In your testimony before the Appropriations subcommittee on January 28 last you said of the examinations for the commercial attachés (Hearings, pp. 879, 880): "The examination is very severe and requires a fluent knowledge of the language of the country to which the attaché is assigned." I assert that your statement is incorrect and am prepared to prove my assertion, if disputed, from the publications of your own department. Of course, you did not intentionally mislead the Committee on Appropriations upon this vital point; nevertheless your testimony shows a strange lack of information upon a most important aspect of the commercial attaché service. Did Mr. Baker speak Russian when he was sent to Petrograd? Did Mr. Harrington speak Spanish when he was sent to Peru? It is my information that you do not insist upon a knowledge of Spanish or Portuguese on the part of our attachés who have been sent to South America. Yet I assert that no other tongue can possibly take the place, in trade-expansion work, of Portuguese in Brazil and of Spanish in the other Latin-American countries. It was upon the foregoing grounds that I made the statement, which you declare untrue, that "knowledge of business conditions in the country of their station, knowledge even of the tongue of the country were apparently not deemed essentials to appointment." I reiterate my statement.

You apparently object strenuously to my suggestion that the Department of Commerce and its commercial attachés have asked our consuls to collect information bearing upon various subjects. This really is a matter of common knowledge. Let me, for example, refer you to no less an authority than the present Secretary of Commerce. In his 1915 report, page 60, he says: "In addition to the reports from our own officers a number of special investigations have been made by consuls at the request of the Bureau of Foreign and Domestic Commerce." The State Department records teem with cases of this sort. You can doubtless obtain access to them if you desire. One of the most recent instances of which I have knowledge occurred, I think, the very day when I made my speech—certainly within a day or two before or after. Our consul at Dairen, Manchuria, was called upon by a commercial attaché for information upon a certain point in which the latter was interested; the consul's reply necessitated a report of something over 50 foolscap typewritten pages. An investigation would be interesting to show in detail how many times during the two years of commercial attaché activity the individual attachés have called upon consular officers for assistance and how few times out of this number credit has, in the report to the Department of Commerce and to the public, been given to the consul for his aid.

In a memorandum which follows a report of your hearing last February before the Appropriations Subcommittee you cite four "practical things done by the present staff."

The first: "One attaché has given direct and necessary assistance to the movement of millions of dollars' worth of trade with the European countries." This is so vague as to be difficult to check up. It would perhaps be found on inquiry, however, that our consuls general and consuls, and perhaps, as in the Bolivia tin case, our diplomatic representatives, were quite as responsible. Was the trade "with" Europe export trade or did the "millions" represent imports to compete with American workmen in the manner you are well known to favor?

Second: "Another was largely instrumental in the removal of a discriminatory tax against American coal in Spain." Did the Consular Service have nothing to do with this? See report (published in Commerce Reports) of Consul General Hurst, Barcelona, Spain, February 29, 1916, entitled "Good results from consular trade efforts," etc.

The third achievement deals with the appointment of American advisory experts to China, and the fourth states that a commercial attaché "devoted much of his time to the study of the proposed tariff provisions of the country in which he is stationed."

Doubtless you put your best foot forward in this recital; doubtless 10 men, working actively a year and a half, even under a wrong system, necessarily accomplished things of value. Yet we must be pardoned for wondering if the results achieved over and above what the Diplomatic and Consular Service would in any event have achieved, were worth the $100,000 which they cost. However that may be, your plea for $225,000, in connection with which you submitted the foregoing data, did not greatly impress the Committee on Appropriations, which disregarded your appeal and merely continued the sum which you have had for the previous two years. The attachés now cost the United States, including salaries, expenses, etc., $10,000 apiece. If you had had your way, we would have had double the number, costing $11,250 apiece. And what do they do in addition to the work done by the consuls general and consuls?

Their functions and sphere of activity seem almost identical with those exercised by the consuls general of the United States. In your 1914 report (p. 40) you summarize the situation thus:

"The force thus briefly described may also be characterized—
"The permanent officer with the general outlook—the attaché.
"The permanent officer with the local outlook—the consul.
"The traveling officer with a single subject—the commercial agent.
"It is not meant in any way to exclude from kindly thought the important work of the consuls general."

But you do not state the distinction between the work of the attachés and of the consuls general. Why could the latter word not be substituted for the former in your definition given above?

As I have previously stated, I make no question of the character or abilities of the gentlemen who are our commercial attachés. The worst, so far as I know, which could be urged against them is that some of them are square pegs in round holes. My principal insistence is that the system is fundamentally wrong; that it furnishes a perfect illustration of the folly of duplicating work and of having double responsibility and authority in the same field of activity. The case was succinctly stated in a letter which I received recently in indorsement of my consular speech from the National Business League of America:

"I once asked a foreign consul, 'What is the particular function of a commercial attachés?' With nutshell conciseness he answered, 'To meddle and otherwise interfere with a consular official in the discharge of his duties.'

"The commercial attaché should be retired."

I should not go so far as to advocate their retirement. I wish to utilize every proper means to attain that upbuilding of the foreign trade of the United States, which is the desire of every patriotic American. Commercial attachés may be made an instrument in that work. This is an entirely nonpartisan matter and should be treated as such. Congress should simply transfer the attachés to the Department of State, where they belong.

Permit me to say in this connection that certain activities of the Department of Commerce have not encouraged me to feel confidence in the policy which was shaping the trade-building activities of the commercial attachés. Take, for example, the statement in Commerce Reports dated November 4, 1915, issued by your department, and presumably with your approval:

"Two visitors from Russia have nearly completed the organization of a cooperative sales agency for promoting Russian interests. Their efforts were materially assisted by the Bureau of Foreign and Domestic Commerce."

Again, take the statement distributed broadcast through the country, and again presumably with your sanction, dated September 21, 1915:

"The Swiss Legation at Washington has advices from Berne that manufacturers in Switzerland are anxious to supply the Christmas toy trade of the United States, and the Bureau of Foreign and Domestic Commerce, of the Department of Commerce, has undertaken to assist in having orders placed."

Neither of these announcements, one that your department was promoting Russian interests, the other that you were assisting the Swiss toymakers, is exactly reflective of what I understand by an "America first" platform.

In an interview given to the newspapers you characterize me as "inexperienced," and intimate that my references to commercial attachés may for that reason be treated lightly. This type of reply suggests the familiar story of the lawyer with the hopeless case, who scribbled upon his brief, "No case; abuse the other attorney." Possibly, whatever you might say of Representative JAMES R. MANN, you would not, in view of his 20 years of service in the House, call him inexperienced. Possibly you would agree that he was as well informed upon the public service as any man in Congress. On June 24 last, speaking of your annual report, from which I have quoted, he says:

"A large share of it consists in abuse of Congress. He seems to consider that his proper duty is to scold Congress. That is not the duty of an executive officer of the Government. The fact that he was formerly a Member of the House is no reason why he is at liberty to scold Congress constantly."

It may be, in view of this analysis, that I have taken too seriously your letter and have devoted too much time to this reply. When an ailment is chronic very little can be done to relieve the patient.

Yours, truly,

---

SPEECH OF MR. ROGERS.

COMMERCIAL ATTACHÉS.

Mr. ROGERS. Mr. Speaker, the act of Congress approved July 16, 1914, provides in part as follows:

For commercial attachés to be appointed by the Secretary of Commerce, after examination to be held under his direction to determine their competency, and to be accredited through the State Department, whose duties shall be to investigate and report upon such conditions in the manufacturing industries and trade of foreign countries as may be of interest to the United States, $100,000.

The 1915 and 1916 laws have carried a similar item.

Under this provision the Department of Commerce has appointed 10 commercial attachés, 1 being assigned to each of the

following capitals: London, Paris, Berlin, Petrograd, Peking, Buenos Aires, Rio de Janeiro, Lima, Santiago, and Melbourne.

The fact that these officials are under the Department of Commerce may seem to make it superfluous to discuss them in a speech upon the Consular Service. Nevertheless, I think the connection is sufficiently close and important to warrant a brief reference.

It is my considered opinion that these officials do absolutely no good and in some respects do the country more harm than good. I think they should either be eliminated or be made subject to the State Department.

It is well known that the Department of Commerce, under the tutelage of Secretary Redfield, is one of the greatest self-advertising institutions in the world. It blows its horn in season and out of season. A typical blast appeared in an article entitled "Uncle Sam, Trade Expert," in the Saturday Evening Post for May 6, 1916. This article lauded to the skies the achievements of the commercial attachés and, inferentially at least, left the impression that our commercial attachés were everything and our Consular Service nothing. For example, the following language, quoting a high official of the Department of Commerce, appears:

> It is not strange that all consuls are not able at all times to produce trade reports calculated to inspire the American manufacturer to go out after export business, and to guide those efforts to success after they have been inspired. On this end of the job he needs help of the sort that only the highly trained specialist can give. Hence the commercial attaché and the commercial agent.

I believe it to be a demonstrable fact that these 10 men hinder instead of assist the work of the consuls in caring for our foreign trade. For example, there have been repeated cases where a commercial attaché would ask a consul to collect information for him bearing upon a certain subject. The consul, though under no obligation so to do, would graciously and after much research collect the information desired. Then the attaché, without giving any credit whatever to the consul, would forward the information to the Department of Commerce and it would be blazoned forth to the country with a great hurrah. That very information would frequently have already been made available by the consul himself. Lately, I am informed, some of the consuls have notified the attachés that they no longer could do their own work and that of the attaché as well.

A number of the attachés were selected for political reasons, and several of them at least had no apparent qualifications for the task to which they are assigned. Knowledge of business conditions in the country of their station, knowledge even of the tongue of the country were apparently not deemed essentials to appointment.

These men, being officials of the Department of Commerce, not of the Department of State, and belonging neither to the diplomatic nor to the consular branches of our Government, have no official standing abroad. The foreign Government can not understand why they are in the country at all, and they occupy a thoroughly nondescript position. Oftentimes it seems as if every man's hand was against them and their hand was against every man.

It may be that there is a useful opportunity for service for the right sort of men, but any such men, to be effective at all, must be, as is the practice of other Governments, under the direction of the State Department. The present division of responsibility and authority works very badly, tells directly for friction, and entirely neutralizes any possible good which might otherwise result. As it stands now the country is simply throwing away $100,000.

---

SPEECH OF HON. RICHARD OLNEY, 2D, OF MASSACHUSETTS, IN THE HOUSE OF REPRESENTATIVES THURSDAY, JUNE 22, 1916.

EFFICIENCY OF THE DEPARTMENT OF COMMERCE.

Mr. OLNEY. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD, I wish to insert the following letters and papers pertaining to the efficiency in the Department of Commerce:

DEPARTMENT OF COMMERCE,
OFFICE OF THE SECRETARY,
*Washington, June 15, 1916.*

HON. RICHARD OLNEY, 2d,
*House of Representatives, Washington, D. C.*

MY DEAR CONGRESSMAN: On June 6 Hon. JOHN J. ROGERS, of Massachusetts, caused to be printed in the CONGRESSIONAL RECORD, page 10641, certain remarks, in which he reflected very severely on the commercial attaché service of this department. The inclosed article, which was printed in the Annalist for March 6, will give the facts.

I wish you would read so much of ROGERS's statement as refers to this subject—it is but brief—and perhaps you will see your way to replying to it, using the material herein.

My chief purpose, however, is to hand you copy of letter sent by me to Mr. ROGERS on the 12th, and to suggest that if you do see fit to take the matter up, possibly you can have my letter to him inserted in the RECORD. There have been few worse cases of absolute misrepresentations than Mr. ROGERS's speech, so far as it relates to the commercial attachés, and it would be very simple for you to knock it out and show up the complete untruthfulness of what he says.

Yours, very truly,

WILLIAM C. REDFIELD, *Secretary.*

JUNE 12, 1916.

HON. JOHN J. ROGERS,
*House of Representatives, Washington, D. C.*

MY DEAR CONGRESSMAN: I have read with deep interest your remarks in the CONGRESSIONAL RECORD of June 6 referring to the service of commercial attachés conducted by the Bureau of Foreign and Domestic Commerce of this department. Your information seems so wide, so varied, and so far exceeds that which I possess that I trust I may be pardoned for addressing you in the public interest some questions to which I beg your direct and categorical replies:

(1) Kindly say exactly in what ways do "these 10 men (commercial attachés) hinder the work of the consuls." Kindly give one or more instances in which any commercial attaché has hindered the work of any consul. No such case has ever been reported to the department; rather the reverse.

(2) Kindly give citations of time and place showing "repeated cases where a commercial attaché would ask a consul to collect information for him bearing upon a certain subject," and state the actual cases wherein "the attaché, without giving any credit whatever to the consul, would forward the information to the Department of Commerce and it would be blazoned forth to the country with a great hurrah."

(3) Kindly say what consuls, and where, have "notified the attachés that they no longer could do their own work and that of the attaché as well." Please name the consul or attaché concerned. In view of the publicity given the statement by you, doubtless your informant on this alleged matter will probably not object to our knowing his name. Kindly transmit it to me, that the matter may have closer inquiry. No such case has ever come to my knowledge save through your lips.

(4) Please name the attachés who "were selected for political reasons," and kindly say on whose authority the statement is made.

(5) You are invited to name the attachés who "had no apparent qualifications for the task to which they are assigned." How do you know this? What qualifications do you suggest for a commercial attaché, and which of these qualifications are not required by this department? Have you read the examination papers showing what is required from an attaché?

(6) Name the attachés who are not able to speak "the tongue of the country" to which they were sent or a language current in commercial circles therein. Is there one such? On whose authority do you say "knowledge even of the tongue of the country were apparently not deemed essentials to appointment"? The reverse is true. The facts were available to you. Please give particulars and details to justify your statement.

(7) On what authority do you say the commercial attachés "have no official standing abroad"? All the attachés are accredited through the Department of State, and by a ruling of that department rank after the first secretary of the embassy or legation. The facts are available and are the reverse of your statement.

(8) Kindly state a case to verify your statement that any "foreign government can not understand why they are in the country at all." To what government do you refer? If you prefer not to mention any government, kindly state the source of your authority, that inquiry may be made.

(9) Under foreign governments is it always "the practice" to place the commercial attaché service under the direction of the foreign ministry? Your alleged information seems so complete that I ask you to kindly tell me what other countries have commercial attachés, and how many and how controlled.

(10) What did the Chamber of Commerce of the United States determine with reference to the commercial attaché service?

(11) What did the national foreign trade council, from whom you quote, say about the commercial attaché service?

(12) What did the American Manufacturers' Export Association say about the commercial attaché service?

(13) What special and direct service to a large manufacturer in your own city was rendered by a commercial attaché and publicly acknowledged by the manufacturer?

I hope you will not be too busy to answer fully the questions asked. You are invited, nay, you are respectfully challenged, to publicly state the truth, and the whole truth, respecting what the commercial attaché service has accomplished. The facts are open for all the world to know, and are available to you as a public man. Tell them without fear and favor. I purpose to do so not only because there is nothing in them to be concealed but because the business world has the right to know what has been done for them and how it has been done. The record is one of which this department and the country has just reason to be proud and your attack upon it is most welcome as affording a basis for bringing the truth to light.

Yours, very truly,

WILLIAM C. REDFIELD, *Secretary.*

## War-Risk Insurance Bill.

## EXTENSION OF REMARKS
OF
## HON. JOSHUA W. ALEXANDER,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,
*Saturday, July 29, 1916,*

On the bill (H. R. 13224) to amend an act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September 2, 1914.

Mr. ALEXANDER. Mr. Speaker, this is a bill to continue the War Risk Bureau in the Treasury Department for one year from September 2, 1916. The original act creating the bureau will expire and the bureau will be discontinued on that date unless in the meantime this bill becomes a law.

The act to authorize the establishment of the Bureau of War Risk Insurance in the Treasury Department was approved September 2, 1914. The act provides that the President is authorized, whenever in his judgment the necessity of further war insurance by the United States shall have ceased to exist, to suspend the operation of the act in so far as it authorizes insurance by the United States against loss or damage by risks of war, which suspension shall be made, at any event, within two years after the passage of the act, which will expire September 2, 1916. There is nothing to indicate that the war in Europe will end in the near future, hence the necessity for continuing this act in force beyond the original period is apparent. The operations of the War Risk Bureau have been in the highest degree satisfactory. War-risk insurance has been written by the bureau on American vessels, freight and passage moneys, and cargoes at reasonable rates. The operations of the bureau have cost the Government nothing. On the other hand, the total premiums received by the bureau is shown by the Government recapitulation as $2,727,091.15; the net loss amounts to $694,581.73, leaving surplus premiums on hand of $2,032,509.42. The following recapitulation shows the operations of the bureau from September 2, 1914, to May 31, 1916:

RECAPITULATION.

| | | |
|---|---|---|
| Sept. 2, 1914–May 31, 1916, 1,474 policies issued: | | |
| Total amount insured | | $127,408,991.00 |
| Premiums received on same | | 2,727,091.15 |
| Salvage received to date | | 49,782.00 |
| Total amount at risk | | 15,147,586.00 |
| Known losses to date (paid) | | 744,363.73 |
| Possible outstanding claims | | 250,000.00 |
| Net losses | | 694,581.73 |
| Total expenses of bureau, including salaries of entire force to May 31, 1916 | | 30,594.68 |
| Total premiums received | | 2,727,091.15 |
| Losses to date (all paid) | $744,363.73 | |
| Less salvage received | 49,782.00 | |
| Net losses paid | | 694,581.73 |
| Surplus premiums on hand | | 2,032,509.42 |

The full report of the Bureau of War Risk Insurance, giving details of the receipts and expenditures of the bureau from September 2, 1914, to November 30, 1915, will be found in House Document No. 544, Sixty-fourth Congress, first session.

The following letter received by me from Hon. William G. McAdoo, Secretary of the Treasury, sets out the operations of the bureau from September 2, 1914, date of its establishment, to July 24, 1916, and states the imperative reasons why the life of this bureau should be extended until after the close of the war in Europe:

THE SECRETARY OF THE TREASURY,
*Washington, July 26, 1916.*

MY DEAR JUDGE ALEXANDER: The War Risk Insurance Bureau, which was established September 2, 1914, shows the following results:

| | |
|---|---|
| Total policies issued, September 2, 1914–July 24, 1916 | 1,526 |
| Total amount insured | $135,542,189.00 |
| Net amount at risk, July 24, 1916 | 11,993,017.00 |
| Gross premiums received | 2,868,103.32 |
| Known losses to date | $771,329.57 |
| Salvage received | 58,811.42 |
| Net losses (paid) | 712,518.15 |
| Net premiums in hand, July 24, 1916 | 2,155,585.15 |
| Total expenses of operating bureau from September 2, 1914, to July 24, 1916 | 32,282.47 |

In the two and one-half months preceding July 24, 1916, policies were issued aggregating $14,972,393; premiums received on same, $237,933.92.

This will indicate to you not only the signal service that the bureau has rendered to the business and shipping interests of the country, but the highly successful results thus far achieved (the net premiums in hand, after payment of all losses, amounting to $2,155,585.15, with only $11,993,017 net amount at risk), and this great business has been done at a total cost to the Government of only $32,282.47. It is a signal record of usefulness, efficiency, and economy, to say nothing of the very great influence this bureau has had upon war-risk insurance rates throughout the world, with corresponding benefit to American business and shipping interests.

For some reason, inexplicable to me, there seems to be some opposition to the extension of the life of this bureau for another period of two years, notwithstanding the fact that the business and shipping interests of the country seem to be unanimously for it so far as the resolutions of chambers of commerce and maritime exchanges received at the department can be taken as interpreting this sentiment. It would be a grave disadvantage to the business interests of the country, especially to the farming interests, if the life of the War Risk Insurance Bureau is not extended by the present Congress. It expires, as you know, by limitation September 2, 1916. I earnestly hope that House bill 13224, introduced by you March 15, 1916, may be passed without delay.

Faithfully, yours, W. G. MCADOO.

Hon. J. W. ALEXANDER,
*House of Representatives.*

The following resolutions, adopted by the Chamber of Commerce of the State of New York, the National Foreign Trade Council, and the Maritime Exchange of New York, and a letter from Mr. P. A. S. Franklin, of the International Mercantile Marine Co., also resolutions adopted by the Philadelphia Chamber of Commerce, the Philadelphia Board of Trade, the Philadelphia Maritime Exchange, the Philadelphia Bourse, and the Commercial Exchange of Philadelphia, emphasize the importance of the passage of this bill and the continuance of the War-Risk Insurance Bureau in the Treasury Department until the close of the war in Europe:

CHAMBER OF COMMERCE OF THE STATE OF NEW YORK,
*New York, July 10, 1916.*

Hon. WILLIAM G. MCADOO,
*Secretary of the Treasury, Washington, D. C.*

DEAR MR. SECRETARY: Re United States War-Risk Bureau, I am under the impression that the law which created this bureau was framed so that it should expire by limitation on September 2 of this year.

I am directing your attention to this matter in the great hope that while Congress is in session any needed legislation for the extension of this bureau during the period of the war may be obtained.

It would be most unfortunate to have this bureau discontinue its operations this autumn. It would be very difficult, if not quite impossible, to insure the more valuable steamers of the American flag against war risk if this bureau is discontinued, as, from information that I have, it seems unlikely that the open market could furnish at most favorable rates a sufficient amount on individual steamers. If this proved to be the case, owners of American ships would have to rely on foreign underwriters for a portion of their cover.

The effect might very likely be not only to raise the rate of insurance on vessels but to raise the cost both of insurance and freights to shippers, and so be detrimental to the trade of the United States.

Since the original idea of the United States War-Risk Bureau was solely to put American shipowners and American shippers on a parity with foreign owners and shippers, because of the special protection afforded them by their Governments through their war-risk bureaus, it would seem only consistent that American shipowners and shippers should have the protection continue as long as the cause which gave rise to it continues to exist.

I am addressing this letter to you, as the bureau is administered in your department, and venture to urge that the administration should suggest to Congress the necessary action to extend its existence.

Yours, very respectfully,

E. H. OUTERBRIDGE, *President.*

[Personal.]

NATIONAL FOREIGN TRADE COUNCIL,
OFFICE OF THE SECRETARY,
*New York City, July 28, 1916.*

Hon. J. W. ALEXANDER,
*Chairman Committee on Merchant Marine and Fisheries,*
*House of Representatives, Washington, D. C.*

DEAR SIR: Herewith I have the honor to transmit a copy of a report of the merchant marine committee of the National Foreign Trade Council, consisting of James A. Farrell, president United States Steel Corporation and chairman National Foreign Trade Council; Capt. Robert Dollar, president Robert Dollar Steamship Co., of San Francisco; P. A. S. Franklin, vice president International Mercantile Marine Co., indorsing and urging the immediate enactment of H. R. 13224, a bill prolonging the life of the Bureau of War Risk Insurance in the Treasury Department.

The National Foreign Trade Council was one of the first organizations to urge the necessity, at the outbreak of the war, of the establishment of Government war-risk insurance. In the opinion of this committee that necessity has not passed, and will not pass until the war is ended, but on the contrary, its continuance is urgently required in the interest of the foreign trade of the United States.

Respectfully, yours,

ROBERT H. PATCHIN, *Secretary.*

P. S.: A copy of the accompanying report has been sent to the Speaker of the House, the Hon. JAMES R. MANN, the Hon. J. HAMPTON MOORE of Pennsylvania, and Secretary MCADOO.

REPORT OF THE MERCHANT MARINE COMMITTEE OF THE NATIONAL FOREIGN TRADE COUNCIL ON H. R. 13224.

(64th Cong., 1st sess.)

At the outbreak of the present European war the fact that upward of 80 per cent of American foreign commerce was dependent for ocean transportation upon belligerent merchant vessels caused our export and import trade to suffer almost as acutely as if it had been belligerent. Exports of farm and factory products, grains, cotton, foodstuffs, and manufactures were piled high on the wharves at all seaports and lay in idle freight cars, congesting railroad terminals. While the control of the sea remained in doubt no belligerent vessels could go to sea.

The business interests of the country called for and the Government promptly responded with two legislative policies designed to relieve, and which gradually did relieve, the emergency. Foreign-built vessels of any age were authorized to take American register; that is, to fly the American flag and enjoy its protection. With a few exceptions all of the foreign-built vessels owned by American citizens were thus brought under the flag of the United States. Immediately this policy was determined upon it was apparent that American resources for war-risk insurance of the increased American tonnage, a large part of which operated in the trans-Atlantic trade subject to dangers from floating mines and other hazards of war were inadequate.

At the war-emergency meeting of the National Foreign Trade Council, held at the Chamber of Commerce of the State of New York, on Monday, August 10, 1914, resolutions were adopted calling attention to the vital necessity for the movement of exports and imports, and declaring:

"Whereas, even with legislation permitting the American registry an operation of foreign-built ships under the American flag, the movement of exports and imports will be greatly retarded because of prohibitive war risks (British Government insurance covering only British vessels and their cargoes); therefore be it

*Resolved*, That we recommend that the Government promptly provide war-risk insurance on both the hulls and cargoes of American vessels engaged in over-sea trade, at reasonable rates, and we urge upon Congress the immediate enactment of the laws necessary thereto."

The bill providing for a Bureau of War Risk Insurance was promptly passed and approved on September 2, 1914. It was an emergency measure, and its life was fixed at two years with authority for its suspension by the President within that time if, in his judgment, the necessity of further war insurance by the United States should have passed. At that time there was little expectation that the war would continue longer than two years, otherwise the bill undoubtedly would have provided for its continuance for three or four years, or the duration of the conflict.

The two years will expire on September 2 next. The war has not ended; American vessels are still subject to war hazards; even outside the war zones certain waters are infested by floating mines, and the perils of neutral commerce continue unabated. The resources for private insurance of war risks have not increased to such an extent as to permit the discontinuance of the Government's helpful activity.

Even those countries with a greater merchant marine in the foreign trade and resources far superior to the United States for insurance of war risks maintain government war insurance and have no thought of abating it while the conflict continues. The operation of the War Risk Insurance Bureau has benefited American-owned vessels. It has cost the Government nothing, for the total premiums received have been $2,727,091.15 and the net losses only $694,581.73, leaving surplus premiums on hand of $2,032,509.42. The institution has been stable, not subject to the fright and panic which now and then have seized the London and New York insurance markets, and therefore has exercised a steadying influence upon rates. The rates charged by the Government have been fair both to assurer and assured. The amount of war risk on hulls obtainable from American underwriters is limited. The War Risk Bureau is able to accept large covers on very high-valued vessels of American ownership, thus enabling the American shipowner to avoid recourse to the London market to complete his total insurance at a rate well above the prevailing rates in New York or the rates that have been fixed by the bureau. Even under existing circumstances it has often been necessary for shipowners, after having a heavy amount covered by the Government Bureau of War Risk Insurance and, in addition, all that the New York market could accommodate, to have still remaining a sum which it was necessary to place in London to complete the total required on a high-valued ship and cargo. Without the additional resources provided by the Government Bureau of War Risk, the amount for which American vessel owners would be obliged to go to London would be enormous. To discontinue the bureau now simply because the statutory termination of its life has been reached, without any change in the conditions necessitating its operation, would, in the opinion of this committee, be a serious mistake and unnecessarily disturbing to American ocean transportation without conferring collateral benefit upon the export and import trade of the United States.

Therefore the merchant marine committee, on behalf of the National Foreign Trade Council, representing all sections of the country and all lines of industry and commercial enterprises engaged in or affected by foreign trade, respectfully urges the immediate enactment and approval of H. R. 13224 as reported by the House Committee on Interstate Commerce.

---

MARITIME EXCHANGE.
OFFICE OF THE PRESIDENT,
*New York City, July 13, 1916.*

Hon. J. W. ALEXANDER,
*Chairman Committee on Merchant Marine and Fisheries,*
*House of Representatives, Washington, D. C.*

DEAR SIR: We are authorized by the board of directors of the Maritime Association of the Port of New York to communicate with you regarding the United States War Risk Bureau, which was provided by congressional enactment for the purpose of furnishing to American shipowners and shippers insurance facilities to meet conditions arising from the European war, and which we understand will expire by limitation on September 2 next.

While the establishment of this bureau was intended as an emergency measure, in view of the prolonging of the European war we feel that conditions are such as to make the continuance of the bureau most desirable after the expiration date above mentioned.

At the present time the outlook for an increased American merchant marine is most promising, and we believe that every possible assistance in the way of favorable legislation should be afforded our shipping interests at this time. Our board of directors believes that the continuance of the War Risk Bureau, by facilitating the placing of risks and by its effect on insurance rates, will be most helpful to our growing merchant marine and will place our vessels in a favorable position to compete with foreign vessels which are granted similar protection by their various Governments.

Our board of directors, in behalf of a membership of 850, embracing representatives of practically all interests allied to shipping at this port, respectfully urges your valued assistance in this matter, which we deem of the utmost importance.

Very respectfully, yours,
J. B. MERRELL, *President.*
JOHN DOWD, *Secretary.*

---

WAR-RISK INSURANCE LAW.

NEW YORK, *July 7, 1916.*

Hon. J. W. ALEXANDER,
*Chairman Committee on Merchant Marine and Fisheries,*
*Washington, D. C.*

DEAR JUDGE ALEXANDER: Understanding that this law expires on September 2, this is to strongly plead with you to do your utmost to have Congress continue this law, at least until the end of the present European war.

The British Government is carrying 80 per cent of the war risk on all of its shipping at the rate of 1½ per cent for 91 days, which is the same rate that the United States has been charging, although steamers under our own flag have not been subjected to anything like the risk of the steamers under the British flag.

If the United States withdraws from the war-risk insurance, and as it is impossible to get sufficient insurance in the United States to cover American flag steamers, it will place the American steamship owner operating in foreign trade at a very serious disadvantage, and leaves him at the mercy of the foreign underwriter, which, I am sure, you will agree with me is most unfortunate, and will ultimately be detrimental to the trade and commerce of the United States.

We are insuring with the United States Government at $1,000,000 each the steamships *Finland* and *Kroonland*, and at about $800,000 each the steamships *New York*, *Philadelphia*, *St. Louis*, and *St. Paul*, and it would be almost impossible to get this insurance in the outside market, and if we had to go into the outside market for it we would absorb so much insurance that it would be very difficult for the shippers to get insurance on the traffic forwarded on these steamers, except at exorbitant rates, as underwriters always watch their total line upon each steamer.

This act has been of great assistance to the American merchant marine and, in addition, has resulted in a profit to the Government, therefore I most strongly urge that you do your utmost to have it continued in effect, and thereby materially assist shipping under the American flag, and also greatly oblige,

Yours, very truly,
P. O. P. FRANKLIN.

---

PHILADELPHIA CHAMBER OF COMMERCE,
*July 15, 1916.*

Hon. JOSHUA W. ALEXANDER,
*Chairman Committee on Merchant Marine and Fisheries,*
*House of Representatives, Washington, D. C.*

DEAR SIR: The Philadelphia Chamber of Commerce requests that the following resolution be submitted to your committee and that the same be presented to the House. Will you be good enough to take care of this for us?

"Whereas there is at present, by enactment of Congress, a measure providing for the insurance of the commerce of the United States against the risks of war, and that there is also in effect at the present time a Bureau of War Insurance, under the control of the Treasury Department, subject to the general direction of the Secretary of the Treasury; and

"Whereas this Bureau of War Risk Insurance has rendered effective aid during its existence, and without same it would have been impossible to fully insure American steamships against war risk; and

"Whereas the law creating this bureau will expire by limitation on September 2 of the present year: Therefore be it

"*Resolved*, That the Philadelphia Chamber of Commerce, in the interest of the commerce of the United States, earnestly requests that the term for which the law was enacted be extended until the close of the war in Europe."

HOWARD B. FRENCH, *President.*

Attest:

N. B. KELLY, *General Secretary.*

---

PHILADELPHIA BOARD OF TRADE,
*Philadelphia, July 13, 1916.*

Hon. JOSHUA W. ALEXANDER,
*Chairman Committee on the Merchant Marine and Fisheries,*
*House of Representatives, Washington, D. C.*

DEAR SIR: During the consideration of the bill authorizing the establishment of a bureau of war-risk insurance the president of the Philadelphia Board of Trade sent the following telegram to the President of the United States:

"Philadelphia Board of Trade believes the present emergency justifies the Government of the United States assuming premium of insurance on war risks on American hulls and cargoes bound to European and other ports where such risk has not been already covered by the countries of destination and trusts your influence will be exerted to that end."

The law creating the war-risk bureau and providing for war-risk insurance expires by limitation on September 2 of the present year, and the Philadelphia Board of Trade earnestly advocates and heartily indorses the proposed legislation to extend the operation of the bureau until the close of the war now prevailing in Europe.

The unanimous opinion here is that this bureau has rendered most effective aid during the time of its existence, as it would have been practically impossible to fully insure valuable American steamships against war risks without the operation of the bureau.

On June 2 of this year the Chamber of Commerce of the United States reported that the Government was carrying a total insurance of $124,600,000 upon which premiums have been paid amounting to $2,680,000 since the organization of the bureau on September 3, 1914. The net losses paid amount only to $695,000, and against this the collections of salvage have reached nearly $50,000.

The board of trade therefore, even from a purely commercial standpoint, feels that it is entirely justified in earnestly petitioning the favorable action of your committee on the legislation proposed, to extend the bureau as stated above.

Very truly, yours,
WM. M. COATES, *President.*
W. R. TUCKER, *Secretary.*

---

WAR-RISK INSURANCE.

THE PHILADELPHIA MARITIME EXCHANGE,
*Philadelphia, July 13, 1916.*

Hon. J. W. ALEXANDER,
*Chairman Committee on the Merchant Marine and Fisheries,*
*House of Representatives, Washington, D. C.*

DEAR SIR: I beg to inclose herewith an official copy of a resolution adopted by this exchange in connection with war-risk insurance, and shall esteem it a favor if you will present the same to your committee at your convenience.

Yours, faithfully,
E. R. SHARWOOD, *Secretary.*

---

WAR-RISK INSURANCE.

*To the honorable the Committee on the Merchant Marine and Fisheries of the House of Representatives:*

At a meeting of the executive committee of the Philadelphia Maritime Exchange, acting under authority of the board of directors, held the 12th day of July, 1916, the following resolution was unanimously adopted:

"Whereas in September, 1914, a measure was enacted by the Congress providing for insurance of the commerce of the United States against the risks of war by the Federal Government, and in accordance therewith a Bureau of War Risk Insurance was established in the Treasury Department, subject to the general direction of the Secretary of the Treasury; and

"Whereas it appears to be the consensus of opinion that the aforesaid War Risk Bureau has rendered most effective aid during the period of its existence, and that without its assistance it would have been difficult, if not impossible, to fully insure the more valuable American steamships against war risks; and

"Whereas the law creating the War Risk Bureau and providing for war-risk insurance will expire by limitation on September 2 of the present year: Therefore be it

"*Resolved*, That, in the opinion of the Philadelphia Maritime Exchange and in the interest of the commerce of the United States, the term for which the law was enacted should be extended until the close of the war that is now prevailing in Europe."

THE PHILADELPHIA MARITIME EXCHANGE,
By J. S. W. HOLTON, *President*.

Attest:
[SEAL.] E. R. SHARWOOD, *Secretary*.

PHILADELPHIA, *July 12, 1916*.

---

PHILADELPHIA BOURSE,
*Philadelphia, July 13, 1916*.

Hon. JOSHUA W. ALEXANDER,
*House of Representatives, Washington, D. C.*

DEAR SIR: While not in sympathy with the principle that the Federal Government should undertake any enterprise which naturally should be cared for by a private corporation and private capital, the Philadelphia Bourse respectfully urges the prompt passage of legislation extending the operation of the Government War Risk Insurance Bureau until the close of the European war.

It advocates such extension since the American merchant marine in the past two years has come to lean upon the bureau and would be placed at a serious disadvantage were the bureau to cease on September 2, 1916, the date on which the law creating it expires by limitation.

Many large shipping companies have informed the bourse that it would be most difficult, if not impossible, to fully insure the more valuable American flag steamers against war risk without the bureau. The foreign-flag ships are insured largely by their own Governments on most favorable terms, considering the conditions, and it would be impossible for valuable American flag ships to secure enough insurance in this country. Without the bureau they would be compelled to rely upon the foreign underwriter, which would mean their absorbing of so much insurance that the rates would be advanced on shippers of merchandise by American flag steamers. This would be detrimental to the trade and commerce of the United States and to the American merchant marine.

The Philadelphia Bourse therefore urges the passage of legislation extending the operation of the War Risk Insurance Bureau until the end of the war.

Very truly, yours,

GEORGE E. BARTOL, *President*.

---

THE COMMERCIAL EXCHANGE OF PHILADELPHIA,
*Philadelphia, July 13, 1916*.

Hon. JOSHUA W. ALEXANDER,
*Chairman Merchant Marine and Fisheries Committee,*
*House of Representatives, Washington, D. C.*

DEAR SIR: In view of the extraordinary conditions prevailing and the consequent risks to American shipping as the result of the European war since August, 1914, Congress enacted, as you know, a law, effective on September 2, 1914, creating a War Risk Insurance Bureau, which will, by limitation, expire on September 2, 1916.

The opinion among shipping men is that this bureau has been of great value and has accomplished an incalculable amount of good to American commerce, for without it foreign insurance premiums would have become excessively high, if not altogether prohibitive; and we feel that should the bureau and its usefulness cease to be effective through lack of the necessary legislation the loss to our merchants and those of other exporting markets would be greatly deplored.

The board of directors of the Commercial Exchange of Philadelphia therefore, in session on the 13th instant, authorized this communication to be addressed to you, urging upon your committee the importance of having the War Risk Insurance Bureau continued until the end of the European war, and we therefore ask you to use your utmost endeavor to have the act above referred to extended.

Very truly, yours, L. G. GRAFF, *President*.

---

## The Franking and Newspaper Privileges.

# SPEECHES
OF
# HON. THOMAS D. SCHALL,
OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 29, 1916.*

Mr. SCHALL. Mr. Speaker, a Congressman holds merely the power of attorney to represent and transact the legislative business of his district and country. Upon partisan questions his duty is plain. But upon nonpartisan questions his country and his district must rely upon his vision and understanding of the situation. Every Congressman, I believe, wants to, or should want to, represent, not misrepresent, the consensus of the opinion of his district where that opinion is consistent with the interest and welfare of the country at large.

The problem of representative government has always been to ascertain this consensus of the public opinion upon proposed legislation concerning the interests of all the people. It is in the very conflict of opinions of parties and men wherein lies the secret of our success and strength.

There are always two sides to any question; and in a democracy the majority should say which side shall prevail.

The problem of the endurance of our democracy is the problem of having all the people understand the questions upon which legislation is proposed, and in order that all the people might have the fullest opportunity to know what is going on in their Government Congress has very wisely provided what is known as the franking privilege, by which system any public document, letter, or information pertaining in any way to the business of the Government can be mailed free to any citizen throughout the country.

Congress has also gone to the extreme, and rightly, in minimum rates to the newspapers that the fullest privilege of free speech and free press may be preserved. The safety of our Republic rests upon our free institutions, an unhampered press, and our public schools from whose towers the Stars and Stripes tell in what a spirit are reared our coming men.

This so-called franking privilege is one of the bulwarks of the people's liberties, upon which the foundation of our Republic must stand, for it is upon the education and understanding of our people that our republican institutions must rely for their perpetuation.

Every citizen has a right to know what laws are proposed, what are enacted, what are defeated, the attitude of the Congressman or public officials upon each of these, and their reasons for or against them. The franking privilege is expressly given the people, and it is the Congressman's duty, through his frank, to see that the people are informed as to the public business, and the closer he keeps in touch with them the more efficient and democratic will be his vote.

Newspapers can not and do not give full and definite information, and it can not be expected of them, for they are run for gain, and often the policy of a paper is a considerable source of income.

Often the apparent information is a plain matter of business, and there is no animosity intended to be conveyed by this statement.

The franking privilege is at times abused, no doubt, as is also the mailing privilege given to the newspapers. But the occasional evil is so far outweighed by its necessity and benefit in both instances that they should remain lasting institutions.

Too often one privilege in the interests of the people tries to get rid of another. The franking privilege is a thorn in the side of some molders of public opinion, and their attempt to drag it down should be met by understanding on the part of the people.

If the franking privilege should be taken away from the people they are likely to be exposed to the contagion of misinformation and public representatives would dwindle to trembling weaklings, shrinking and subservient to the swish of the whip of the interest-owned press. I hope the day may never come that honest public officials, deprived by the destruction of this institution of self-defense for their public acts, should thus be driven from the country's council.

A private injury often points a public wrong. Newspaper criticism was made of the use of my frank to congratulate a mother upon the birth of a son. The idea that the Government frank should be so belittled as to use it in congratulating some of the plain people, who perform the labor of this country, pay most of the expenses of the Government and get the least for it! Had that frank been used in congratulating some of the high and mighty there would have been no criticism.

A mother who has passed through the valley of the shadow of death to produce an American citizen deserves congratulation, and if justice were done not only should every mother be congratulated but every needy mother be pensioned. Conservation of the life and health of our prospective citizens is true preparedness.

The object of government is to lighten the burdens of its citizens. We spend billions to reward patriotism in pensions and memorials. The common people are the government; the office of Congressman is their gift and they have a right to its congratulations or condolences.

The franking privilege has of late years been much maligned, and because no one has taken the trouble to give the people the facts concerning the use of it, and misstatement after misstatement has been allowed to go unchallenged, many people have come to believe that it is their enemy, while in reality it is their friend.

How often in the very newspapers whose mailing privilege amounts almost to a frank do we read "petty graft," "cheap economy, if a man's conscience will allow him to use it," "hundreds of thousands of dollars extorted annually from the taxpayers for paper and printing of the belchings of our Congressman."

The writers of such as the above are not informed, for the Congressman or Senator must pay for paper, printing, and addressing, exactly as must the newspapers. The Government is at the expense only of carrying the document to its citizens, who, it must be admitted, have some rights to secure their information concerning their Government straight from the men they send there to represent them.

If the occasional franking of a public document "extorts hundreds of thousands of dollars annually from the taxpayers," what must be the toll on the taxpayers for the mailing privilege given the newspapers?

Because of these unwarranted and vicious attacks some Congressmen are intimidated, and the people are thereby deprived of information concerning their Government which is their due.

Another sample:

"The whole franking privilege is the dirtiest kind of graft. The 'gift' of tons of handsome volumes known as the Yearbook of the Agricultural Department costs the people of the United States probably $2 a volume, but the recipients never think that they are paying for them themselves."

Since the taxpayers are paying for them, it is the duty of their Congressman to see to it that they get them, and if he did not he would be negligent. The editor is "probably" wrong in his quoting of the price. They cost the Government a little over 40 cents apiece, and each Congressman is given an allotment of 750 throughout a district containing approximately 250,000 people. Seven hundred and fifty volumes, each about an inch thick, would not make many "tons of handsome volumes."

They contain valuable information for the farmer in the care of crops, live stock, prevention of disease, sanitation, treatment of plague in crop and animal, all of which knowledge is of vital general interest to the whole Nation, for the success of the producer heralds the success of the consumer. When I receive a request for the Agricultural Yearbook—and many are received—I always feel, and, I believe, rightly, that back of that request is a good, progressive, up-to-date United States citizen seeking to better his understanding of his work, and therefore to better the country in which he lives.

The farmer receives little enough comparatively from the Government, and the editor should not begrudge him the latest word on scientific farming. Along this same line there has been some criticism of the free vegetable-seed distribution. There may be some justice in this criticism, and a full airing of the facts, where they are authentic, would no doubt be of benefit to the public. A thorough discussion in the papers often crystallizes public opinion. And public opinion being once definite upon this or any other question, the legislature would enact into law that public opinion. The benefit derived by the people through free and fair discussion in the public print of public questions is the just reward to the people for the mailing privilege granted to the newspapers by the people's Government. Much of the criticism is that the seeds are not used and therefore become a waste; that seed houses grafted through this means a lot of money and gave poor seeds in return; that Congressmen sent these seeds by the mail sack full to be distributed—which, in reality, they never were—thus great quantities of seeds fell into the hands of a very few people. To eliminate this, I caused to be addressed one package of vegetable seeds to every person in my district who I thought might use such seeds, thus hoping to give them the widest distribution possible and save the waste.

These seeds were allotted to my district, and I felt that as the Representative of that district it was my bounden duty to see to it that my district got them and that they were as widely distributed as possible among those who could use them.

At the opening of Congress I submitted to my constituents a series of nonpartisan questions which would be before this Congress for consideration and asked them to give their opinions upon them, stating that there was no other way for me to secure exact information, for should I rely entirely upon the newspapers' presentation of public opinion I should sometimes go sadly astray of what the people really want. An editor in my district who is in the habit of giving me and his readers advice often and freely, but who is undoubtedly well paid, says:

> Tommy SCHALL is writing to his constituents for advice about running the Government. Among other things, he takes a slap at the newspapers. Really big men have found by experience that it doesn't pay politically to defame the newspaper. Tommy has this, along with a lot of other things, yet to learn.

I had no intent of defaming any newspaper. My object was and always shall be to arrive at the truth. I realize I have many things to learn, but I prefer to gather how I should vote directly from the people. I believe that this country belongs to them as well as to me and the editor, and their desire for its welfare is as keen as ours.

I have no quarrel with the newspapers and am always grateful for their support, and the fair treatment given me by a great number of them I highly appreciate. But if lack of belief that divinity doth hedge a newspaper bars you as a really great man, I admit the soft impeachment and with the same spirit advise the editor not "to fancy himself bestriding his narrow world like a great colossus while we poor petty public men must creep beneath his huge legs and peep round to find ourselves dishonorable graves."

Many of the newspapers of my district congratulated me upon this method of arriving at public opinion. I received 9,500 replies; one answer out of every four letters. These answers required 2-cent stamps, which fully returned to the Government the money for the franking of the original letters.

A great daily, the Minneapolis Journal, commented upon my referendum as follows:

> It relieves the Congressman from any necessity for independent thought or responsibility. All he has to do is vote as a majority of his constituents indicate. Whether or not they know anything about the subject in question is of no moment.
>
> Further, it makes certain that the careful Congressman will never be led off into any foolhardy attempt to rise above a purely local view of any question, no matter how big and broad that question may be.
>
> In the long run it is likely that the public will arrive at a different conception of the duties of a Congressman. There will be a demand for a man representative of his constituency in spirit, tendencies, and broad principles, a man who can think nationally. With that as a basis, he will be expected to avail himself of the greatly superior opportunities for obtaining information which his position affords.
>
> For if a Congressman is no better fitted to reach a conclusion as to how to vote on the ordinary matter coming up for consideration than the average man of his constituency with no special occasion or opportunity for studying the subject, his district had better make a change. What else is he there for?

The assumption of the Journal that the average man does not know what he wants and that only a few of the elect are capable should be strenuously refuted. How can a Congressman know the "spirit, tendencies, and broad principles of his constituency" better than to hear directly from them?

What will become of our boasted Government, of the people, for the people, and by the people when Congressmen tuned to the Journal's liking shall be in the saddle?

How will asking one's constituency their views on nonpartisan questions deprive a Congressman of all advantages set out in the above editorial? The Congressman's vision is surely not obscured by receiving the intelligent, divergent opinions from all parts of his district.

For a Congressman to follow the rules laid down by the Journal would be the height of conceit. I have never claimed that my mental capacity was more than ordinary, but I do not thereby admit that it is inferior to the men holding the same gauge of office. I have discovered as I have journeyed through life that the fellow who thinks he knows it all is very likely to make serious blunders. The men who have been of service to their country are the men of small conceit who have been willing to get the divergent opinions of all who have intelligent thoughts, and from all the divergent opinions centering upon them draw their conclusions as to what is the best thing to do.

I remember the story told of Abraham Lincoln when he sent his messenger to his Secretary of State, Seward, instructing Seward to do so and so. Seward replied to the messenger to go back to Lincoln and tell him that he, Lincoln, was a blank fool. The messenger reported to Lincoln, and it is said of Lincoln that he scratched his head and said, "Did Seward say that?" Upon receiving the reply that he did, he soliloquized, "Well, if Seward said that he must have some good reason for it." After considerable thought upon the matter he recalled his messenger and told him to go back to Seward and tell him that he had come to the conclusion that Seward was right.

The idea that because a man is chosen Congressman he thereby has a monopoly on the statesmanlike wisdom of that district! An election does not constitute an apotheosis.

The real apprehension, I fear, with the above opinion molder is that the people may come to be consulted as to how a Congressman should vote, instead of taking his information from their pages.

Again, the Journal editorially instructs the public as follows:

> We want something more than mere errand boys in both branches of the United States Congress. We want big-brained, patriotic men; men who think and vote nationally. The people are coming to judge Congressmen by the patriotism, the judgment, the statesmanship they show in handling national questions. Some districts send errand boys to Washington; others send broadgauge men, who see in their positions great opportunities to serve the American people and to preserve the American Republic. In these days of stress and danger the errand boy is becoming passé.

It ought not to be an argument against a Congressman that he is willing to listen to the intelligent opinion of his district, that he attends to his duties by visiting departments and answering inquiries as well as attending to his duties in the committee room and on the floor of the House.

On the 23d of May, when the Navy bill was up, I made a speech advocating adequate preparedness along the lines of education the Journal has been holding out to the public, believing it was better to err on the side of safety. The greatest daily newspaper of the Capital of our Nation gave me the leading editorial upon that speech and commented upon it as a remarkable speech. It was favorably commented upon editorially throughout the East. And yet the Journal never informed its readers that such a speech was made, although it was exactly on the lines they had been boosting for. The only difference between us was as to who should pay for it, but that was a question to be decided later. I maintain that we should help out a protection revenue fund by a tax in proportion to the income of the individuals and corporations whose property is so protected by such preparedness; and that a tax should be placed on the output of the manufacturer of munitions of war whose profits are running beyond comprehension on account of the European war, which war is the immediate cause of our present necessity for preparedness. Then, too, while I stand for adequate preparedness, just like the Journal, I do not stand for Uncle Sam to be held up by the armor-plate companies and munition companies and steel companies of this country in securing that necessary preparedness.

For instance, I do not think that Uncle Sam should have paid the armor-plate company $616 per ton for armor plate, while that same company sold that same armor plate and transported it across the ocean for $249.

Now, had I just stood for preparedness and stopped right there, I might have been sliding along easy under full sail as a man who had been in the wilderness for some time but had finally come to see the light.

But I broke my pick when I advocated that a tax be placed upon individual incomes and that corporations and manufacturers of munitions of war, steel companies, and so forth, should bear their part, and it was the height of heresy for me to vote for a Government-owned munition factory which the Journal designates as pork. Now, mind you, I sent out that referendum letter to my constituents December 7, 1915.

On January 1, 1916, the Journal published the following, which will show a later editorial of that paper to be without foundation:

WASHINGTON, *January 1.*

Congressman THOMAS D. SCHALL says he is getting a liberal education on public questions from his constituents. At the beginning of the session Mr. SCHALL sent out about 20,000 letters asking expressions of opinion on preparedness, foreign affairs, the Philippines, and other subjects that are likely to be brought before Congress.

"The answers have covered all the subjects on which I asked for opinions except rural credits and the proposed ship-purchase bill," said Mr. SCHALL.

"The advocates of preparedness are in a heavy majority, but few of my constituents go into details, indicating that the legislation should be dealt with by experts. Many people advocate military instruction in the higher grades of the public schools and in the colleges in order to fit the young men for military duty if called upon later in life. The proponents of an increased military force range from 'moderate' to double the present force.

"Navy increase is urged, but, as with the Army, it should be left to experts. Some want more dreadnaughts and others favor submarines, and a lot of them. Encouragement of the militia is advocated by a majority of writers.

"As to foreign questions, Germany and Austria and Great Britain and France should be held to international laws. Our attitude toward Mexico should be 'neighborly,' and we should not let go of the Philippines."

Mr. SCHALL would not permit the names of his constituents to be used, but he gave out extracts from some of the letters. One man said: "Support the Constitution, be honest, fear no one. Fight barbarism, and bury Bryan and his like very deep. That's all."

An official of the Minneapolis Federal reserve bank said the President was in position to judge all these matters better than others, and he believed the Chief Executive should be supported, whether he was a Democrat or a Republican.

A street railway official advocated increasing the Regular Army to 200,000, with military training outside the Army to put 1,000,000 men in the field.

One writer gave an interesting view of what European nations think of the United States. He traveled in Europe just before the outbreak of the war, and this is the way he sized up European sentiment:

"The French regard us with amused tolerance. England's attitude is one of disdainful indifference. Germany thinks of us as sand. We would, in the German opinion, make a respectable annex to the Kaiser's Empire, with the addition of the cement of German culture, thoroughness, and method."

Although not altogether correct or fully quoted, the above article gives a fair indication of the general interest and intelligent character of the answers.

On May 13, 1916, the Journal editorially informs its readers:

Mr. THOMAS D. SCHALL voted anti-United States on the McLemore resolution, then polled his district. Finding it was for preparedness, he promptly reversed his former action and voted for a larger Army.

The inaccuracy of part of the above statement can be easily shown by reference to the date of the January 1 Journal article, which shows that I had the information that my district was for preparedness at least not later than January 1, else how could they have gotten it from me, which they purport that I secured after March 7, the date of the McLemore vote.

FACTS VERSUS FICTION ON THE WARNING RESOLUTION.

The inaccuracy of the anti-United States talk was well known to the newspaper men at Washington or to anyone who had access to the facts of the situation as it was. The inaccuracy of the issue sent out broadcast all over by the greatest newspaper syndicate in this country was aided and abetted by the Wall Street interests, headed by Morgan, seeking to maintain or increase the price of war stocks. A war with Germany, tied up as she was on the ocean and both hands full on the land, could in nowise threaten the big business of this country. In fact, it would be a desired situation from the standpoint of the munition traffickers, which includes in one way or another many of the great corporations of this country. For Germany was in position to inflict little or no harm upon us; but a declaration of war with her would at once precipitate a feverish military preparedness which would in no way interfere with the sale of goods to the allies and would increase the market by the addition of the United States. For the great moneyed interests of this country there was nothing to lose by war with Germany, since she could not strike back and could not buy of us, and, from the dollar standpoint, there was everything to gain. Therefore, as soon as the former attitude of the President was known through his note written by his Secretary of State to England on the 18th of January, there was concentrated a great part of the money power of this country, aided and abetted by a great press syndicate, against the President's attitude. And there was instituted a tremendous newspaper propaganda throughout this country to bring about once more the change of his mind. That they succeeded everybody knows, for the President came out finally in contradiction to the authorized attitude of his Secretary of State. Now, the question arose as to how he could pass the buck. The Democratic Congressmen and Senators, having read the attitude of the President through the letter of his Secretary, a chosen member of the official family, like good partisans and desirous of keeping the thought of the party a unit, began to line up, as they thought, with the administration. As the different newspapers, friends, and constituents inquired of them concerning the situation, they unqualifiedly indorsed the present, as they supposed, attitude of the President.

Thus, by the time the President got ready to change his mind the whole Democratic Party had in one way or another succeeded in putting themselves on record throughout their respective districts on what they supposed was the President's position.

But, lo and behold, they woke up one morning to find that the official communication of the Secretary of State, approved by the President at the time of its writing, was not at all his idea, but that his attitude was the opposite. Thus arose the jangle, which has been so well advertised by the press, between the Democratic part of the legislative bodies and the President. And it therefore became necessary to have the difficulty settled.

And so, after the situation had been sufficiently scrambled in the newspapers, the President boldly came out and demanded in the newspapers that Congress have a thorough and fair discussion of the situation and either indorse his attitude or not. This to the casual reader of the press, who could not and did not know of the tumult behind the screen, seemed like a reasonable proposition. But, owing to the opinions given out throughout the country by the Democratic Senators and Congressmen who have some regard for their reputation for stability of opinion and who could not so easily execute mental gymnastics, there arose indignant murmurs, which grew louder and louder in the Democratic cloakrooms of the Senate and the House, at the President's seeking to wash his hands in their political blood.

But the press kept on stirring and the President kept on insisting upon a full and fair discussion of the question of warning. Both the Democratic majority in the House and in the Senate sought to dodge in every way they could, but the press was back of the President and kept the tom-toms going. It was freely predicted that the President, according to his usual custom, which, by the way, was a precedent set by himself, would come before a joint session of the Senate and the House and explain the situation and demand that a fair, thorough, full, and free discussion be had. Instead he adopted an underground method, which carried no information with it, of conveying his desire to the Senate of a fair and thorough discussion before that body. And the Senate was thus forced reluctantly to take up the warning resolution. This resolution was originally of considerable length, but before it went to the Senate for a vote, which under the rules of the Senate seems to be permissible but which would not be in the House, it was reduced by its author to the statement that "the sinking of an

armed merchantman with loss of American lives was a cause for war."

This was the exact last position assumed by the President. When the smoke cleared away Minnesota found her senior Member voting to table it, and her junior Member voting against tabling it. Therefore, from the record of the Senate we find the senior Member in voting to table, voting against the President's attitude, while the junior Member, who has been so loudly heralded through the press as a traitor, was voting, according to the record, with the attitude of the President. And the gentleman who introduced the resolution and who voted exactly as did the senior Member of Minnesota was also heralded through the newspapers as something undesirable. Even the President was puzzled till the press again came to his aid with a report that the Senate had confirmed his position.

The majority of the Democratic Party, it was claimed by the press, supposed the resolution contained the little word "not," which it did not contain. This makes just the difference between "a cause for war" and "not a cause for war." The Journal announced that the senior Member voted to stand with the President and that the 11 other Representatives had voted against the President and the country. Why the Minneapolis Journal assumed that the intention of all the other Minnesota Representatives was against the President and the country, the fact of the record and the entire situation surrounding the question will not explain. This is the record of the Senate. You can figure it out any way you want.

The McLemore resolution, as it was presented in the House, you all know, differed in its effect from the Senate resolution. It was a long, cumbersome, crudely worded, impossible instrument. It was the least promising, the least possible, least considered of the many resolutions that blossomed out during the turmoil between the Democrats of Congress and their President. It had been tabled by the committee along with many others more worthy to be considered. The committee had not the least intention of putting this question before the House, believing the question was a diplomatic one for the President. But, as I have said before, the Democrats had gone on record in their eagerness to stand back of the President in what they thought to be his attitude. And the President either had to put them in the wrong or be in the wrong himself. So the Democratic majority began to cast about for some means of appearing to comply with the seeming demand of the President in order to allay the troubled waters, to apparently do something to satisfy the public, but in reality, to do nothing and thereby save their own and the President's political skins.

Both "would not play false and yet would wrongly win." So the committee picked out the McLemore resolution, which, mark you, was already dead by a vote of the committee, and which they were sure, owing to its construction, could not, without amendments, muster a corporal's guard upon the floor of the House, and brought it in under this rule:

*Resolved*, That immediately upon the adoption of this resolution the House shall proceed to consideration of H. Res. 147; that there shall be four hours of general debate, one-half to be controlled by the gentleman from Virginia [Mr. FLOOD] and one-half by the gentleman from Wisconsin [Mr. COOPER]; that at the conclusion of said general debate the said resolution shall be considered under the general rules of the House.

Under the general rules of the House a motion to table was in order by anyone immediately at the end of the discussion, and thus any amendment or debate upon the merit would be shut off.

Their gag of the House was complete, and by this ruse they succeeded in not having a fair and thorough discussion upon the merits, as the President had so loudly claimed through the newspapers he desired. And the people were buncoed, for in reality the whole fiasco was an arrangement to vote not to vote upon anything, and places the Congressmen very much in the position of the witness who, after being admonished by the court and lawyers to answer all questions yes or no, said that there were some questions that could not be answered that way, and proved it by asking the court if he still beat his wife.

I realize that I took much the same position as the Kansas dog which, when he saw a cyclone coming, got up on his hind legs and began to bark at it. The cyclone hit him and turned him inside out. When he had straightened himself out and partly recovered his poise, he soliloquized thus: "How vain it is to open your mouth in the face of a cyclone!"

I am not pro-German; I am not pro-English; I am pro-American," and I try to be "pro common horse sense." Perhaps this last "pro" may be questioned, for it is commonly reiterated that if you want to stay in Congress you should be subservient to the powers that be. But I can not believe that our country has come to that, and I will have to be shown. Ignored by the aforesaid great daily, without political organization, without money, without any of the so-called necessary perquisites, and handicapped as I am, the plain people of the tenth district of Minnesota believe in me. And that is one of the reasons I voted against tabling the McLemore resolution, for I refuse to become a part of a lie to throw dust in the eyes of the people.

My great-grandfathers fought to establish this country; my father fought to preserve its unity; and I am ready to give of myself at any time whatever my country can use.

What wonder that public men grow weary of being beaten at the cart's tail and flayed in the public eye for standing for the "welfare of the people of the United States"?

How futile the attempt of mere man in public office to keep from being misrepresented, misquoted, misjudged, misunderstood, when the editor of a great daily newspaper, thoroughly imbued with the idea of electing this man or defeating that one, with a few careless strokes of the pen can put him on the defensive, even among his friends, and perhaps utterly ruin him. Every day of the year hundreds of thousands of copies of these newspapers are projected into the public mind for consumption on a newspaper privilege furnished them by the Government amounting almost to a frank. The contagious misinformation thereby conceived is continued in its work of destruction from mouth to ear. How tiny the trickling of the franking privilege, which is costly, slow, and fraught with much labor and which can be only used occasionally, when compared with the great Niagara of the daily press. With what flaunt of patriotism they have condemned public men who have had the courage to oppose errors of the administration which they now themselves editorially attack. But a moment ago they were acclaiming:

Oh excellent young judge!
A Daniel come to judgment!

It makes a difference whose ox is gored, and they are awakening to the fact that all this false newspaper blare of "standing by the President" was a Democratic horse of Troy, which the confiding Republican newspapers hauled within their walls with loud pæans of patriotism. That they are becoming aware that it is high time they should "fear the Greeks bearing gifts" the following editorial from the Minneapolis Journal of July 24 will signify:

IS CRITICISM DISLOYAL?

The effort of the Democratic press to brand as disloyal any criticism, however well founded, of President Wilson's mishandling of foreign affairs furnishes a striking example of a perverted conception of both loyalty and logic. Reduced to simple terms, the argument of these papers runs thus:

"Our affairs have been handled in a blundering, vacillating, and uncertain fashion, both as to Europe and as to Mexico. As a result of this wobbling course our relations with various European countries are unsatisfactory, and the situation with Mexico is fraught with danger. Nevertheless, because of the stress of our various foreign relations, there must be no criticism of the blundering, vacillating course which has produced this situation. Out of loyalty to our country we must refrain from pointing out the serious errors of the administration which have been in part responsible for our present difficulties. Then, in the absence of just criticism, the President may be reelected and the country suffer from four years more of the same trouble-making ineptitude."

That kind of an argument may appeal to a certain type of mind. The bulk of the American people, however, are infinitely more interested in the welfare of the United States than they are in the welfare of the present administration. They are defining loyalty in the broad terms of the good of the country. And the good of the country to-day demands just the proper criticism of the administration at many points, and in November the transfer of the management of our foreign affairs to experienced, sagacious, and far-seeing men.

## Transportation of National Guardsmen to the Mexican Border.

### EXTENSION OF REMARKS
OF
### HON. CHARLES BENNETT SMITH,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 29, 1916.*

Mr. SMITH of New York. Mr. Speaker, I am unable to grasp the mental attitude of the gentleman from Texas [Mr. SLAYDEN] in treating with levity the experiences of National Guardsmen in traveling from their native States to the Mexican border. I am also unable to agree with him in his conclusion that the railroads did the best they could in furnishing facilities for moving the troops to the border.

It should not be forgotten that most of the men who went to Texas joined the State militia with little or no expectation of being called on to shoulder arms against a foreign foe. They

had not been trained in the hardships of war. Until a few weeks before they started for the Mexican boundary the two Houses of Congress were in dispute as to whether the National Guard would constitute the reserve army, or whether another plan would be adopted for compulsory or voluntary enlistment for a reserve army.

The law mustering the militia into the Federal service was not actually in force before the men composing it were called to the colors. They were unprepared in military training. They were unprepared physically. They were unprepared in the sense of being ready to leave profitable vocations or providing adequately for their families.

If ever men were entitled to have the best treatment the Government could give them the National Guardsmen were emphatically entitled to it. Did they get it? Assuredly they did not. The same Army officers who declared that the militia would have to endure long training before its membership would be ready for anything resembling war put the guardsmen on the same footing as the Regulars without a moment's hesitation or delay. In fact they were given far less consideration than the Regulars, because the standing Army moves by routine and little difficulty is experienced in handling it.

To praise the transportation facilities in carrying the troops to Texas is to burlesque the truth. The railroads would not dare use the coaches in ordinary traffic that were put into service in transporting the guardsmen to the border. The equipment was a disgrace to the railroads of the country and a scandal to the Nation.

I have no desire to complain or criticize, but I can not allow the statements of the gentleman from Texas [Mr. SLAYDEN] to go into the RECORD without expressing in this brief and incomplete way my own views on the subject.

---

## Speech of Hon. Charles Evans Hughes Accepting the Republican Nomination for President of the United States.

### EXTENSION OF REMARKS

OF

### HON. JAMES R. MANN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 2, 1916.*

Mr. MANN. Mr. Speaker, under the leave granted by the House I herewith insert in the RECORD the speech of Senator HARDING, chairman of the committee to notify Hon. Charles Evans Hughes of his nomination by the Republican Party as their candidate for President, and also the speech of Mr. Hughes delivered in reply to the notification. The ceremonies attendant upon the notification took place in Carnegie Hall, New York City, July 31, 1916, and were attended by many prominent Republicans from throughout the country.

The speeches are as follows:

SENATOR HARDING'S SPEECH OF NOTIFICATION.

Senator HARDING said:

Mr. Hughes, the committee here assembled, representing all the United States and Territories, chosen by the Republican national convention, which met in Chicago on last June 7, is directed by that convention formally to notify you of its action in selecting you as its nominee for the Presidency of the Republic.

Speaking for the committee, it is my pleasure to say directly what was conveyed to you by telegraph while the convention was yet in session—that you are the unanimous choice of the Republican national convention for the party standard bearer.

That convention uttered the principles of a confident, determined, reunited, and enthusiastic Republican Party, which turns to you, in highest respect and trust, as a nominee best typifying the party's purposes and the people's desires.

Inasmuch as the unusual circumstances inspired an informal notice at the time of the convention's action and you then made an informal acceptance of the call to patriotic duty, which won the plaudits of our people, I shall not refer in detail to the action of the convention or the declared principles to which the Republican Party is committed. But it is fitting that I should speak the congratulations of this committee on your most extraordinary nomination.

It has no parallel in the history of the Republican Party. As the whole people have approvingly witnessed, you have been chosen for leadership by a convention which comprised the best thought, the highest intention, and deepest consecration of a great and historic party, when you were not only not an aspirant, but discouraged all endeavors in your behalf.

Notwithstanding your holding aloof from all conference and participation, that unfailing understanding which directs popular sentiment to highest victory called you to the service of the party and the Nation. Your record of public service, your well-known and courageous views on public questions when in executive position, your abiding devotion to Republicanism, your possession of a confidence which has united all believers in Republican policies under our party banner, your unalterable and abiding Americanism, your high personal character and well-known capacity—all these have fixed you in the American mind as the best exponent of Republican principles and the wisest leader to restore American prestige and efficient government.

We bring you now the commission to that leadership. We bring it in full confidence that the people will gladly acclaim the Republican restoration under your trusted leadership. We bring it in the highest appreciation of that peace of right and justice which your unwavering Americanism will hold secure rather than endanger. We bring it in the strong belief that American material good fortune under Republican industrial preparedness will be the glad reflex of our own peace and the world's peace and be held permanent under Republican protection. We bring it in firm conviction that you, sir, will hold that platform promises constitute a sacred party covenant, and the expressed will of the people at the polls must find response in capable and efficient administration.

Aye, sir, we bring it believing you will add to our self-respect, confidence, and good fortune at home and to that respect and good opinion abroad which meets our higher American aspirations.

MR. HUGHES'S SPEECH OF ACCEPTANCE.

Mr. Hughes said:

Senator HARDING, members of the notification committee, and fellow citizens, this occasion is more than a mere ceremony of notification. We are not here to indulge in formal expressions. We come to state in a plain and direct manner our faith, our purpose, and our pledge. This representative gathering is a happy augury. It means the strength of reunion. It means that the party of Lincoln is restored, alert, effective. It means the unity of a common perception of paramount national needs. It means that we are neither deceived nor benumbed by abnormal conditions.

We know that we are in a critical period, perhaps more critical than any period since the Civil War. We need a dominant sense of national unity; the exercise of our best constructive powers; the vigor and resourcefulness of a quickened America. We desire that the Republican Party as a great liberal party shall be the agency of national achievement, the organ of the effective expression of dominant Americanism. What do I mean by that?

THE EXPRESSION OF AMERICANISM.

I mean America conscious of power, awake to obligation, erect in self-respect, prepared for every emergency, devoted to the ideals of peace, instinct with the spirit of human brotherhood, safeguarding both individual opportunity and the public interest, maintaining a well-ordered constitutional system adapted to local self-government without the sacrifice of essential national authority, appreciating the necessity of stability, expert knowledge, and thorough organization as the indispensable conditions of security and progress; a country loved by its citizens with a patriotic fervor permitting no division in their allegiance and no rivals in their affection—I mean America first and America efficient. It is in this spirit that I respond to your summons.

Our foreign relations have assumed grave importance in the last three years. The conduct of diplomatic intercourse is in the keeping of the Executive. It rests chiefly with him whether we shall show competence or incompetence; whether the national honor shall be maintained; whether our prestige and influence shall be lowered or advanced. What is the record of the administration? The first duty of the Executive was to command the respect of the world by the personnel of our State Department and our representation abroad. No party exigency could excuse the nonperformance of this obvious obligation. Still, after making every allowance for certain commendable appointments, it is apparent that this obligation was not performed.

WEAKNESS AND INEXPERTNESS.

At the very beginning of the present administration, where in the direction of diplomatic intercourse there should have been conspicuous strength and expertness, we had weakness and inexpertness. Instead of assuring respect we invited distrust of our competence and speculation as to our capacity for firmness and decision, thus entailing many difficulties which otherwise

easily could have been escaped. Then in numerous instances, notably in Latin America, where such a course was particularly reprehensible, and where we desire to encourage the most friendly relations, men of long diplomatic experience whose knowledge and training were of especial value to the country were retired from the service apparently for no other reason than to meet partisan demands in the appointment of inexperienced persons.

Where, as in Santo Domingo, we had assumed an important special trust in the interest of its people, that trust was shockingly betrayed in order to satisfy "deserving Democrats." The record showing the administration's disregard of its responsibilities with respect to our representation in diplomacy is an open book, and the specifications may easily be had. It is a record revealing professions belied. It is a dismal record to those believing in Americanism. Take, for example, the withdrawal of Ambassador Herrick from France. There he stood, in the midst of alarms, the very embodiment of courage, of poise, of executive capacity, universally trusted and beloved. No diplomat ever won more completely the affections of a foreign people; and there was no better fortune for this country than to have at the capital of any one of the belligerent nations a representative thus esteemed.

WHAT REMOVING HERRICK MEANT.

Yet the administration permitted itself to supersede him. The point is not that the man was Ambassador Herrick, or that the nation was France, but that we invited the attention of the world to the inexcusable yielding of national interest to partisan expediency. It was a lamentable sacrifice of international repute. If we would have the esteem of foreign nations, we must deserve it. We must show our regard for special knowledge and experience. I propose that we shall make the agencies of our diplomatic intercourse in every nation worthy of the American name.

The dealings of the administration with Mexico constitute a confused chapter of blunders. We have not helped Mexico. She lies prostrate, impoverished, famine stricken, overwhelmed with the woes and outrages of internecine strife, the helpless victim of a condition of anarchy which the course of the administration only served to promote. For ourselves, we have witnessed the murder of our citizens and the destruction of their property. We have made enemies, not friends. Instead of commanding respect and deserving good will by sincerity, firmness, and consistency, we provoked misapprehension and deep resentment.

In the light of the conduct of the administration no one could understand its professions. Decrying interference, we interfered most exasperatingly. We have not even kept out of actual conflict, and the soil of Mexico is stained with the blood of our soldiers. We have resorted to physical invasion, only to retire without gaining the professed object. It is a record which can not be examined without a profound sense of humiliation.

THE CASE OF HUERTA.

When the administration came into power Huerta was exercising authority as Provisional President of Mexico. He was certainly in fact the head of the Government of Mexico. Whether or not he should be recognized was a question to be determined in the exercise of a sound discretion, but according to correct principles. The President was entitled to be assured that there was at least a de facto government; that international obligations would be performed; that the lives and property of American citizens would have proper protection. To attempt, however, to control the domestic concerns of Mexico was simply intervention, not less so because disclaimed.

The height of folly was to have a vacillating and ineffective intervention, which could only evoke bitterness and contempt, which would fail to pacify the country and to assure peace and prosperity under a stable government. If crimes were committed, we do not palliate them. We make no defense of Huerta. But the administration had nothing to do with the moral character of Huerta, if in fact he represented the Government of Mexico. We shall never worthily prosecute our unselfish aims or serve humanity by wrong headedness. So far as the character of Huerta is concerned, the hollowness of the pretensions on this score is revealed by the administration's subsequent patronage of Villa—whose qualifications as an assassin are indisputable—whom apparently the administration was ready to recognize had he achieved his end and fulfilled what then seemed to be its hope.

JOHN LIND'S MISSION.

The question is not as to the nonrecognition of Huerta. The administration did not content itself with refusing to recognize Huerta, who was recognized by Great Britain, Germany, France, Russia, Spain, and Japan. The administration undertook to destroy Huerta, to control Mexican politics, even to deny Huerta the right to be a candidate for the office of president at the election the administration demanded. With what bewilderment must the Mexicans have regarded our assertion of their right to manage their own affairs. In the summer of 1913, John Lind was dispatched to the City of Mexico as the President's "personal spokesman and representative" to the unrecognized Huerta, in order to demand that the latter eliminate himself. It was an unjustifiable mission, most offensive to a sensitive people. John Lind lingered irritatingly. The administration continued to direct its efforts at the destruction of the only government Mexico had.

In the spring of 1914 occurred the capture of Vera Cruz. Men from one of our ships had been arrested at Tampico and had been discharged with an apology. But our admiral demanded a salute, which was refused. Thereupon the President went to Congress, asking authority to use the armed forces of the United States. Without waiting for the passage of the resolution, Vera Cruz was seized. It appeared that a shipload of ammunition for Huerta was about to enter that port. There was a natural opposition to this invasion, and a battle occurred, in which 19 Americans and over a hundred Mexicans were killed. This, of course, was war. Our dead soldiers were praised for dying like heroes in a war of service. Later we retired from Vera Cruz, giving up this noble warfare.

DID NOT GET THE SALUTE.

We had not obtained the salute which was demanded. We had not obtained reparation for affronts. The ship with ammunition which could not land at Vera Cruz had soon landed at another port, and its cargo was delivered to Huerta without interference. Recently the naked truth was admitted by a Cabinet officer. We are now informed that "we did not go to Vera Cruz to force Huerta to salute the flag." We are told that we went there "to show Mexico that we were in earnest in our demand that Huerta must go." That is, we seized Vera Cruz to depose Huerta. The question of the salute was a mere pretext.

Meanwhile the administration utterly failed to perform its obvious duty to secure protection for the lives and property of our citizens. It is most unworthy to slur those who have investments in Mexico in order to escape a condemnation for the nonperformance of this duty. There can be no such escape, for we have no debate, and there can be no debate, as to the existence of this duty on the part of our Government. Let me quote the words of the Democratic platform of 1912:

"The constitutional rights of American citizens should protect them on our borders and go with them throughout the world, and every American citizen residing or having property in any foreign country is entitled to and must be given the full protection of the United States Government, both for himself and his property."

The bitter hatred aroused by the course of the administration multiplied outrages, while our failure to afford protection to our citizens evoked the scorn and contempt of Mexicans. Consider the ignominious incident at Tampico in connection with the capture of Vera Cruz. In the midst of the greatest danger to the hundreds of Americans congregated at Tampico our ships which were in the harbor were withdrawn and our citizens were saved only by the intervention of German officers and were taken away by British and German ships. The official excuse of the Secretary of the Navy is an extraordinary commentary.

NAVAL COMMANDER'S DILEMMA.

Our ships, it seems, had been ordered to Vera Cruz, but as it appeared that they were not needed the order was rescinded. Then, we are told, our admiral was faced with this remarkable dilemma: If he attempted to go up the river at Tampico and take our citizens on board, the word of "aggressive action," as the Secretary called it, "would have spread to the surrounding country," and it was "almost certain that reprisals on American citizens would have followed and lives would have been lost." We had so incensed the Mexicans that we could not rescue our own citizens at Tampico, save at the risk of the murder of others. We must take Vera Cruz to get Huerta out of office and trust to other nations to get our own citizens out of peril. What a travesty of international policy.

Destroying the government of Huerta, we left Mexico to the ravages of revolution. I shall not attempt to narrate the sickening story of the barbarities committed, of the carnival of murder and lust. We were then told that Mexico was entitled to spill as much blood as she pleased to settle her affairs. The administration vacillated with respect to the embargo on the export of arms and munitions to Mexico. Under the resolution of 1912 President Taft had laid such an embargo. In August, 1913, President Wilson stated that he deemed it his duty to see

that neither side to the struggle in Mexico should receive any assistance from this side of the border, and that the export of all arms and munitions to Mexico would be forbidden.

But in February, 1914, the embargo was lifted. In April, 1914, the embargo was restored. In May, 1914, it was explained that the embargo did not apply to American shipments through Mexican ports, and ammunition for Carranza was subsequently landed at Tampico. In September, 1914, the embargo was lifted on exports across the border; thereupon military supplies reached both Villa and Carranza. In October, 1915, an embargo was declared on all exports of arms except to the adherents of Carranza. There was an utter absence of consistent policy.

CARRANZA'S RECOGNITION.

For a time we bestowed friendship on Villa. Ultimately we recognized Carranza, not on the ground that he had a constitutional government, but that it was a de facto government. The complete failure to secure protection to American citizens is shown conclusively in the note of the Secretary of State of June 20, 1916, in which he thus described the conditions that have obtained during the last three years:

For three years the Mexican Republic has been torn with civil strife; the lives of Americans and other aliens have been sacrificed; vast properties developed by American capital and enterprise have been destroyed or rendered nonproductive; bandits have been permitted to roam at will through the territory contiguous to the United States and to seize, without punishment or without effective attempt at punishment, the property of Americans, while the lives of citizens of the United States who ventured to remain in Mexican territory or to return there to protect their interests have been taken, in some cases barbarously taken, and the murderers have neither been apprehended nor brought to justice. * * * It would be tedious to recount instance after instance, outrage after outrage, atrocity after atrocity, to illustrate the true nature and extent of the widespread conditions of lawlessness and violence which have prevailed.

The Santa Ysabel massacre, the raid at Columbus, the bloodshed at Carrizal, are fresh in your minds. After the Columbus raid we started a "punitive expedition." We sent a thin line of troops hundreds of miles into Mexico, between two lines of railway, neither of which we were allowed to use and which we did not feel at liberty to seize. We were refused permission to enter the towns. Though thus restricted, the enterprise was still regarded by the Mexicans as a menace. Our troops faced hostile forces, and it is not remarkable that our men fell at Carrizal. What other result could be expected?

THE PURPOSE UNACCOMPLISHED.

We were virtually ordered to withdraw, and without accomplishing our purpose we have been withdrawing and we are now endeavoring to safeguard our own territory. The entire National Guard has been ordered out, and many thousands of our citizens have been taken from their peaceful employment and hurried to the Mexican border. The administration was to seize and punish Villa for his outrage on our soil. It has not punished anyone; we went in only to retire; future movements are apparently to be determined by a joint commission.

The Nation has no policy of aggression toward Mexico. We have no desire for any part of her territory. We wish her to have peace, stability, and prosperity. We should be ready to aid her in binding up her wounds, in relieving her from starvation and distress, and in giving her in every practicable way the benefits of our disinterested friendship. The conduct of this administration has created difficulties which we shall have to surmount. We shall have to overcome the antipathy needlessly created by that conduct and to develop genuine respect and confidence. We shall have to adopt a new policy, a policy of firmness and consistency, through which alone we can promote an enduring friendship.

DEMANDS PROTECTION OF CITIZENS.

We demand from Mexico the protection of the lives and property of our citizens and the security of our border from depredations. Much will be gained if Mexico is convinced that we contemplate no meddlesome interference with what does not concern us, but that we propose to insist in a firm and candid manner upon the performance of international obligations. To a stable government, appropriately discharging its international duties, we shall give ungrudging support. A short period of firm, consistent, and friendly dealing will accomplish more than many years of vacillation.

In this land of composite population, drawing its strength from every race, the national security demands that there shall be no paltering with American rights. The greater the danger of divisive influences, the greater is the necessity for the unifying force of a just, strong, and patriotic position. We countenance no covert policies, no intrigues, no secret schemes. We are unreservedly, devotedly, whole-heartedly, for the United States. That is the rallying point for all Americans. That is my position. I stand for the unflinching maintenance of all American rights on land and sea.

We have had a clear and definite mission as a great neutral Nation. It was for us to maintain the integrity of international law; to vindicate our rights as neutrals; to protect the lives of our citizens, their property, and trade from wrongful acts. Putting aside any question as to the highest possibilities of moral leadership in the maintenance and vindication of the law of nations in connection with the European war, at least we were entitled to the safeguarding of American rights. But this has not been secured.

SERIES OF DIPLOMATIC NOTES.

We have had brave words in a series of notes, but, despite our protests, the lives of Americans have been destroyed. What does it avail to use some of the strongest words known to diplomacy if ambassadors can receive the impression that the words are not to be taken seriously? It is not words, but the strength and resolution behind the words that count.

The chief function of diplomacy is prevention, but in this our diplomacy failed, doubtless because of its impaired credit and the manifest lack of disposition to back words with action. Had this Government, by the use of both informal and formal diplomatic opportunities, left no doubt that when we said "strict accountability" we meant precisely what we said, and that we should unhesitatingly vindicate that position, I am confident that there would have been no destruction of American lives by the sinking of the *Lusitania*. There we had ample notice; in fact, published notice. Furthermore, we knew the situation, and we did not require specific notice. Instead of whittling away our formal statements by equivocal conversations, we needed the straight, direct, and decisive representations which every diplomat and foreign office would understand. I believe that in this way we should have been spared the repeated assaults on American lives. Moreover, a firm American policy would have been strongly supported by our people, and the opportunities for the development of bitter feeling would have been vastly reduced.

It is a great mistake to say that resoluteness in protecting American rights would have led to war. Rather, in that course lay the best assurance of peace. Weakness and indecision in the maintenance of known rights are always sources of grave danger; they forfeit respect and invite serious wrongs, which in turn create an uncontrollable popular resentment. That is not the path of national security.

THE MAINTENANCE OF RIGHTS.

Not only have we a host of resources short of war by which to enforce our just demands, but we shall never promote our peace by being stronger in words than in deeds. We should not have found it difficult to maintain peace, but we should have maintained peace with honor. During this critical period the only danger of war has lain in the weak course of the administration.

I do not put life and property on the same footing, but the administration has not only been remiss with respect to the protection of American lives; it has been remiss with respect to the protection of American property and American commerce. It has been too much disposed to be content with leisurely discussion. I can not now undertake to review the course of events, but it is entirely clear that we failed to use the resources at our command to prevent injurious action, and that we suffered in consequence. We have no ulterior purposes, and the administration should have known how to secure the entire protection of every legitimate American interest and the prompt recognition of our just demands as a neutral Nation.

We denounce all plots and conspiracies in the interest of any foreign nation. Utterly intolerable is the use of our soil for alien intrigues. Every American must unreservedly condemn them and support every effort for their suppression. But here, also, prompt, vigorous, and adequate measures on the part of the administration were needed. There should have been no hesitation, no notion that it was wise and politic to delay. Such an abuse of our territory demanded immediate and thoroughgoing action. As soon as the administration had notice of plots and conspiracies it was its duty to stop them. It was not lacking in resources. Its responsibility for their continuance can not be escaped by the condemnation of others.

We are a peace-loving people, but we live in a world of arms. We have no thought of aggression, and we desire to pursue our democratic ideals without the wastes of strife. So devoted are we to these ideals, so intent upon our normal development, that I do not believe that there is the slightest danger of militarism in this country. Adequate preparedness is not militarism. It is the essential assurance of security; it is a necessary safeguard of peace.

SHOCKINGLY UNPREPARED.

It is apparent that we are shockingly unprepared. There is no room for controversy on this point since the object lesson on

the Mexican border. All our available Regular troops—less, I believe, than 40,000—are there or in Mexico, and as these have been deemed insufficient the entire National Guard has been ordered out; that is, we are summoning practically all our movable military forces in order to prevent bandit incursions. In view of the warnings of the last three years, it is inexcusable that we should find ourselves in this plight. For our faithful guardsmen, who with a fine patriotism responded to this call and are bearing this burden, I have nothing but praise. But I think it little short of absurd that we should be compelled to call men from their shops, their factories, their offices, and their professions for such a purpose.

This, however, is not all. The units of the National Guard were at peace strength, which was only about one-half the required strength. It was necessary to bring in recruits, for the most part raw and untrained. Only a small percentage of the regiments recruited up to war strength will have had even a year's training in the National Guard, which at the maximum means 100 hours of military drill, and, on the average, means much less.

Take the Eastern Department as an illustration. The States in this department contain about 72 per cent of the entire Organized Militia of the country. I am informed by competent authority that the quota of militia from this department, recently summoned with the units raised to war strength as required would amount to about 131,000 men; that in response to this call there are now en route to or on the border about 54,000 men, and in camp in their respective States about 28,000 men; and thus, after what has already been accomplished, there still remain to be supplied in recruits about 48,000 men.

UNTRAINED MEN CALLED OUT.

Men fresh from their peaceful employments and physically unprepared have been hurried to the border for actual service. They were without proper equipment; without necessary supplies; suitable conditions of transportation were not provided. Men with dependent families were sent, and conditions which should have been well known were discovered after the event. And yet the exigency, comparatively speaking, was not a very grave one. It involved nothing that could not readily have been foreseen during the last three years of disturbance and required only a modest talent for organization. That this administration while pursuing its course in Mexico should have permitted such conditions to exist is almost incredible.

In the demand for reasonable preparedness the administration has followed, not led. Those who demanded more adequate forces were first described as "nervous and excited." Only about a year and a half ago we were told that the question of preparedness was not a pressing one; that the country had been misinformed. Later, under the pressure of other leadership, this attitude was changed. The administration, it was said, had "learned something," and it made a belated demand for an increased Army. Even then the demand was not prosecuted consistently and the pressure exerted on Congress with respect to other administrative measures was notably absent. The President addressed Congress but little over six months ago, presenting the plans of the War Department, and Congress was formally urged to sanction these plans as "the essential first steps."

They contemplated an increase of the standing force of the Regular Army from its then strength of 5,023 officers and 102,985 enlisted men to a strength of 7,136 officers and 134,707 enlisted men, or 141,843 all told. It was said that these additions were "necessary to render the Army adequate for its present duties." Further, it was proposed that the Army should be supplemented by a force of 400,000 disciplined citizens raised in increments of 133,000 a year through a period of three years." At least so much "by way of preparation for defense" seemed to the President to be "absolutely imperative now." He said, "We can not do less."

ARMY ORGANIZATION BILL.

But within two months this program was abandoned and the able Secretary of War, who had devoted himself persistently to this important question, felt so keenly the change in policy that he resigned from the Cabinet. Now, the Army organization bill provides for an Army on paper of 178,000, but in fact it provides for only 105,000 enlisted men for the line of the Regular Army for the fiscal year ending June 30, 1917, and I am informed that for the next fiscal year there will be an increase of only 15,000. The plan for the supplemental Federal Army completely under Federal control was given up.

We are told that the defects revealed by the present mobilization are due to the "system." But it was precisely such plain defects that under the constant warnings of recent years, with the whole world intent on military concerns, should have been studied and rectified. The administration has failed to discharge its responsibilities. Apparently it is now seeking to meet political exigencies by its naval program; but it has imposed upon the country an incompetent naval administration.

We demand adequate national defense, adequate protection on both our western and eastern coasts. We demand thoroughness and efficiency in both arms of the service. It seems to be plain that our Regular Army is too small. We are too great a country to require of our citizens who are engaged in peaceful vocation the sort of military service to which they are now called. As well insist that our citizens in this metropolis be summoned to put out fires and police the streets. We do not count it inconsistent with our liberties or with our democratic ideals to have an adequate police force. With a population of nearly 100,000,000 we need to be surer of ourselves than to become alarmed at the prospect of having a Regular Army which can reasonably protect our border and perform such other military service as may be required in the absence of a grave emergency. I believe, further, that there should be not only a reasonable increase in the Regular Army, but that the first citizen reserve subject to call should be enlisted as a Federal Army and trained under Federal authority.

NATION WANTS MODERN METHODS.

The country demands that our military and naval programs shall be carried out in a businesslike manner under the most competent administrative heads; that we shall have an up-to-date preparation; that the moneys appropriated shall be properly expended. We should also have careful plans for mobilizing our industrial resources; for promoting research and utilizing the investigations of science. And a policy of adequate preparedness must constantly have in view the necessity of conserving our fundamental human interests; of promoting the physical well-being of our population, as well as education and training; of developing to the utmost our economic strength and independence.

It must be based upon a profound sense of our unity and democratic obligation. It must not mean the abandonment of other essential governmental work, but that we shall have in both efficiency and in neither waste or extravagance. We should also be solicitous, by wise prevision and conference, to remove so far as possible the causes of irritation which may in any degree threaten friendly relations. In our proposals there is, I repeat, no militarism. There is simple insistence upon common sense in providing reasonable measures of security and avoiding the perils of neglect. We must have the strength of self-respect; a strength which contains no threat, but assures our defense, safeguards our rights, and conserves our peace.

We are deeply interested in what I may term the organization of peace. We cherish no illusions. We know that the recurrence of war is not to be prevented by pious wishes. If the conflict of national interests is not to be brought to the final test of force, there must be the development of international organization in order to provide international justice and to safeguard, so far as practicable, the peace of the world.

FAVORS A WORLD COURT.

Arbitration treaties are useful within their proper sphere, but it is worse than folly to ignore the limitations of this remedy or to regard such treaties as an adequate means of preventing war. There should be an international tribunal to decide controversies susceptible of judicial determination, thus affording the advantage of judicial standards in the settlement of particular disputes and of the gradual growth of a body of judicial precedents. In emphasizing the desirability of such a tribunal for the disposition of controversies of a justiciable sort it must not be overlooked that there are also legislative needs.

We need conferences of the nations to formulate international rules, to establish principles, to modify and extend international law so as to adapt it to new conditions, to remove causes of international differences. We need to develop the instrumentalities of conciliation. And behind this international organization, if it is to be effective, must be the cooperation of the nations to prevent resort to hostilities before the appropriate agencies of peaceful settlement have been utilized. If the peace of the world is to be maintained, it must be through the preventive power of a common purpose.

Without this, it will still remain not only possible but practicable to disregard international obligations, to override the rights of States, particularly of small States, to ignore principles, to violate rules. And it is only through international cooperation giving a reasonable assurance of peace that we may hope for the limitation of armaments. It is to be expected that nations will continue to arm in defense of their respective interests as they are conceived, and nothing will avail to diminish this burden save some practical guaranty of international

order. We in this country can, and should, maintain our fortunate freedom from entanglements with interests and policies which do not concern us. But there is no national isolation in the world of the twentieth century.

OUR INTERNATIONAL DUTY.

If at the close of the present war the nations are ready to undertake practicable measures in the common interest in order to secure international justice, we can not fail to recognize our international duty. The peace of the world is our interest as well as the interest of others, and in developing the necessary agencies for the prevention of war we shall be glad to have an appropriate share. And our preparedness will have proper relation to this end as well as to our own immediate security.

When we contemplate industrial and commercial conditions we see that we are living in a fool's paradise. The temporary prosperity to which our opponents point has been created by the abnormal conditions incident to the war. With the end of the war there will be the new conditions determined by a new Europe. Millions of men in the trenches will then return to work. The energies of each of the now belligerent nations, highly trained, will then be turned to production. These are days of terrible discipline for the nations at war, but it must not be forgotten that each is developing a national solidarity, a knowledge of method, a realization of capacity, hitherto unapproached. In each the lessons of cooperation now being learned will never be forgotten. Friction and waste have been reduced to a minimum; labor and capital have a better understanding, business organization is more highly developed and more intelligently directed than ever before. We see in each of these nations a marvelous national efficiency. Let it not be supposed that this efficiency will not count when Europe, once more at peace, pushes its productive powers to the utmost limit.

On the other hand, in this country, with the stoppage of the manufacture of munitions, a host of men will be turned out of employment. We must meet the most severe competition in industry. We are undisciplined, defective in organization, loosely knit, industrially unprepared.

THE CONDITION OF LABOR.

Our opponents promised to reduce the cost of living. This they have failed to do; but they did reduce the opportunities of making a living. Let us not forget the conditions that existed in this country under the new tariff prior to the outbreak of the war. Production had decreased, business was languishing, new enterprises were not undertaken; instead of expansion there was curtailment, and our streets were filled with the unemployed. It was estimated that in the city of New York over 300,000 were out of work. Throughout the country the jobless demanded relief. The labor commissioners of many States and our municipal administrations devoted themselves to the problem of unemployment, while the resources of our voluntary charitable organizations were most severely taxed. What ground is there for expecting better conditions when the unhealthy stimulus of the war has spent its force and our industries and workingmen are exposed to the competition of an energized Europe?

It is plain that we must have protective upbuilding policies. It is idle to look for relief to the Democratic Party, which as late as 1912 declared in its platform that it was "a fundamental principle of the Democratic Party that the Federal Government under the Constitution had no right or power to impose or collect tariff duties except for the purpose of revenue." We are told in its present platform that there have been "momentous changes" in the last two years, and, hence, repudiating its former attitude, the Democratic Party now declares for a "nonpartisan tariff commission." But have the "momentous changes" incident to the European war changed the Constitution of the United States? Is it proposed to use a tariff commission to frame a tariff for revenue only? Is the opposing party ready to confess that for generations it has misread the Constitution? Is that party now prepared to accept the protective principle? Rather, so far as the tariff is concerned, it would appear to be without principle. Witness its action in connection with the sugar duties, its reaffirmation of the doctrine of a revenue tariff, its dyestuffs proposal, and its formulation, in lieu of protective duties, of an "antidumping" provision, the terms of which are sufficient to show its ineffective character!

THE PROTECTIVE TARIFF.

The Republican Party stands for the principle of protection. We must apply that principle fairly, without abuses, in as scientific a manner as possible; and Congress should be aided by the investigations of an expert body. We stand for the safeguarding of our economic independence, for the development of American industry, for the maintenance of American standards of living. We propose that in the competitive struggle that is about to come the American workingman shall not suffer.

The Republican Party is not a sectional party. It thinks and plans nationally. Its policies are for the promotion of the prosperity of every part of the country, South, East, North, and West. It is not simply a question of a wise adjustment of the tariff in accordance with sound principle, but there is also the need in other respects for stable conditions for commercial and industrial progress. If we are to meet effectively the conditions which will arise after the war is over, we must put our house in order. Let it be understood that the public right is to be maintained without fear or favor. But let us show that we can do this without impairing the essential agencies of progress.

There is no forward movement, no endeavor to promote social justice, which in the last analysis does not rest upon the condition that there shall be a stable basis for honest enterprise. This subject has several important phases to which at this time I can allude only briefly. We should place our transportation system on a sure footing. We should be able wisely to adjust our regulative powers so that the fundamental object of protecting the public interest can be fully secured without uncertainties or conflicts and without hampering the development and expansion of transportation facilities. This national end may be accomplished without the sacrifice of any interest that is essentially local, or without weakening public control. Our present system is crude and inadequate.

COMMERCE, INDUSTRY, SHIPPING.

Moreover, in the severe economic struggle that is before us, and in seeking, as we should, to promote our productive industries and to expand our commerce—notably our foreign commerce—we shall require the most efficient organization, quite as efficient as that found in any nation abroad. There must be no unnecessary wastes and no arbitrary obstructions. We have determined to cut out, root and branch, monopolistic practices, but we can do this without hobbling enterprise or narrowing the scope of legitimate achievement. Again, we must build up our merchant marine. It will not aid to put the Government into competition with private owners. That, it seems to me, is a counsel of folly. A surer way of destroying the promise of our foreign trade could hardly be devised. It has well been asked, Does the Government intend to operate at a profit or at a loss? We need the encouragement and protection of the Government for our shipping industry, but it can not afford to have the Government as a competitor.

We stand for the conservation of the just interests of labor. We do not desire production or trade or efficiency in either, for its own sake, but for the betterment of the lives of human beings. We shall not have any lasting industrial prosperity unless we buttress our industrial endeavors by adequate means for the protection of health, for the elimination of unnecessary perils to life and limb, for the safeguarding of our future through proper laws for protection of women and children in industry, for increasing opportunities for education and training. We should be solicitous to inquire carefully into every grievance, remembering that there are few disputes which can not easily be adjusted if there be an impartial examination of the facts. We make common cause in this country not for a few, but for all, and our watchword must be cooperation not exploitation. No plans will be adequate save as they are instinct with genuine democratic sympathy.

FEDERAL COMPENSATION LAW.

I stand for adequate Federal workmen's compensation laws, dealing not only with the employees of Government, but with those employees who are engaged in interstate commerce and are subject to the hazard of injury, so that those activities which are within the sphere of the constitutional authority of Congress may be dealt with under a suitable law.

We propose to promote by every practicable means our agricultural interests, and we include in this program an effective system of rural credits. We favor the wise conservation of our natural resources. We desire not only that they shall be safeguarded, but that they shall be adequately developed and used to the utmost public advantage.

We turn to other considerations of important policy. One of these is our attitude toward the Philippines. That, I may say, is not a question of self-interest. We have assumed international obligations which we should not permit ourselves to evade. A breach of trust is not an admissible American policy, though our opponents have seemed to consider it such. We should administer government in the Philippines with a full recognition of our international duty, without partisanship, with the aim of maintaining the highest standards of expert administration, and in the interest of the Filipinos. This is a matter of national honor.

FAVORS VOTES FOR WOMEN.

I indorse the declaration in the platform in favor of woman suffrage. I do not consider it necessary to review the arguments usually advanced on the one side or the other, as my own convictions proceed from a somewhat different point of view. Some time ago a consideration of our economic conditions and tendencies, of the position of women in gainful occupations, of the nature and course of the demand, led me to the conclusion that the granting of suffrage to women is inevitable. Opposition may delay but, in my judgment, can not defeat this movement. Nor can I see any advantages in the delay which can possibly offset the disadvantages which are necessarily incident to the continued agitation. Facts should be squarely met. We shall have a constantly intensified effort and a distinctly feminist movement constantly perfecting its organization to the subversion of normal political issues. We shall have a struggle, increasing in bitterness, which I believe to be inimical to our welfare. If women are to have the vote, as I believe they are, it seems to me entirely clear that in the interest of the public life of this country the contest should be ended promptly. I favor the vote for women.

Confronting every effort to improve conditions is the menace of incompetent administration. It is an extraordinary notion that democracy can be faithfully served by inexpertness. Democracy needs exact knowledge, special skill, and thorough training in its servants. I have already spoken of the disregard of proper standards in numerous instances, in appointments to the diplomatic service. Unfortunately there has been a similar disregard of Executive responsibility in appointments to important administrative positions in our domestic service. Even with respect to technical bureaus the demands of science have been compelled to yield to the demands of politics.

THE CIVIL-SERVICE LAWS.

We have erected against importunities of spoilsmen the barriers of the civil-service laws, but under the present administration enactments providing for the creation of large numbers of places have been deliberately removed from the merit system. The principles of our civil-service laws have been shamelessly violated. We stand for fidelity to these principles and their consistent application. And, further, it is our purpose that administrative chiefs shall be men of special competence eminently qualified for their important work.

Our opponents promised economy, but they have shown a reckless extravagance. They have been wasteful and profligate. It is time that we had fiscal reform. We demand a simple businesslike budget. I believe it is only through a responsible budget, proposed by the Executive, that we shall avoid financial waste and secure proper administrative efficiency, and a well-balanced consideration of new administrative proposals.

We live in a fateful hour. In a true sense, the contest for the preservation of the Nation is never ended. We must still be imbued with the spirit of heroic sacrifice which gave us our country and brought us safely through the days of civil war. We renew our pledge to the ancient ideals of individual liberty, of opportunity denied to none because of race or creed, of unswerving loyalty. We have a vision of America prepared and secure, strong and just, equal to her tasks, an exemplar of the capacity and efficiency of a free people. I indorse the platform adopted by the convention and accept its nomination.

**Awakening Americanism—A Job for Salesmen.**

---

## EXTENSION OF REMARKS

OF

## HON. C. WILLIAM RAMSEYER,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 2, 1916.*

Mr. RAMSEYER. Mr. Speaker, under leave to extend remarks a great many organizations of the country get a hearing in the CONGRESSIONAL RECORD on some topic of public interest. A few days ago my attention was called to an able address delivered by C. Louis Allen before the World's Salesmanship Congress, at Detroit, July 12, 1916. I submit it as among the best that has found its way into the RECORD during this session. It is full of practical suggestions and wholesome teachings, and is expressive of the high ideals and patriotic spirit of the men who constitute that large body of traveling salesmen of the United States.

The address is as follows:

"The primary purpose of this congress is business betterment. Specifically, it is hoped to better business through betterment in salesmanship. It is evident that the sponsors of the congress recognize that salesmanship is a vital factor in every betterment movement; that if business betterment be the object, then the way to get it is to improve salesmanship.

"To secure this betterment in salesmanship it was, of course, necessary for this congress to consider in detail certain problems more or less technical in their nature. If, however, real progress is to be made in the improvement of our art, is it not just as essential that we look out as well as in; that we see the vision as well as the detail, for oftentimes in the humdrum of our daily work the detail becomes irksome and uninteresting, unless a clear vision enables us to plainly see the worth-whileness of the goal ahead. The hard-driven men on the road, the boys who are forever getting the rough end of the stick, the fellows who are carrying the message to Garcia and getting that gentleman's name on the dotted line—these must be given a vision so big and vital that it will hearten them to endure the drab drudgery and dull monotony of their everyday work.

"Can we find in salesmanship such a vision, which when once discovered will give to the salesman a new enthusiasm and determination, a new dignity and character? Yes, we can; if we but recognize the universal application of salesmanship. We are all salesmen, every one of us, for a salesman is one who causes others to believe as he believes, and then moves them to act on that belief. Your lawyer is a salesman; he must "sell" his facts to the jury and his interpretation of the law to the judge. The helpful preacher is he who "sells" his spiritual ideals to his congregation and moves them to live up to those ideals. Your doctor must "sell" his faith in his science to his patients. The politician has his platforms and policies and usually his personal services for sale. Even in romance your proposing swain must "sell" himself to the doubting maid, and if he misrepresents the goods of his devotion it is likely to lead him to the divorce court.

"Every reform is a testimonial to the power of some one's salesmanship. Progress and improvement everywhere bear witness to the ability of some one to "sell" the other fellow his idea or ideal, theory or creed. But in the great university of life, where all are students of salesmanship, at least to some degree, to the salesman is given the high privilege of becoming a teacher of the science, a master of the art, and a leader among his fellows. Surely such a vision gives the salesman a new insight into his opportunities and a clearer understanding of his responsibilities.

"And now for a field in which to develop these larger opportunities and discharge these graver responsibilities. Take the relation of business to government. Where can be found a greater opportunity for the constructive salesman who has a proper understanding of the theory of government and the purpose of business? At the present time, business and government are working at cross purposes. Neither understands the other. The attitude of government toward business is wholly a negative one and destructive in its operation.

"And yet, is the Government wholly to blame? In diagnosing the commercial ills of our day let us look first within. What has business done in a big, constructive way to change this attitude on the part of the Government? What has business done to bring about a clearer understanding of its high purpose to serve? What has business done to "sell" the American public its ideals and aims as well as its goods and merchandise; its capacity for national service, as well as its stock of profit-producing products?

"Ever since American business got big it has been pussyfooting. Some one started the fiction that to be big was to be bad, and business itself began halfway to believe it. This attitude has resulted in making legitimate business the target for the poisoned arrows of every blatant demagogue. True business is service, and real service is the destiny and goal of humanity. If your business does not truly serve then get out of it; but if it does, be not ashamed of it, and offer no apologies for conducting it.

"I conceive of American business to-day as a great dynamic body, created to serve, gifted with understanding and marvelously able to convince; and, yet, the great American curse of selfish indifference is upon it. We are all so busy peddling our own products and banking the proceeds that we have little time for the broader, more fundamental view of constructive business building.

"We love to talk in glittering, high-sounding generalties about export trade. We study Spanish conjugations, pore over atlases and advertise in the American Exporter. In fact, we do every-

thing but build ships, the one absolutely essential thing to the establishment of an export trade. We make speeches about ship subsidy at merchants' association banquets, and that's about as far as it goes. We haven't taken the first steps to translate the term 'ship subsidy' into an understandable business proposition for the American public, nor to 'sell' the idea to the farmer, the merchant, and the laboring man. These still regard ship subsidy as just another little scheme to make some sort of a present to the 'plutes.'

"Talk to these people in their own language. Use words and ideas that they understand, and you will have no trouble in securing their support for deserving measures. Car shortage, for instance, is a term that every farmer comprehends. It brings a vision of produce rotting beside the railroad tracks; of grain stacked in the fields unable to get to market. Car shortage sends a chill down every farmer's back. It makes him feel the mortgage tightening around his neck. So if we will just drop the term 'ship subsidy' and talk to the American people in terms of 'ship shortage' it will understand. Convince the people of the peril to our commerce in ship shortage. Make them understand just what will happen to American industries if a dearth of shipping ties our hands at the close of Europe's war, at a time when the biggest and sharpest contest in which world trade has ever grappled will be on. Through salesmanship our desperate need of shipping may become vitalized and energized into a moving force that will place upon the high seas an adequate American merchant marine.

"Great principles develop great leaders; great crises call forth great commanders; a great cause requires and invariably is able to enlist great men. If this Congress would better business through better salesmanship, let it give to the salesmen of America a truly great cause to champion. The response will be spontaneous and universal; the result will be bigger, better, and stronger salesmen, able and willing to render a greater service to themselves, their employers, to business as a whole, and to their country.

"And what shall this cause be? My friends, I ask you, 'To what cause can the salesmen of America be dedicated with greater honor to themselves and profit to their fellows than to the permanent liberty and true welfare of all our people?'—a cause which is expressed by the one word 'Americanism.'

"It seems to me that to get at a real understanding of Americanism, we must go back to the days when our country was conceived and brought forth by hardy bands of partiots, who, having renounced their allegiance to foreign potentates, came to this new land in search of civil, religious, and economic freedom. Let us get at the spirit of Roger Williams. Let us try to understand the purpose of the Pilgrim Fathers. Let us examine the circumstances and conditions which caused our Scotch and Irish ancestors to resent unjust taxation; which prompted our forefathers in Germany, France, and Russia to resist the autocratic interference with their personal and religious liberty; which caused them, in common with patriots from other lands, to set up in this country an independent Republic, dedicated to the principle that 'all men are created equal' and deserve equal opportunity. Let us try to catch the spirit of Washington and of Jefferson, of Monroe and of Lincoln, and when we have once caught the meaning of their Americanism let us do our share toward awakening this spirit, slumbering and dormant now for nearly half a century.

"Americanism, therefore, is of the mind and of the soul. It is the national consciousness; the spirit of unity which binds together in one high and just purpose a nation composed of many peoples. But let us remember that unity is only possible where equal justice prevails. Freedom's problems in 1916 differ from those of 1776. Then the questions were largely religious and political; to-day they are primarily economic. Eternal vigilance is the price of freedom, then, now, and forever.

"And yet we know that this spirit of unity does exist, for without it we could not live. But many years of peace and plenty have dulled the national conscience until now we have begun to consider peace and plenty as the end of existence. Our country has become a bountiful provider of good things rather than an ideal to die for; life has ceased to be a thing to spend and be spent, but instead has become a matter of fatted ease and luxurious stupor from which we are reluctant to be aroused.

"The danger to democracy lies in its colossal indifference. In a republic universal unanimity of opinion is impossible and undesirable, but the one thing that is essential, if the nation is to live its life and carve out its destiny, is that all of the people should think. No evil will result from sincere and earnest convictions that differ, but a subtle peril lurks in that brand of satisfied indifference which always indicates a lack of deep conviction of any kind on the vital question of national life.

"Too fat to fight, too smug to think; these are the charges. They represent the gravest peril that threatens America to-day. From this national lethargy, from this stupor of satisfied indifference and economic gluttony, the people must be awakened and the spirit of true Americanism must be placed once more upon the altar, now occupied by the greedy god of selfish materialism. For with nations, as with individuals, life's lessons must be learned. The wise learn by observation, the others walk blindly to the very brink of ruin and suffer the agonies of torment before they perceive the great principle involved. God grant that this Nation wake before it is too late; may we learn the great lesson of our day without grovelling in the gutter of carnage and bloodshed; may our national vision lead us to the only goal for a country, as it is for a man, a woman, or a child—to do right, to be brave and just and true, and let whatever will come after.

"This great work of awakening the national spirit and quickening the national conscience is really a job for America's master salesmen. Too long the rudder of American destiny has been usurped by self-seeking politicians. The people must be 'sold' on Americanism, its glorious past, its present ideals, and its future destiny as the inspiration and model of government 'of, by, and for' a free people.

"I take it that in a republic deriving its powers from the consent of the governed, this element of salesmanship is of vital importance. Of what use are great leaders and far-sighted prophets if the people refuse to support the measures advocated? Paper plans for national defense may be drawn, battleships may be built on blue prints, but unless the people are convinced of the wisdom of preparedness as a national policy the appropriation necessary to convert plans into the effective tools of defense will not be forthcoming.

"Is it not therefore obvious that we have too long overlooked one of our greatest natural resources, a veritable Niagara of power, to wit, the power to convince the American public, resident in our loyal army of 1,000,000 salesmen? I see in this might of America's hosts of intelligent salesmen a chance for service to our country in this hour of crisis that far surpasses any service which it has ever rendered in the past. Here is an incalculable power to convince; here is a force that can pump manhood and conviction into the fatty degeneration of our national spirit.

"We are told that more aeroplanes of American manufacture and consigned to foreign Governments went down on the *Cymric* than we have in all branches of the Government service, and yet, those who know say that our expenditure for this new weapon of defense should be ten to twenty times our present appropriation. But before Congressmen responsible to their satisfied constituents can be induced to vote an adequate appropriation, the public must be 'sold' on aeroplanes and our need of them, for this is a democracy and the people must be back of every governmental action.

"For the last four months the Government has been attempting to secure 20,000 men for the Regular Army. To date, 9,000 have been recruited. What is the trouble? Poor salesmanship! The men in charge of recruiting should be master salesmen, for the Army must be 'sold' to its prospective recruits. Think of the motive power in American salesmen to create and set in motion such phases of dynamic sentiment!

"Suppose the salesmen of America were thoroughly organized, working in close alliance with the Government. Then the Government might call in a Hugh Chalmers, a John H. Patterson, or a Charles M. Schwab and say to him: 'Here are the conditions. These are our needs. Go, convince the public!' Then, operating under the same principles which have built for these men successful business organizations, an army of 100,000 salesmen would sweep forth into their territories, mingle with the trade that knows and has faith in them, and by red-blooded personal salesmanship convince the public of the Government's need of support.

"Progress in a democracy is very largely a matter of salesmanship, for the people can not be driven; they must be led, which is to say, they must be 'sold.' American salesmanship in its new valiant rôle of statesmanship could invade this or that misguided territory and enlighten the people of that section on the attitude of the rest of the country, thus knitting the whole Nation into a tighter texture of harmony of purpose and singleness of ideals, for nationalism is nothing short of an exalted form of merchandise, and in order to root it firmly in the hearts of our people, it must be 'sold' to them.

"Already the spirit of Americanism has commenced an assault upon the trenches of commercialism. The engineers of America through their various societies and organizations have offered their services to the Government, and the Government has accepted and is to-day profiting by the wise counsel of some of the foremost engineers of America.

"But what of America's salesmen? What of that vast army of 1,000,000 patriots with their gift to understand, to stir, to move to action; their power to electrify and convince? What

share of the load in this hour of crisis are they to shoulder? For surely the salesmen of America will not be content to stand idly by without putting a strong hand on the loom of circumstance that hour by hour is weaving the strands of destiny. If the engineers of America possess the brains, the training, and the vision to play a definite rôle in the making of history, how much more of the raw materials of greatness exist to-day in the hosts of American salesmen?

"I ask that we here and now create a permanent organization, to be known as the 'salesmen of America'; that through this organization we offer our services to the Government of the United States. I ask that we say to our country: 'Here are our brains—they are keen; here is our power to sell and convince—it is potent; here is our understanding of our fellows—it is useful; here is our love of our country—it is devout and undiluted. Let us get under our share of the load. We ask to serve."

## Status of the National Guard.

### EXTENSION OF REMARKS
OF
### HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 2, 1916.*

Mr. MOORE of Pennsylvania. Mr. Speaker, under leave to extend my remarks upon the status of the National Guard and to incorporate therein certain letters of the War Department, all intended to assist in a better understanding of mooted questions that have arisen since the mobilization of the National Guard for service along the Mexican frontier and for the information and convenience of those Representatives who have received numerous inquiries upon the subject from the relatives of the officers and men who volunteered for what they believe to be a patriotic duty, I submit the following correspondence:

QUESTIONS ADDRESSED TO THE SECRETARY.

JULY 26, 1916.

Hon. NEWTON D. BAKER,
*Secretary of War, Washington, D. C.*

DEAR MR. SECRETARY: There is now pending in your department a resolution of inquiry (H. Res. 292), copy of which I inclose, introduced by me July 5 and passed by the House July 11, concerning which I have had so many inquiries that I am persuaded to say that an early answer by the department covering the points referred to would tend to allay much of the criticism that is now being received in letters and through the newspapers. As the resolution calls for a report to the House, however, I merely bring the matter to your attention, since, in the rush of business in your department, it may have been temporarily overlooked.

There is another matter to which I respectfully and earnestly call your attention, to wit, the status of the National Guard, which is not clearly understood by many of my correspondents and which seems to be in doubt in Congress. It may be that you can advise me upon this subject, which seems now to be greatly confused.

This is what many of us would like to know:

First. Is the National Guard as at present mustered in by officers of the Regular Army, under the oath required by the national defense act (the Hay bill), in the jurisdiction of the States, subject to orders from the governors, or is it now a part of the Regular Army of the United States, in the pay of the United States Government, and subject to the Regular Army term of service? An answer to this inquiry might include the further question as to the pensionable status of members of the National Guard as now sworn in for service along the Mexican border.

Second. If the National Guard as at present in service along the Mexican border has not been drafted under existing law (including the Dick Act and the national defense act), is it available for service under the Constitution beyond the borders of the United States? An answer to this question may include the statement of the effect of the resolution of Congress declaring an emergency to exist.

I believe that a letter from the department in answer to these questions would help to allay much of the confusion that has arisen in the public mind, and would tend to settle many of the private complaints that have grown out of the mobilization of the National Guard.

Very truly, yours, J. HAMPTON MOORE.

THE ANSWERS UNDER WAY.

WAR DEPARTMENT,
*Washington, July 28, 1916.*

Hon. J. HAMPTON MOORE,
*House of Representatives, Washington, D. C.*

MY DEAR MR. MOORE: Referring to your letter on the subject of H. Res. 292, the reply thereto was forwarded to the Speaker of the House of Representatives on July 21, 1916, and reports submitted by the Quartermaster General and Chief of Ordnance too late to be incorporated in that reply are now going forward.

I am having the Judge Advocate General prepare for my consideration his opinion on the two questions asked in your letter, and an answer will be made as soon as it can be prepared.

Very truly, yours,

NEWTON D. BAKER,
*Secretary of War.*

(NOTE.—The House resolution 292, referred to in the above letters, being a resolution of inquiry relating to the transportation of the National Guard, its treatment on the way, and its equipment for service, was forwarded by the Secretary as indicated, and is now embodied in House Document No. 1311. While it admits some of the newspaper accusations as to the poor quality of cars used, it generally denies that the National Guardsmen were illtreated or unprovided for or that they were dealt with in an unsoldierly manner. The response of the Secretary makes a 16-page document, which can doubtless be obtained by Members from the document room.)

WANTS THE PUBLIC INFORMED.

WAR DEPARTMENT,
*Washington, July 29, 1916.*

MY DEAR MR. MOORE: Under date of July 26 you asked me by letter some questions relative to the status of the National Guard. The Judge Advocate General has, at my request, prepared a memorandum, which I inclose for your information, with request that you secure its publication in the CONGRESSIONAL RECORD, if that be possible, so as to secure as widespread distribution of this information as possible.

In view of the fact that misunderstandings seem to have arisen on this rather intricate legal situation, I am handing copies of the memorandum of the Judge Advocate General to the representatives of the daily press in the hope that the public mind may be cleared up about a situation which was temporary in its origin and cause and will not occur again should any subsequent occasion arise to summon the National Guard provided by recent Army legislation into the service of the country. I particularly regret that this unavoidable confusion of thought should in some quarters have been taken to imply a reflection upon the National Guard, for which the guard itself is, of course, in no sense responsible.

Very truly, yours,

NEWTON D. BAKER,
*Secretary of War.*

Hon. J. HAMPTON MOORE,
*House of Representatives.*

OPINION OF THE JUDGE ADVOCATE GENERAL.

WAR DEPARTMENT,
OFFICE OF THE JUDGE ADVOCATE GENERAL,
*Washington, July 29, 1916.*

[Memorandum for the Secretary of War.]

1. The views of this office are desired with respect to the questions raised in the accompanying letter by the Hon. J. HAMPTON MOORE, Member of Congress, with respect to the status of members of the National Guard now in the service of the United States. The questions submitted by Mr. MOORE are as follows:

(a) "Is the National Guard as at present mustered in by officers of the Regular Army under the oath required by the national defense act—the Hay bill—in the jurisdiction of the States, subject to orders from the governors, or is it now a part of the Regular Army of the United States, in the pay of the United States Government, and subject to the Regular Army term of service? An answer to this inquiry might include the further question as to the pensionable status of members of the National Guard as now sworn in for service along the Mexican border.

(b) "If the National Guard as at present in service along the Mexican border has not been drafted under existing law, including the Dick Act and the national defense act, is it available for service under the Constitution beyond the borders of the United States? An answer to this question may include the statement of the effect of the resolution of Congress declaring an emergency to exist."

2. In answering these questions the term "Organized Militia" will be applied to the militia organized under the act of January 21, 1903, known as the Dick bill (32 Stat., 775), as amended, and the term National Guard will be applied to the members of the Organized Militia who have qualified under the national defense act of June 3, 1916, by subscribing the oath and enlistment contract as provided in sections 70 and 73 of that act.

3. The Organized Militia of the States of Arizona, New Mexico, and Texas have been mustered into the service under the call of May 9, 1916, and the Organized Militia and National Guard of the other States are in the service under the call issued by the President June 18, 1916, both calls being for the purpose of protecting the United States against aggression from Mexico.

4. The questions submitted will be answered first with respect to the Organized Militia of the States of Arizona, New Mexico, and Texas. These were mustered into the service of the United States under section 7 of the Dick bill, the officers and enlisted men taking in connection with the said muster the oath prescribed by the muster-in regulations promulgated under that law. Their status is that of militia called into the service of the United States for one of the purposes specified in the Constitution—that is, to protect the United States against invasion. While in such service they are subject to the laws and regulations governing the Regular Army, so far as applicable to their temporary status, and are subject only to the orders of the President. They are not, while in such service, under the jurisdiction of the States, nor are they subject to the orders of the governors, whose authority over them for the time being is suspended, except only with respect to the appointment of officers. They are not a part of the Regular Army of the United States, nor are they subject to the Regular Army term of service. They are in the service as militia called forth to meet the exigency for which the call was issued. While in the service they are, of course, in the pay of the United States Government, and are entitled to the same pay and allowances as the regular troops. With regard to their pensionable status, section 22 of the Dick bill gives them the benefit of the pension laws for any disability incurred in the service, and in case of death confers on the widow or children of the deceased all the benefits of such pension laws. Under the decision of the comptroller of July 20, 1916, the widow or beneficiary of a member of the Organized Militia dying in the service, in line duty, and not as the result of his own misconduct, is entitled to the six months' gratuity pay, the same as in the case of officers or soldiers of the Regular Army.

5. Answering the questions submitted with respect to the Organized Militia and National Guard who are in the service under the call of June 18, 1916, it should be observed that shortly after the passage of the national-defense act of June 3, 1916, the Organized Militia of the several States began to transform themselves into the National Guard of the new national-defense act. The call of June 18, 1916, found this process of transformation going on, and it was necessary, therefore, for that call to embrace both the Organized Militia and the National Guard if it were to be effective to call into the service of the United States all of the militia forces, and it was so drafted.

6. With respect to those organizations of the Organized Militia that had transformed themselves prior to June 18, 1916, into the National Guard under said act, no muster-in was necessary, as it was the effect of the call to place them in the service of the United States from the date they were required by the terms of the call to respond thereto (sec. 101, national-defense act). The muster-in rolls of the several organizations are on file in the War Department, but this office has not had an opportunity to give them any detailed examination. It is understood, however, that pursuant to instructions the members of the Organized Militia who had not qualified under the national-defense act were required to be mustered in, taking the prescribed muster-in oath; but as to those who had so qualified, their names were entered upon the muster rolls with a notation to the effect that they had already taken the oath prescribed in sections 70 and 73 of the national-defense act.

7. There are, therefore, in the service of the United States under the call of June 18, 1916, two classes of militia: One the militia organized under the Dick bill, and the other the National Guard as organized under the national-defense act. With respect to those who have not qualified under the national-defense act, their status is identical with that of the Organized Militia of the States of Arizona, New Mexico, and Texas, which is discussed above. The status of those who have qualified under the national-defense act is that of National Guard "called as such into the service of the United States" (sec. 101, national-defense act), and they are, while in such service, "subject to the laws and regulations governing the Regular Army," so far as applicable to their temporary status, and are subject only to the orders of the President. They are not, while in such service, under the jurisdiction of the States, nor are they subject to the orders of the governor, whose authority over them for the time being is suspended, except only with respect to the appointment of officers within the classes specified in the national defense act of June 3, 1916. They are not a part of the Regular Army of the United States, nor are they subject to the Regular Army term of service. Like the Organized Militia, whose status is discussed above, their status in the service under the call is that of militia called into the service of the United States for one of the purposes specified in the Constitution; that is, to protect the United States against invasion. They are, of course, in the pay of the United States Government, and are entitled while in the service to the same pay and allowances as Regular troops. In fact, both classes of troops, while in the service of the United States, are subject to the laws and regulations governing the Regular Army, so far as applicable to their temporary status, and subject only to the orders of the President. Neither class of troops while in such service is under the jurisdiction of a State or subject to the orders of a governor, whose only authority with respect to them is, as above stated, to appoint officers to any vacancies which may occur. Both classes of the militia are entitled to pensions for disabilities incurred during their period of service, under the same conditions as are Regular troops; and their beneficiaries are also entitled, under the decision of the comptroller of July 20, 1916, to the six months' gratuity pay in the case of their death while in the service from wounds or disease "not the result of their own misconduct."

8. Much of the misconception that has arisen regarding the status of the National Guard in service under the call of June 18, 1916, appears to rest on the assumption that it is the effect of the new oath and enlistment contract and the call of that date to make the National Guard available for any service for which the Regular Army may be used during the period of service under the call. But that Congress did not so intend is evident from the fact that the act of June 3, 1916, contains a provision (sec. 101) applicable to the National Guard "when called as such into the service of the United States," and a distinct provision (sec. 111) for drafting them into the Federal service, applicable only "when Congress shall have authorized the use of the armed land forces of the United States, for any purpose requiring the use of troops in excess of those of the Regular Army." As to persons so drafted it is distinctly provided that they "shall from the date of their draft stand discharged from the militia, and shall from said date be subject to such laws and regulations for the government of the Army of the United States as may be applicable to members of the Volunteer Army * * *." It is clear, I think, that the national-defense act contemplates that the National Guard shall be available for service either as National Guard called into the service of the United States as such for the three constitutional purposes, or, when specially authorized by Congress, as a national force supplementing the Regular Army and available for any service for which regular troops may be used. In other words, the national-defense act gives the Government the right, in return for the expenditure for pay, training, and equipment of the National Guard, to draft them into the Federal service to supplement the Regular Army, but this right can be exercised only when Congress shall have authorized its exercise, as has been done in the joint resolution of July 1, 1916.

9. With regard to the effect of the declaration in the joint resolution of July 1, 1916, that an emergency exists, I think there can be no question but that this declaration serves as the reason for conferring the authority to make the draft, and also as a limitation upon the authority with regard to the term of service under the draft. It is provided therein that the draft shall be "for the period of the emergency, not exceeding three years, unless sooner discharged." The resolution confers a discretion on the President to issue the draft or not, as the exigencies of the situation may require.

E. H. CROWDER,
*Judge Advocate General.*

PRESIDENT HAS NOT DRAFTED THE GUARD.

To further elucidate the subject, I submit the inclosed extract from a letter of Judge Advocate Gen. Crowder, July 26, 1916, in response to inquiries arising in a New Jersey case. The answers here are pertinent to many inquiries arising from other sections of the country:

"DEAR SIR: I beg to acknowledge receipt of your letter of July 25, 1916, in the matter of the status of your two sons, members of Troop D, First New Jersey Squadron, now located at Douglas, Ariz. You say that previous to their departure for the border they subscribed to the Federal oath and enlistment

contract provided for in the national-defense act approved June 3, 1916; and you ask to be advised as follows:

"(a) Is it true that the President of the United States has not yet signed the draft which federalizes the State militia?

"(b) If the guardsmen should be ordered into Mexico, can they be ordered in without taking a further oath or without being mustered into the United States Army?

"With respect to (a), no draft has yet been ordered under the authority contained in resolution of July 1, 1916, for drafting the National Guard into the Federal service.

"With respect to (b), the present status of the National Guard is that of militia called into the Federal service for a purpose specified in the Constitution; that is, for the defense of the United States against invasion. It is for this purpose that the National Guard has been called into the service and is now doing duty along the Mexican border. It is assumed that the National Guard will not be ordered into Mexico while in their present status, except as such orders may be incidental to the authorized purpose of protecting the United States against invasion, and that should a more extended Federal use be necessary, action will be taken to draft them into the service of the United States under the authority contained in said joint resolution and in section 111 of the national defense act, thus completing their federalization and making them available for every purpose for which the Regular Army may be employed. The execution of the draft does not require that any additional oath be taken or any further muster.

"Very respectfully, E. H. CROWDER,
"*Judge Advocate General.*"

---

**Address of Hon. Jesse D. Price, Notifying Hon. David J. Lewis of His Nomination as United States Senator from Maryland; Also Reply of Hon. David J. Lewis in Accepting the Nomination, at Baltimore, July 25, 1916, Together with Address of Hon. Hugh A. McMullen, Comptroller of Maryland, at the Democratic Convention, Held in Baltimore May 11, 1916.**

## EXTENSION OF REMARKS
OF
## HON. J. CHARLES LINTHICUM,
OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 2, 1916.*

Mr. LINTHICUM. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I insert the following addresses:

SPEECH OF HON. JESSE D. PRICE, NOTIFYING HON. DAVID J. LEWIS OF HIS NOMINATION AS UNITED STATES SENATOR, AT BALTIMORE, MD., JULY 25, 1916.

Gentlemen, this committee is here to discharge a very important duty delegated to it by the late Democratic State convention, which was in turn instructed by the Democratic voters throughout the State, namely, to officially notify the candidate of the party for the United States Senate. Of course, this is a mere formality, because the voters have already settled the question as to the party choice; yet this occasion may well be used to emphasize the progressive tendencies and beneficent purposes of the Democratic Party and the things for which our candidate stands.

The period since the recent advent of our party to power in the Nation has been called "the new freedom," and well it may, for in this short period more legislation of real benefit to the people as a whole has been put upon the statute books than in the entire history of the Republican Party. Under the wise leadership of President Woodrow Wilson the Democratic majorities in Congress have legislated for the average man, and not for the favored few, as has been done by Republican administrations. Favored classes and special interests have failed to dominate this administration, and the laws enacted have been made applicable to all alike. By their partnership with these legislation favorites, the Republican Party had thrown up breastworks and dug trenches until they regarded themselves as invincible.

But the time came, as it will come to any party that undertakes to ignore the general good, when thousands of honest men of their party refused to longer follow the lead of selfishness and greed, and banded themselves together as Progressives in order to rebuke their leadership and to accomplish many of the reforms promised in the Democratic platform of 1912, and which have been so splendidly and faithfully redeemed by the present Democratic administration. It should be evident to all true Progressives that the fulfillment of their hopes lie in the continuance in power of the Democratic Party and in the reelection of Woodrow Wilson and a Democratic Congress. The great mass of the American people, groaning under the burdens of an iniquitous tariff, demanded relief, which was promised by the Republican Party in 1908, which promise was never redeemed, and in the passage of the Payne-Aldrich Act were handed a stone where they had asked for bread. In 1912 the Democratic Party promised relief and promptly redeemed it by passing the Underwood tariff law, which is the fairest and most equitable of any tariff law ever enacted, and which was proving a great revenue producer until interrupted in part by a great world war.

The difference between a Republican tariff and a Democratic tariff is that the Republican theory, while requiring the people to pay exorbitant duties, the bulk of it goes into the coffers of favored individuals, while the Democratic theory lightens the burdens on the necessities of the people and the money goes into the Treasury of the United States for the purposes of Government. If only a small part of the money legislated into the hands of favored individuals by the Republican tariff policies had gone into the Treasury of the United States and been applied to "national defense" there never would have been this great hue and cry over our "national unpreparedness," and we could have had a Navy not only second or third but first on the seas of the world, and we would now be prepared on land and sea to defend these priceless institutions handed down to us from the fathers.

The Republican Party steadfastly refused to abolish our panic-breeding currency system, presumably at the behest of a small coterie of large bankers, who controlled the money of the people, taking it out of the channels of commerce and diverting it to fields of speculation. It remained for the Democratic Party to reform this system by the passage of the Federal reserve act, the greatest piece of constructive financial freedom ever enacted into law in the history of nations.

We have just extended this principle from the business man to the farmer by enacting a genuine rural-credit law.

For the merchant and manufacturer we have established the Federal Trade Commission.

For the commerce of the Nation we are enacting a law, known as the United States shipping bill, which it is confidently believed will restore our flag to the seas and give us a genuine and efficient merchant marine, which has declined under Republican incompetency and inaction until we have become the butt of ridicule.

On account of Republican shortsightedness in past years we find ourselves so unprepared for national defense as to amount to almost criminal negligence. The Democratic Party, however, in the full vigor of its governing responsibility, has met the situation, and this present Democratic Congress is appropriating over six hundred millions for defense purposes, believing that no price is too high to pay for preserving and protecting our priceless institutions, established at such a sacrifice by the founders of this Republic. When it comes to paying the bills for these abnormal expenditures due to past Republican negligence and incompetence we are met by Republican obstruction in Congress. We propose to raise a part of these abnormal expenses by an increase in the tax on large incomes, on munition manufacturers, and inheritances, and have been met by bitter Republican opposition, the only Republican alternative proposed being the old time-worn cry of "Raise the tariff," when every single one of them ought to know that it could not be raised in that way, for, after reaching a certain rise, it would stop importation, and therefore would not produce revenue. It is evident from their tactics that they are merely a party of fault finding, obstruction, and inaction, with no constructive genius or policies, and therefore, as to-day constituted, incapable of government in line with modern progressive thought.

Prosperity and peace have characterized the administration of Woodrow Wilson. The Republican prophecy of four years ago, that the ascendency of Democracy would mean commercial and financial disaster, has been completely exploded and the prophets utterly confounded.

The country is enjoying the greatest era of genuine prosperity in its history. Our commerce has reached unheard of figures, and for the fiscal year ending June 30 last exceeds the greatest under Republican administration by about 70 per cent. In the year closing June 30 last our exports about double the exports for the last year of the Taft administration. In 1912 the balance of trade in favor of the United States was $551,000,000. In 1916 the balance under Wilson was $2,100,000,000, or an in-

crease of nearly 300 per cent—a greater trade balance in one year than in the entire four years of the Taft administration. The gross bank deposits on May 1 last reached the record total of over eleven billions of dollars, against eight billions on the same date of 1912—an increase of three billions four hundred millions, or 39 per cent. These facts and figures clearly disprove the Republican theory that the high-tariff policies of the Republican Party are necessary to the prosperity of the country. They also clearly demonstrate the Democratic contention that tariff laws do not produce prosperity, and fully establish the Democratic claim that the American people, with their magnificent resources and ingenuity, unhampered by high tariff walls to impede their advance, are able to reap their just share of the world's trade and prosperity.

PEACE.

Woodrow Wilson, by his almost infinite patience and wisdom, in the midst of a great world war, has kept us at peace. He has refused to be stampeded. He has set his face resolutely toward peace with honor without the use of the sword. He has confounded his critics by preserving the national honor with firmness and without resort to arms. He has set the world an example in peaceful diplomacy and has achieved results without the loss of American blood or American self-respect. His unselfish Americanism is better understood from the following remarks made in a recent speech, when he said:

I am willing, no matter what my personal fortune may be, to play for the verdict of mankind. Personally, it will be a matter of indifference to me what the verdict on the 7th of November is, provided I feel any degree of confidence that when a later jury sits I shall get their judgment in my favor. Not in my favor personally—what difference does that make?—but in my favor as an honest and conscientious spokesman of a great Nation.

The millions of Americans who desire peace will not turn out of office the President who has kept the Nation at peace.

The achievements of the present Democratic administration have been so numerous and varied that it would be impossible to attempt a review of them in a single address, but they have touched in their beneficence every phase of American life and activity. The business man, the farmer, the laborer, protecting alike the strong and the weak, without favoritism to any class, without prejudice to any class in that broad meaning of democracy which seeks to maintain a government by and for the people.

In this great work of Democracy and in redeeming the promises of our party to the people of the Nation, Hon. DAVID J. LEWIS has played a faithful and conspicuous part. No man in Congress has displayed a greater zeal for the welfare of the toiling millions of free Americans than my colleague, Hon. DAVID J. LEWIS. He has been prominently identified with all the progressive measures proposed by the Democratic program of four years ago and during his six years of service in the House of Representatives of the United States from the sixth congressional district of this State has ever been found on the firing line, protecting the interest of the people. Bringing to bear his studious judgment on the great problems of labor, backed by a personal experience as a miner in the coal fields of western Maryland, he has helped in solving some of the great problems of labor and in the betterment of conditions surrounding this large and important class of our citizens; at the same time he is big and broad enough to recognize the legitimate rights of capital and believes all citizens of high or low degree should be protected in their constitutional rights. Perhaps the greatest service Mr. LEWIS has rendered the American people has been in connection with the establishment of the parcel post.

The accomplishment of this great piece of constructive legislation involved the greatest ability, industry, and patience. The country was in the grip of the rich and powerful express companies and the people were being made to pay, oftentimes, the most unjust rates and frequently rendered an indifferent service. In order to break this monopolistic hold upon the people it was necessary to dig up and present the facts and data to the public mind; to break down false standards and to educate the public conscience to a realization of the possibilities of such a service on the part of the Government. But Mr. LEWIS with his characteristic persistency and industry dug away until he broke down all the barriers and the system was established. That it has proven a success no one doubts, and the wonder is that the American people were so long deprived of this inestimable benefit. To-day it is universally regarded as one of the greatest governmental utilities, and is a blessing to every American citizen.

The people of Maryland feel a just pride, in that one of her sons was instrumental in securing this great boon to the American public. We could no more do without this system than we could dispense with our Postal Service, and it is saving to the American people annually vast sums of money. The people of Maryland alone are benefited each year to the extent of many thousands of dollars. It should be a source of just pride to any man to be identified with such legislation, which is of such universal benefit and application, and the accomplishment of which is the real test of public service.

It is perfectly natural that the people of Maryland would reward such a public servant and give him further opportunity for service. I am sure, Mr. LEWIS, that it is in this spirit rather than in a personal phase that the Democrats of Maryland have selected you as their candidate for the Senate of the United States. I know you well enough to know that the spirit of service alone animates you, and that aside from a desire to be of benefit to our people you have no ambition. With such a record of party achievement as I have outlined, and with such a candidate as we present, there should be no question as to the result, and I am sure there is none, but let us not deceive ourselves as to the one-sidedness of the present campaign. The enemy is alert and resourceful.

They are classing Maryland as a doubtful State. The edict has gone forth to make a determined effort to capture a seat in the United States Senate from Maryland and two or three seats in the House of Representatives. They are backed by their old-time partners, the "special interests," who have not had a seat at the council tables of the Democratic administration for four years past, and who are looking with longing eyes to the return to power of that party who has legislated for them in the past and who will legislate for them in the future if returned to power.

We feel confident, however, that it is only necessary to lay our record before the people in the proper manner in order to secure a favorable verdict. We have a record to which we can point with just pride, and we should wage a campaign of truth with aggressiveness and victory will be ours. With this idea, Mr. LEWIS, this committee, representing the last Democratic State convention, gives you official notice of your nomination to the high and responsible office of United States Senator, with the firm conviction that you will so hold aloft the banners of our party as to result not only in giving the electoral vote of Maryland toward the reelection of Woodrow Wilson as President of the United States but in sending a Democrat to the Senate of the United States and the election of six Democratic Congressmen from this State.

SPEECH BY CONGRESSMAN LEWIS.

Mr. Chairman and gentlemen of the committee, I am at a loss for words to express my appreciation of the great honor and confidence you now so graciously advise me the party has bestowed upon me. While there are other men, perhaps many others, within the party whose talents may commend them more for this priceless manifestation of party favor, yet I trust there would be none more steadfast, none more earnest in loyalty to its principles and its purpose. I am a Democrat, and that by mature and deliberate choice. And by Democracy I mean what you mean, what the party means, and what the platform adopted at St. Louis means and states. It expresses the views of the masses of the party. It expresses mine. I shall, if elected to the Senate, support its declarations and do everything honorable to write them into the forms of public law.

Happily, gentlemen, we have more to sustain and elucidate our positions as Democrats than unapplied party formulas or unrealized platform promises. We have a record—a record true of but three years of full, and five years of partial, control of the Government; a time, an opportunity almost diminutive, but the record, how ample, how broadly embracing in its grasp of national needs.

Through what a transition that record has carried us in the last four years. The same House of Representatives, the same Senate, institutionally speaking, are still with us, but their responsibilities and characters, how changed. The House of Representatives has been de-Cannonized. The Senate has been made as responsive to the people as the German Reichstag or the British House of Commons. The incomparable banking power of America has been unified, and operative institutions formed for the mobilization of its resources; the antitrust laws have been modernized, and the juridical status of both labor and capital rationally defined thereunder, while that perennial subject of political and business disturbance, the tariff, has been adjusted and is to be taken out of the field of partisan politics, and, like railway rates and practices, reposed in semi-judicial commission, holding office for 12 years, and beyond the influence of political contests. Antidumping measures have been added, too, to guarantee business stability.

Times have changed, the purchasing power of the dollar is much less now than 20 years ago, while public-service rates have remained stationary. These conditions would have wrecked most of these agencies were it not for the tremendous growth

of the traffic which under the operation of the law of increasing returns, well understood by railway financiers, has prevented disaster in most cases, coupled with the aid of seasons of special prosperity, as now. But the principle of increment thus arising seems to have exhausted itself in the cases of many of our railroads; a remedy is needed, and at the suggestion of the President Congress has passed a resolution providing for an investigation to determine how far the needs of such railroads require additional revenues in order to adequately man the operation of the properties and secure the new capital essential for their development for proper service to the public. If these railroads do not enjoy the confidence of investors, then the industry must lag or stop and the public suffer, and thus the panic periodically rock the boat of national industry, giving us railway depressions, as we formerly suffered financial depressions with our banking facilities when wholly unorganized and uncoordinated. Difficulties there will be, doubtless; but the difficulties will not prove insuperable if they are approached in a spirit of appreciation of the rights of the public no less than of the rights and needs of the railways themselves.

These are some of the more important laws enacted to serve and improve the business and financial institutions of the country.

But Democracy is more than government by a class; it represents all classes; and much as it has done for the business interests it has given equal attention to that other great element, the rural interests, which it is not flattery to address as the mainstay of modern as of ancient civilization. It has provided them with three agencies for their betterment, two of which are as yet unapplied—the rural-credit law, intended to bring the financial resources of the country within their easy reach, and the Shackleford road law, through which some $85,000,000 become available from the National Treasury for road development and improvement—and a third agency now in its fourth year of trial, the Parcel Post System, conducted under provisions of law which I had the honor to draft, extending virtually an express service to the farms on over a million miles of rural routes. This system is already handling as many parcels, four per capita, as the German parcel post, 40 years its senior, and at a service cost less than half that by express. It has lifted the parcel traffic of the country from the 300,000,000 parcels carried by express in 1912 to the more than 700,000,000 parcels now carried by express and parcel post combined. In 1915 this metropolis alone posted about 5,000,000 parcels at an average rate of 12 cents each, when by express the rate would have been 32 cents, or a gross saving of $1,000,000 to Baltimore City and its trade.

How far is the Government to go into fields now occupied by private agencies, I am asked. Well, speaking for myself, I should say that the studies I have made of these subjects have been those of a business man, and these studies have convinced me that the Government would be committing the gravest folly to go into lines of private business; but there are a few services, and I have in mind the postal functions, which can only be economically and completely rendered; that is, in a way to give service to all the people by the Postal System acting through the postal motive. Institutionally regarded, the function of communication is a public function and not a private industry at all, and has only become private business here by governmental neglect to assume and discharge its constitutional duties.

My advocacy of these governmental enterprises begins and ends with the Postal System. Pure business considerations convince me that the Government is as derelict, on economic and public-service grounds, in neglecting to give the postal establishment permission to perform its full institutional functions, especially communication, and including the electrical message, as it was for 40 years in neglecting to give us the parcel post. I believe in giving the American Postal System the same right to serve the American people that every other postal system enjoys; and Congress has just provided a joint commission to investigate the postalizing of the telephone and telegraph, as I have for some time urged.

I have been at work for some time on a manufacturer's and merchant's international parcel post, through which to help develop our foreign export trade, especially in South America. It contemplates the shipment of the ordinary packing units of trade, such as a case of shoes, not too bulky or heavy for postal handling, at rates loaded to pay the cost of postal handling plus the ocean freight and railway rates at both ends. These rates from the Atlantic States to the interior of any of the South American Republics ought to mean not more than about 3 or 4 cents a pound in normal times, and with proper C. O. D. facilities, would give our exporting manufacturers a means of entry into South America which no other country as yet enjoys. The present foreign parcel post is limited to 11 pounds, at 12 cents a pound, and is almost wholly inadequate, while no other single agency exists carrying the small shipment from consignor to consignee from our country to foreign destinations.

I recognize, gentlemen of the committee, that a degree of reserve or distrust properly attaches to any new program. We can not deny that most new programs turn out to be unwise and impracticable, and distrust is justified. But not all new things prove wrong, and many prove highly serviceable to the human family. There is an alleged constructive statesmanship that is only a congeries of vagaries, like the recall of judicial decisions. There is also an alleged conservatism that is only prejudice and unreasoning fear—"that is afraid to brush down the cobwebs lest the ceiling may fall." The true conservative is, I take it, the man with progressive purpose, who takes the middle ground, who investigates, rejects that which is false, but holds fast to that which is true.

This postal legislation affords a clear answer to an objection the unfriendly critic is sure to make when we rehearse the full catalogue of Democratic achievements. "Hasty, unprecedented, too much legislation," he will say. No; not at all. This very parcel-post legislation ought to have been passed 40 years ago. It is harrowing to think that during all that time the people had to let half their parcel traffic die in its womb for want of a postal express system to carry it. And the regional reserve banking system, just to mention another instance, it ought to have been provided in the seventies, when the national banks first showed their incapacity uncoordinated to encounter great economic or national strain. It is harrowing to think of the business wrecks and the popular distress caused during banking panics by this fundamental neglect to organize the banks. Why has the party of standpatism so signally failed to meet these great national requirements? Because they took their inspiration from a few members of a single class. But no single class, even if wise enough, is good enough to properly govern a free country. And why has the Democratic Party so signally succeeded? Because it represents the whole people—the farmer, the laborer, the employer, the merchant—and sympathizes with each of them enough to understand their needs and their trials. This sympathy gives it the vision necessary for constructive statesmanship.

And this great work was largely accomplished while the world was on fire with its greatest war; a war which, like some cosmic magnet, has sucked in all the other great powers except our own. How much would one of the warring peoples of Europe be willing to give now for a statesmanship that saved it from the deadly grasp of this war? And yet all this has been done at no sacrifice of honor and with only that moderate sacrifice of the national wealth necessary to place the country in the way of preparation for any military dangers which may come. No wonder the opposing party is without a platform worthy of the name. They had nothing to promise, nothing they dared denounce. No wonder it is seeking to recapture the Government through appeals to prejudice and by combining all the heterogeneous elements in the Republic. No wonder they invaded the silent chamber of the Supreme Court to secure a leader without a record to offend their motley following. Can they win this way? Is the absence of a record a recommendation? And should the Democratic Party, of realized promises and achievements, should it be rejected without argument? Is it to be condemned rather than rewarded for its devotion and, like Aristides, be banished for its service to the people?

Business men, farmers, workmen, patriots of Maryland, what think ye of all this constructive work? Should it be impaired by unsympathetic administrators during its initial years of trial? And the country's security among the nations, extraordinarily vouchsafed to us, instead of a fate of fire and sword, by a statesmanship worthy of the greatest examples of history. Peace, this priceless and exceptional peace and security, what think ye of it? How much, I repeat, how much would ye, if one of the war-stricken nations of Europe, be willing to give now for a statesmanship which had saved it from this war? Should we Americans, then, imperil it by needlessly transferring its now successful guardianship into untried hands? It was not thus that your fathers builded or answered to the Republic in its trying periods of the past. Nor will their children fail to emulate them in patriotic wisdom in this most momentous of occasions for their country since the Civil War.

---

ADDRESS MADE BY HON. HUGH A. MCMULLEN, COMPTROLLER OF MARYLAND, AT THE DEMOCRATIC CONVENTION HELD IN BALTIMORE MAY 11, 1916.

This is one of the great pleasures of my life, to speak in behalf of one whom I have known and loved for more than 30 years, with whose career I am thoroughly familiar.

My first recollection of the gentleman to whom I refer is as a boy of 17, with the hard knowledge of a man of 40, learned in the great university of everyday experience, whose wisest teacher is poverty.

At that time he came to a small mining village in Allegany County, a stranger to our people but kindred to them in their humble occupation. He secured work in the mines of the Union Mining Co., and after taking up his abode with us he learned to love Maryland and become one with our people.

A short time later he began to study under the late Rev. Dr. Nott, whose sainted soul looks down to-day with pleasure upon the crude artisan of that day, who is now to become the standard bearer of the great Democratic Party of Maryland for the highest position of honor and responsibility within the gift of her generous people.

Some time later he began the study of law in the office of Benjamin A. Richmond, one of Maryland's great attorneys. This labor was rewarded with an admission to the bar of our county within a few years; and since then his career is known in every village and hamlet of this great country of ours.

A diligent student of men and questions, he was elected in 1901 to the State Senate of Maryland, a position in which he rendered signal service to the people of the State, but especially the great wage-earning body of our own county.

In 1910 he was elected to the Congress of the United States, which position he has since held, having been returned to that body from a congressional district pronouncedly Republican, and whose Republican majority has reached the enormous total of more than 6,000. In that exalted position he has brought honor to our State and is held in grateful respect by the farmers and business men to whom the blessings of his legislation flows as a cooling stream in the heat of summer.

We come to-day to present this man to the people of the State of Maryland for their support. We come to offer them from out the ranks of Democracy one of her simple sons who has graced every position to which he has been called and who has gilded his every public act with the gold of incorruptibility.

We come to offer to them a man whose sympathy takes in every condition of life, from him whose toilsome day brings in the scant reward that nourishes a family as dear to him as that of a king, as well as to those who care for large property and wide interests and who are seriously concerned that their interests shall be in the safe keeping of those who are intelligent enough to comprehend their requirements and fearless enough to stand in support of them against unjust clamor and unfair action.

I come to you to-day, gentlemen of this convention, to offer you the name of a man who was great in adversity, who is great in prosperity, whose dominant characteristic is modesty, and even in this great success modesty becomes him as does the white rose the breast of innocence and beauty.

I place before this convention for nomination to the exalted office of Senator of the United States for the State of Maryland the name of DAVID J. LEWIS, of Allegany County.

---

## Relief of the Destitute Persons in the District Overflowed by the Coosa River and Its Tributaries.

---

### EXTENSION OF REMARKS

OF

# HON. GORDON LEE,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 2, 1916.*

Mr. LEE. Mr. Speaker, I am asking unanimous consent for the consideration of House joint resolution 272, introduced by me on July 21, authorizing the Secretary of War to take such action as is necessary for the relief of the destitute persons in the district overflowed by the Coosa River and its tributaries. The resolution is short, and I therefore read it for the information of the House:

Joint resolution authorizing the Secretary of War to loan, issue, or use and to purchase quartermaster's and medical supplies for the relief of destitute persons in the districts overflowed by the Coosa River and its tributaries.

Whereas the recent disastrous floods of the Coosa River and its tributaries have overflowed certain districts, causing the loss of much property and rendering many persons homeless and temporarily without means of support: Therefore be it

*Resolved, etc.*, That the Secretary of War be, and he is hereby, authorized to loan, issue, or use such tents, provisions, and supplies pertaining to the Quartermaster's and Medical Departments of the Army, from any stores now on hand or that he may see fit to purchase, as he may deem necessary for the temporary relief of destitute persons in need of the same in the districts overflowed by the recent floods of the Coosa River and its tributaries, under such regulations for the care and return of articles not consumed in the use as he may deem necessary.

SEC. 2. That for the purpose of carrying out the provisions of this resolution there is hereby appropriated, out of any money in the Treasury of the United States not otherwise appropriated, the sum of $100,000.

The committee to which this resolution was referred submitted it to the War Department, with a similar bill introduced by the gentleman from Alabama [Mr. BURNETT]. The War Department has reported favorably on the passage of the bill giving relief to the flood sufferers in North and South Carolina, Georgia, Florida, Alabama, Mississippi, and a section of Tennessee, and recommends the appropriation of $540,000. This amount will not begin to render the assistance that is greatly needed in the flooded sections of that territory, but properly expended, as I have no doubt it will be, will give relief to many poor and deserving people. I realize it is only by unanimous consent under the rules of the House at this time that I can hope to get this resolution acted upon, and I sincerely trust that no gentleman may deem it wise to object. I am satisfied that when the House knows the real situation in this overflowed district no objection can be raised.

That section of Georgia in which my district is located has experienced the most terrific flood in the memory of the oldest living inhabitant, and the disaster to all interests has been overwhelming, farmers, merchants, railroads, county governments having suffered untold losses; and now many of the more unfortunate people, especially small farmers living along the streams, are in destitute circumstances and are greatly suffering for the want of food and clothing.

In this connection I desire to read in the hearing of the House a few telegrams and letters that have come from the stricken people of my district:

CALHOUN, GA., *July 11.*

Hon. GORDON LEE,
*Member of Congress, Washington, D. C.:*

To-day's paper says Government will aid farmers in Alabama flooded section. Eleven inches rain here in three days. Still raining. All streams highest since eighty-six. All corn and cotton on streams total loss. The cotton loss will equal in dollars the value of corn crop not destroyed in county land. Owners hit hard. Lands washed. Croppers on shares, many with large families, will suffer for bread, as entire crop is total loss, which is their all. They deserve Government aid, and as soon as possible. They are counting on you to get governmental aid. Landowners able to stand loss.

A. B. David; J. C. Garlington; W. R. Rankin, ordinary; W. L. Swain, county commissioner; R. H. Land, sheriff; W. O. Lewis, C. S. C.; W. L. Hines; T. A. Hopper.

ROME, GA., *July 22, 1916.*

Hon. GORDON LEE,
*House of Representatives, Washington, D. C.:*

We strongly urge your best efforts to secure Government aid for flood sufferers in Floyd and other counties of your district. We have made searching investigation and can prove absolutely need of tenants and farmers who lost their crops in summer floods of last week, while continued rains and a cloud-burst this morning are completing the work of destruction and preventing any efforts at replanting. The situation is a grave one, and we feel it your duty to do what you can. We know your efforts will be appreciated by those in distress.

ROME TRIBUNE-HERALD.
Mrs. J. LINDSAY JOHNSON.
J. LINDSAY JOHNSON, Jr.
J. D. MCCARNEY.

---

ROME, GA., *July 22, 1916.*

Hon. GORDON LEE, *Washington, D. C.:*

The unprecedented summer flood of last week, by which all crops on lowlands were wiped out, and the continuous downpour of rain, in some instances cloud-bursts, is materially damaging crops of uplands and preventing the replanting of the fields already destroyed. The reports from various sections of last night's rain is "unusually destructive." Much suffering must result to the poor tenants and laborers in this county. If it is possible to secure immediate aid from the Government, I hope you will use your best efforts to do so.

JNO. W. MADDOX.

---

ROME, GA., *July 22, 1916.*

GORDON LEE,
*House of Representatives, Washington, D. C.:*

Our people in the river sections are in deplorable condition because of the floods. Please see that we are included in any Government assistance rendered.

J. G. POLLACK,
*Chairman Board Commissioners, Floyd County, Ga.*

---

ROME GA., *July 26, 1916.*

Hon. GORDON LEE, *Washington, D. C.*

DEAR SIR: The Floyd County grand jury, now in session, earnestly ask that you use your best efforts to procure Federal aid for the distressed and needy flood sufferers in this section.

Yours, truly, C. TERHUNE, *Foreman.*

ROME, GA., *July 22, 1916.*

Hon. GORDON LEE, M. C.,
*Washington, D. C.:*

The flood condition of our own north Georgia cries for help. Farms ruined; farmers exhausted. I beg your influence to include this section of Georgia for national help. Condition is worst ever known.

R. A. DENNY.

ROME, GA., *July 22, 1916.*

Hon. GORDON LEE,
*House of Representatives, Washington, D. C.:*

The deplorable condition of our people, caused by recent floods, makes it most urgent that you include this section in your bill for Federal aid.

BENJ. C. YANCEY.

—

ROME, GA., *July 22, 1916.*

Hon. GORDON LEE.
*House of Representatives, Washington, D. C.:*

After canvassing situation find there are at least 500 families, tenants, in Floyd County alone whose crops are destroyed by flood and need immediate aid or suffering will result. Conditions on creeks as bad as on rivers.

M. B. EUBANKS,
*Clerk County Commissioners.*

—

OOSTANAULA, GA., *July 31, 1916.*

Hon. GORDON LEE,
*Washington, D. C.*

DEAR FRIEND: I take this method of writing you, as the people of this section are in a bad fix and need help from the Government. Along the Oostanaula River the most of us are renters, and we have lost our entire crop and need help. I, for one, have a wife and eight children and have bought all my supplies on time to make my crop, and now it is all gone. I had about 35 acres in cotton, and it is all gone; I also had 25 acres in corn, and I won't make an ear of corn; and all of the rest of the people on the river are in the same fix. So I thought I would write you, as I saw the people in Floyd County were asking for help.

If we don't get help some way we will suffer; nothing to feed our stock on, or ourselves either.

Your friend,

THOS. W. FOWLER.

—

CALHOUN, GA., R. F. D. 4,
*July 24, 1916.*

Mr. GORDON LEE,
*Washington, D. C.*

MY DEAR FRIEND: I received your letter and was awful proud to hear from you. Yes; I am one of the corn club boys and had my acre planted, and it was waist high and just fine. It was on fresh land, and I had cultivated it twice and fertilized it, and it commenced raining, so we lost all of our corn—not a bit left on the place—and I could just cry. I am a little orphan boy—no father. I have one brother and a mother, and we live with our grandpa and grandma. My father died 13 years ago and my grandpa raised us, and now we have to work and keep them up. And we have one uncle to keep up. He has got one leg cut off and grandpa fell off a wagon and broke one of his hips, so you see we have to work for them and keep them up. Me and my brother had 20 acres of corn and every bit was washed away, and it was fine corn, and some cotton washed away. I am 14 years old and brother is 18, so I don't know what we will do if we don't get help, and of course we would appreciate help. We don't own any land at all; we rent land, and everybody says we two boys are good workers, and our corn-club man, G. F. Fears, came over to see me, and he said we were sure good farmers, and we had our corn clean, fixing to lay by our crops. So it is gone, and it does look so sad. I just can't keep from crying and grieving over it. I work so hard. I don't know what to do. I wish you could just come and see for yourself. It is a sight. Just stand and see the fields with no corn on them; just white with mud.

I live a mile and a half from Calhoun; been here five years and never lost a crop before. I tell you it has left us in a bad shape, so I don't know what to do. We will try and be good boys and maybe the good Lord will help us live and have something to eat.

Mr. LEE, I just felt like I wanted to write you a letter and tell you how things were. It is just like I tell you. We two boys have to make the living for four besides ourselves, and we have lost everything. I don't see hardly how we will live.

Your friend,

EARL CLINE.

—

ROME, GA., *July 22, 1916.*

Hon. GORDON LEE,
*Washington, D. C.:*

Will you not include in your application for Government aid for the flood sufferers the unfortunate ones who are located in your district? A cloudburst last night made things still more deplorable. The gratitude of many sufferers and their sympathizers will be yours for the efforts I know you will make in their behalf.

HAMILTON YANCEY.

—

ROME, GA., *July 22, 1916.*

Hon. GORDON LEE, M. C.,
*Washington, D. C.:*

The 241 members of Rome woman's club appeal to you to include North Georgia in your request for a relief appropriation for Georgia flood sufferers.

Mrs. ROBERT M. HARBIN, *President.*

—

ROME, GA., *July 22, 1916.*

Hon. GORDON LEE,
*Washington, D. C.:*

At the request of a number of citizens, the continuous rains preventing farmers replanting and recent floods, 100 of tenants losing entire crops, I ask for them Government aid.

JOHN C. FOSTER.

—

SUGAR VALLEY, GA., *July 13, 1916.*

Hon. GORDON LEE,
*Washington, D. C.*

MY DEAR SIR AND FRIEND: I wish to write you a few lines to let you know about our trouble and soon-to-be suffering here in Gordon County, Ga. About all our crops are under the back or high water. I and Lee and Alf Cooley alone have about 30 acres in corn and cotton under water, all under, every stalk of that amount, and all along the Oostanaula River is the same way, the best corn in the county, and cotton, too. Thousands of acres are under the backwater, and a great many are badly hurt by running water, and it will be too late to plant over. We may sow some and make hay. That is our only hope now. Many are in debt to merchants for groceries furnished. The Oostanaula River is fast filling up with mud, washing in along the banks, and need the channel opened up and banks made wider to hold the water, which would be a great help to us. I hope you will look into this and see what you can do for us, and oblige.

Your true friend,

H. A. COOLEY.

—

ROME, GA., R. F. D. 8, *July 19, 1916.*

Hon. GORDON LEE.

SIR: The farmers here in Floyd County is ruined here on the creeks and rivers. Can you do anything in way of helping the farmers that have lost everything they have got? Five of my brothers lost every bit of their cotton and corn, and all of them renters, and hundreds of others they can't get no work to do. What can we do. Are there any chance of getting the Government to help us? If the Government is going to do anything for the people, now is the time to do it.

Please write me on return mail in regard of this.

Your friend,

WILLIAM L. JUSTICE.

—

PLAINVILLE, GA., *July 12, 1916.*

Hon. GORDON LEE, M. C.,
*Washington, D. C.*

DEAR SIR: You are, no doubt, aware of the vast damage done to the farmers of this section by the recent floods. Especially has it fallen heavily upon the people of this immediate section on account of the peculiar physical condition of the river here, where it makes something like a 10-mile bend, the inland section being lowlands. The crops are completely devastated, having now been inundated for a week. I hope there is a possibility of securing Government aid for these people.

Assuring you of my best wishes and hoping to hear from you promptly, I remain,

Yours, very truly,

T. W. WOODS.

—

TILTON, GA., *July 13, 1916.*

Hon. GORDON LEE,
*Washington, D. C.*

MY DEAR CONGRESSMAN: You are aware of the fact that the great deluge of rain has ruined all lowland crops throughout Georgia, Mississippi, and Alabama.

In behalf of our county, Whitfield, I make this appeal. The Connasauga River has had all corn and other foodstuff under water for three days, and is now over all bottom land. Upland crops are damaged by storms and washouts.

Without help from the Government many people will face starvation another year, and many of them will not be able to farm another year. Will you please let me know and to whom we must apply for help.

Thanking you in advance for your able assistance, I am,

Yours,

J. S. PARKER, N. P. & J. P.

—

ROME, GA., *July 15, 1916.*

Hon. GORDON LEE,
*House of Representatives, Washington, D. C.*

DEAR SIR: I want to say in regard to the inclosed letter that the conditions as set out there are not exaggerated. The crops upon thousands and thousands of acres of our best land in this county are destroyed, and the season is so far advanced they can't plant over again of cotton and corn, and many of them are unable to purchase seed, and if you could do anything for them, they certainly deserve it, and I know they will all highly appreciate it.

Very truly, your friend,

JOHN W. MADDOX.

—

JULY 19, 1916.

Hon. GORDON LEE and Hon. JOHN L. BURNETT,
*Washington, D. C.*

MY DEAR SIRS: I have just visited and returned from the river section of Cherokee County, near Cedar Bluff.

The Coosa River was within about 3½ feet of the 1886 freshet. All river lands were overflowed and crops swept away. Food crops are absolutely destroyed. Many tenants, both white and colored, are left penniless, with no means for support. Merchants who have already advanced to these tenants can not be expected to continue their advances, as there is no possibility of payment by the tenants during the year.

High water still covers most of the bottoms and receding very slowly, showers falling practically every day, making it impossible to even plant any kind of food crops on the uplands for several days to come, even with dry weather.

There is but little outside work to offer them. Landlords are heavy losers, both for present year crops and advances already made.

The problem confronting these people is a very serious one. In my humble opinion, the conditions justify and call for such aid as the Government can properly extend to these people. Health conditions are also imperiled. Decaying vegetable matter threatens typhoid and malaria. Inoculation against these fevers should be required, and as they have no money to pay for same, can this be furnished by the Government?

I have made this suggestion to Dr. Sigert, of Cedar Bluff, and Joe L. Daniel.

Above for your serious consideration.

Yours, very truly,

HAMILTON YANCY.

—

ROME, GA., *July 13, 1916.*

Hon. GORDON LEE,
*House of Representatives, Washington, D. C.*

MY DEAR SIR: We, your constituents and friends, who reside in the county of Floyd, beg to call your attention to the great disaster that has befallen this country, caused by the flood that has overflowed and destroyed a large part of our crops for this year—large bodies of corn and cotton have been absolutely destroyed, and in some instances every acre of corn and cotton of some of us who sign this petition is actually lost. We know of nothing at this late day in the year from which we can hope to reap any crop, except from cane and millet seed or peas. With the destruction of our crops, our credit for this year is destroyed

and we are appealing to you to secure for us from the Government cane, millet, and peas, if possible. We know in many instances the Government has aided those who have met with a like calamity, and if any people ever needed it, certainly we do now. Your aid and assistance in this matter can never be more appreciated than now.

Very truly, yours,

J. B. Barna, J. T. Spann, W. D. Vank, J. W. Fitzsimmons, T. W. Walker, J. B. Parlier, C. T. Kennedy, H. S. Clements, R. P. Parlin, John B. Thomas, H. R. Hortin, J. T. Cooley, F. B. Williams, C. R. Brewer, Geo. W. Thomas, Alice L. Thomas, A. G. Thomas, J. P. Cuzzart, T. W. Keitty, M. M. Middleton, W. M. Leming, L. F. Thomas, V. G. Smith, W. J. Carter, C. F. Hofford, G. U. Barna, J. R. Ellis, W. M. Green, J. J. Hill, A. N. Chapman, Mack Clark, B. H. Barna.

These telegrams and letters tell their own story. It is a story of disaster and ruin by no fault of the people involved.

I ask in my resolution for the appropriation of a comparatively modest sum.

Mr. Speaker, I am a firm believer in the doctrine of self-help, and I have no patience with people who run to Congress for appropriations upon every pretense. My record in this respect is well known to the Members of this House, but in this case circumstances are entirely different. The large section of my State, involving 13 counties, composed of people in modern circumstances, has been overtaken by an appalling disaster, and the cry for relief is a real cry of distress and, I am sure, justifies me in coming to Congress for help from this great and rich Government, to which these people are so loyal, and I therefore trust that no objection will be raised to the immediate consideration of this resolution.

## Peary and the North Pole.

### EXTENSION OF REMARKS

OF

### HON. HENRY T. HELGESEN,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 21, 1916.*

Mr. HELGESEN. Mr. Speaker, since my speech of January 13, 1916, on "Government Maps of the Arctic Regions Corrected," and my analysis of the Peary hearings, which was printed in the CONGRESSIONAL RECORD of February 12, 1916, I have received a great quantity of letters and personal assurances that men in the scientific world, educators, geographers, and historians are deeply interested in the official determination of certain claimed discoveries in the Arctic regions, and in the attainment of the North Pole. So great is the interest in this important subject that I have made a careful analysis of Civil Engineer Peary's book, "The North Pole," and his magazine articles on the same subject, in order to add this analysis to the one already presented in the CONGRESSIONAL RECORD of February 12, 1916, and the official correspondence quoted in my speech of January 13, 1916, so that no question may be raised as to the omission of any evidence which Peary may claim to have from the final analysis, which it is now necessary to consider in connection with the joint resolution which I have to-day introduced, and which I shall now read:

Joint resolution to repeal an act entitled "An act providing for the promotion of Civil Engineer Robert E. Peary, United States Navy, and tendering to him the thanks of Congress," known as Public, No. 487, approved March 4, 1911.

Whereas by an act (known as Public, No. 487, approved Mar. 4, 1911) the Sixty-first Congress authorized the President of the United States to place Civil Engineer Robert E. Peary on the retired list of the Corps of Civil Engineers, with the rank of rear admiral and with the highest retired pay of that grade under existing law; and

Whereas such retirement with retired pay was not granted to Civil Engineer Peary in recognition of his naval services, but for various alleged Arctic explorations, which he claimed resulted in his reaching the North Pole on April 6, 1909; and

Whereas the various alleged Arctic discoveries claimed to have been made at certain times and on sundry expeditions by Civil Engineer Peary have been proven fictitious; and

Whereas the Hon. Josephus Daniels, Secretary of the United States Navy, under date of April 28, 1915, officially states that Hydrographic Office Chart No. 2142, incorporating Civil Engineer Peary's alleged discoveries which he claimed to have made prior to 1903 has been canceled and withdrawn from circulation; and

Whereas the Hon. Josephus Daniels, Secretary of the United States Navy, under date of September 15, 1915, officially states that Hydrographic Office Chart No. 2560 has been sent to the engravers for the purpose of removing therefrom certain other nonexistent geographical features claimed to have been discovered by Civil Engineer Peary; and

Whereas it has been officially established that the so-called "evidence" presented by Civil Engineer Peary to Congress in the effort to prove his claimed attainment of the North Pole fails in every detail to substantiate his claim; and

Whereas it is a manifest injustice to the American taxpayers to take from the Treasury the sum of $6,000 annually to reward Civil Engineer Peary for services never performed and for feats never accomplished: Therefore be it

*Resolved, etc.*, That an act (Public, No. 487, approved Mar. 4, 1911) entitled "An act providing for the promotion of Civil Engineer Robert E. Peary, United States Navy, and tendering to him the thanks of Congress," be, and the same is hereby, repealed; and be it further

*Resolved*, That the President of the United States be, and he is hereby, authorized to remove Civil Engineer Robert E. Peary from the retired list of the Corps of Civil Engineers, United States Navy.

Mr. Speaker, this resolution speaks for itself. The only evidence which Robert E. Peary has ever presented to the world in substantiation of his claim to have attained the North Pole is contained in his testimony before the House Committee on Naval Affairs in 1910 and 1911, in his book "The North Pole," and in his magazine articles. My analysis of his "evidence" before the House Committee on Naval Affairs was printed in the CONGRESSIONAL RECORD of February 12, 1916. There remains, therefore, only his book, "The North Pole," and his magazine articles, the analysis of which I herewith present.

Robert E. Peary's first dispatch announcing his alleged discovery of the North Pole was published in the New York Times of September 7, 1909. His first account of his alleged discovery of the North Pole was published in the New York Times of September 9, 1909, and consisted of a brief outline of his sledge trip from Cape Columbia to the north. Such discrepancies as appear between this first brief telegram and his later complete accounts must, in all fairness, be charged to errors of typography and transmission. The same is true of his first newspaper story, which was published, as per contract copied below, in the New York Times of September 10 and 11, 1909:

TIMES CONTRACT WITH PEARY, AS PUBLISHED IN NEW YORK TIMES, SEPTEMBER 11, 1909.

JULY 6, 1908.

NEW YORK TIMES, *New York City.*

GENTLEMEN: I herewith acknowledge the receipt of the sum of four thousand dollars ($4,000) from the New York Times on behalf of itself and associates. It is understood that in making this advance the Times does not assume any responsibility for or any connection with the expedition on which I am about to embark and which has for its purpose the finding of the North Pole. The money is advanced to me as a loan to be repaid to the New York Times and its associates out of the proceeds of the news and literary rights resulting from this expedition, it being understood that if for any reason the expedition is abandoned before the fall of 1908 the money will be refunded to the Times. If the expedition is successful and the pole is discovered, I promise to use every means in my power to reach civilization and wire to the Times the full story of the discovery over my own signature. The Times is to have the sole rights to the news of the discovery and is to have the exclusive right of its publication in all parts of the world. My understanding is that the Times, on its part, agrees to syndicate the news both in Europe and America, and to give me the entire amount it receives, after deducting costs of cables, tolls, etc. The Times and its associates will pay me what they consider a reasonable amount for the use of the material in their own publications. From the sum thus raised the $4,000 is to be repaid, and I am free to sell the magazine and book rights to my best advantage.

It is understood, however, that should the news reports by any possibility not realize the sum of $4,000 any deficit will be reimbursed to the Times from the magazine and book rights.

Should the expedition not be successful in finding the pole, but should simply result in explorations in the far North, the Times is to be repaid $4,000 out of the news, magazine, and book rights of the expedition, so far as they may go toward the liquidation of that claim.

Yours, very truly,

R. E. PEARY.

As this analysis is not of a hypercritical nature, no reference is made herein to the newspaper stories above mentioned, and only the complete magazine story and Peary's book, The North Pole, are considered.

The North Pole: Its Discovery in 1909 Under the Auspices of the Peary Arctic Club, by Robert E. Peary, opens with a characteristic "introduction" by Theodore Roosevelt and "foreword" by Gilbert H. Grosvenor, director and editor of the National Geographic Society. The magazine story opened in Hampton's Magazine for January, 1910, and was published in monthly installments, extending through nine issues of the magazine. On page 6 of the January, 1910, number Peary says:

To attain it (the pole) I had dedicated my whole being * * * had given all my own money and the money of my friends.

On page 18 of the same magazine, and also on page 27 of The North Pole, Peary mentions "Eagle Island, our summer home on the coast of Maine," and also says:

My Eskimo dogs, North Star and the others, had been brought down from *one of my islands* in Casco Bay, on the coast of Maine.

Peary was fortunate, indeed, after "spending all of his money" in his search for the North Pole, to still own "our summer home on the coast of Maine" and a number of "islands in Casco Bay," of which he makes such casual mention. The majority of persons who have "given all their money" for any cause would consider a "summer home on the coast of Maine" and a few "islands in Casco Bay" as equivalent to a considerable amount of money, and many a wealthy man would gladly number one of those same valuable islands among his worldly possessions.

In May, 1908, two months prior to his departure from New York, Peary published his plan for his final polar trip. In

The North Pole he quotes this published statement, one paragraph reading as follows:

The selection of a winter base which commands a wider range of the central polar sea and its surrounding coasts than any other possible base in the Arctic regions. Cape Sheridan is practically equidistant *from Crocker Land* from the remaining unknown portion of the northeast coast of Greenland and from my "nearest the pole" of 1906.

Donald B. McMillan, Peary's friend and a member of the Peary expedition of 1908–9, has now established beyond doubt the nonexistence of Crocker Land. Although a strenuous effort is made by Peary and his friends to prove a theory that a body of land does exist in the Polar Basin that might be called Crocker Land, McMillan has effectually proved that no land is to be found at or near the region where Peary located Crocker Land. Hence his winter base, although located at a suitable point from which to launch a sledge party toward the pole, was *not* "equidistant from Crocker Land" and other points, since Crocker Land does not exist.

In Chapter I of The North Pole, entitled "The plan," and again in Chapter XXII ("Essentials that brought success"), Peary lays great stress on the value of the "Peary system," which he claims to have evolved as the result of his many years of work in the Arctic. Although Peary christens this "system" with his own name, the salient features of the plan were advocated by the Duke of the Abruzzi in 1903 as the result of his own polar expedition which reached 86° 34′ north latitude under the leadership of Capt. Cagni in 1901. The parallel columns which I present show the similarity of the "Peary system" as presented by Peary on pages 202–203 of The North Pole and the plan advocated by the Duke of the Abruzzi in his book On the *Polar Star:*

| [From The North Pole.] | [From On the *Polar Star.*] |
|---|---|
| To drive a ship through ice to the farthest possible northern land base from which she can be driven back again the following year. (P. 202.) | To sail along the western coast of Greenland to the north of Kennedy Sound, where it ought to be possible to go to a still higher latitude than that reached by the *Alert* of Grant Land. (P. 272.) |
| To do enough hunting during the fall and winter to keep the party healthily supplied with fresh meat. (P. 202.) | We had fresh bear's flesh (the result of hunting) served out to us once or twice every week. (P. 150.) |
| To have dogs enough to allow for the loss of 60 per cent of them by death or otherwise. (P. 202.) | The greatest care should be given to the choice of the dogs. When they are collected in Siberia, those of inferior quality should be put aside, and only those selected which seem the strongest and to have the most power of endurance. (Pp. 284–285.) |
| To have the confidence of a large number of Eskimos. (In this particular Peary's method differed from that of the Duke of the Abruzzi, who, as will be seen by the parallel statement, gave the preference to his own Alpine guides.) (P. 202.) | All the men intended to take part in the expedition required to be endowed with more than ordinary endurance, both moral and physical. I became convinced that it would be easy to find such men among our Alpine guides. I therefore took with me four guides. The guides were of the greatest use. (Pp. 282–283.) |
| To have an intelligent and willing body of civilized assistants to lead the various divisions of Eskimos—men whose authority the Eskimos will accept when delegated by the leader. (P. 202.) | One should not start for these expeditions unless with persons who have given proof of their moral and physical capacity. It is only the absolute obedience of all the men (not the blind obedience of persons who do not know what they are doing, but the obedience inspired by the sense of duty and of confidence in their chiefs) which can allow the leader to come to decisions he would otherwise find it very difficult to carry out. (P. 285.) |
| To transport beforehand to the point where the expedition leaves the land for the sledge journey, sufficient food, fuel, clothing, stoves (oil or alcohol), and other mechanical equipment to get the main party to the pole and back and the various divisions to their farthest north and back. (P. 202.) | Sledge expeditions were to be carried on in autumn and spring; the former were to transport supplies to the lands situated more to the north and the latter to attempt to reach the highest latitude. (P. 16.) |
| To have an ample supply of the best kind of sledges. The Peary sledge is from 12 to 13 feet in length, 2 feet in width, and 7 inches in height. The Peary sledge has oak sides, rounded, both in front and behind, with 2-inch wide bent ash runners attached, the runners being shod with 2-inch wide steel shoes. The sides of both are solid, and they are lashed together with sealskin thongs. (Pp. 135–202.) | The sledges were after the model of those used by Nansen. They were 11 feet 5 inches long, 1 foot 6 inches wide, and 6½ inches high. The runners were provided with a convex section, so that it might be more easy to turn the sledge. They were shod with plates of white metal, and wooden runners were strapped beneath them. The foremost ends of the runners were joined by a bow, to which the trace was attached. No nails were used, but the various parts were lashed together. (Pp. 183–184.) |
| To have a sufficient number of divisions or relay parties, each under the leadership of a competent assistant, to send back at appropriate and carefully calculated stages along the upward journey. (P. 202.) | The expedition required to be formed of three detachments. The first detachment was to advance to the eighty-fifth parallel, carrying supplies to feed the entire expedition during the first stage of its march, and for its own food during its return to the ship. The second detachment was to go on farther to the north, up to the eighty-eighth parallel, with provisions for the rest of the expedition in its march to the north and for itself when on the way back; and, lastly, the third detachment was to advance from the eighty-eighth parallel to the pole. (P. 15.) |
| To have every item of equipment of the quality best suited to the purpose, thoroughly tested, and of the lightest possible weight. (P. 202.) | An expedition ought to make frequent excursions in winter, not only to test the outfit, but to accustom the men to the life which they shall have to lead. (P. 285.) |
| To know by long experience the best way to cross wide leads of open water. (P. 202.) | The state of the places through which a guide (Alpine) is continually passing changes from year to year, sometimes from day to day. The (Alpine) guides are accustomed from their youth to observe attentively and decide prudently. (P. 284.) |
| To return by the same route followed on the upward march, using the beaten trail and the already constructed igloos to save the time and strength that would have been expended in constructing new igloos and in trail breaking. (P. 203.) | Cagni, who conducted the Duke of the Abruzzi's expedition to its "farthest north" of 86° 34′, started back over his upward trail, but owing to the drift of the ice lost the trail on the fourth day. Peary claims to have enjoyed an abnormal season, inasmuch as he claims there was "no lateral drift of the ice." (P. 499, Polar Star, Vol. II.) |
| To know exactly to what extent each man and dog may be worked without injury. (P. 203.) | One should not start for these expeditions unless with persons who have given proofs of their moral and physical capacity. Only those who are in a state of perfect health should go on an Arctic expedition. (Pp. 284–285.) |
| To know the physical and mental capabilities of every assistant and Eskimo. (P. 203.) | It was essential to have men well acquainted with nautical astronomy, who could use instruments and make calculations so as to find their way back to land. It was, moreover, necessary that if we found ourselves in difficult circumstances, these persons should have the knowledge possessed by those accustomed to command. (P. 27.) |
| Last, but not least, to have the absolute confidence of every member of the party, so that every order of the leader will be implicitly obeyed. (P. 203.) | It is only the absolute obedience of all the men (the obedience inspired by the sense of duty and of confidence in their chiefs) which can allow the leader to come to decisions he would otherwise find it very difficult to carry out. (P. 285.) |

Thus the famous "Peary system" was not altogether the evolution of Peary's personal experience. He profited largely by and copied from the experiences and plans of earlier explorers in the same field. While the Duke of the Abruzzi gives great credit to Dr. Nansen for invaluable advice and suggestions, Peary heralds his plan as an original "system," and thereupon christens it the "Peary system."

It may also be noted, in comparing the "Peary System," as published in The North Pole, with the "system" as published in the June, 1910, number of Hampton's Magazine, that while the principles of the "system" are the same in both accounts, the book makes no reference to a possible obliteration of the trail, while the corresponding paragraph in Hampton's reads:

To return by the same route that was followed on the upward march, using the beaten trail, and the already constructed igloos, *provided that this trail shall not have been obliterated by shifting of the ice.*

The following paragraph in the June Hampton's Magazine is omitted altogether from the book:

To have the final party carry, on the last leg of the dash, enough supplies to get it back to land by a new route in case shifting ice shall have destroyed the up-trail and the igloos along its route.

After this review of his plan Peary says, on page 17 of The North Pole—

Compare this scheme, if you please, with the manner of its execution. * * * The sledge divisions left the *Roosevelt* from February 15 to 22, 1909, rendezvoused at Cape Columbia, and on March 1 the expedition left Cape Columbia. The eighty-fourth parallel was crossed on *March 18, etc.*

But on page 232 of The North Pole, Peary says:

On this march (March 11, 1909), we crossed the eighty-fourth parallel.

Which date is correct? If merely a typographical error why did not Peary correct it in the second edition of his book? It reads the same in both editions.

On page 7 Peary also says:

It will be noted that while the journey from Cape Columbia to the pole consumed 37 days (though *only* 27 *marches*), we returned from the pole to Cape Columbia in only 16 days.

On page 296 of The North Pole is the following statement:

90 N. LAT., NORTH POLE,
*April 6, 1909.*

Arrived here to-day, 27 *marches* from C. Columbia.

On page 316 of The North Pole, Peary says:

Our return from the pole was accomplished in *16 marches*, and the entire journey from land to the pole and back again occupied 53 days, or *43 marches*.

Sixteen from forty-three leaves twenty-seven. Therefore, this is another instance of Peary's mention of 27 marches from Cape Columbia to the Pole.

But in the Congressional Library, catalogue number G 670, 1909, p. 5, is a small notebook containing facsimile "Extracts from Commander Peary's personal diary on his trip to the North Pole," all in Peary's own handwriting, signed by himself. The seventh page of this little book contains the following statement (in Peary's own handwriting):

90 N. LAT., NORTH POLE,
*April 6, 1909.*

Arrived here to-day, *28 marches* from C. Columbia.

Which statement shall we believe, the one made in Peary's own handwriting, while every event of the trip, including the number of marches made, was fresh in his mind, or the "afterthought" as given in Hampton's Magazine and The North Pole?

Chapter 2 of The North Pole is entitled "Preparations," and on page 25 is the following paragraph:

Here are a few of the items and figures on our list of supplies for the last expedition: Flour, 16,000 pounds; * * * *smoking tobacco, 1,000 pounds.*

Apropos of this statement are the following parallel quotations made from Peary's earlier book, Northward Over the Great Ice, and from a letter written by Peary to the United States Tobacco Co., shortly after his return from his last expedition, and which was published in Hampton's Magazine for January, 1910:

[From Northward Over the Great Ice.]

Personally, as a matter not of conscientious scruples but of judgment and taste, I am neither a drinker nor a smoker, and I have always selected men for my parties who, as far as their word of honor could be relied upon, used neither *tobacco* nor spirits (p. 188).

Tobacco is objectionable in arctic work. It affects the wind endurance of the individual, particularly in low temperatures, adds an extra and entirely unnecessary item to the outfit, and vitiates the atmosphere of tent and house (p. 189).

[From Hampton's Magazine for January, 1910.]

UNITED STATES TOBACCO CO.,
*Richmond, Va.*

GENTLEMEN: I am indebted to the United States Tobacco Co., both on this expedition and on the last, for some specially packed North Pole smoking tobacco for the use of the expedition. This tobacco was most highly prized by both members of the party and the Eskimos, and assisted materially in passing many an hour of the long, dark winter night at Cape Sheridan.

R. E. PEARY.

As with all Arctic expeditions of later generations, dogs were, next to the men themselves, the most important part of the outfit. Without their tractive power an attempt to reach the North Pole would be useless. Therefore it was necessary for Peary to acquire dogs, dogs, and more dogs. In chapter 8 of The North Pole, entitled "Getting recruits," page 72, he says:

When, on August 1, the *Roosevelt* steamed out from Cape York she had on board several Eskimo families which we had picked up there. We also had about 100 dogs bought from the Eskimos. When I say "bought" I do not mean paid for with money, as these people have no money and no unit of value. All exchange between them is based on the principle of pure barter. The Eskimos had dogs, which we wanted, and we had many things which they wanted, such as lumber, knives and other cutlery, cooking utensils, ammunition, matches, etc. So, as the Yankees say, we traded.

In 1912 Matthew Henson, Peary's companion on all of his Arctic trips, published a little book entitled "A Negro Explorer at the North Pole," the foreword of which was written by Peary. In this foreword Peary says:

It would be superfluous to enlarge on Henson in this introduction. His work in the north has already spoken for itself and for him. His book will speak for itself and for him.

Therefore, as seen from the foregoing, Peary vouches for the authenticity of Henson's book. Relative to the "purchase" of dogs from the Eskimos, Henson says, on pages 29–30:

Commander Peary gave me explicit instructions to get Nipsangwah and Myah ashore as quick as the Creator would let them, but to be sure their seven curs were kept aboard. Acting under orders, I obeyed, but it was not a pleasant task. I have known men who needed dogs less to pay a great deal more for one pup than was paid to Nipsangwah for his pack of seven. The dogs are a valuable asset to these people, and these two men were dependent on their little teams to a greater extent than on the plates and cups of tin which they received in exchange for them.

Apparently Peary was not actuated altogether by benevolence in his dealings with his Eskimo friends.

Chapters 5, 6, and 7 of The North Pole are devoted to an interesting description of the Eskimos and Eskimo customs. On page 76 Peary says:

Boatswain Murphy, whom I was to leave at Etah, was a thoroughly trustworthy man, and I gave him instructions to prevent the Eskimos from looting the supplies and equipment left there.

Peary apparently had less confidence in his Eskimo friends than they deserved, if we may judge from the accounts of these people given by other travelers in the Arctic regions. Dr. Fridtjof Nansen, in a chapter of The First Crossing of Greenland, entitled "The Eskimo of Greenland," pages 299–300, says:

Driftwood belongs to the one who first finds it floating in the sea, no matter where that be, but to establish his rights the finder must tow it ashore and pull it up above high-water mark. For this form of property the Eskimo has great respect. In proof of Eskimo uprightness, I may state that a man who has brought his wood to shore is certain to find it at the same spot years after—if so be, indeed, that no European has come that way.

Dr. Nansen continues, on pages 335–336, of the same volume:

Honesty is another of his (the Eskimo's) prominent qualities. Theft is in any case rare.

Capt. Charles F. Hall in 1867 left a cache of stores near Cape Weynton, of which the Eskimos were aware, and returning two years later found them untouched. (See pp. 383–384 of Nourse's Narrative of the Second Arctic Expedition Made by C. F. Hall.

George Borup, a member of Peary's last expedition, in his thrilling little book, A Tenderfoot with Peary, says on page 314:

A bit after breakfast the next day, the 25th, we made Cape York. There, on the extreme end of the cape, about 50 feet above sea level, we saw three boxes which the huskies (Eskimos) told us had been left by a large ship. We opened these boxes and found that they'd been left by Capt. Adams, of the Scotch whaler *Morning*, of Dundee, on June 17, and contained a lot of mail from home. The Eskimos had regarded the boxes as sacred, and had not dreamed of molesting them, though, for all they knew, their contents might have been extremely valuable to them.

Peary's references to the Eskimos are remarknble for their tone of proprietorship. He designates these natives of the Arctic regions as "My Eskimos," "My little brown people," and so forth, and on page 333 of The North Pole, he says:

I had come to regard them with a kindly and personal interest, which any man must feel with regard to the members of any inferior race who had been accustomed to respect and depend upon him during the greater part of his adult life.

It is on page 24 of Hampton's Magazine for January, 1910, that Peary presents his most striking conception of the primary object in the creation of the Eskimos:

These Eskimos are one of the most important tools in all my program of Arctic work. I have been able to utilize them as no explorer ever has before. In the light of recent events I have sometimes wondered if the mission of their life on earth, after having lived for generation after generation isolated in that little Arctic oasis, was not to assist in the discovery of the pole.

Peary seems to have had an especial fondness for his earlier book, Nearest the Pole, as in The North Pole we find him frequently using incidents and language which are practically copied verbatim from the former book. A few instances will illustrate:

[From Nearest the Pole.]

Just off the point of Sumner a brief nip between two big blue floes, which the swift current was swinging past the cape, set the *Roosevelt* vibrating like a violin string (pp. 44–45).

The *Roosevelt* fought like a gladiator, turning, twisting, straining with all her force, smashing her full weight against the heavy floes, and rearing upon them like a steeplechaser taking a fence.

More than once did a fireman come panting on deck for a breath of air, look over the side, mutter to himself, "By G— she's *got* to go through!" then drop into the stokehole, with the result a moment later of an extra belch of black smoke from the stack and an added turn or two to the propeller (p. 45).

[From The North Pole.]

More than once a brief nip between two big blue floes has set the whole 184-foot length of the *Roosevelt* vibrating like a violin string (p. 104).

At other times, under the pressure on the cylinders of the bypass before described, the vessel would rear herself upon the ice like a steeplechaser taking a fence.

Often * * * have I seen a fireman come up from the bowels of the ship, panting for a breath of air, take one look at the sheet of ice before us, and mutter savagely: "By God, she's *got* to go through!" Then he would drop back again into the stokehole, and a moment later an extra puff of black smoke would rise from the stack, and I knew the steam pressure was going up (p. 105).

The winter quarters of the *Roosevelt*, at Cape Sheridan, were reached on September 5, the same day of the month and 15 minutes later than the time of arrival at the same point in 1905. Preparations were at once commenced for the long winter night, and the members of the expedition were sent out to hunt for game and furs, both of which were necessary to insure the success of the expedition.

Peary devotes much space in The North Pole to the elaborate preparations for the sledge journey over the ice of the Polar Sea to the pole; and in Chapter XXI, "Arctic ice sledging as it really is," graphically describes some of the enormous obstacles to be overcome by the expedition. On page 194 he says:

There is no land between Cape Columbia and the North Pole, and no smooth and very little level ice. For a *few miles only* after leaving the land we had level going, as for those few miles we were on the "glacial fringe." This fringe is really an exaggerated ice foot. Pressure ridges may be anywhere from a few feet to a few rods in height; they

may be anywhere from a few rods to a quarter of a mile in width; the individual masses of which they are composed may vary from the size of a billiard ball to the size of a small house.

Opposite page 193 is a photograph entitled "Face of the land ice, 'glacial fringe,' off Cape Columbia." This photograph purports to represent the "few miles of level going" between Cape Columbia and the pole. In the picture this "level going" appears to be composed of a series of ice bowlders piled up in indescribable confusion.

And yet, notwithstanding the fact that "between Cape Columbia and the North Pole there is no smooth and very little level ice," in his account of the sledge journey on April 3, 4, 5, and 6, *after Bartlett left him*, Peary repeatedly describes the "level going" encountered, which enabled him to make far better time than he made while he had a supporting party to "pioneer" the way. On page 279, which he dates April 3, Peary says:

As soon as we struck the *level old floes* we tried to make up for lost time.

On page 280 (Apr. 4):

The surface of the ice was *as level as the glacial fringe from Hecla to Cape Columbia*, and harder.

Again, on page 284:

The going was even better than before. There was hardly any snow on the hard, granular surface of the old floes, and the sapphire-blue lakes were larger than ever.

Peary had apparently forgotten his previous statement that "between Cape Columbia and the North Pole there is no smooth and very little level ice," or perhaps he fancied that the reader's memory would not extend over so many pages.

The difficulties of a journey to the North Pole are summarized by Peary on pages 198–199 of his book:

Briefly stated, the worst of them are: The ragged and mountainous ice over which the traveler must journey with his heavily loaded sledges; the often terrific wind, having the impact of a wall of water, which he must march against at times; the open leads which he must cross and recross; the intense cold, sometimes as low as 60° below zero; the difficulty of dragging out and back over the ragged and "lead" interrupted trail enough pemmican (etc.) and liquid fuel to keep sufficient strength in his body for traveling.

The extent to which Peary's expedition was exempt from these "difficulties" is shown in the pages of The North Pole.

Peary's plan for his final attack on the pole, as published by him in May, 1908, prior to his departure for the north, stated:

On the return march in the next expedition I shall probably do voluntarily what I did involuntarily the last time; that is, retreat upon the north coast of Greenland instead of attempting to come back to the north coast of Grant Land diagonally against the set of the ice.

He apparently modified this plan during the winter, for on page 203 of The North Pole, in describing the "Peary system" in detail, he prints in italics the following paragraph:

To return by the same route followed on the upward march, using the beaten trail and the already constructed igloos to save the time and strength that would have been expended in constructing new igloos and in trail breaking.

The latter plan would necessitate a return to the north coast of Grant Land, and Peary had apparently forgotten all about the "easterly set of the ice" in the latter planning of his return.

Conditions favored them throughout the winter, and in accordance with Peary's plan, the last of the sledge parties left Cape Columbia for the north on March 1, 1909. Peary says on page 216 of The North Pole:

An hour after I left camp my division had crossed the glacial fringe, and the last man, sledge, and dog of the northern party—comprising altogether 24 men, 19 sledges, and 133 dogs—was at last on the ice of the Arctic Ocean, *about latitude* 83°.

In Hampton's Magazine for June, 1910, Peary says:

The northern party * * * was at last on the ice of the Arctic Ocean, about latitude 83° 10′.

This means a difference of 10 miles between the points where Peary locates the first ice of the Arctic Ocean.

In chapter 22, "Essentials that brought success," Peary says relative to observations:

The distance which we traveled day by day was at first determined by dead reckoning, to be verified later by observations for latitude. Observations were taken every five marches, as soon as it was possible to take them at all.

On Peary's trip of 413 geographical miles from Cape Columbia to the point which he claimed to be the North Pole observations were taken only three times, twice by Marvin and once by Bartlett. In addition to these observations Peary took what he called a "latitude sight," which he asserts gave him 89° 25′. At the point that he called the pole Peary took several sets of observations. On the return trip he made no observations of any kind, as he followed the upward trail homeward, and apparently did not care to verify the observations made on the upward journey.

Let us compare the infrequency of Peary's observations with those made by other Arctic explorers:

Lieut. J. B. Lockwood, of the Greely expedition, who in 1882 attained the highest north of any expedition up to that time, 83° 24′, on a sledge journey of 276 miles from Fort Conger to Lockwood Island, made seven observations, not including those at his "farthest," and this notwithstanding he was following the coast line of Greenland, and therefore did not require frequent observations in order to keep his course.

Dr. Fridtjof Nansen on a sledge journey of 129 miles (as the crow flies) from the point where he left the *Fram* at 84° 4′ north latitude to his "farthest north" at 86° 13′, made five observations, not including those made at his "farthest."

Capt. Cagni, who led the sledge journey of the Duke of the Abruzzi's polar expedition, made 11 observations from a latitude of 81° 51′ to his "farthest north" at 86° 34′, a direct distance of 283 miles. On his return trip, which was much longer, owing to the drift of the ice, Capt. Cagni made 22 observations.

All of these explorers except Peary made observations for latitude, longitude, and compass variation. Peary made no observations for compass variation, nor for longitude; neither did he have with him any chart showing the variations of the compass as they have been observed from time to time by other explorers and navigators. These facts were brought out by Peary's own testimony before the congressional committee in 1911.

A perusal of The North Pole impresses the reader with the remarkable freedom of Peary's last expedition from that bugbear of all Arctic explorers who have attained a high northing, namely, the drift of the polar ice. Dr. Nansen says on page 272 of his Farthest North:

Yesterday evening I reckoned out the observations and find that we have drifted strongly westward, having come from 61° 16′ E. right to about 57° 40′ E. But then we have also drifted a good way north again, up to 82° 26′ N., after being down in 82° 17.8′ on the same date, and we have been pushing southward as hard as we could the whole time.

Capt. Cagni, in relating the story of his return from the "farthest north" of the Italian expedition, repeatedly mentions the hardships caused the expedition by the constant drift of the ice. I quote from Volume II, page 577, of On the *Polar Star:*

The sun comes out at 6 and I am able at last to take an altitude. As I calculate the longitude I am overcome by a great feeling of discouragement. *In seven days* of severe toil we have not advanced *3 feet* to the east.

Dr. Achille Cavalli Molinelli, in charge of the second detachment of the same expedition, returning from 83° 16′ to Teplitz Bay, says on pages 648 and 649, Volume II, of On the *Polar Star:*

We are always deviating to the west. * * * The drift had carried us to the west, though yesterday we had directed our course to the east. * * * We are the sport of the wind and the drift.

De Long's ship, the *Jeannette*, drifted from Wrangell Land to the New Siberian Islands. Peary's own expedition of 1906, returning from a claimed northing of 87° 06′, was carried east by the drift of the ice and forced to land on the northern coast of Greenland instead of near the starting point on Grant Land. But in his latest trip no difficulty of this nature seems to have overtaken him. Peary mentions his 1906 trip on page 304 of The North Pole:

It will be recalled that the expedition of 1905–6 returned by a different route. This result was caused by the fact that strong winds carried the ice upon which we traveled *far to the eastward* of our upward course. This time, however, we met with no such misfortune.

Peary several times emphasizes the lack of drift on his 1908–9 expedition. On page 232 of The North Pole he says:

There has been no lateral (east and west) motion of the ice during seven days.

And, again, on page 307:

So far there had been no lateral (east and west) movement of the ice.

Strange to say, notwithstanding Peary claims to have encountered "no lateral drift," on pages 4 and 5 of The North Pole he says:

Leaving the land my course will be more west of north than before in order to counteract or allow for the easterly set of the ice between the north coast of Grant Land and the pole. I shall probably retreat upon the north coast of Greenland (a course diagonally *with* the set of the ice) instead of attempting to come back to the north coast of Grant Land (diagonally *against* the set of the ice).

Yet Peary claims to have traveled from Cape Columbia to the North Pole and returned straight along the meridian of Cape Columbia, making no allowance for "the easterly set of the ice," and reached his exact starting point without taking a single observation for longitude or for compass variation.

Peary's statements that he encountered no east-and-west movement of the ice on his last expedition are contradicted in various

places in his book. His first difficulty in the shape of open water was met at the "shore lead," a few miles north of Cape Columbia. Bartlett, who was pioneering the trail, succeeded in crossing the lead, but when the main party reached it they found it open. On page 222 of The North Pole Peary described this occurrence:

With the first of the daylight we were hurrying across the lead on the raftering young ice. On the other side there was no sign of Bartlett's trail. This meant that *the lateral movement* (that is, east and west) of the ice shores of the lead had carried the trail with it.

This is a direct contradiction of Peary's later statement (p. 307) that—

So far there had been no lateral movement of the ice.

The lateral (east and west) drift of the ice of the Polar Sea was established before Peary ever went to the Arctic. The men of the Lady Franklin Bay (Greely) expedition observed this ice drift, an instance of which is noted on pages 22 and 23 of Greely's Three Years of Arctic Service, Volume II:

Lieut. Lockwood's report says: "One clearly defined lead ran northwest toward Cape Joseph Henry." The entire polar pack suddenly set off to the northward, and Lieut. Lockwood says, "Two or three of the dogs went into the water, and I suddenly perceived that the ice was moving offshore. The main polar pack moved slowly to the northeast. Soon there was a belt of open water a hundred yards and more along shore, and in two hours the main ice had moved 200 yards to the east." The movement was general, as the corresponding motion of floebergs offshore indicated.

In Mr. Gilbert H. Grosvenor's "Foreword" to Peary's book, The North Pole, he mentions the loss of the ill-fated *Jeannette* in 1879 off the coast of Siberia, boxes from which were found three years later washed ashore on the southeast coast of Greenland, some four years before Peary's first northern trip. Mr. Grosvenor, in his "Foreword," also notes the drift of Nansen's ship, the *Fram*, across the Polar Sea in 1893–1896, as well as other instances, to show that this constant drift is a well-known, well-established fact and not an occasional phenomenon. In view of these statements in his own book Peary's attempt to impress on the public the fable that he encountered no "lateral drift" in 1909, either in going north or in returning, but was able to follow his upward trail on his return directly to his starting point, is both amusing and remarkable.

Borup and Marvin also encountered this easterly drift, for, on page 160, of "A tenderfoot with Peary," Borup, one of Peary's own men, says:

The sea ice had begun drifting east. * * * The ice on the far side of the lead was drifting steadily eastward, although there was no wind.

And again, on page 162, of the same book:

The lead was still going apart. The sea ice was drifting eastward so fast that floebergs we'd marked out were out of sight in a couple of hours. The Lord only knew where the trail was. We didn't.

This quotation is from Borup's diary of March 7, 1909, and on March 11, four days later, Peary wrote to Marvin:

There has been no lateral motion of the ice during seven days.

On pages 222–224 Peary mentions numerous small leads, necessitating deviations from their direct course, in order to find a crossing which would safely hold the men, dogs, and sledges. He emphasizes strongly the advantages derived from his experience and knowledge of the best manner to cross these leads. As I have previously noted, in his description of the "Peary system," he says:

To know, by long experience, the best way to cross wide leads of open water.

Without claiming the origination of any wonderful "system," Capt. Cagni, of the Italian expedition, thus describes the method of crossing these leads or "channels" (as Cagni calls them) adopted by him:

[From "On the *Polar Star*," p. 402.]

The precautions which I obliged them (the men) to take when crossing thin ice, especially when of great extent, were not excessive. I always sent on ahead a man whose duty it was to stop wherever the fresh ice could bear, and as there the ice generally formed a step, over which it was sometimes difficult to bring the sledges, the man had to prepare a slight incline with his ice axe. I then sent forward a sledge, followed at 3 feet distance, at least, by a man who was never to walk beside it, in order not to increase the weight on the ice; the other sledges followed at 20 or 30 yards from each other, and when I thought the thinness of the ice really dangerous, I never allowed one sledge to cross until the preceding sledge was in safety on the other side of the channel. The column only went on after all had crossed. It is true that this took up some time, but we thus avoided mishaps which might easily have happened, and never met with an accident, even when crossing wide expanses of ice so thin that it bent under our feet, as though it were a bridge of long, thin planks. And in spite of the delay caused by this method of crossing these belts, we saved a great deal of the time it would have taken to go around them.

Under date of March 4, 1909, Peary says:

The leads were even more numerous than the day before.

These "numerous leads" are of special interest from their relation to Peary's "estimate" of his daily mileage, of which mention will later be made.

Peary states that the leads are caused by the movement of the ice under the pressure of the wind and tides. In 1911, at the hearing before the congressional Committee on Naval Affairs, Peary said that, in his opinion, there is no considerable current in the waters of the Arctic Ocean and that the leads are caused only by the action of the wind and the tides.

The small leads mentioned by Peary are only a preliminary to the "big lead" encountered by him in 1905–6 and which he again reached on March 4, 1909. Of this lead he writes:

The lead had opened directly through the heavy floes; and considering that these floes are sometimes 100 feet in thickness and of almost unimaginable weight, the force that could open such a river through them is comparable with the forces that threw up the mountains and opened the channels between the lands.

On pages 224–225 of The North Pole, Peary writes:

The wind had swung completely around to the *west* during the night, there were occasional squalls of light snow, and the thermometer had risen to only 9° below zero. A broad and ominous band of black extending far to the east and west across our course and apparently 10 or 15 miles to the north of us gave me serious concern. Evidently the ice was abroad in every direction, and the high temperature and snow accompanying the west wind proved that there was a large amount of open water in that direction.

Again, on page 226:

The open water was about a quarter of a mile in width and extended east and west as far as we could see when we climbed to the highest pinnacle of ice in the neighborhood of the camp. *I was glad to see that there was no lateral movement in the ice; that is, that the two shores of the lead were not moving east or west or in opposite directions.*

Remember that Peary says that a lead is caused by the movement of the ice under the pressure of the wind and tides. Remember also that he says that the wind opening this lead was from the west. Remember further that he says that—

The force that could open such a river is comparable with the forces that threw up the mountains and opened the channels between the lands.

Is it reasonable, can we really believe, that a *westerly* wind and tidal force, "comparable with the forces that threw up the mountains and opened the channels between the lands," is yet so slight that it would cause no lateral movement in the ice bordering a channel that "extended east and west as far as we could see," which was opened by that same westerly wind and tidal force? And yet Peary said in the note left at this camp for Marvin, which note is copied on page 232 of The North Pole:

There has been no lateral motion of the ice during seven days.

And it was during this same period of seven days that Borup, held up at the shore lead some 30 miles south of Peary's camp, wrote:

The ice on the far side of the lead (the side *nearest Peary's camp*) was drifting steadily eastward.

But, although on March 11 Peary says that there had been no lateral motion of the ice for seven days, only one day later he says on page 233 of "The North Pole":

We hoped that Marvin and Borup, with their men and vital supply of fuel, would get across the "Big Lead" before we had any more wind; for *six hours of a good, fresh breeze would utterly obliterate our trail, by reason of the movement of the ice*, and their search for us in the broad waste of that white world would have been like the proverbial search for a needle in a haystack.

This paragraph is remarkable for two reasons:

First. We have Peary's own word for the statement that "six hours of a good, fresh breeze would utterly obliterate our trail, by reason of the movement of the ice," and that it would be impossible for those coming after them to locate the trail again. This is a reasonable statement, easy of credence. But Peary claims that MacMillan and Goodsell, the first of the supporting parties to return to land, followed the upward trail back to land; that Borup followed the upward trail to the point where MacMillan and Goodsell turned back, and then followed their trail to Cape Columbia; that Marvin followed, first the upward trail and then Borup's back to the Big Lead, where he was drowned; that Bartlett followed the upward trail back to Marvin's return igloo, then followed Marvin's trail as far as the Big Lead; making a new trail from that point to Cape Columbia; that Peary and his party followed their own upward trail from the pole to Bartlett's return camp, then followed Bartlett's trail to Cape Columbia.

Goodsell returned south on March 14 and MacMillan on March 15. Borup started on his return trip on March 20, five days after MacMillan. Six days later (see p. 253 of The North Pole) Marvin returned—on March 26. Five days after Marvin's return, or April 1, Bartlett turned back. Seven days later Peary's main party left the place he called the North Pole. Can we believe that during all of this period there was at no time "six hours of a good fresh breeze"?

Second. Peary's own party was the only relay of the expedition that carried instruments necessary for taking observations. This was a different procedure from that of other large expeditions. For instance, we find that each detachment

of the Duke of the Abruzzi's expedition carried an aluminum sextant, an artificial glass horizon, an aneroid, thermometers, a prismatic compass, a case of instruments, Magnaghi's tables, notebooks, and pencils. The total weight of these accessories was less than 20 pounds, but rendered the observations of the expedition of incalculably greater value. Each division of Mylius-Erichsen's Danish expedition to Greenland carried a full equipment of instruments for observations.

Is it possible that Peary did not care to have his returning parties in a position to verify the observations taken on the upward trip?

Peary and Borup are also a little at variance as to the time of the first appearance of the sun. While held up at the Big Lead, Peary says on page 227 of The North Pole:

> March 5, for a little while about noon, the sun lay, a great yellow ball, along the southern horizon. Had it not been cloudy on the 4th we should have seen the sun one day earlier.

While Borup's version on page 161 of his book is:

> On *March 6* the only comfort in the day was the sight of the sun. Five months since we had seen it. It certainly looked great.

Both in Hampton's Magazine and in his book Peary makes frequent mention of rough going, which necessitated zigzagging and detours. On page 234 of The North Pole he says:

> For about 5 miles we zigzagged through a zone of very rough ice.

On page 241:

> This march having been largely over a broad zone of rough rubble ice, some of my sledges had suffered slight damage.

And the next day:

> Marvin gave us a good march, at first over very rough ice.

On pages 242–243 Peary says:

> Bubbles in all my spirit thermometers were caused by the jolting of the thermometer with our *constant stumbling over the rough ice* of the Polar Sea.
>
> Again Marvin gave us a fair march, at first over heavy and much-raftered ice, then over floes of greater size and more level surface. But the reader must understand that what we regard as a level surface on the polar ice might be considered decidedly rough going anywhere else.

On page 247 they again found heavy traveling:

> The going was at first tortuous, over rough, heavy ice, which taxed the sledges, dogs, and drivers to the utmost.

A still more graphic description is given on pages 250–251:

> In this march there was some pretty heavy going. Part of the way was over small old floes, which had been broken up by many seasons of unceasing conflict with the winds and tides. Inclosing these more or less level floes were heavy pressure ridges, over which we and the dogs were obliged to climb. Often the driver of a heavily loaded sledge would be forced to lift it by main strength over some obstruction. Those who have pictured us sitting comfortably on our sledges riding over hundred of miles of ice smooth as a skating pond should have seen us lifting and tugging at our 500-pound sledges, adding our own strength to that of our dogs.

Again, on pages 256–257:

> The last quarter was almost entirely over young ice, averaging about 1 foot thick, broken and raftered, presenting a rugged and trying surface to travel over.
>
> This march was by far the hardest for some days. At first there was a continuation of the broken and raftered ice, sharp and jagged, that at times seemed almost to cut though our sealskin kamiks and hareskin stockings, to pierce our feet. Then we struck heavy rubble ice, covered with deep snow, through which we had literally to plow our way, lifting and steadying the sledges until our muscles ached.

In A Negro Explorer at the North Pole Henson corroborates Peary's description of difficult traveling:

> The way to the Pole lay across the *ever-moving and drifting ice* of the Arctic Ocean. For more than a hundred miles from Cape Columbia it was piled in heavy pressure ridges, ridge after ridge, some more than a hundred feet in height. In addition open leads of water held the parties back until the leads froze up again, and *continually the steady drift of the ice carried us back* on the course we had come.

Special attention is directed to these accounts of rough traveling as quoted, as they are of interest in their bearing on his day-by-day mileage.

It is evident from Peary's story, both as published in Hampton's Magazine and his book, that he did not keep a careful daily record of the events of the trip. I have already referred to Henson's book and Peary's indorsement of it in the "Foreword." On general principles, in a question of accuracy between Peary's book and Henson's, one is inclined to give the benefit of the doubt to Peary, but as Peary himself vouches for the authenticity of Henson's book, it is only consistent to give both versions. In justice to Henson it must be said that his book is largely a copy of his diary, of which he says, on page 4 of A Negro Explorer at the North Pole:

> Entries were made daily of the records of temperature and the estimates of distance traveled, and when solar observations were made the results were always carefully noted.

In comparison with this statement is the one made by Peary before the congressional committee in 1911 relative to the entries in his own journal:

> Question by Mr. DAWSON. I have a curiosity to see the journal that you kept from day to day during your presence in the vicinity of the pole. Did you make entries in this journal every day?
>
> Answer by PEARY. Not every day. Sometimes we were so busy that I did not make entries.

These facts must be remembered when a difference in detail occurs between Peary's record and Henson's. For instance, Peary says, on pages 249–250 of the North Pole:

> The result of Marvin's observations gave our position as approximately 85° 48′ north latitude. * * * The next march was made in a temperature of —30 and a misty atmosphere, caused by open water in the neighborhood. At the end of the march, which was about 15 miles, and which put us across the eighty-sixth parallel, we reached Bartlett's next camp, where we found Henson and his party.

This statement by Peary covers the day's journey of March 23, 1909. Henson's story, as told on pages 110–111 of A Negro Explorer at the North Pole, follows:

> He (Marvin) reported that he had taken an elevation of the sun (on March 22) and computed his latitude as 85° 46′ north.
>
> Conditions are never similar; no two days are the same; and our going this day was nothing like the day before. It was backing and filling all of the time, except for the last hour of traveling, when we zigzagged to the eastward, where the ice appeared less formidable. There we camped. The latitude was 85° 46′ north.

Therefore, after more than one day of traveling from the point where Peary says Marvin's observation showed the latitude to be 85° 48′—and Marvin reported to Henson that it was 85° 46′—Henson again reports the latitude as 85° 46′, the same as the preceding day. This result was probably the combined result of Bartlett's and Henson's "dead reckoning," as at this time Bartlett and Henson were traveling together. As Peary's division was the only part of the expedition that was equipped with the necessary instruments for taking observations, the other divisions, when apart from him, were obliged to depend on "dead reckoning" for an estimate of their mileage. Relative to this method of obtaining position, Peary says, on pages 211–212 of The North Pole:

> Three members of the expedition had had sufficient experience in traveling over Arctic ice to enable them to estimate a day's journey very closely. These three were Bartlett, Marvin, and myself.

The fact that after a whole day's travel the party had made no perceptible advance, was doubtless due to the "backing and filling and zigzagging to the eastward," described by Henson, which finally brought them to a camping place in the same latitude as the previous day, though somewhat to the eastward.

(Peary gives the latitude on March 22, according to Marvin's calculation, as 85° 48′, while Henson quotes Marvin as saying it was 85° 46′. This apparent discrepancy between the two is accounted for in the facsimile of Marvin's observation, shown on pages 351–352 of The North Pole. Marvin apparently obtained 85° 46′ as the result of his first observation, and 85° 48′ after making a "corrected calculation," but overlooked the latter result when he gave Henson the figures.)

A peculiar statement by Peary is found on page 15 of the July, 1910, number of Hampton's Magazine, also on page 249 of The North Pole:

> It was from this point (85° 48′ north latitude) that we calculated the position of *Camp 19, where Borup turned back, as being 85° 23′*.

"Camp 19" was located (according to both Peary and Bartlett) between the 87th and 88th parallels, and was reached after all of the supporting parties except Bartlett's, had turned back. Borup returned on March 20 from *Camp 12*, not from *Camp 19*.

Peary's location of "Camp 19, where Borup turned back, as being 85° 23′," is interesting, from whatever angle considered. We are informed by Peary in Hampton's Magazine and in the first and second editions of The North Pole, that Borup turned back at the end of the twelfth march. The assertion that Borup started south at Camp 19 likewise appears in the magazine and the first and second editions of the book. We can not, therefore, make use of the customary "typographical error" explanation for this discrepancy, for if a mere typographical error (such as might have occurred in the magazine story) it would have been corrected in one of the two editions of the book.

If, however, Peary is correct in giving his *observed latitude of Camp 19 as 85° 23′*, and we allow him the full mileage claimed by him between his "Camp 19" and his "Polar camp" (a total of 177 miles, thus completing the 27 marches which he claims from Cape Columbia to his "Polar camp"), we find that this computation places Peary's farthest north at 88° 20′, or *100 miles from the pole*.

We have, therefore, Peary's own statement (based on his location of Camp 19) that he did not get nearer the Pole than 100 miles.

By a similar method of reasoning we find that other statements made by Peary in Hampton's Magazine, and in the first and second editions of The North Pole, place his farthest north at a point 112 miles from the Pole. For instance, on the upward journey Peary refers to the various camps by numbers only, as, for example: "Camp No. 19, where Borup turned back," etc. On the homeward journey, however, he

refers to "Camp Nansen," named in honor of Nansen's farthest north. The same is true of "Camp 17," which on April 11, Peary calls "The Marvin return igloo." On page 307 of The North Pole he quotes from his diary of April 11:

"Hope to reach the Marvin return igloo to-morrow." But the following day, when the "Marvin return igloo" was reached, he says, on page 308:

A double march brought us to Camp Abruzzi, 86° 38', named in honor of the farthest north of the Duke of the Abruzzi.

Note that according to Peary's book these names were not given until the homeward trip, while in Hampton's Magazine he makes no mention of "Camp Abruzzi" (or Camp Cagni). Now read what Henson says, on page 132 of A Negro Explorer at the North Pole:

Our different camps had been known as Camp No. 1, No. 2, etc., but *after the turning back of Capt. Bartlett* the camps had been given names, such as Camp Nansen, Camp Cagni, etc., and I asked what the name of this camp was to be—"Camp Peary"? "This, my boy, is to be Camp Morris K. Jesup, the last and most northerly camp on the earth."

Peary makes no mention of naming the camps until the homeward trip, or after Bartlett turned back. Thus Henson is corroborated by Peary on this point. Therefore, if Henson is right (and Peary corroborates him in his assertion that the camps were not given personal names until after Bartlett turned back), it appears that "Camp Nansen" and "Camp Abruzzi" (or Cagni) *were not reached until after Bartlett's return.*

If these camps were not reached until after Bartlett's return, we may assume that "Camp Nansen" was one march beyond Bartlett's farthest north and Camp Abruzzi (or Cagni) one march beyond Camp Nansen. This brings Peary's "Polar Camp" only three marches beyond "Camp Abruzzi" (or Cagni), at 86° 38' (since Peary only claims to have made five marches north after Bartlett's return). Peary's last three northward marches were 25, 25, and 30 miles, respectively, a total of 80 miles. This distance of 80 miles beyond "Camp Abruzzi" (or Cagni) at 86° 38' places Peary's "Polar Camp" at 88° 8', or *112 miles from the North Pole!*

But, it may be argued, Marvin's observation proved that *his* return camp was at 86° 38' (a little beyond the Italian record), and that Bartlett's observation proved that *he* reached 87° 47' north.

True, these observations as given by Peary do state that Marvin reached 86° 38' and that Bartlett reached 87° 47'. But it is a lamentable fact that Prof. Marvin's alleged observations can not be confirmed by him; it is also a fact, stated by Donald B. MacMillan in Harper's Magazine for October, 1915, that Capt. Bartlett was not acceptable to the insurance companies as the master of MacMillan's ship, since he held no master mariner's "ticket." MacMillan adds:

It is a strange anomaly that insurance companies will refuse to accept a man trained in Arctic work and experienced in ice navigation on the ground that he has no "ticket," but will accept a warm-water man *who happens to know something about practical astronomy.* In event of a crisis a pencil, paper, and sextant will not save the ship or the lives of the men aboard.

MacMillan is quite right in his assertion that "a pencil, paper, and sextant will not save the ship," but the knowledge of *the use* of a paper, pencil, and sextant in practical astronomy *will* enable a man to make reliable observations, and, according to MacMillan, Capt. Bartlett—splendid sailor and ice fighter though he is—lacks this knowledge. Therefore his observations are wholly valueless as a corroboration of Peary's claimed position at any point in his northward journey. Hence we have only Peary's own contradictory evidence and observations to show that he was nearer than 100 miles to the North Pole at any time. And, as Prof. Gannett stated, when called as a witness before the congressional committee, Peary's observations *could* have been faked. (See p. 15 of the hearing.) Therefore, in view of Peary's many other contradictory statements in his magazine story, in his book, and at the congressional hearing, his observations can not be accepted as incontrovertible evidence in his favor. On the contrary, we find, as stated that we have Peary's own story as foundation for the statement that he was never nearer to the North Pole than 100 miles.

The last observation made by Marvin—as quoted in Peary's narrative—gave a latitude according to Peary of 86° 38'. The date of this observation is uncertain, as shown by quotations from The North Pole, by Peary, and A Negro Explorer at the North Pole, by Henson:

[From The North Pole, by Peary.]

At half past 10 on the morning of the *25th* I came upon Bartlett and Henson with their men, all in camp in accordance with my instructions. I turned them all out, and everyone jumped in to repair the sledges. * * * While this work was going on, Marvin took another meridian observation for latitude and obtained 86° 38'. (*Mar. 25*, p. 252.)

(NOTE: Peary does not mention Marvin's frozen feet, although he records sending Borup and McMillan back earlier than he intended, on account of frost bites. Borup mentions Marvin's "frozen toes," on page 139 of his book; and again, on page 171, Borup says that Marvin had "both heels touched up.")

The next morning, *Friday, March 26*, I rapped the whole party up at 5 o'clock, after a good sleep all round. Marvin, with Kudlooktoo and "Harrigan," 1 sledge, and 17 dogs, started south at *half past 9 in the morning* (p. 253).

The first three-quarters of the march after Marvin turned back on *March 26*, the trail was in a straight line. * * * The next day, *March 27*, was a brilliant dazzling day of Arctic sunshine (p. 256).

[From A Negro Explorer at the North Pole, by Henson.]

Turned out at 4.30 a. m., breakfasted, and 15 minutes later we were once more at work making trail. In the course of an hour (about 5.45 a. m.) we returned to the igloo for the sledges. We found that the main column had reached camp and Commander Peary gave me my orders to take the trail at once and speed it up, as he intended that I should remain at the igloo the following day to sort out the best dogs and rearrange the loads, as Marvin was to turn back. * * * My mind was relieved. I feared that I would be the next after Borup. At the same time I did not see how Marvin could travel much longer, as his feet were very badly frozen. (Mar. 25, pp. 112–113.)

*March 26:* The commander and party reached the igloo at *10.45 a. m.* At *12 noon*, Prof. Marvin took his final sight, and after figuring it out, told me that he made it 86° 38' north (pp. 113–114).

(Note that Henson says that Marvin took an observation at noon of March 26, the same day that Peary says Marvin started south at half past 9 in the morning.)

*March 27:* I was to take the trail at 6 a. m., but before starting, I went over to Marvin's igloo to bid him good-by (p. 114).

The above discrepancy between Peary's report and Henson's story of the date of Marvin's return from the north is worthy of more than passing notice. If each man only gave one date, Peary's statement might be given credence as against Henson's; but in Hampton's Magazine and in The North Pole, *Peary gives two dates for Marvin's return.*

On page 350 of The North Pole, Appendix II, is a line reading:

II. Marvin's observations, *March 25, 1909.*

Pages 353 to 358, inclusive, are devoted to alleged facsimiles of Marvin's observations of March 25, 1909.

On pages 321–322 of The North Pole, Peary says:

The Eskimos of whom Marvin was in command at the time he lost his life fortunately overlooked, in throwing Marvin's things upon the ice, a little canvas packet on the upstanders of the sledge containing a few of his notes, among them what is probably the last thing he ever wrote. *It will be seen that it was written on the very day that I last saw him alive, that day upon which he turned back to the south from his farthest north:*

*March 25, 1909.*

This is to certify that I turned back from this point with the third supporting party, Commander Peary advancing with 9 men in the party, 7 sledges with the standard loads, and 60 dogs. Men and dogs are in first-class condition. The captain with the fourth and last supporting party expects to turn back at the end of five more marches. Determined our latitude by observations on March 22 and again *to-day, March 25.* A copy of the observations and computations is herewith inclosed. Results of observations were as follows: Latitude at noon, March 22, 85° 48' north. Latitude at noon, March 25, 86° 38' north. Distance made good in three marches, 50 minutes of latitude, an average of 16⅔ nautical miles per march. The weather is fine, going good, and improving each day.

ROSS G. MARVIN.

We have, therefore, three different dates given as the date of Marvin's departure south from his "farthest north," two by Peary, and one by Henson. The discrepancy in Peary's story can not in this instance be explained as a typographical error, for it is incredible that the same typographical error would occur twice, as, for instance, on pages 253 and 256 of The North Pole, Peary gives the date as March 26, while on page 321 he gives it as March 25. We must remember, too, that this is the second time Peary's story has appeared in print—that is, in Hampton's Magazine and again in The North Pole—and the same discrepancies relative to the date of Marvin's return occur in both, while Henson gives a different date from either—March 27.

In tabulated order these dates appear as follows:

| Date of Marvin's return— | |
|---|---|
| As given by Peary on page 16 of Hampton's Magazine for July, 1910 | March 26 |
| As given by Peary on page 253 of The North Pole | March 26 |
| As given by Peary on page 256 of The North Pole | March 26 |
| As given by Peary on page 321 of The North Pole | March 25 |
| As given by Peary on page 292 of Hampton's Magazine, August, 1910 | March 25 |
| As given by Henson on page 114 of A Negro Explorer at the North Pole | March 27 |

Who, then, is right—Peary or Henson? If Henson is in error in his statement that Marvin returned on March 27, which of Peary's dates is correct: March 25, to which he so touchingly alludes as "the very day that I last saw him alive, that day upon which he turned back to the south from his farthest north," or March 26, of which he says, "Marvin started south at half past 9 in the morning"?

The story of Marvin's death, as Peary claims it was told by the Eskimos, shows a marked variance in Hampton's Magazine

and in Peary's book. Page 292 of Hampton's Magazine for September, 1910, says:

It seems that, from the camp just north of the Big Lead, he had started on ahead of his men immediately after breakfast, as was the custom of the leaders of the supporting parties. When he came to the Big Lead, the recent ice of which was safe and secure at the edges, it is probable that he did not notice the gradual thinning of the ice toward the center of the lead until it was too late and he was in the water. The Eskimos were too far in the rear to hear his calls for help, and in that ice-cold water the end must have come very quickly. The Eskimos following after with the dog team could not see anything of their leader, and then they came to a hole in the ice. Of course they knew what had happened to Marvin; but with the childish superstition peculiar to their race, they camped there for a while on the possibility that he might come back.

The account in The North Pole reads as follows:

As was customary on breaking camp, he had gone out ahead of the Eskimos * * *. Coming along over the trail in his footsteps, the Eskimos of his party came to the spot where the broken ice gave them the first hint of the accident. One of the Eskimos said that *the back of Marvin's fur jacket was still visible* at the top of the water. *It was, of course, impossible for them to rescue the body, since there was no way of their getting near it.* Of course, they knew what had happened to Marvin; but with childish superstition peculiar to their race, they camped there *for a while* on the possibility that he might come back.

Borup's account differs slightly from both of the foregoing versions. On pages 202–203 of A Tenderfoot with Peary, Borup says:

Marvin, as usual, set out ahead of his men. A few miles beyond lay the Big Lead, and when Kudlooktoo and Harrigan arrived they saw the back of his kooletah floating above the water. The air in it held poor Marvin up. *They tried to get him out, but the ice was too thin*, and to their repeated calls he gave no answer. They camped on the nearest old ice and *the next morning* found that his body had gone down.

Henson, in writing of Marvin's death, says, on page 151 of A Negro Explorer at the North Pole:

I learned all about the sad affair from Kudlooktoo and Harrigan. On breaking camp he had gone on, leaving the boys to load up and follow him. When they came up to where he had disappeared they saw the ice newly formed about him, his head and feet beneath and nothing showing but the fur clothing of his back and shoulders. *They made no effort to rescue him.*

The great white world holds in its lonely silence many tragic mysteries, hidden forever from the ken of mortal man, but of its buried secrets none is more tragic or more mysterious than the untimely death of this brave young professor, who laid down his life *somewhere, at some time*, in the Arctic wastes.

Of the day following Marvin's return, Peary says, on page 237 of The North Pole:

The temperature during this march dropped from *minus 30° to minus 50°*.

In Hampton's Magazine for July, 1910, he says of the same day:

The temperature varied from *minus 30° to minus 20°*.

Apparently Peary estimated the temperature, as well as the mileage, and failed to note at what point his "estimate" placed the mercury.

On page 256 of The North Pole Peary says:

The first three-quarters of the march after Marvin turned back, on March 26, the trail was fortunately in *a straight line*.

And again, on page 259:

We had made some 12 miles over much better going than that of the last few marches and on a *nearly direct line*.

The fact that they marched "on a nearly direct line" seems to have been worthy of note to Peary. Does this mean that their usual deviations from a direct course were considerable?

At the close of the day's travel on March 28, at a point "estimated" by Peary to be a little beyond the 87th parallel, the expedition was again halted by a lead; and in relating the events of that night, Peary says on page 260 of The North Pole:

Leaping to my feet and looking through the peephole of our igloo, I was startled to see a broad lead of black water between our two igloos and Bartlett's, the nearer edge of water being close to our entrance. *Bartlett's igloo was moving east* on the ice raft which had broken off.

The statement by Peary that Bartlett's igloo was moving east, proves an easterly current at this point sufficiently strong to cause an alarmingly perceptible drift of Bartlett's igloo. This is contrary to Peary's statements made before the congressional committee and elsewhere, that no perceptible current is found in the Polar Basin, the movement of the ice being caused by the wind and the tides.

Bartlett and his outfit were rescued from their perilous position, and the entire party was held up for the whole of March 29. The following day the lead closed and they continued their journey.

On April 1, at a point claimed by Peary to be 87° 47′ north latitude, Peary sent Capt. Bartlett back in command of the last of the supporting parties. Perhaps for this act more than for any other of his Polar trip, Peary has been severely criticized. In The North Pole, page 266, he explains his refusal to allow another white man to finish the journey with him, and gives a number of interesting reasons for showing preference to Henson:

We did not have supplies enough for an increase in the main party. The food which he (Bartlett) and his two Eskimos and dog teams would have consumed between this point and the pole, on the upward and return journeys, might mean that we would all starve before we could reach the land again.

This statement will not bear analysis. As a matter of fact, conservative figures show that Peary must have arrived at Cape Columbia on his return trip with 900 pounds of provisions and fuel on his sledges. The standard daily ration for each man, as given on page 210 of The North Pole, was—

One pound of pemmican.
One pound of ship's biscuit.
Four ounces of condensed milk.
One-half ounce of compressed tea.
Six ounces of liquid fuel (alcohol or petroleum).

Making a total of 2 pounds 10½ ounces per day, including fuel. The daily standard ration for the dogs was a pound of pemmican per dog.

On page 273 of The North Pole, on April 1, after Bartlett returned, Peary says:

My food and fuel supplies were *ample* for 40 days.

Capt. Bartlett also took with him on his return trip supplies for 40 days. With the figures given by Peary as the standard ration of food and fuel per man and dog, it is an easy matter to compute the amount taken by Peary for 40 days, as well as the amount carried by Bartlett for 40 days. As Bartlett had food and fuel for the same number of days that Peary did, why would Bartlett have been a "passenger" if he had continued the rest of the northern journey with Peary?

Bartlett's return party consisted of himself, 2 Eskimos, and 19 dogs. Bartlett took with him on his return journey supplies for himself and his outfit sufficient for 40 days, which allowed for possible delays. He actually reached Cape Columbia in 18 days (April 18), so that he must have had 22 days' supplies for his entire party still on his sledge when he arrived at Cape Columbia.

Full rations for Bartlett's party from the time he turned back on April 1 until Peary reached Cape Columbia on the return trip would have amounted to only 620 pounds (including fuel), and this, too, without making any allowance for dogs killed by the way.

As we have already shown that Peary must have had at least 900 pounds of food and fuel left on his sledges when he arrived at Cape Columbia we can readily see that none of the party, men or dogs, would have been near starvation if he had taken Bartlett's entire supporting party to the place he called the North Pole, even had they been reasonably delayed on the return.

Briefly stated, if, instead of turning back, Bartlett had completed the journey with Peary and returned to Cape Columbia with him, Bartlett would have reached Cape Columbia with his dog team intact and with 17 days' supplies still untouched on his sledge, while Peary would have had the same 900 pounds of surplus food and fuel with which he returned.

But Peary says—page 272 of The North Pole:

Henson, with his years of Arctic experience, was almost as skillful as an Eskimo. He could handle dogs and sledges. He was a part of the traveling machine. Had I taken another member of the expedition also he would have been a passenger, necessitating the carrying of extra rations and other impedimenta. It would have amounted to an additional load on the sledges, while the taking of Henson was in the interest of economy of weight.

I have already shown the fallacy of this argument, proving that Peary could have availed himself of the "pioneering" services of Bartlett's party throughout the entire trip, without adding 1 ounce of rations or other "impedimenta" to his own sledges. So far as Henson's skill is concerned, the same was true of other members of the expedition. Note his commendation of Borup on pages 243–244 of The North Pole:

This young Yale athlete was a valuable member of the expedition. His whole heart was in the work, and he had hustled his heavy sledge along and driven his dogs with *almost the skill of an Eskimo*.

On page 320 Peary says of Marvin:

I soon came to know Ross Marvin as a man who would accomplish the task assigned to him, whatever it might be. In the spring sledge campaign of 1906 he commanded a separate division. When the great storm swept the polar sea and scattered my parties hopelessly in a chaos of shattered ice Marvin's division, like my own farther north, was driven eastward and came down upon the Greenland coast, whence he brought his men safely back to the ship. From this expedition he returned trained in Arctic details and thoroughly conversant with the underlying principles of all successful work in northern regions, so that when he went north with us in 1908 he went as a veteran who could absolutely be depended upon in an emergency.

Of Bartlett Peary says on page 20 of The North Pole:

*First and most valuable of all* was Bartlett, master of the *Roosevelt*. He was 33 when last we sailed north. Blue-eyed, brown-haired, stocky and steel-muscled Bartlett, whether at the wheel of the *Roosevelt* hammering a passage through the floes or tramping and stumbling over the ice pack with the sledges, or smoothing away the troubles of the crew, was always the same—tireless, faithful, enthusiastic, true as the compass.

Again, referring to Bartlett's return from 87° 47′, Peary says, on page 268:

Bartlett had been invaluable to me, and circumstances had thrust upon him the brunt of the pioneering instead of its being divided among several as I had originally planned.

This does not sound as though Bartlett would have been a mere "passenger," had Peary chosen him as a companion on the last lap of the polar journey.

Peary claims, however, that Henson was incapable of finding his way back to land with one of the supporting parties. I quote from pages 272–273 of The North Pole:

While Henson was more useful to me than any other member of my expedition, when it came to traveling with my last party over the Polar ice, he would not have been so competent as the white members of the expedition in getting himself and his party back to the land.

Notwithstanding this expression of Henson's unfitness to travel alone, Peary considered him competent to do his share of the "pioneer" work on the journey to the pole. On page 234 of The North Pole, when three marches north of the Big Lead, Peary says:

Henson at once received instructions to get away early the next morning with his division of Eskimos and sledges, *to pioneer the road for the next five marches.*

If sufficiently capable to start out with no one but his Eskimos and lay out a route for the expedition over the untrodden wastes of the Polar Sea, we should naturally infer that Henson could safely follow a beaten track back to land, which is what is claimed for the other returning divisions. A quotation from Henson's book, "A Negro Explorer at the North Pole," is also of interest in this connection (p. 129)—

With my proven ability in gauging distances, Commander Peary was ready to take the reckoning as I made it, and he did not resort to solar observations until we were within a hand's grasp of the pole.

Small wonder that Peary considered Henson "More useful to me than any other member of the expedition," when Henson's presence obviated the necessity and trouble of solar observations! Not every explorer can have at hand a human chronometer, sextant, and artificial horizon, sufficiently reliable to take a squint at the sun, a look at the dogs, a drink of—ice water—and say: "To-day we have traveled 20 miles and are a certain distance from the pole." And yet Peary did not consider Henson "competent in getting himself and his party back to the land" over a beaten trail!

However, whether or not Peary's reasons as stated were genuine, Henson was the man who went forward, and Bartlett the man who returned. On page 268 of The North Pole, Peary says, immediately prior to Bartlett's return:

When the calculations were completed, two copies were made, one for Bartlett and one for me, and he got ready to start south with his 2 Eskimos, 1 sledge, and *18 dogs.*

At the hearing before the congressional committee in 1911 Bartlett's "Log from Camp 22 to the *Roosevelt*," was presented as evidence. This is printed on pages 50 and 51 of the hearing, and the first item reads:

April 1, 1909.—3 p. m. left commander with *19* dogs, 1 sledge, 2 huskies, and just enough for 40 days.

At no time did Peary seem able to keep an accurate count of his dogs. This inaccuracy is remarkable from the fact that Peary laid great stress on the value of dogs in an Arctic expedition, declaring that they are indispensable in a successful dash to the pole. On pages 170–171 of The North Pole he says:

Dogs, and plenty of them, were vitally necessary to the success of the expedition. Had an epidemic deprived us of these animals we might just as well have remained comfortably at home in the United States. All the money, brains, and labor would have been utterly thrown away, so far as concerned the quest of the North Pole.

Again, on page 70:

A word ought to be said about those remarkable creatures, the Eskimo dogs, for without their help success could never have crowned the efforts of the expedition.

In view of Peary's opinion of the inestimable value of these animals, we should expect him to count them as carefully as a miser counts his hoarded gold. Note some of his statements. On page 216 of The North Pole he says:

An hour after I left camp my division had crossed the glacial fringe, and the last man, sledge, and dog of the northern party—comprising altogether 24 men, nineteen sledges, and *133 dogs*—was at last on the ice of the Arctic Ocean.

On page 235:

A little later on (March 14) Dr. Goodsell with 2 Eskimos—Wesharkoopsi and Arco—1 sledge, and *12 dogs* took the back trail.

Twelve from one hundred and thirty-three leaves one hundred and twenty-one.

Again, on page 237:

MacMillan got away for Columbia with 2 Eskimos, 2 sledges, and *14 dogs.* The main expedition now comprised 16 men, 12 sledges, and *100 dogs.*

Fourteen from one hundred and twenty-one leaves *one hundred and seven.* Peary does not explain the apparent shortage of seven dogs. However, we may safely assume that the two Eskimos who were taken ill at the Big Lead camp and were sent back to land used these seven dogs on their return trip. This assumption, if correct, would leave the 100 dogs in the field, as Peary asserts.

Peary is also one sledge short in his count, for he says:

One sledge had been broken up to repair the others, three had been taken back with the returning parties, and two were left at this camp.

This would leave 13 of the original 19, instead of 12 sledges, as Peary states; but this, too, we may count as the sledge which the two sick Eskimos took with them (of which Peary makes no note, although Borup does). Goodsell also returned with one sledge and MacMillan with two. We have, therefore, as Peary says, 16 men, 12 sledges, and an even hundred of dogs.

On page 241 of The North Pole, Peary gives his detailed plan for the balance of the polar dash. Both in his book and on page 12 of Hampton's Magazine for July, 1910, he speaks of the time as the evening of March 19; but this is presumably a typographical error, as he also calls the following day March 19, while Borup has the dates of the occurrences in regular order—that is, March 18 and March 19. Peary says:

At the end of this march, on the evening of the 19th (should be 18th), while the Eskimos were building the igloos, I outlined to the remaining members of my party—Bartlett, Marvin, Borup, and Henson—the program which I should endeavor to follow from that time on. At the end of the next march (which would be five marches from where MacMillan and the doctor turned back) Borup would return with 3 Eskimos, *20 dogs,* and 1 sledge, leaving the main party—12 men, 10 sledges, and *80 dogs.*

Five marches farther on Marvin would return with 2 Eskimos, *20 dogs, and 1 sledge,* leaving the main party with 9 men, 7 *sledges, and 60 dogs.*

Five marches farther on Bartlett would return with 2 Eskimos, *20 dogs, and 1 sledge,* leaving the main party 6 men, *40 dogs, and 5 sledges.*

Let us consider, first, the number of sledges in the party. Peary says that after MacMillan returned they had left 16 men, 12 sledges, and 100 dogs.

Borup was to return next, taking with him "1 sledge," leaving the main party with 10 sledges. One sledge had played out, which accounts for the apparent discrepancy here. But Peary continues:

Five marches farther on Marvin would return with *1 sledge,* leaving the main party with *7 sledges.*

Here Peary's count is wrong, for if Marvin took only 1 sledge out of 10, it should have left the main party with 9, instead of 7 as Peary says. He continues:

Five marches farther on Bartlett would return with *1 sledge,* leaving the main party with *5 sledges.*

Here we find the original error carried along and another added to it, for taking Peary's own statement that Marvin's departure would leave the main party with 7 sledges, if Bartlett, returning, took only 1, there should have been 6 sledges left to the main party instead of the 5 allowed by Peary. Could Peary possibly foresee the exact number of sledges that would be broken in the next 10 days? This is hardly a reasonable supposition. However, a greater discrepancy occurs in his estimate of the dogs.

Remember that at this point, March 18, Peary says that—

The main expedition now comprised 16 men, 12 sledges, and 100 dogs.

On page 243 of The North Pole he says:

Borup, with 3 Eskimos, *16 dogs,* and 1 sledge, started on his return to the land.

This enumeration is confirmed by Borup on page 181 of his book. As 16 dogs from 100 leaves 84, Peary's statement on page 244 of The North Pole is remarkable:

With the departure of Borup's supporting party the main expedition comprised 12 men, 10 sledges, and *80 dogs.*

Nothing is said that hints at the killing of any of the dogs for dog food; in fact, such slaughter was unnecessary, as the expedition was amply supplied with provisions for both men and dogs. Neither is any note made of dogs dropping out from overwork, accident, or other causes.

On page 253 of The North Pole Peary enumerates Marvin's returning party:

Marvin, with Kudlooktoo and "Harrigan," 1 sledge, and *17 dogs,* started south at half-past 9 in the morning.

Peary's accounting after Borup's return gives the number in the main party, as stated above:

Twelve men, 10 sledges, and 80 dogs.

Accepting Peary's reckoning as correct, up to this point, we have left after Marvin returned, 80 dogs less the 17 taken by Marvin, or 63 dogs. But, without noting the loss of any dogs other than those taken back by the returning parties, Peary enumerates the following, after Marvin's return:

I had now passed the "farthest north" of all my predecessors and was approaching my own best record, with my eight companions, *sixty dogs*, and seven fully loaded sledges.

Peary's library on board of the *Roosevelt* evidently did not include an elementary arithmetic.

On page 268, April 1, Peary says of Bartlett's return:

He (Bartlett) got ready to start south on the back trail with his two Eskimos, one sledge, and *eighteen dogs*.

Again accepting Peary's figures after Marvin's return as correct we should have, after Bartlett left him, 60 dogs less the 18 Bartlett took with him, or 42 dogs. One dog was killed by the Eskimos on April 1 (see p. 273 of The North Pole), which leaves 41 dogs. But on page 269 Peary gives his final party as follows:

With the departure of Bartlett, the main party now consisted of my own division and Henson's. My men were Egingwah and Seegloo; Henson's men were Ootah and Ooqueah. We had five sledges and *forty dogs*.

We have accepted Peary's figures after each returning division left him merely for the sake of argument, in order to show that, even with that allowance, his story does not show a reasonable degree of continuity. The tabulation presented herewith shows the difference in the figures as given by Peary and the figures as they must actually have been, if we accept the number of dogs and sledges in the returning parties, as they are given by Peary:

| | Peary's count. | | Actual count. | |
|---|---|---|---|---|
| | Dogs. | Sledges. | Dogs. | Sledges. |
| Number on hand before Borup returned | 100 | 12 | 100 | 12 |
| Returned with Borup | 16 | 1 | 16 | 1 |
| Number left after Borup's return | 80 | 10 | 84 | 11 |
| One sledge broken | ..... | 1 | ..... | 1 |
| | ..... | 9 | ..... | 10 |
| Returned with Marvin | 17 | 1 | 17 | 1 |
| Number left after Marvin's return | 60 | 7 | 67 | 9 |
| One dog killed | 1 | ..... | 1 | ..... |
| | 59 | ..... | 66 | ..... |
| Returned with Bartlett | 18 | 1 | 18 | 1 |
| Number left after Bartlett's return | 40 | 7 | 48 | 8 |

Another striking discrepancy in Peary's exposition of his plan is noted on page 242 of The North Pole, when he said:

I hoped that, with good weather and the ice no worse than that which we had already encountered, *Borup might get beyond 85°*, Marvin beyond 86°, and Bartlett beyond 87°.

This "hope" was expressed at their eleventh upward camp, and, if we may accept Peary's reckoning and statements, *they were already beyond the eighty-fifth parallel.* His later observations placed this camp at 85° 8′, as their march of 15 miles from the eleventh to the twelfth upward camp placed them at 85° 23′; and in writing of the homeward journey, on page 310 of The North Pole, Peary says:

Another double march brought us to our *eleventh upward camp at 85° 8′*.

And yet Peary "hoped that Borup might get beyond 85°"!

After Bartlett's return, on April 1, Peary spent the remainder of the day in camp with his five men, who prepared the sledges and other equipment for the final dash, while Peary, "pacing back and forth in the lee of the pressure ridge near which our igloos were built," made out his program. This he describes on page 269 of The North Pole:

We were now 133 nautical miles from the pole. Every nerve must be strained to make five marches of at least 25 miles each, crowding these marches in such a way as to bring us to the end of the fifth march by noon to permit an immediate latitude sight. Weather and leads permitting, I believed that I could do this. From the improving character of the ice, and *in view of the recent northerly winds*, I hoped that I should have no serious trouble with the going.

It was these same "northerly winds," however, which, as Peary says on page 265, forced to the south the ice over which they traveled, "*thus losing us miles of distance.*"

Up to this point, with the advantage of an already broken trail to follow, the "main party" had averaged only 13 miles per day; and only three times, by extra effort and "favored by good going" (see p. 251), had they been able to make *20 miles per day.* Yet Peary now plans to make "five marches of at least 25 miles each," while breaking his own trail against a north wind that heretofore had lost him miles of distance, and to crowd these marches into a period of less than five days, whereas two of his other forced marches of 20 miles each had been made with a full day's rest between them.

On page 274 of The North Pole Peary tells of his final start:

A little after midnight on the morning of April 2 I started to lift the trail to the north, leaving the others to pack, hitch up, and follow. I felt the keenest exhilaration, and even exultation, as I climbed over the pressure ridge and breasted the keen air sweeping over the mighty ice, pure and straight from the pole itself.

The wind was still "sweeping" down from the north, "straight from the pole itself," but for some unexplained reason it seemed to have lost its power to "lose them miles of distance."

Peary left the others to pack, hitch up, and follow, while he "took his proper place in the lead." After describing his thoughts and sensations at some length, including the statement that—

It was a fine marching morning, clear and sunlit. The going was the best we had since leaving the land—

Peary says, on page 276:

After some hours the sledges caught up with me. The dogs were so active that morning, after their day's rest, that I was frequently obliged to sit on a sledge for a few minutes or else run to keep up with them, which I did not care to do just yet.

Peary does not state the time necessary to pack, hitch up, and follow, but on page 112 of A Negro Explorer at the North Pole, Henson says:

Turned out at 4.30 a. m. We breakfasted, and *15 minutes later* we were at work making trail.

Query: If it took Henson and the Eskimos 15 minutes to "pack up, hitch, and follow," at what rate of speed must Mr. Peary have walked to attain such a distance in advance of his party that it was "some hours" before the sledges caught up with him, and that, too, when the dogs were so active that he was "frequently obliged to sit on a sledge for a few minutes or else run to keep up with them?"

The wind on April 2 underwent frequent and sudden changes, if we accept Peary's descriptions. On page 274 of The North Pole, he says that he "breasted the keen air sweeping over the mighty ice, pure and straight from the pole itself." This gives a mental picture of a wind of considerable force, otherwise Peary would not describe it as "sweeping over the mighty ice." On page 275 he says:

The wind of the past few days had subsided to *a gentle breeze*.

Again, on the same page, he refers to—

The appearance of the ice fields to the north this day, *the biting character of the wind*—

and so forth.

And again, on page 277, at the end of the same day, he says:

The wind had ceased to blow from the north.

An unusual circumstance in connection with Peary's entire sledge journey was the fact that throughout the trip he made no observations for longitude nor for compass variation. Notwithstanding this apparent handicap to accurate progress, Peary says, on page 276 of The North Pole:

Our course was nearly, as the crow flies, due north, across floe after floe, pressure ridge after pressure ridge, headed straight for some hummock or pinnacle of ice *which I had lined in with my compass*.

Since Peary stated before the congressional committee, in 1911, that he made no observations for longitude nor for compass variation at any time throughout his polar trip it would be extremely interesting if he had told us how he succeeded, without at any time knowing the actual direction in which his compass needle pointed, in following a course "due north as the crow flies."

The unusually favorable traveling conditions were interrupted on April 3 by broad pressure ridges; and Peary says, "We had to use pickaxes quite freely." This, however, made but little difference in the day's march, for Peary asserts that they "hustled along for 10 hours," making 20 miles.

On page 281 Peary says of April 4:

That night I put all the poorest dogs in one team and began to eliminate and feed them to the others as it became necessary.

It is difficult to understand the necessity for killing any of his dogs at this time to feed to the others. As already shown, Peary must have reached Cape Columbia on the return trip with at least 1,500 pounds of provisions on his sledges. To further prove his ample allowance of provisions we have his statement made to the congressional committee in 1911, page 77 of the hearing, that—

The standard ration for a sledge dog was 1 pound of pemmican per day or per march, but in regard to the dogs that amount was exceeded practically the entire upward trip, so that they got at times 2 pounds of pemmican per day. They were fed double rations up to perhaps the twelfth march, and on the return march the dogs were fed in accordance with the distance traveled, so that most of the time on the return they were double rationed.

Therefore it was not due to short rations that the elimination of any of the dogs to feed to the others became necessary.

On April 5, page 284 of The North Pole, Peary says:

I took a latitude sight, and this indicated our position to be 89° 25', or 35 miles from the pole; but I determined to make the next camp in time for a noon observation, if the sun should be visible.

This was a deviation from the program made out by Peary on April 1, as at that time he planned to make five forced marches, taking an observation at the end of the fifth march. It is also a direct contradiction to his statement to the congressional committee in 1911, as given on page 100 of the hearing:

Mr. MACON. Then *you took no observations, longitude or otherwise*, for a distance of 133 miles after you left Bartlett at 87° 47'?
Commander PEARY. *No, sir.*

Fortune favored the party, so far as the condition of the ice was concerned, as seen by quotations from Peary's description of the successive days of their journey after Bartlett left him:

April 2. The going was the best we had had since leaving the land. The floes were large and old, hard and level (p. 275).
April 3. There were some broad, heavy pressure ridges in the beginning of this march, and we had to use pickaxes quite freely. As soon as we struck the level old floes we tried to make up for lost time (p. 279).
April 4. The weather and the going were even better than the day before. The surface of the ice was as level as the glacial fringe from Hecla to Cape Columbia and harder (p. 280).
April 5. The going was the same, and the dogs were on the trot most of the time (p. 282).
April 6. The going was even better than before (p. 284).

If, as Peary states, on April 2, "The going was the best we had had since leaving land," and steadily improved, as he indicates, the ice in the region of the pole must resemble the Hudson River in midwinter when cleared for an "ice carnival."

The story of the arrival at the place Peary called the pole varies slightly as told by Peary and Henson. I give herewith the version of each of these two men, the only men who have ever written, or can ever write, a personal account of the last five days of Peary's northward journey:

[From The North Pole, by Peary.]

The last march northward ended at 10 o'clock on the forenoon of April 6. I had now made the five marches planned from the point at which Bartlett turned back, and my reckoning showed that we were in the immediate neighborhood of the goal of all our striving. *At approximate local noon of the Columbia meridian I made the first observation at our polar camp* (p. 287).

[From A Negro Explorer at the North Pole, by Henson.]

When we halted on April 6, 1909, I noticed Commander Peary at work unloading his sledge and unpacking several bundles of equipment. I asked what the name of this camp was to be—Camp Peary? "This, my boy, is to be Camp Morris K. Jesup, the last and most northerly camp on the earth!" *As prospects for getting a sight of the sun were not good, we turned in and slept* (pp. 132–133).

Note that Peary says he made the first observation at the polar camp at approximate local noon of April 6, while Henson says they could not get a sight of the sun, so turned in and slept. For the benefit of those persons who prefer to accept Peary's statement as opposed to Henson's, I will quote Peary's testimony before the congressional committee in 1911, page 126 of the hearing. The subject of Peary's polar photographs was under discussion, and Mr. ROBERTS of Massachusetts made inquiry as to the time the photographs were taken, as follows:

Mr. ROBERTS. Can you tell us about what time the photographs were made at or in the vicinity of the pole, with relation to your arrival there?
Mr. PEARY. Not precisely; no.
Mr. ROBERTS. You arrived about noontime on the 6th of April?
Mr. PEARY. About 10 o'clock.
Mr. ROBERTS. Were any of them made that day?
Mr. PEARY. I should say that some of those photographs were made in the evening. I can not say exactly when they were taken, but they were taken after 8 o'clock of the 6th. I do not know that I can recall the precise time, other than to say that they were taken after 8 o'clock, *because they were taken in sunlight. They were taken some time after 8 p. m. of the 6th and 4 p. m. of the 7th.*

Peary's positive recollection that these photographs were taken some time after 8 p. m. of the 6th, "because they were taken in sunlight," established beyond a reasonable doubt the fact that there was no sunlight on April 6th earlier than 8 p. m. This is confirmed by his statement on page 285 of The North Pole, describing the weather of April 6:

Notwithstanding the grayness of the day and the melancholy aspect of the surrounding world, etc.

All of this confirms Henson's assertion that Peary made no observation at noon of April 6, for if Peary could not take photographs on April 6 until after 8 p. m., owing to lack of sunlight, he certainly could not have obtained a latitude observation of the sun. Therefore, in this instance, we are forced to give credence to Henson's statement over Peary's.

Peary and Henson agree on one point, however, namely, that Peary decided the Pole was reached *before* any observations were made. Peary says:

My *reckoning* showed that we were in the immediate neighborhood of the goal of all our striving.

Henson says that Peary told him, immediately after they halted on April 6:

This, my boy, is to be Camp Morris K. Jesup, the last and most northerly camp on the earth.

The respective accounts of Peary and Henson relative to the first observations are herewith given:

[From The North Pole, by Peary.]

After the usual arrangements for going into camp at approximate local noon of the Columbia meridian, I made the first observation at our polar camp. It indicated our position as 89° 57' (p. 287).

[From A Negro Explorer at the North Pole, by Henson.]

It was about 10 or 10.30 a. m. on the 7th of April, 1909, that the commander gave the order to build a snow shield to protect him from the flying drift of the surface snow. I knew that he was about to take an observation (p. 134).

Thus Peary claims to have made his first observation at noon of April 6, while Henson declares that the first observation was made about 10 or 10.30 in the forenoon of April 7. For the reason just stated, namely, that the sun was obscured until after 8 p. m. of April 6, we must accept Henson's version of the time of the first observation.

This difference in the time of observations, as given by Peary and Henson, serves to illuminate a statement made by Peary before the congressional committee in 1911. On pages 39 and 40 is a quotation from Peary's diary, as read by him:

27 March. Tuesday, *April 6.* 12 hours on a direct course. Temperature when we arrived at this camp (the polar camp), 10 a. m.—11.

After reading the above quotation from his diary, Peary remarked:

*On the next day, the 6th,* I have this entry: "The Pole at last!"

But if the date given in the first quotation from his diary was "April 6," the "next day" of which he speaks must have been April 7 instead of the 6th, which would make his record of events at the Pole correspond with Henson's narrative and would bring his date of leaving the Pole to April 8, instead of April 7, as given in his book.

At whatever time made, however, Peary's observations show the movable nature of his polar camp. On page 287 of The North Pole, he says:

The first observation indicated our position as 89° 57' (*or 3 miles from the pole*).

On page 290 he says:

At 6 o'clock on the morning of April 7, having again arrived at Camp Jesup, I took another series of observations. These indicated our position as being *4 or 5 miles from the pole.*

On the same page he continues:

Again I returned to the camp (Jesup) in time for a final and completely satisfactory series of observations on April 7 at noon, Columbia meridian time. These observations gave results essentially the same as those made at the same spot 24 hours before (*3 miles from the pole*).

Peary's records of the temperature at the pole also show a slight difference in each of the three places where they are stated by him. On page 291 of The North Pole, he says that—

The temperature during these observations had been from minus 11° Fahrenheit to minus 30° Fahrenheit.

On page 180 of Hampton's Magazine for August, 1910, he says:

When we arrived (at the pole) the temperature was 11° below zero, Fahrenheit; at 4 o'clock on the 7th the thermometer registered 33° below.

On page 40 of the hearing before the congressional committee he read from his diary:

Thirty hours. Minimum temperature, —32°; maximum, —11°.

A difference of opinion also exists between Peary and Henson as to the points where the observations were made. Peary says, on pages 288–289 of The North Pole:

Everything was in readiness for an observation at 6 p. m., Columbia meridian time, in case the sky should be clear, but at that hour it was, unfortunately, still overcast. But as there were indications that it would clear before long, two of the Eskimos and myself pushed on an estimated distance of *10 miles.*

Henson says, on page 135 of his book:

He (Peary) purposed to take another sight about *4 miles* beyond and that he wanted at least two hours to make the trip.

Henson's statement of the distance traveled between the observations is more consistent than Peary's, in view of the brief time spent at their "farthest north." In fact, Peary's movements at his polar camp and beyond, as related by him, include a great amount of work performed in an incredibly short time. Accepting the dates recorded in Peary's book, we find that the expedition arrived at Camp Jesup at 10 a. m. of April 6 and left on their homeward journey at 4 p. m. of April 7. We have, therefore, 30 hours spent at and about Camp Jesup, and in that time Peary (as he says) made an observation; "turned in for *a few hours of* absolutely necessary sleep; made one round trip 'beyond the pole' of 20 miles; made observations at the end of 10 miles and a round of observations on his return to camp; made another round trip of 16 miles;

raised his flags; wrote out his records and prepared them for deposit; searched for land; searched for a suitable place for a sounding (which he did not find); took a number of photographs; double-rationed the dogs twice (which must have been done while they were not on the road on either the 20-mile or 16-mile run); and, finally, went into the igloos 'and tried to sleep a little before starting south again.'"

As the best time made on the trip from Cape Columbia to Camp Jesup was a forced march of 30 miles, in about 12 hours, the 20-mile journey between 6 p. m. of April 6 and 6 a. m. of April 7, with a stop of an hour for observations, shows unusually quick traveling for the dogs, which must have felt somewhat the strain of the five days of forced marches just ended. This was immediately followed by another run of 16 miles, made in 5 hours' time, a higher rate of speed than was made at any time on the northward journey. After the observations were made at Camp Jesup, about noon of April 7, only three hours were left for all the balance of Peary's performances at Camp Jesup, including the brief rest before starting back and the preparations for the first southward march.

In connection with Peary's "Polar photographs," we note that notwithstanding his statement to the congressional committee that all of his photographs were taken between 8 p. m. of April 6 and 4 p. m. of April 7, on page 2 of Hampton's Magazine for January, 1910, is a full-page photograph entitled:

First photograph at the North Pole—Stars and Stripes at the earth's apex. Photograph taken by Peary on the day of discovery, April 6, 1909.

As Peary stated that he took no photographs until *after* 8 p. m. of April 6, at which hour he was on his sledge journey to a point "an estimated 10 miles beyond," and returned from that sledge journey at 6 a. m. of April 7, when did he really take the photograph which purports to have been taken by him "on the day of discovery, April 6, 1909"?

While this analysis is not intended as a comparison of Peary's story with Henson's, some of the discrepancies between the two accounts are too striking to be overlooked. As before remarked, Peary and Henson are the only men who have ever written or can ever write a personal account of Peary's North Pole expedition after Capt. Bartlett turned back. As Peary wrote the "Foreword" for Henson's book, and gave his sanction to the contents, it is consistent to compare the accounts of the two men, since Peary wrote his own story and vouched for the accuracy of Henson's. Finally, it is a fact that in practically every instance where Henson is *contradicted by Peary* the same circumstance as described by Henson is *elsewhere corroborated by Peary.*

The flag raising, as described by Peary and Henson, is herewith quoted:

[From The North Pole, by Peary.]

Of course there were some more or less informal ceremonies connected with our arrival at our difficult destination. We planted five flags at the top of the world. The first one was a silk American flag which Mrs. Peary gave me 15 years ago. I carried it wrapped about my body on every one of my expeditions northward after it came into my possession. A broad diagonal section of this ensign would now mark the farthest goal of earth—the place where I and my dusky companions stood. After I had planted the American flag in the ice I told Henson to time the Eskimos for three rousing cheers, which they gave with the greatest enthusiasm. * * * In the afternoon of *the 7th, after flying our flags* and taking our photographs, we went into our igloos and tried to sleep a little before starting south again (pp. 294–296).

[From A Negro Explorer at the North Pole, by Henson.]

When we halted on April 6, 1909, I noticed Commander Peary at work unpacking several bundles of equipment. He pulled out from under his kooletah a small folded package and unfolded it. I recognized his old silk flag. He fastened the flag to a staff and planted it firmly on the top of his igloo. The Stars and Stripes were "nailed to the pole." A thrill of patriotism ran through me, and I raised my voice to cheer the starry emblem of my native land. The Eskimos gathered round, and, taking the time from Commander Peary, three hearty cheers rang out on the still, frosty air. This was a thin silk flag that Commander Peary had carried on all of his Arctic journeys. At the North Pole a diagonal strip running from the upper left to the lower right corner was cut, and this precious strip, together with a brief record, was placed in an empty tin, sealed up and buried in the ice as a record for all time (pp. 132–134).

Thus Peary places the "ceremonies of flying the flags," and so forth, on April 7, just before the return south, while Henson says they took place directly after their arrival at the place called the pole on April 6. To corroborate Henson on this point—and contradict himself—Peary prints on page 297 of The North Pole a copy of one of the records left at his polar camp:

90 N. LAT., NORTH POLE,
*April 6, 1909.*

I have *to-day* hoisted the national ensign of the United States of America at this place, which my observations indicate to be the North Polar axis of the earth, and have formally taken possession of the entire region and adjacent for and in the name of the President of the United States of America.

I leave this record and United States flag in possession.

ROBERT E. PEARY,
*United States Navy.*

From the date of the above record it is noted that Peary himself states that he "hoisted the national ensign of the United States of America" *to-day, April 6,* which statement completely corroborates Henson relative to the date of the flag raising.

The "sleep" or rest was of but short duration, and Peary decided to make the next camp, 30 miles to the south, before they slept. On page 301 of The North Pole he says:

Four hundred and thirteen nautical miles of ice floes and, possibly, open leads still lay between us and the north coast of Grant Land.

It is a geographical fact that Cape Columbia, on the north coast of Grant Land, is 413 miles from the North Pole, or 90° north latitude. But Peary's so-called "polar camp" was at least 3 miles from 90° north latitude, or, to give his own figures, at 89° 57′ north latitude; therefore, at the time they started south the distance from 89° 57′ to Cape Columbia was only 410 miles, instead of the 413 which Peary mentions. This difference is small, but in such close estimates as Peary makes every mile counts.

Peary had carefully preserved 1,500 fathoms of wire and a sounding lead for the purpose of making a sounding "at the pole." On page 304 of The North Pole he says, relative to the only sounding he was able to make in that vicinity:

We crowded on all speed for the first 5 miles of our return journey. Then we came to a narrow crack which was filled with recent ice, which furnished a chance to try for a sounding, a thing that had not been feasible at the pole itself, on account of the thickness of the ice. Here, however, we were able to chop through the ice until we struck water.

An extremely interesting feature of this sounding appears in the "Profile of soundings" published on page 338 of The North Pole. In this "profile" the location of the sounding just mentioned is given as 89° 55′ or *5 miles from the pole,* whereas, since Peary says that his polar camp was at 89° 57′ (or 3 miles from the pole) and they "crowded on all speed for the first 5 miles of the return journey" (before taking the sounding), the sounding must have been taken 5 miles *south of their camp,* which (if we accept Peary's location of the camp) means that the sounding was taken 8 miles south of the pole instead of 5 miles south of the pole, or at 89° 52′ instead of at 89° 55′. As this "Profile of soundings" is the result of the expedition which Peary considers of the greatest scientific value, so great that when it was first forwarded to the Coast and Geodetic Survey he requested that it be not made public until later (see p. 58 of the hearing before the congressional committee), we might reasonably expect great accuracy and care in its preparation, instead of which, on this point as on others, a marked inconsistency of detail is shown.

The result of the sounding in question is given by Peary on page 304 of The North Pole:

Our sounding apparatus gave us 1,500 fathoms of water, with no bottom. As the Eskimos were reeling in the wire parted, and both the lead and wire went to the bottom. With the loss of the lead and wire the reel became useless and was thrown away, lightening Ooqueah's sledge by 18 pounds.

On page 210 Peary gives the weight of a wooden reel as 18 pounds, so that Ooqueah's sledge was actually lightened to that amount; but Peary seems to have considered unworthy of mention the lessening of weight caused by the loss of the 14-pound lead and about 17 pounds of wire.

Peary devotes but little space to the southward journey, although some of his descriptions are at variance with his earlier statements. For instance, he says on page 305 of The North Pole, relative to the action of the wind on the ice:

Friday, April 9, was a wild day. All day long the wind blew from the north-northeast, increasing finally to a gale, while the thermometer hung between 18° and 22° below zero. For the last half of this march the ice was raftering all about us and beneath our very feet under the pressure of the howling gale.

On page 233 of The North Pole—on the upward journey—we read that—

Six hours of a good fresh breeze would utterly obliterate our trail.

If "six hours of a good fresh breeze would utterly obliterate the trail" on the upward journey, why did not a howling gale for the last half of a double march—a gale so strong that the ice was raftering beneath their feet, forming in irregular ridges, from its pressure—also obliterate the trail. Nothing like that happened, however. On the contrary, they made a double march and camped at Bartlett's return camp.

Of this same day Peary says:

Under the impact of the storm the ice was evidently crushing southward and bearing us with it.

Nevertheless, he continues:

We camped that night at 87° 47′ (at Bartlett's return camp).

Notwithstanding the "crushing of the ice southward," bearing the return party with it, Bartlett's igloo was found at the old place, 87° 47′, for Peary says that they did not have to build new igloos until after April 18.

On April 10 Peary says:

"During the night the gale moderated and gradually died away, leaving the air very thick. It was almost impossible for us to see the trail. Though the temperature was only 10° below zero we covered only Bartlett's last march (20 miles) that day." He also adds that at the end of the march "certain eliminations which we were compelled to make among the dogs left us a total of 35."

At the end of a double march on April 11, Peary says on page 307 of The North Pole:

When we camped we were very near the 87th parallel. The entry that I made in my diary that night is perhaps worth quoting: "Hope to reach the Marvin return igloo to-morrow. I shall be glad when we get there onto the big ice again. This region here was open water as late as February and early March and is now covered with young ice which is extremely unreliable as a means of return."

As the expedition did not reach the 87th parallel on the upward trip until March 28, it is difficult to understand how Peary knew the condition of the ice at that point "as late as February and early March." However, his diary continues:

A few hours of a brisk wind, east, west, or *south* would make this entire region open water for from 50 to 60 miles north and south and an unknown extent east and west. Only calm weather or a *northerly* wind keeps it practicable.

In the next paragraph Peary says:

A double march brought us to Camp Abruzzi, 86° 36′. The trail was faulted in several places, but we picked it up each time without much difficulty. The following day was a bitterly disagreeable one. On this march we had in our faces a fresh *southwest* wind that, ever and again, spat snow that stung like needles, and searched every opening in our clothing. But we were so delighted that we were across the young ice that these things seemed like trifles. The end of this march was at "Camp Nansen," named in honor of Nansen's "Farthest North."

According to Peary's statement above quoted, the "fresh southwest wind" did not strike them until they were across the young ice. But on the upward journey he says of the march directly after leaving 86° 13′ (which he now calls "Camp Nansen"):

During this march we crossed several leads covered with young ice, treacherous under the recently fallen snow.

Apparently Peary overlooked this stretch of "treacherous young ice" in writing of the homeward journey. It is also remarkable that while a southerly wind would have made the region of young ice directly north of this point "open water," the southwest wind which they here encountered seemed to have no power to move the young ice (which Peary says they found on the upward journey).

On page 308 (April 15) Peary says:

Between there and the next camp, at 85° 48′, we found three igloos where Marvin and Bartlett had been delayed by wide leads, now frozen over. My Eskimos identified these igloos by recognizing in their construction the handiwork of men in the parties of Bartlett and Marvin

The igloo at 85° 48′ was the fourteenth igloo built on the upward journey. On page 51 of the congressional hearing a quotation from Bartlett's diary says:

April 11 reached *tenth igloo.*
April 13: Shortly after leaving lost main trail; *built igloo, first since leaving commander.*

Peary says that *north of the fourteenth* upward going igloo were igloos built by the men of Marvin's and Bartlett's on the homeward journey, while Bartlett says he built his *first igloo on the homeward trip south of the tenth upward going igloo.* Peary, therefore, locates Bartlett's first new igloo more than four marches too far to the north. The reader is left to supply his own explanation for this inconsistency of detail, as Peary makes none.

On page 309 of The North Pole (April 15) Peary says:

We arrived at the next camp, where Marvin had made a 700-fathom sounding and lost wire and pickaxes. We were now approximately 146 miles from land.

On the northward journey (p. 265) Peary wrote:

There was a strong northerly wind blowing full in our faces. The wind pressure was forcing to the south the ice over which we traveled, and thus *losing us miles of distance.*

Again, on page 268:

We had traveled fully 12 miles more than his—Bartlett's—observation showed in the last five marches. Our latitude was the direct result of the northerly wind of the last two days, which had crowded the ice southward as we traveled over it northward.

Again, on the homeward trip (p. 306):

Under the impact of the storm the ice was crushing southward and bearing us with it.

The "Profile of soundings," on page 338 of The North Pole, gives a latitude of 85° 33′, or a distance of 146 miles from Cape Columbia for Marvin's 700-fathom sounding. We must remember that the camp where this sounding was made was on movable ice—not on land.

But notwithstanding almost continuous strong northerly winds of sufficient force to lose the expedition miles of distance on the northern journey, and to "crush the ice southward" and bear the returning party with it on the homeward trip, this camp where Marvin made the 700-fathom sounding is found still at the same old stand, 146 miles from Cape Columbia. The same was true of the eleventh upward camp, which they found located at 85° 8′, the precise spot it occupied when they left it on the northern journey.

Leaving the eleventh upward camp, Peary says on page 310:

Sunday, April 18, found us still hurrying along over the trail made by Marvin and Bartlett. *They had lost the main trail.*

Bartlett's diary, as quoted on page 51 of the hearing, shows that he did not lose the main trail until after he left the tenth upward igloo. Bartlett's diary continues:

Shortly after leaving (tenth) igloo lost main trail, followed Marvin's, losing it on a long, wide strip of young ice. Built igloo, first since leaving commander. Shortly after leaving picked up main trail, reaching the seventh igloo.
April 15. Reached the fifth igloo.

The fifth igloo was the first one built on the upward journey after the expedition left the Big Lead. From this point Bartlett made a new trail to land.

Peary says that from the eleventh igloo until a point near the seventh igloo, his returning division traveled over Bartlett's and Marvin's trail, as "they (Barlett and Marvin) had lost the main trail." Bartlett, however, says that he did not lose the main trail until after he left the tenth igloo, and found it again before he reached the seventh, followed it to the fifth igloo, and from there made a new trail to land. Thus Peary places the point where Bartlett lost the main trail one march farther north than Bartlett locates it in his day-by-day diary.

On page 314 of The North Pole Peary says:

We had now reached the neighborhood of the "Big Lead." For the rest of the journey we were compelled to follow the single trail made by Bartlett instead of our well-beaten outward trail. I could not complain. We had kept the beaten road back to within some 50 miles of the land.
Within some 50 miles of the land—

Brought Peary's division to the fifth camp, a short distance north of the Big Lead. When Peary said that—

We had kept the beaten road back to within some 50 miles of the land—

He had apparently forgotten that for about 30 miles between camp 11 and camp 7 he reports that they lost the main trail and only picked it up in Henson's first pioneer march.

The last 50 miles of the journey seem to have been uneventful, as Peary devotes only two pages of The North Pole to that part of the trip, and practically the same amount of space in the magazine story. On pages 315–316 of The North Pole he says:

Before midnight that night the whole party had reached the glacial fringe of Grant Land. We had now left the ice of the polar sea and were practically on terra firma.
It was almost 6 o'clock on the morning of April 23 when we reached the igloo of "Crane City" at Cape Columbia, and the work was done.

On the northward journey (p. 216), Peary says:

An hour after I left camp (at "Crane City," Cape Columbia), my division had crossed the glacial fringe, and the last man, sledge, and dog of the northern party was at last on the ice of the Arctic Ocean.

Peary does not explain why on the return trip, with light sledges and a small party (which he claims can travel much faster than a large party), he required six hours to travel the short distance from the edge of the glacial fringe to "Crane City," when the same distance, with heavily loaded sledges and a large cavalcade of men and dogs, was traversed in an hour on the outward trip.

He continues:

Here (at "Crane City") I wrote these words in my diary:
"My life work is accomplished. The thing which it was intended from the beginning that I should do, the thing which I believed could be done, and that I could do, I have done."

Peary states that his returning party reached Cape Columbia on April 23. On page 291 of Hampton's Magazine for September, 1910, Peary says:

After putting 4 pounds of pemmican into each of the 29 faithful dogs, to keep them quiet, we had at last our chance to rest. For 48 hours we slept practically all the time.

The North Pole makes no mention of "putting 4 pounds of pemmican into each dog." The dogs had been fed full rations on both the northward and homeward journeys. They had been given double rations whenever a double march was made, and Peary says, on page 291 of Hampton's Magazine for September, 1910, and on page 317 of The North Pole:

The dogs, like ourselves, had not been hungry when we arrived (at Cape Columbia).

Yet he put 4 pounds of pemmican into each of them.

The party left Cape Columbia for the ship on April 25, and on page 317 of The North Pole, Peary says:

We reached Cape Hecla in one march of 45 miles and the *Roosevelt* in another of equal length.

This would have brought Peary to the ship late on April 26. But on page 82 of the congressional hearing, a quotation from Peary's diary reads as follows:

No. 1. *Roosevelt* to ——— and return, February 22 to April 21, R. E. Peary, United States Navy.

A letter written by Peary to MacMillan, who was with Borup on the north coast of Greenland when Peary arrived at the ship, also reads (see p. 231 of Borup's book):

S. S. "ROOSEVELT," *April 28, 1909.*

MY DEAR MACMILLAN: Arrived on board *yesterday*. Northern trip entirely satisfactory. Captain came on board *24th*.

This letter dates Peary's arrival at the ship on April 27, and Capt. Bartlett's arrival at the ship on April 24 (*one day after Peary arrived at Cape Columbia*). A quotation from Bartlett's diary, on page 51 of the congressional hearing, also dates Bartlett's arrival at the ship on April 24:

April 20.—Left Columbia, reaching the ship on the 24th.

But on page 115 of the congressional hearing, Congressman Macon asked Peary:

Mr. MACON. How long was it after Capt. Bartlett reached his camp on the return trip that you arrived there?
PEARY. I found him at the *Roosevelt* at Cape Sheridan.
Mr. MACON. How long had he arrived there before you did?
PEARY. *Four days.*
Mr. MACON. He was there four days before you arrived?
PEARY. *Four days.*

Therefore, according to Peary's statement before the congressional committee, he must have arrived at the *Roosevelt* on April 28 instead of April 26 or April 27.

In the chapter of The North Pole headed "Last Days at Cape Sheridan," page 325, Peary says:

It is not long now to the end of the story. On returning to the *Roosevelt* I learned that MacMillan and the doctor had reached the ship *March 21*, Borup on April 11, the Eskimo survivors of Marvin's party April 17, and Bartlett on April 24.

Hampton's Magazine for September, 1910, page 293, says:

Dr. Goodsell and MacMillan reached the ship *March 25*.

That March 25 is the correct date is shown by a letter now before me, dated March 23, 1916, signed by Dr. J. W. Goodsell, in which he says:

I turned back from the 84° 29′ camp on March 14, 1909, and MacMillan from the 84° 29′ camp on March 15. * * * We made the 36 miles (from Porter Bay) to the ship in one forced march, where we arrived on *March 25*, 1909—not March 21, as recorded in Peary's book.

Dr. Goodsell also says:

My division was the first to reach Cape Columbia (on the northward journey), where I arrived on February 22, Washington's Birthday.
From Peary's book you could not determine that my division was the first to reach Cape Columbia on the northward dash.

Peary had planned to have Marvin and MacMillan, after they returned to the ship with their supporting parties, make a sledge trip to Cape Morris Jesup on the north coast of Greenland for the purpose of making tidal observations and a line of soundings as far north from the cape as they could prudently go so late in the season. When Marvin's Eskimos returned to the ship with the story of Marvin's death, MacMillan at once determined to go to Cape Morris Jesup with Borup and two Eskimos, make 10 days' tidal observations, as many soundings as possible, and, as Borup said on page 206 of "A Tenderfoot with Peary," "try to survey Peary Channel."

This auxiliary expedition left the ship at Cape Sheridan on April 19, 1909, with a "supporting party" of three Eskimos. They traveled easily and arrived at Cape Jesup on May 8, intending to arrange their work so that they could reach the ship on the return trip about July 1. This arrangement would allow them about a month in which to survey "Peary Channel." This plan, however, was frustrated the day they arrived at Cape Jesup, when they were overtaken by a party of "Eskimo couriers," sent from the ship by Peary with a note to MacMillan. It developed that on Peary's arrival at the ship, one week after MacMillan and Borup left for Cape Jesup, he was told of their intention to survey Peary Channel. He immediately started two Eskimos posthaste after them with a note to MacMillan. Peary says on page 326 of The North Pole:

On the 18th MacMillan and Borup, with five Eskimos and six sledges, had departed for the Greenland coast to establish depots of supplies in case my party should be obliged to make its landing there as in 1906, and also to make tidal readings at Cape Morris Jesup. I therefore at once started two Eskimos off for Greenland with a sounding apparatus and a letter informing MacMillan and Borup of our final success.

Peary places the date of MacMillan's and Borup's departure from the ship for the Greenland coast on April 18; but on page 201 of "A Tenderfoot with Peary" Borup says:

It was midnight of April 17 that the familiar cry of "Kamuttee coming" (a sledge coming) rang out, and we knew that Marvin's division was at hand.

And on page 206:

We saddled up and were on the lope 36 hours after the arrival of Marvin's ill-fated division.

The above brings the date of their departure from the ship to April 19 instead of April 17. On the second day away from the ship, page 210, Borup mentions the date as "April 20," proving that they left the ship on the 19th.

It will be noted that Peary says nothing of MacMillan's intention to survey Peary Channel; but on page 206 of "A Tenderfoot with Peary" Borup says:

We decided that a stay in the field till July 1 would make those at the ship appreciate us the more on our return, so we arranged to lay down a series of "Childs's" lunch counters every 20 miles or so from Cape Bryant to Cape Morris Jesup for the commander, do a little work for the Coast and Geodetic Department, and to *try to survey Peary Channel*.

On page 230 Borup describes the arrival of the Eskimo messengers from Peary immediately after MacMillan and Borup reached Cape Jesup:

Just as we were turning in we heard a dog team coming. We rushed outside and saw an Eskimo running toward us, but it would have required the Bertillon system to identify the man in his coat of dirt, sunburn, and goggles as Karko, whom we'd picked to go to the pole, and three more huskies. We thought the commander had hit the coast near us.
Karko wasn't long in dispelling the illusion. "Peary oomiaksoah" (Peary's on the ship). Then we turned from Karko to see who the other men were—Wesharkoupsi, Ahwatingwah, and Inighito, the last two being two of the three men in our supporting party. Karko dived for his bag and dug out a letter addressed: "Prof. D. B. MacMillan, North Greenland Coast."

Borup gives a verbatim copy of Peary's letter on pages 231–232 of his book, but on account of its length I shall quote only a few extracts:

S. S. "ROOSEVELT," *April 28, 1909.*

MY DEAR MACMILLAN: Arrived on board yesterday. Northern trip entirely satisfactory. No need of Greenland depots.
Captain came on board 24th. *Concentrate all energies on tidal observations and line of soundings* north from Morris Jesup, and use intended supplies for this purpose.
*Never mind about any survey work. Concentrate all your energies on Jesup.*
You should be back much earlier than the 1st of July. Am anxious to have you back earliest possible date.

PEARY.

Although in The North Pole Peary makes no mention of the proposed survey of Peary Channel by MacMillan and Borup, he makes it very clear in his letter to MacMillan that he wished no attempt at such a survey made. To those who know the history of the fictitious "Peary Channel" ("discovered" (?) by Peary in 1892), his concern on that point is not remarkable. As "Peary Channel" never existed anywhere but in Peary's imagination, it is not strange that he preferred to have MacMillan and Borup keep away from its supposed location. That "channel" has now been removed from the Government maps and charts, and will not appear on any maps later published.

On pages 328–329 of The North Pole, Peary says:

On the 31st (of May) MacMillan and Borup themselves arrived from Greenland. MacMillan reported that he got as far as 84° 17′ north of Cape Jesup, had made a sounding which showed a depth of 90 fathoms, and had obtained 10 days' tidal observations.

This differs slightly from Borup's account, for on page 240 of his book Borup reports that:

He (MacMillan) said he'd been out to 84° 15′.

On page 246 of Borup's book he gives a copy of the record left in a cairn at Cape Morris Jesup, which contains the following:

Last sounding at 84° 15′, depth of 91 fathoms.

As the record left in a cairn is always supposed to be the exact, "official" record, it may be noted that the record quoted by Borup differs from Peary's statement, both as to the depth of the sounding and the point where it was made.

After his return from Cape Jesup, Borup, with the help of the Eskimos, built a permanent monument at Cape Columbia. Peary described this monument at length and quotes the record left there, giving the names of the entire expedition. The final paragraph of the record reads:

The club's steamer *Roosevelt* wintered at Cape Sheridan, 73 *miles* east of here (Cape Columbia).

Borup gives a similar description on page 274 of his book, and it is also duplicated on page 294 of Hampton's Magazine for September, 1910. But on page 134 of The North Pole Peary mentions: Cape Columbia, *90 miles* from the ship"; and again on page 317 he says of the return journey:

We reached Cape Hecla (from Cape Columbia) in one march of 45 miles, and the *Roosevelt* in another of equal length—

making the total distance from Cape Columbia to Cape Sheridan, *90 miles*. Which is correct?

Peary reports the first of the summer rains on June 16, and adds:

On the same day Borup captured a live musk calf near Clements Markham Inlet.

Borup reports the capture of the calf on June 10. (See pp. 261–262 of his book.)

A monument was erected to Marvin's memory at Cape Sheridan, near the winter quarters of the *Roosevelt*. Peary described this monument on page 321 of The North Pole and page 294 of Hampton's Magazine for September, 1910:

[From The North Pole, by Peary.]

On the northern shores of Grant Land we erected a cairn of stones, and upon its summit we placed a rude tablet inscribed:

[From "The discovery of the North Pole," by Peary, in Hampton's Magazine for September, 1910.]

A memorial was erected on the foothills of Cape Sheridan, less than a mile from the *Roosevelt*. It is a cross made of sledge planks, imbedded in a pile of stones. At the intersection of the arms is a copper plate, bearing the following inscription:

[The inscription is the same in the book and the magazine.]

In Memory Of
ROSS G. MARVIN
of
CORNELL UNIVERSITY
*Aged 3½*
Drowned April 10, 1909, forty-five miles north of C. Columbia, returning from 86° 38′ N. Lat.

In Peary's earlier book, Nearest the Pole, he enumerates the personnel of his 1905–06 expedition and mentions: "Ross G. Marvin, *25 years of age*" (in July, 1905). If Marvin was 25 years of age in 1905, he could not have been 34 in 1909; neither would strict accuracy make him 31, which is the age given by Borup in *his* description of Marvin's memorial. It is reasonable to conclude, therefore, that Peary was wrong when he said Marvin was 25 in 1905, and was again in error when he said Marvin was 34 in 1909; and that Borup has the right figures, namely, 31 years in 1909.

Peary is also variable as to Henson's age. In Nearest the Pole he speaks of "Matthew Henson, 39 years of age" (in 1905, which is correct). On page 20 of The North Pole he writes of Henson (in 1909): "He is now about 40 years of age." This, of course, is only a small matter of five years difference.

The preparations for the homeward voyage occupied the members of the expedition until about the middle of July, and Peary says on page 332 of The North Pole:

On July 18 the *Roosevelt* pulled slowly out from the cape and turned her nose again to the south.

On page 294 of Hampton's Magazine for September, 1910, he says:

On July 18 the *Roosevelt* left her winter quarters, etc.

Borup, however, on page 283 of his book, gives the date of departure from Cape Sheridan as July 17, one day earlier than Peary's date; and in this Borup is corroborated by Henson, who says:

It was 2.30 p. m., July 17, 1909, that the *Roosevelt* pointed her bow southward and we left our winter quarters and Cape Sheridan.

Some of the discrepancies in Peary's narrative may seem trivial and of no importance, but they are significant as proving Peary's inaccuracy and carelessness in small matters as well as those of greater consequence.

The book proper, The North Pole, closes with the words:

The victory was due to experience; to the courage, endurance, and devotion of the members of the expedition, who put all there was in them into the work; and to the unswerving faith and loyalty of the officers, members, and friends of the Peary Arctic Club, who furnished the sinews of war without which nothing could have been accomplished.

Following this peroration are three appendixes. Appendix I is entitled "Summary of Bathymetrical, Tidal and Meteorological Observations," by Dr. R. A. Harris. As this "summary" is based on Peary's report as published in The North Pole, it necessarily partakes largely of the inaccuracies shown in the main part of the book.

Dr. Harris first refers to "soundings" in the Arctic, and says:

Previous to the expeditions of Peary, little was known concerning the depths of that portion of the Arctic Ocean which lies north of Greenland and Grant Land. In 1876 Markham and Parr, at a point nearly north of Cape Joseph Henry, in latitude 83° 20½′, and longitude 63° W., found a depth of 72 fathoms. In 1882 Lockwood and Brainard, at a point lying northerly from Cape May, in latitude about 82° 38′ N., and longitude about 51½° W., sounded to a depth of *133 fathoms* without touching bottom.

On page 27, volume 1, of the Official Report of the United States Expedition to Lady Franklin Bay, under Gen. (then Lieut.) A. W. Greely, we read:

At about 82° 40′ N. and 51° W., a sounding was made. Eight hundred and twenty feet of line and thongs were used, but no bottom was found.

Eight hundred and twenty feet is a depth of *136½ fathoms* instead of 133 as stated by Dr. Harris. No mention is made by Dr. Harris of a sounding made by the Greely expedition at Cape Bryant (82° 21′ N. lat.), half a mile from shore, which gave a depth of 103 feet or 17⅙ fathoms.

Dr. Harris continues on page 337 of The North Pole:

The motion of the polar pack was inferred by Lockwood from the existence of a tidal crack extending from Cape May to Beaumont Island. Peary's journeys along the northern coast of Greenland in 1900, and upon the Arctic ice in 1902 and 1906, firmly established the motion suspected by Lockwood.

In April of the years 1902 and 1906 he found an eastward drifting of the ice due to westerly or northwesterly winds.

Thus Dr. Harris credits Peary with the establishment of the eastward drift of the ice north of Greenland and Grant Land, but he fails to note that ice in motion was observed near Cape Frederick (on the northern coast of Greenland, lat. 82° 51′ N.) by the Greely expedition (see p. 122, vol. 1, of the Official Report of Greely's Expedition); neither does he mention the strong easterly current off Cape Bryant which prevented Lockwood and Brainard from making satisfactory tidal observations at that point on their return from their "farthest north." (P. 211, vol. 1, Official Report of Greely's Expedition.)

Dr. Harris continues:

The water sky observed to the north of Cape Morris Jesup in 1900, strongly indicated the existence of deep water between Greenland and the North Pole.

If the existence of "water sky" north of Cape Jesup means deep water between Greenland and the North Pole, why did not Lieut. Lockwood's report printed by the Government in 1888, likewise indicate deep water between northern Greenland and North Pole? Lieut. Lockwood's report, as given on page 208, volume 1, of the Official Government Report:

To the north (from Lockwood Island) lay an unbroken expanse of ice, interrupted only by the horizon.

Therefore, in this respect at least, the "expeditions of Peary," to which Dr. Harris refers, only served to corroborate the earlier observations of the Greely expedition.

Dr. Harris lays great stress on Peary's profile of soundings, which purport to have been made between Cape Columbia and the North Pole, on the meridian of Cape Columbia.

As Peary made no observations for longitude or for compass variation on his polar trip, we have nothing to prove and much to disprove his assertion that he traveled on the meridian of Columbia. Such being the case, the soundings as reported by him are of little value as a "profile" of the ocean's depth from Cape Columbia to the pole. Furthermore, as already shown, the sounding of 1,500 fathoms, to which Dr. Harris especially refers, was not taken, according to Peary's own book as well as his statement before the congressional committee, at 89° 55′ north latitude, where he places it on his "profile of soundings," but at a point at least 3 miles south of 89° 55′, and probably even farther. This is not a hypothetical analysis, therefore I have no "theory" as to where Peary's "polar sounding" was actually made; but I quite agree with Dr. Harris that the sounding made by Peary at his "farthest north"—wherever that was—is not at variance with Nansen's sounding made at 85° 20′. Furthermore, to me it is not at all impossible that this same "polar sounding" was made in a latitude paralleling that of Nansen's, namely, 85° 21′, or more probably south of that point.

Dr. Harris analyzes at length the tidal observations made by the Peary expedition at Cape Sheridan, Point Aldrich, Cape Bryant, Cape Morris Jesup, and Fort Conger, the periods of time covered at these stations being about 231, 29, 28, 10, and 15 days, respectively. But in this appendix Dr. Harris does not refer—except by the briefest possible footnote references—to the lengthy, exhaustive, and accurate tidal observations carried on by the Greely expedition at Black Horn Cliffs, Repulse Harbor, Capes Sumner, Baird, Beechy, Cracroft, and Distant Cape and Fort Conger in 1882–83, nor does Dr. Harris refer to the tidal observations made at Cape Sheridan by the Nares expedition in 1875–76. From a careful analysis of these earlier records practically the same conclusions were reached as those set forth by Dr. Harris and accredited to Mr. Peary's work. Such obvious unfairness is unworthy a scientist of Dr. Harris's standing and attainments. (See Appendix 140, vol. 2, p. 637, Government Report of the Greely Expedition.)

On page 340, in a table giving "the mean lunitidal intervals and the mean ranges of tide," Dr. Harris gives the latitude of Cape Morris Jesup as 83° 40′ north latitude, 1 mile farther north than is claimed by Peary. He also gives the latitude of Cape Sheridan as 82° 27′, 1 mile farther south than is given by Peary; and the longitude of Fort Conger as 64° 44′ west instead of 64° 45′ west, as given by Greely.

Dr. Harris also refers repeatedly to "Crocker Land," since proven not to exist by Donald B. MacMillan, of Peary's polar expedition.

Another interesting feature of Dr. Harris's appendix is his frequent use of the term "Peary Land" to designate the north-

ern part of Greenland. This portion of Greenland was explored and named prior to Peary's explorations, and it is unjust to earlier explorers to place Peary's name over the names of "Washington Land," "Nares Land," and so forth, given to that part of Greenland by Hall, Greely, and other explorers. Presumably the name "Peary Land" was placed on the map to commemorate Peary's "discovery" of the fictitious "Peary Channel," which Peary claimed divided the northern part of Greenland from the mainland, but since "Peary Channel" has been proven to exist only in Peary's imagination, it is manifestly unfair to place the name of "Peary Land" on that portion of Greenland.

Dr. Harris says of Peary's meteorological work (The North Pole, p. 346):

Regular *hourly observations* of the thermometer and barometer were carried on day and night by the tide observers.

A brief résumé of the results obtained is given below, together with a few taken from the Report of the Proceedings of the United States Expedition to Lady Franklin Bay by Lieut. (now Gen.) A. W. Greely.

But Dr. Harris does not state that while the Peary expedition made "regular *hourly observations* of the thermometer and barometer day and night," the number of meteorological observations "*made and recorded each day*" by the Greely expedition was 234; and this, too, in addition to elaborate and careful magnetical, pendulum, time, and sound observations and experiments. In a word, little reliable scientific data of value was obtained and published up to date by Peary's last expedition which had not already been obtained and recorded by earlier expeditions.

In this connection I would say that Dr. J. W. Goodsell, surgeon to Peary's 1908–9 expedition, has completed the manuscript of a book embodying his own personal, scientific work and observations. Of this book Dr. Goodsell wrote under date of March 1, 1916:

It was not until a year after our return that I received permission to write, and even to date Peary attempts to prohibit me from any lecturing or writing likely to be translated into any foreign language.

For several years after our return I was engaged in compiling my scientific data concerning the expedition in connection with my sledging and other experiences. Peary wrote me to send him the material for my book and he would write the introduction. He received the 568 typewritten pages in latter March, 1915, and my illustrations a few days later. *He has not written since, will not return my uncopyrighted book or illustrations, nor will he answer any letters requesting their return.*

On May 1, 1916, Dr. Goodsell wrote the Explorers' Club informing it of Peary's refusal to return his manuscript and requesting the club to accept either his own resignation or Peary's. On June 17, 1916, Dr. Goodsell received the typewritten manuscript without letter or explanation of any kind.

Such scientific material as appears in Peary's book The North Pole is the result of Dr. Goodsell's work, and is used by Peary without quotation marks or other acknowledgment. I quote herewith a few extract from Dr. Goodsell's original journal (a copy of which was furnished Peary immediately on the return of the expedition) and their equivalents as found in Peary's book The North Pole:

[From The North Pole, by Peary.]

The Protococcus nivalis (Red Snow), one of the lowest types of the single, living protoplasmic cell. The nearly transparent gelatinous masses vary from a quarter inch in diameter to the size of a pinhead, and they draw from the snow and the air the scanty nourishment they require (pp. 72–73).

When the little auks fly high against the sunlit sky they appear like the leaves of a forest when the early frost has touched them and the first gale of autumn carries them away circling, drifting, eddying through the air (p. 75).

One place seemed secure, and we were making ready to attach the cables, when an ice floe, about an acre in extent, with a sharp, projecting point like the ram of a battleship, came surging along toward the *Roosevelt*, and we were obliged to shift our position. Before the ship was secured she was again threatened by the same floe, which seemed to be endowed with malign intelligence and to follow us like a bloodhound (pp. 112–113).

* * * Black Cape, a dark, cone-shaped mountain, standing alone, on the eastern side washed by the waters of the sea, on the west separated by deep valleys from the adjacent mountains (p. 118).

[From Dr. Goodsell's Journal.]

The larger, nearly transparent gelatinous masses are about one-fourth inch in diameter. These are exceptional, the masses being usually the size of a pinhead or smaller. * * * The Protococcus nivalis (Red Snow) is certainly one of the very lowest type of the living, single protoplasmic cell existing on the scant nourishment and less heat that the air and snow provide.

When the auks fly high the reflection of the sun makes them appear like the leaves of a forest when the early frost has touched the leaves and the first gale of autumn carries them away circling, drifting, eddying through the air.

One place seemed secure, but a large floe, of an acre or more, with a projecting point like a battleship, pushed toward the *Roosevelt*, necessitating a change of position to southward. Before the vessel was secured she was again threatened by the same floe, which had followed, persistent as a bloodhound.

* * * Black Cape, a dark, cone-shaped mountain, standing alone. At the eastern side washed by the waters of the sea, on the west separated by deep valleys from the adjacent mountains.

Dr. Goodsell's forthcoming book contains several pages of interesting material relative to the "red snow" of the "crimson cliffs," the result of his microscopical studies.

Henson also says of Dr. Goodsell (pp. 156–158 of A Negro Explorer at the North Pole):

Dr. Goodsell, with two teams and the Esquimo men Keshungwah and Tawchingwah, left the ship on May 27 to hunt in the Lake Hazen and Ruggles River regions. Dr. Goodsell returned to the *Roosevelt* on June 15 with a load of geological, zoological, and botanical specimens almost as heavy as the loads of meat and skins he brought in. He was an ardent scientist, and viewed nearly every situation and object from the viewpoint of the scientist. Nothing escaped him; a peculiar form of rock or plant, the different features of the animal life, all received his close and eager attention, and he had the faculty of imparting his knowledge to others. He evinced an eager interest in the Esquimos and got along famously with them.

His physical equipment was the finest; a giant in stature and strength, but withal the gentlest of men, having an even, mellow disposition that was never ruffled. In the field the previous spring he had accompanied the expedition beyond the "Big Lead" to 84° 29', and with the strength of his broad shoulders he had pickaxed the way.

Peary mentions the supplementary expeditions of MacMillan and Borup but says nothing whatever of Dr. Goodsell's independent trip to the Lake Hazen region, after the return from the northern trip, and the only record of his scientific work is found on page 190 of The North Pole, when Peary says:

The doctor completed a record of the approximate mean temperatures for the season, which showed that every month except October had been colder than three years before.

This is in striking contrast to the narratives of other leaders of Arctic expeditions, who carefully give personal credit to each member of the party for work done. Such credit is particularly conspicuous in Gen. Greely's account of his three years in the Arctic.

Appendix II to The North Pole contains facsimile reproductions of the alleged observations made by Marvin, Bartlett, and Peary; also reproductions of the certificates to position, purporting to have been made by Marvin and Bartlett.

In regard to Bartlett's reputed observation, it is only necessary to say that the errors in calculation are such as to show that the computation was not made by a man experienced in nautical observations.

Appendix III to The North Pole contains the "Report of the subcommittee of the National Geographic Society on Peary's Records, and Some of the Honors Awarded for the Attainment of the Pole."

This "report" is signed by Henry Gannett, C. M. Chester, and O. H. Tittmann, and was presented to the board of managers of the National Geographic Society on November 4, 1909.

The opinion prevailed at that time, and in some quarters still prevails, that this report of the subcommittee of the National Geographic Society was equivalent to a national recognition of Peary's claim to the discovery of the North Pole. Nothing could be further from the truth. That the "National Geographic Society" is neither national, geographic, nor a society is shown by the following resolution introduced in Congress by Representative F. O. Smith, of Maryland, on January 21, 1915:

[Sixty-third Congress, third session, House resolution 709.]

Whereas the National Geographic Society (of Washington, D. C.) is not national (in the sense that it is not a bureau of nor connected with the National Government in any capacity whatsoever), is not geographic, is not scientific, and is not a society, but is simply and solely a private publishing house, no special privileges should be granted to it. (Third paragraph of resolution.)

Therefore recognition of Peary's claimed achievement by this "society" was no more a national recognition than was the publication of his story by Hampton's Magazine.

This subcommittee reported that:

Commander Peary has submitted to this subcommittee his original journal and record of observations, together with all his instruments and apparatus and certain of the most important of the scientific results of his expedition. These have been carefully examined by your subcommittee, and they are unanimously of the opinion that Commander Peary reached the North Pole on April 6, 1909.

How "carefully examined" these data were by the subcommittee is manifested in the "minority report" of the congressional committee before whom Peary testified in 1911, from which I quote:

From these extracts from the testimony it will be seen that Mr. Gannett, after his "careful examination" of Capt. Peary's proofs and records, did not know how many days it took Capt. Peary from the time he left Bartlett to reach the pole and return to the Roosevelt, that information being supplied by a Mr. Grosvenor. It will be also observed that Mr. Gannett as a result of his careful examination of Capt. Peary's proofs and records, gives Capt. Peary in his final dash to the pole the following equipment: Two sledges, 36 or 32 dogs, 2 Eskimos, and Henson. It will be seen later from Capt. Peary's testimony that he had on that final dash 40 dogs, 5 sledges, and a total of 6 men in his party. This discrepancy on so vital a point might seem quite conclusive that the examination of the Geographic Society's committee was anything but careful.

The following quotations from the testimony of Mr. Tittmann show with what care, or, rather, lack of care, this committee examined Capt. Peary's proofs:

"The CHAIRMAN. Are you satisfied Peary reached the North Pole?

"Mr. TITTMANN. Surely.

"Mr. GREGG. Did you see the book of original entry in which he made the record of these soundings?

"Mr. TITTMANN. No; I did not.

"Mr. GREGG. Have you ever, in any capacity, seen the books of original entries?

"Mr. TITTMANN. No, sir; I have not."

This member of the committee says he did not have as much opportunity to go over the details as the other members of the committee, "because he was very much occupied with other matters." When asked for certain information by the chairman, Mr. Tittmann refers him to Mr. Gannett and hurries away.

Appendix III closes with the following statement and list, on pages 364–365 of The North Pole:

Among the home and foreign honors awarded for the attainment of the pole are the following:

The special great gold medal of the National Geographic Society of Washington.
The special gold medal of the Philadelphia Geographical Society.
The Helen Culver medal of the Chicago Geographical Society.
The honorary degree of doctor of laws from Bowdoin College.
The special great gold medal of the Royal Geographical Society of London.
The Nachtigall gold medal of the Imperial German Geographical Society.
The King Humbert gold medal of the Royal Italian Geographical Society.
The Hauer medal of the Imperial Austrian Geographical Society.
The gold medal of the Hungarian Geographical Society.
The gold medal of the Royal Belgian Geographical Society.
The gold medal of the Royal Geographical Society of Antwerp.
A special trophy from the Royal Scottish Geographical Society.
The honorary degree of doctor of laws from the Edinburgh University.
Honorary membership in the Manchester Geographical Society.
Honorary membership in the Royal Netherlands Geographical Society of Amsterdam.

A careful personal inspection of these medals and honors, however, reveals the fact that of the 15 medals and honors mentioned in the list above presented only 8 were given for the discovery or "attainment" of the North Pole; 2 were presented by societies of which Peary was a leading member; 1 degree (from Bowdoin College) was presented by Peary's alma mater; and, furthermore, the fact was brought out at the congressional hearing (see p. 20 of the hearing) that none of the societies conferring honors had examined Peary's records or other data (with the exception of the National Geographic Society). Mr. Gannett, chairman of the National Geographic Society subcommittee, making that statement to the congressional committee. Mr. Gannett was asked by Hon. THOMAS S. BUTLER:

The records of Peary were not submitted to any of these societies? They simply accepted the judgment of the National Geographic Society?

To the above question Mr. Gannett replied:

That is the case.

The special great gold medal of the Royal Geographical Society of London is mentioned on page 365 of Peary's book as one of the medals presented for the discovery of the Pole, and a full-sized photographic reproduction of each side of the medal is shown opposite page 365. The inscription on one side of this medal reads, "Robert Edwin Peary," and on the reverse side:

Presented by the Royal Geographical Society. For Arctic Exploration, 1886–1909.

No mention is made, directly or indirectly, of the North Pole, yet on the strength of this report of the subcommittee of the National Geographic Society and on the strength of the contradictory and absurd testimony given by Peary himself before the House Committee on Naval Affairs, Robert E. Peary was placed on the retired list of the Corps of Civil Engineers on March 4, 1911, said retirement to date from April 6, 1909, *nine years before Mr. Peary would have been eligible to retirement* under our very easy age-limit retirement system.

Furthermore, since March 4, 1911, Peary has posed before the world as "rear admiral, retired," although his retirement with rank and pay of that high office gives him no more right to use the title of rear admiral than belonged to him before he was retired.

Secretary Daniels, of the Navy Department, is authority for the statement that Peary's title is "civil engineer," and when the Secretary was asked if by right of courtesy or common usage Robert E. Peary may be properly addressed as "rear admiral," he replied that Peary's correct title is "civil engineer." To address Peary as "admiral" or "rear admiral" is therefore a breach of etiquette of the service, and, as was said in a discussion of this subject in the Senate on the 13th of this month:

To call these men admirals does not make them so any more than to call the tail of a sheep a leg makes it so.

When the bill rewarding Peary for his claimed Arctic services was introduced in Congress Hon. G. von L. Meyer, then Secretary of the Navy, wrote to the chairman of the House Committee on Naval Affairs that—

* * * It seems inappropriate to confer upon him (Peary) a title for which his previous education, training, and service have not fitted him. It is therefore recommended that in the title of the bill and in the fourth line thereof the word "commander" be changed to "Civil Engineer," *the latter being Mr. Peary's correct official designation*, and, further, that instead of appointing him a rear admiral and placing him upon the retired list as such that he be retired as a civil engineer with the rank of rear admiral and with the highest retired pay of that grade under existing law.

These recommendations of Secretary Meyer were adopted, and Peary was therefore retired as a civil engineer with the rank and pay of a rear admiral. That such retirement does not include the right to the title of "rear admiral" was clearly brought out in the Senate in the discussion of July 13, to which I have already referred, when Senator SWANSON, of Virginia, said:

To fix the pay of staff officers in the Navy they are given certain rank. The officers of the different staff corps rank so and so, with the pay of that rank. The law provides, for instance, that a chaplain shall have the *rank* of captain. That means that his *pay* shall be the same as that of a captain; but he is *still called a chaplain*. A doctor of medicine a member of the Medical Corps is called doctor, but he receives the pay of the *rank* which he holds. Some of them have the *rank* of lieutenant, some have the *rank* of commander, some have the *rank* of captain; but doctors in the Navy are not *called* captains. * * * So if a man is a paymaster, that title is an honorable title and has been an honorable title for a long time, and he should not be ashamed of it. Why should he try to have the title of captain or admiral or any other title that does not appertain to the calling in which he is engaged?

This discussion to which I have referred was relative to a proposed amendment introduced in the Senate by Senator WALSH to give staff officers the right to use the title of their respective ranks. Under the provisions of this amendment a civil engineer retired with the rank of rear admiral would have had a right to be addressed as "rear admiral"; but this amendment was rejected. As Senator LODGE, of Massachusetts, said:

It (the amendment introduced by Senator WALSH) is an attempt to give a title that misrepresents the office. It is giving a man a title which does not describe him. It is giving him a title to which he has no title.

And, as I have just stated, the amendment was rejected. Therefore, in using the title of rear admiral, and in encouraging this form of address by others, Robert E. Peary is consistently pursuing the policy of pretense which he so long followed in his claimed Arctic work.

All that now remains is to briefly review Peary's various trips to the Arctic regions. I shall therefore present a short résumé of his first, last, and intermediate expeditions, on which his various claimed "discoveries" were made. And I shall also at the same time—"lest we forget"—incorporate a few prominent facts with which some of us are doubtless familiar, but which, since we are all so prone to forget, may have escaped the memory of some. By this résumé and these facts we shall plainly see that Peary is not entitled to his claims to nor reward for "Arctic explorations" and so-called discoveries.

FOLLOWING THE PATHFINDERS—WHEREVER MR. PEARY WENT, SOME ONE WAS THERE BEFORE.

Not to all explorers is granted the honor of breaking the pioneer trail over those portions of the earth's surface before untrodden by man. Some brave spirit must lead the way into new regions, while those who follow keep the paths open and develop the resources of the uttermost parts of the earth for future generations. Honor is due to all—to those who follow no less than to those who lead—but bitter indeed is the lot of the man who, craving and claiming with insatiate greed the rôle and honor of pioneer, finds always before him the trail of the pathfinder. Such a man is Robert E. Peary, for wherever Mr. Peary went, some one was there before.

In 1886 Mr. Peary, then a young man of 30, made what he terms his "reconnoissance" of the Greenland ice cap, in company with Christian Maigaard, then the assistant governor of Ritenbenk, Greenland. On this trip he claims to have reached a point 100 miles inland. The entire trip occupied 23 days on the ice, which Peary reports as very level throughout, with few crevasses, and for the greater part of the way covered with a layer of dry snow, into which at the farthest point reached by the two men Peary could drive his staff 6 feet deep. This condition of the ice cap made traveling unusually easy. On July 17, 1886, they had ascended to an altitude of 7,525 feet elevation, and, according to Peary's calculation of longitude, had reached a point about 100 miles inland. Of this calculation, however, Dr. Fridtjof Nansen says, in his "First Crossing of Greenland," Volume I, pages 505–506:

Unfortunately Peary's longitude was only based, as it seems, on some observations of altitude taken with the theodolite about noon on July 19. The expression "circum-meridian sights," which both he and Maigaard use, is not quite clear in itself. These so-called "simple altitudes" are, besides, notoriously uncertain for longitude reckonings.

The chronometer, too, had come to a standstill, and an ordinary watch, which Peary declares to have been "very trustworthy" was used in its place. But as far as I can see from his account, no observations were taken subsequently to determine this timekeeper's accuracy. The distance of a hundred miles from the margin of the ice can not, therefore, be established beyond all doubt.

It is difficult to say, too, what faith we can place in this elevation of 7,525 feet, as it was only based upon the records of an aneroid barometer. Though we (Nansen and his party) had with us three particularly good aneroids made specially for us in London, we should regularly have estimated our elevation much too high, if we had not had a boiling point barometer to correct our daily observations. This shows that it will not do to attach too great importance to observations taken by the aneroid barometer alone.

But laying aside for the moment Dr. Nansen's criticisms, this was by no means the first attempt to penetrate the inland ice of Greenland. Short trips were made by the English traveler, Edward Whymper, in 1867; the Swedish explorer, Baron Nordenskiold, in 1870; the Norwegian geologist, Amund Helland, in 1875; Lieut. Jensen, in command of a Danish expedition in 1878; and by the Swedish geologist, Holst, in 1880. None of these expeditions reached a point farther inland than 45 miles; but in 1883, three years before Peary's "reconnoissance," Baron Nordenskiold, not content with the result of his first journey in 1870, made elaborate preparations for a second expedition into the unexplored fastnesses of Greenland's interior. A party of 10 men ascended the ice at about the same point that Nordenskiold's start was made in 1870, and succeeded in penetrating about 73 miles over the interior of the ice cap, where the wet snow compelled them to stop. Before returning, however, two members of the party, carrying little weight and traveling on skis, made a further march into the interior, which the most conservative estimate places at 45 miles, thus extending the distance traveled by the expedition to 118 miles, or 18 miles farther than Peary claims to have reached three years later. Peary's starting point was the head of Pakitsokfjord, the fjord where Whymper and Helland made their respective starts. Therefore, Peary made neither the first nor the longest journey up to that time over the inland ice. Wherever Mr. Peary went, some one was there before.

In 1891 Peary organized an expedition having for its object the complete crossing of Greenland, with a possibility of an ultimate dash for the North Pole. This expedition left New York on June 6, 1891, and the latter part of July reached McCormick Bay, where winter quarters were established. On April 30, 1892, after a winter spent in elaborate preparations, the men commenced packing supplies up to the ice cap. This work occupied them for about a fortnight, and on May 16 the actual start over the ice cap was made. Ten days later the supporting party returned, and Peary, with one companion, Eivind Astrup, traveled for about six weeks over the ice cap, until its altitude lessened and they reached a point where grass and flowers were abundant and herds of muskoxen were grazing. On July 4, they ascended a plateau of which Peary says in Northward Over the Great Ice, pages 342–346, inclusive:

> We stood upon the northeast coast of Greenland and, looking far off over the surface of a mighty glacier on our right and through the broad mouth of the bay, we saw stretching away to the horizon the great ice fields of the Arctic Ocean.
>
> I christened the bay Independence Bay, in honor of the date, July 4. The United States Navy was remembered in the name Navy Cliff, which I gave to the giant cliff on which we stood.

Contrary, however, to Mr. Peary's claims, he did not at any time travel across the Greenland ice cap from the west coast to the east coast. His trip of 1892, and a later one in 1895, extended only to "Navy Cliff," which according to the latest map compiled and published by Gilbert H. Grosvenor, editor and manager of the National Geographic Magazine, is a point about three-fourths of the distance between the eastern and western coast. In other words, a straight line drawn from McCormick Bay (Mr. Peary's starting point) diagonally across Greenland toward the northeast, the direction Peary followed, places "Navy Cliff" and the upper end of "Independence Bay" (Mr. Peary's "farthest") at a point about three times as far distant from the western coast as it is from the eastern coast. Therefore, Mr. Peary can not claim the honor of the first, or any, *complete crossing* of the mainland of Greenland.

Wherever Mr. Peary went, some one was there before. The first complete crossing of Greenland was made in 1888 by Dr. Fridtjof Nansen. Mr. Peary claims that he furnished the idea and the plan for Nansen's trip in a paper published in the Bulletin of the American Geographical Society for December, 1886.

This claim, however, is directly contradicted by Nansen, who, in 1882, wrote a paper that was published in the Danish Geografisk Tidskrift (Vol. VII, p. 76), in which he expressed the opinion that the east coast of Greenland could be reached without difficulty. Nansen held the opinion that once the east coast was reached it would be comparatively easy to travel across the ice cap to the west coast, but it was not until the following year, 1883, that his idea took definite form. On pages 3 and 4 of The First Crossing of Greenland, Nansen says:

> One autumn evening in 1883—I remember it still as if it were only yesterday—I was sitting and listening indifferently as the day's paper was being read. Suddenly my attention was roused by a telegram, which told us that Nordenskiold had come back safe from the interior of Greenland; that he had found no oasis, but only endless snow fields, on which his Lapps were said to have covered on their "ski" an extraordinarily long distance in an astonishingly short time. The idea flashed upon me at once of an expedition crossing Greenland on "ski" from coast to coast. Here was the plan in the same form in which it was afterwards laid before the public and eventually carried out.

It is difficult to understand how Mr. Peary can claim for himself the first inspiration of the idea that led Nansen to make his hazardous trip over the inland ice of Greenland, when Nansen's plan was conceived three years before Peary's "reconnoissance" was made. Therefore, as stated above, Dr. Nansen was the first explorer to conceive and effect a complete crossing of the mainland of Greenland.

Mr. Peary also claims as one of the results of his 1892 expedition the determination of the insularity of Greenland. In Northward Over the Great Ice, pages 344–346, Volume I, Peary says:

> Our observation point was a giant cliff (Navy Cliff). Looking to the west we saw the opening of the fjord that had barred our northern advance. It was this fjord whose western entrance we had descried afar off days before. Now we knew that we had paralleled its course across the northern end of the mainland from Robeson Channel clear to the Arctic Ocean off the shores of northeast Greenland. It was evident that this channel marked the northern boundary of the mainland of Greenland.

Peary's sole companion on this trip was the young Norwegian explorer, Evind Astrup. Let us see what Mr. Astrup has to say about this "fjord" or "channel." I quote from Astrup's book, "With Peary Near the Pole," page 227:

> Mr. Peary christened the rock upon which we were standing "Navy Cliff"; it terminated toward the north in a steep mountain wall, continuing with but few interruptions to the verge of the sea ice; and there below us, at its foot, a large bay opened out eastward, shut in by four rocky sides. How far inland this bay or fjord penetrated we could not determine with any certainty.

Astrup's report is very far from a corroboration of Mr. Peary's claim to the discovery of a channel or fjord which "marked the northern boundary of the mainland of Greenland."

In 1895 Peary made a second trip to Navy Cliff in company with Hugh Lee and Matthew Henson. Lee, however, owing to illness, was unable to complete the entire journey, so that Independence Bay and Navy Cliff were reached only by Peary and Henson; therefore Mr. Peary had no one to either corroborate or contradict his statements except his colored servant, Henson, who, as Peary afterwards said, was "as loyal and responsive to my will as the fingers of my right hand." (See p. 271 of "The North Pole.")

As three later expeditions under the command of Mylius Erichsen, Ejnar Mikkelsen, and Knud Rasmussen, respectively, have reported positively and officially that this channel, later called "Peary Channel," which Peary said "marked the northern boundary of the mainland of Greenland," does not exist, but that the territory supposed to be occupied by that channel is high land it is preposterous to assume that Peary could have made two trips to the upper end of Independence Bay and still be ignorant of the fact that no channel cuts through the northern end of Greenland. This effectually and finally robs Mr. Peary of the honor of the discovery of the insularity of Greenland.

In 1896 and 1897, respectively, Peary made two summer trips to Cape York for the purpose of bringing back to civilization the famous "Cape York meteorites," now in the American Museum of Natural History, New York. The discovery of the existence of these "iron stones," their nature as ascertained by specimens, and their location at 76° 12′ north latitude, 53° west longitude, may be found in the account of Sir John Ross's voyage to the Arctic in 1818, "A Voyage of Discovery to the Arctic Regions" (p. 102); also page lxxxix, Appendix III. Therefore, since this book was published in 1819, although Mr. Peary did perform the somewhat questionable feat of taking from the Eskimos their only natural source of the iron from which their native implements are fashioned, he can not be credited with the "discovery" of the meteorites, whose exact location was given in a book published only three years less than a century ago. Wherever Mr. Peary went some one was there before.

After his return to New York in 1897 with the last of the "Cape York meteorites" Mr. Peary promptly turned his attention to preparations for another expedition, which left New York for the Arctic on July 4, 1898.

Mr. Peary's first claimed achievement on this expedition was the "discovery" of Axel Heiberg Land (called by Peary "Jesup Land"). On page 202 of his book, Nearest the Pole, Peary relates his "discovery" (?) of this land in a paragraph quoted from his journal of June 24, 1906:

East lay the wide, white zone of the ice foot; west the unbroken surface of Nansens Strait, and beyond it the northern part of that western land which I saw from the heights of the Ellesmere Land ice cap in *July, 1898*, and named Jesup Land, though Sverdrup has later given it the name of Heiberger Land.

But on page 296 of this same book Mr. Peary, in describing his northern journey in 1898, says:

The *Windward* sailed from New York on the 4th of July, 1898, and on the 7th I went on board the *Hope* at Sydney, Cape Breton. Pushing rapidly northward and omitting the usual calls at the Danish Greenland ports, Cape York was reached after a voyage uneventful. The work of hunting walrus and assembling my party of natives was commenced at once; the *Windward* soon joined us, after which the hunting was prosecuted by both ships until the final rendezvous at Etah, whence both ships steamed out on *August 13*.

As Mr. Peary was en route from New York to Etah, and engaged in hunting walrus and assembling his party of natives, from July 4 to August 13, 1898, some 180 miles from the "heights of Ellesmere Land," it is plainly evident that he did *not* "see that western land" in July, 1898. It is also worthy of note that although a year later, in his report to the Peary Arctic Club, Peary reported that he had "crossed the Ellesmere Land ice cap to the west side of that land," he makes no mention whatever of "seeing" any land west of Ellesmere Land nor of the discovery of any new land anywhere. As a matter of fact, Peary never "remembered" that he had "seen" this western land (Heiberg Land) until he learned in 1903 that Sverdrup had discovered it; then his memory was quickened, and he suddenly recalled that he "saw" it in July, 1898, while he was yet on board of his ship en route from New York to Etah. Mr. Peary must have used the same telescope to "see" this land which he afterwards used to view "Crocker Land," of which more later. And as no one, not even Mr. Peary, disputes the fact that Capt. Otto Sverdrup visited this "western land," which he (Sverdrup) christened "Axel Heiberg Land," early in 1900, it is evident that again some one was ahead of Mr. Peary.

That it is now admitted, even by Mr. Peary's friends, that he did not discover this land, is fully evidenced by the latest map published by Mr. Peary's friend and supporter, Mr. Gilbert H. Grosvenor, the able manager and editor of the National Geographic Society, which map credits Sverdrup with its discovery, removes the name of "Jesup Land," and places the name of "Axel Heiberg Land" on this territory. Wherever Mr. Peary went, some one was there before.

After establishing his winter quarters in 1898, Mr. Peary claims to have made a "reconnoissance" of the Hayes Sound region, and "discovered" (?) that Hayes Sound does not exist. He says, on page 300 of Nearest the Pole:

September 18 I left the ship with two sledges and my two best Eskimos, with provisions for 12 days, for a reconnoissance of Princess Marie Bay. September 20 I reached the head of a small fjord running southwest from near the head of Princess Marie Bay. From a commanding peak in the neighborhood I could see that both arms of Buchanan "Strait" ended about south of my position; that the "strait" is in reality a bay; and that *Hayes Sound does not exist*.

The following will show that it is not well, when actual facts are desired, to accomplish one's exploring feats by long-distance telescopes, wireless telegraphy, or absent treatment.

August 12, 1899, Herbert L. Bridgman, secretary of the Peary Arctic Club, reached Etah with supplies for Peary and received from him a report of his year's work. Of this report Peary says (pp. 315–316 of Nearest the Pole):

The year had been one of hard and continuous work for the entire party. In that time I obtained the material for an authentic map of the Buchanan Bay-Bache Peninsula-Princess Marie Bay region, crossed the Ellesmere Land ice cap to the west side of that land, established a continuous line of caches from Cape Sabine to Fort Conger, and familiarized myself with the region as far north as Cape Beechey.

The National Geographic Magazine for October, 1899, accepted this report as gospel truth and printed Peary's "discovery," that Hayes Sound "did not exist" as what it called "the solution of one of the most important geographical problems in that region."

*But*, it must be remembered that Peary's "solution" of this "important problem" was made from a very convenient "commanding peak" in the neighborhood, from which convenient vantage point he also "saw" or claimed to "see" that both arms of Buchanan Strait ended about south of his position on Harmsworth Bay.

Now, let us see what is the true "solution" of this "important problem." In October, 1898, Capt. Otto Sverdrup and four of his men left their winter quarters to explore Hayes Sound and Buchanan Strait. Not content with exploring from any "commanding peak"—Peary's favorite method—Sverdrup and his men actually traversed, on foot and with sledges, the whole region about Buchanan Bay and Hayes Sound; they found that Buchanan Bay opens into Hayes Sound, which is separated from Flagler Bay by North Sound; that Hayes Sound at its upper end divides into two branches called by Sverdrup "Beistad Fjord" and "Jokelfjord"; that Peary's statement that "both arms of Buchanan Strait ended about south of my position—on Harmsworth Bay"—was wholly erroneous, for what Peary called the "arms of Buchanan Strait" are really Flagler Bay, fully one-third of which extends farther west than Harmsworth Bay; and Beistad Fjord, more than half of which extends farther west than Harmsworth Bay, neither of them being an "arm of Buchanan Strait," but a continuation of Hayes Sound, discovered by Dr. Hayes in 1861, and which Mr. Peary said did not exist! That Sverdrup's mapping of this region is correct is attested by the fact that he has been corroborated by the Canadian explorer, Capt. J. E. Bernier; and Hayes Sound, with the extensions shown by Sverdrup's map—see New Land, by Sverdrup—is also shown on the map published by the Geographic Board of Canada in 1911, while the map of this region furnished by Mr. Peary to the Hydrographic Office of the United States Navy Department has been canceled and withdrawn from circulation by the Secretary of the Navy. Again, wherever Mr. Peary went, some one was there before.

After Mr. Bridgman's return south, Peary's time during the remainder of 1899 and the first few months of 1900 was occupied principally in hunting and trading, the only trip partaking of the nature of an exploration being his journey along the northern coast of Greenland, where he followed in the steps of Lockwood and Brainard, of Gen. Greely's party. These men in 1882 made a trip along the northern coast of Greenland, which carried them to 83° 24′, the farthest north of any expedition up to that time. From this point—Lockwoods Island—they plainly saw a few miles beyond them, extending about 12 miles farther north, the cape which they named Cape Washington. This cape appears on all of Gen. Greely's official maps dated 1885–1888, and until Peary's trip in 1900 was supposed to be the most northern point of Greenland. Peary's insatiable ambition to be known as the "discoverer" of the most northern point of land on the Greenland coast is shown in a quotation from pages 325–326 of Nearest the Pole:

One march from here—Lockwood Island—carried us to Cape Washington. Just at midnight we reached the low point, which is visible from Lockwood Island, and great was my relief to see on rounding this point another splendid headland rising across an intervening inlet. *It would have been a great disappointment to me to find that another's eyes had forestalled mine in looking first upon the coveted northern point.*

Mr. Peary named this "splendid headland" Cape Morris K. Jesup, but it is noticeable that nowhere in his book, Nearest the Pole, does he give the latitude of what he calls the most northern point of Greenland, although it is shown on H. O. Chart 2142 as 83° 39′. In 1910, in his book, The North Pole, Peary mentions the latitude of Cape Morris K. Jesup as 83° 39′, or 6 miles farther north than the latitude estimated by the Greely expedition for Cape Washington. In view, however, of Mr. Peary's overwhelming anxiety to be the first man to look upon the most northern point of Greenland, and remembering also that he does not give the latitude of Cape Jesup in any of his books until some 10 years after its alleged "discovery," we feel justified in placing a question point against the assertion that this "cape"—named after Mr. Peary's heaviest financial backer—is any farther north than Cape Washington, discovered 18 years earlier by the members of Greely's expedition. This doubt is strengthened by Peary's further statement that after his alleged discovery of this point he traveled northward from there four marches, reaching 83° 50′ north latitude, or a distance of *11 miles* beyond Cape Jesup. In view of some of his later performances, 11 miles in four days was certainly slow traveling for Mr. Peary. At 83° 50′ Mr. Peary abandoned any hope he may have entertained of finding a possible route to the pole from northern Greenland and returned to land. He then traveled from Cape Morris K. Jesup eastward, his first march taking him to a point which he called Cape Bridgman and reported in the same latitude as Cape Washington. Two marches farther took him to Cape Clarence Wyckoff, which he reported in latitude "about" 83°, but gave no longitude. Owing to Peary's very infrequent longitudinal observations, the exact situation of Cape Wyckoff was not known until J. P. Koch, of the Mylius-Erichsen expedition, visited the cape in 1907 and found it to be in latitude 82° 57′ 7″ north, longitude 23° 09′ west.

While Peary was the first to reach Cape Clarence Wyckoff (which he supposed to be an island, but which was discovered by

Koch to be a cape), he was not the first to reach or discover the most eastern point of the northeast coast of Greenland. On his map, published in connection with Nearest the Pole, Peary placed Cape Henry Parrish (which he "saw" but did not visit) directly opposite Cape Clarence Wyckoff, in longitude about 23° west. South of this point and extending south of Melville Land he placed a sea, which he called "East Greenland Sea." This imaginary "sea" has been proven by the Mylius-Erichsen expedition, the Ejnar Mikkelsen expedition, and the Knud Rasmussen expedition not to exist; and the land, instead of ending as Peary indicated, at about 23° west longitude, in reality extends to about 12° west longitude, a difference in that latitude of at least 150 miles.

Again, one of Mr. Peary's "discoveries" (the East Greenland Sea) is proven a myth; and again we find that Mr. Peary was not the first man to reach the eastern extremity of the Greenland coast. Wherever Mr. Peary went some one was there before.

That Peary's delineation of the coast of northeast Greenland was based on conjecture and not on facts is abundantly proven by Mr. Gilbert H. Grosvenor, manager and editor of the National Geographic Society, who, in his latest map shows "Amdrup Land" and "Mylius Erichsen Land," occupying the space which Peary filled with "East Greenland Sea." Mr. Grosvenor has also moved the coast of Greenland to the east, to coincide with the findings of these other explorers, who once more preceded Mr. Peary on territory which he claimed to have "seen" and of which he gave a false description.

This map of Mr. Grosvenor's is also used by Peary in his latest book, The North Pole.

This ended Peary's "explorations" for 1900. Returning to headquarters he pursued for the balance of the year his favorite vocation in the Arctic, i. e., hunting and trading, and during the winter made his usual preparations for his annual "dash" to the pole.

On April 5, 1901, Peary left Fort Conger with Henson and one Eskimo on what he called an attempt to reach the pole; but after making four marches the party turned back at Lincoln Bay (82d parallel), because, as Peary says on page 334 of Nearest the Pole—

> It was evident to me that the condition of men and dogs was such as to negative the possibility of reaching the pole.

As it took only four days for Mr. Peary to determine this fact, it is a matter of conjecture why he was not able to better diagnose the "condition of men and dogs" before he started. He is delightfully vague in his report of his movements for the balance of 1901.

In 1902 Peary left Fort Conger, on March 24, with Henson and a large number of Eskimos on what he termed another "dash" for the pole. The Eskimos were sent back at intervals until only Mr. Peary, Henson, and four Eskimos remained. After over a month "in the field" they had reached only 84° 17′ 27″ north latitude, at which point they were forced to return owing to the poor condition of the ice. This was about two degrees less than either Nansen or the Duke of the Abruzzi had previously attained, therefore Peary failed to establish a record. The period between their return to land and the arrival of the relief ship in August was spent, as usual, in hunting and trading for furs and ivory. Indeed, the Eskimo name for Peary is "Nalegaksoak," meaning "He who has much to barter" or "The great trader." Although Peary attempts to convey the impression that the Eskimos regard him as their good angel and personal benefactor, this name shows that they place him on a par with other travelers and traders, as it is their usual designation for the foreigners with whom they trade.

On September 17, 1902, Peary arrived at Sydney, C. B., and his 1898 to 1902 Arctic expedition was ended.

The two years following his return were spent by Peary in preparing for what he then advertised as his last attempt to reach the North Pole. In the specially built ship, *Roosevelt*, he left New York on July 16, 1905, and arrived at Cape Sheridan on September 5, where he established winter quarters. The fall and winter were spent in hunting and preparations for the polar trip. On February 19, 1906, Peary, the ubiquitous Henson, and six Eskimos and a supporting party left the ship, to which they returned about three months later.

On his return Peary claimed that on April 21, 1906, he had reached 87° 6′ north latitude, but said that he was obliged to turn back with his men on account of the early breaking up of the ice. He said that the eastward drift of the ice was so rapid on the return to shore that they reached land near Cape Morris Jesup, from which point they made their way back to the ship, arriving there early in May.

June 2, 1906, Peary with three Eskimos started on a trip westward, as Peary says, "Over the glacial fringe of Grant Land." On June 8 he reached Cape Columbia, and about a fortnight later, on June 24, he reports that he reached the northwestern extremity of Grant Land, which was attained by Sverdrup four years previously, and by him named "Land's Lok" (called by Peary "Cape Colgate"). It is from this point that Peary claims to have first seen "Crocker Land," that Arctic will-o'-the-wisp which was destined to be the lure of other explorers in years to come. At two different times from two different points of observation Peary claims to have seen "Crocker Land," which he describes on pages 202 and 207 of Nearest the Pole:

> From the summit, 2,000 feet above the sea level and of a more truly Alpine character than any that I have seen in northern Greenland or Grant Land, the view was more than interesting. * * * North stretched the well-known ragged surface of the polar pack, and northwest it was with a thrill that my glasses revealed the faint white summits of a distant land which my Eskimos claimed to have seen as we came along from the last camp.

Four days later, on June 28, 1906, he wrote in his journal:

> The clear day greatly favored my work in taking a round of angles, and with the glasses I could make out apparently a little more distinctly the snow-clad summits of the distant land in the northwest, above the ice horizon. My heart leaped the intervening miles of ice as I looked longingly at this land, and in fancy I trod its shores and climbed its summits, even though I knew that that pleasure could be only for another in another season.

Mr. Peary might have spared himself that last touch of pathos, for no other was ever to have the "pleasure" of treading the shores and climbing the summits of this land, which existed only in Mr. Peary's vivid imagination. In 1913 an expedition commanded by Donald B. MacMillan—a friend of Peary's and a member of his 1908-9 expedition—was sent out by the American Museum of Natural History, New York City. The object of this expedition was to reach and explore Crocker Land. Late in November, 1914, word was relayed to the museum that Crocker Land does not exist. This report has since been confirmed, and the American Museum Magazine officially published in its April, 1915, issue the fact that this land "discovered" by Peary in 1906 is nowhere to be found in 1914.

In the map published in connection with Nearest the Pole Crocker Land is located by Mr. Peary northwest of Axel Heiberg Land, and Peary's route along the northern coast of Grant Land is shown in minute detail from Cape Columbia to Lands Lok. This map prepared by Peary shows a most irregular coast line, with deep indentations and bays from Cape Alfred Ernest to Lands Lok. But the National Geographic Society does not accept Peary's description of this stretch of "newly discovered coast" as authentic, for in the latest map published by that society all of the aforesaid indentations and bays are omitted, and the coast line shows a straight line from Cape Alfred Ernest to Lands Lok. Did Mr. Peary really traverse the northern coast or "glacial fringe" of Grant Land, or did he merely make his customary look-see from his favorite hummock or "convenient summit"?

Again, Peary found the trail of a former explorer at Svartevag and Lands Lok, where the intrepid Norwegian, Sverdrup, raised the Norwegian flag almost two years before Mr. Peary appeared on the scene. Wherever Mr. Peary went some one was there before.

Of Peary's latest claimed achievement, the discovery of the North Pole, little more need be said. It is now a well-known and thoroughly proven fact, acknowledged by scientists and Arctic explorers the world over, that Mr. Peary has never furnished one iota of proof that he reached approximately the North Pole, but, on the contrary, as I have already shown, all of the evidence tends to prove beyond question that he never did attain that geographic point. In this instance, therefore, we can not say that wherever Mr. Peary went some one was there before, since he was never there, first, last, or at any other time.

Mr. Speaker, I shall quote briefly from a very few of the many letters I have received relative to my speech before this House on January 13, 1916, on "Government maps of the Arctic regions corrected" and my analysis of the Peary "evidence," which was printed in the CONGRESSIONAL RECORD of February 12, 1916.

Gen. A. W. Greely, United States Army, commander of Lady Franklin Bay Expedition, wrote on February 17, 1916:

> I have read your analysis of Civil Engineer Peary's North Polar narrative. It will be difficult for anyone reading your analysis, based on official documents, to come to any other conclusion than that drawn by you.

Julius Meyer, consulting engineer, New York City, wrote on January 24, 1916:

> Kindly permit the expression of my admiration of your courage and thoroughness in the reduction of Mr. Peary to oblivion.

W. J. Hussey, director of the observatory University of Michigan, wrote March 10, 1916:

I am glad that steps have been taken to rectify certain errors in the Government maps of the Arctic region. A large public will thank you for your endeavor in this matter.

Dr. Herman Schoenfeld, Ph. D., LL. D., professor at Georgetown University, wrote January 31, 1916:

You have rendered the greatest possible service to the sacred cause of truth and science, saved our national honor, and your name will therefore be engraved with golden letters in the records of truth in polar discovery.

Dr. R. S. Holway, associate professor of physical geography, University of California, wrote March 31, 1916:

I am much interested in Arctic exploration and include the topic in my lectures here. I regret exceedingly the condition of affairs, but the one absolutely necessary thing is the establishment of scientific truth.

Philip Fox, B. S., professor of astronomy, Northwestern University, wrote on April 14, 1916:

Your speech of January 13, 1916, is a most admirable summary of the results of recent polar exploration and a very just arraignment of Mr. Peary. I am pleased that you lifted up your voice to expose his practices. I admire very much the admirable spirit shown in the speech, as well as the sound, scientific quality of its contents.

Dr. Chase Salmon Osborn, LL. D., author and explorer, considered by many the most widely traveled man in the world to-day, wrote March 20, 1916:

You have conferred a favor upon the people of the entire nation. As one of them permit me to thank you.

Dr. John James Stevenson, LL. D., geologist and author, on April 4, 1916, wrote:

It is an admirable example of painstaking work, successfully accomplished.

Prof. G. C. Bothne, University of Minnesota, wrote on February 10, 1916:

You deserve the thanks of every right-thinking person in America.

President Melvin A. Brannon, University of Idaho, on February 16, 1916, wrote:

This is a very important matter, and it is hoped that your efforts in this direction will be recognized, and proper results will be gotten. Accuracy and right procedure are very important things at all times, and notably when it comes to public documents.

President Vernon P. Squires, North Dakota Educational Association, wrote on February 11, 1916:

You have done a very thorough piece of work in this matter, and I admire one who has the courage to undertake the disagreeable task.

Dr. Frits Holm, LL. D., navigator, explorer, author, and lecturer, wrote on February 4, 1916:

The speech is not only clear and valuable to the science of geography and exact knowledge of exploration, but it constitutes a document of such simple and direct force that it should be sent to all the geographical societies of the world.

John P. Arthur, Boone, N. C., wrote on February 21, 1916:

You have placed all lovers of truth under everlasting obligations by the very fair, careful, and conclusive arguments you have advanced to show up a charlatan and imposter. You will have the thanks of all who love the Nation and the cause of truth and righteousness.

Archbishop John Ireland, LL. D., Yale, 1901, wrote on March 23, 1916:

You have established your point beyond all contention. Peary's fictions certainly should be eliminated from our Government maps, and should be consigned to permanent oblivion.

Rev. Harry N. Poston, Presbyterian Church, Milner, N. Dak., wrote on February 23, 1916:

In the face of the facts recorded how can Congress overlook the matter of taking up the case of Robert E. Peary?

L. K. Armstrong, secretary and treasurer Columbia Section, American Institute of Mining Engineers, wrote on March 7, 1916:

Permit me to congratulate you upon the thoroughness of your process of elimination of Peary in your persistence to have our Arctic Ocean maps correct. Thank you especially for persistence and determination in eliminating fraud.

Capt. P. W. Thompson, captain United States Revenue-Cutter Service and commanding officer on U. S. S. *Corwin* in Arctic waters, wrote on April 6, 1916:

I am convinced that your arguments and analysis are just and that your conclusions are unanswerable.

Capt. Thomas F. Hall, Omaha, Nebr., wrote March 3, 1916:

I do not see how it is possible for Peary to be much longer credited with the discovery of the North Pole. No sane person can believe it who knows the facts.

Middleton Smith, member Point Barrow International Polar Expedition, wrote on January 27, 1916:

As a historical document your speech will live forever and a day.

A. A. Veblen, editor Samband, formerly professor State University of Iowa, wrote April 3, 1916:

You have so thoroughly established your points that only the knowledge that your exposition can not be shaken prevents, or will prevent, Peary from attempting an answer. What you have done in this polar inquiry seems to me a classic piece of work.

Theo. Hewes, editor, Indianapolis, Ind., wrote on April 11, 1916:

Your efforts are appreciated, not alone by myself, but by millions of American citizens.

Edwin Swift Balch, of Philadelphia, historian and geographer, wrote on January 16, 1916:

It is as fine a piece of historical geography as was ever penned, and it will live in geographical annals as the final and concluding chapter in the attempt of wrongfully claiming the discovery of the North Pole by Peary.

And again:

Your efforts, in my opinion, place Congress ahead of any organization in the United States as a scientific, geographical body.

James A. George, Esq., Deadwood, S. Dak., on February 17, 1916, wrote:

Pardon me, a total stranger, writing you. I am pleased to find a man in Congress that has the manhood to publish the truth.

Arthur R. Colburn, Esq., Washington, D. C., wrote on January 19, 1916:

I congratulate you on the strong and firm stand you have taken for the right and for setting Congress straight in a matter wherein it has erred, with the certainty that the future will show up that error in a glowing light.

George H. Gilman, Esq., New York City, wrote March 31, 1916:

The proof is so complete and the action of the department so conclusive that there is nothing to be said except to congratulate you on the result of your careful study and perseverance.

Dr. George C. Brown, M. D., Dunmore, Pa., on March 3, 1916, wrote:

I approve of every word of it.

Dr. Robert Potts White, M. D., Jersey City, N. J., wrote on April 7, 1916:

It is a source of great satisfaction to know that there are still men who possess moral courage sufficient to fight to the last ditch in defense of truth.

Robert J. McLaughlin, computing engineer, New York City, wrote:

The conclusion is inevitable that Peary did not reach the North Pole.

W. S. C. Russell, Springfield, Mass., explorer in Iceland and Labrador, wrote on May 24, 1916:

I am profoundly impressed with the strength of your argument and congratulate you on the skill and courage in which you presented this matter before the House. The Peary claims are not founded on facts of honest service and personal investigations.

Hon. Maurice Francis Egan, American minister to Denmark, wrote to me on May 4, 1916:

I am very much obliged to you for your kindness in sending me your report of the proceedings in the case of Admiral Peary. Prince Valdemar, of Denmark, who was very much interested in all the data concerning the voyages to the North Pole, is desirous of retaining that copy. I should be deeply obliged if you would kindly send me two additional copies, one for Capt. Amdrup, equerry to His Royal Highness, and the other for Admiral Kofoed-Hansen.

Mrs. M. McClellan Brown, lecturer, Cincinnati, Ohio, wrote on May 30, 1916:

I read every word of your speech with avidity. Let me congratulate you. I can now refer to the facts in my clubs and speeches with assurance and clearness of fact.

J. B. Cranfill, editor, Dallas, Tex., wrote on June 5, 1916:

I beg to thank you for your service to the country and to the truth of history as well as geography.

Mr. Speaker, the letters from which I have quoted are a small part of those which I have received and am receiving daily showing the widespread interest felt in this matter.

Now, to recapitulate: Peary's claims to exploration and discovery have been given to the world through the mediums of his magazine articles, his books, and (in the case of the North Pole) through his testimony before the Naval Committee of the House. His magazine articles contradict his books, his books contradict each other, and his testimony before the House Committee on Naval Affairs is at variance with both books and magazines. In view of the facts which I have presented, and since Robert E. Peary's claims to discoveries in the Arctic regions have been proven to rest on fiction and not on geographical facts, I again urge that the joint resolution which I have to-day introduced be adopted, and that Robert E. Peary be removed from the retired list of the Corps of Civil Engineers of the United States Navy, to the end that our taxpayers need no longer be compelled to raise $6,000 annually of retired pay to reward Civil Engineer Peary for services which he never performed, and that historic and geographic truth may prevail.

**Benefits to Tennessee from Federal Road Law.**

## EXTENSION OF REMARKS
OF
# HON. KENNETH D. McKELLAR,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 31, 1916.*

Mr. McKELLAR. Mr. Speaker, on July 11, 1916, the fight over Federal aid to road building in the various States was ended when the President approved what is known as the good-roads law.

Nearly five years ago a number of the Members of the House, among whom were Congressman BYRNS and Congressman AUSTIN and myself, all of Tennessee, met in Mr. SHACKLEFORD'S room and jointly prepared a bill providing for Federal aid to road building throughout the country. This bill was afterwards passed in the House, but was defeated in the Senate. At first this private committee had all kinds of ridicule heaped upon it for advancing a measure which was then declared to be wild. The opponents of the plan contemptuously dubbed us as "dirt-road statesmen." Many of our newspapers ridiculed us, and it was thought that the Congress would never give its consent to aid the States in road building; but the members of the original committee never slumbered and never faltered. Under the leadership of Mr. SHACKLEFORD we kept up the fight and passed our bill in the House, but it was defeated in the Senate, as before stated. The next session, however, the House established a Roads Committee, and Mr. SHACKLEFORD was the chairman of the committee, and again the fight was taken up. At last we have won, and by overwhelming majorities in both House and Senate.

One of the first speeches I made in the House was on this subject, and I have discussed it in every succeeding House and in every campaign and on almost every stump in Tennessee. In my late senatorial campaign I promised the people of my State that I would leave no stone unturned to aid in getting the measure on the statute books, and I am delighted to report to them that this is now the law.

It is not my purpose to discuss the merits of this bill to-day. The merits have already been determined, and the policy of the act is no longer in question. The system has come and has come to stay. Some may have voted against it, but no one will ever offer to repeal the law. Heretofore in discussing this measure with the people of Tennessee I have discussed its merits. I now want to discuss the benefits that Tennessee will receive from it.

### "BENEFITS TO TENNESSEE FROM FEDERAL ROAD LAW."

Under the provisions of the act Congress has appropriated $5,000,000 for the first fiscal year ending June 30, 1917; $10,000,000 for the fiscal year ending June 30, 1918; $15,000,000 for the fiscal year ending June 30, 1919; $20,000,000 for the fiscal year ending June 30, 1920; and $25,000,000 for the fiscal year ending June 30, 1921.

"The first year Tennessee will get $114,153.48, the second year she will get $228,306.96, the third year she will get $342,460.44, the fourth year she will get $456,613.92, and in the fifth year she will get $570,767.40." In other words, in five years, under the terms of this act, Tennessee will receive for good roads the net sum of $1,712,301.20. This is the net amount that will go to Tennessee after deducting 3 per cent for cost of administration. If any State does not accept the benefits of the act, the sum allotted to that State will be reapportioned to the other States. In this way Tennessee's share may be even more than the above.

The funds are apportioned by the Secretary of Agriculture in the following manner: One-third in the ratio which the area of each State bears to the total area of all the States; one-third in the ratio which the population of each State bears to the total ratio of all the States; one-third in the ratio which the mileage of rural routes and star routes bears to the total mileage of rural routes and star routes in all of the States. In this way an equitable division of the fund is provided for. On this basis Tennessee stands fifteenth in the list, 14 other States getting larger sums. Texas gets the largest sum, New York comes second, and Pennsylvania third. Among the southern States, Texas comes first, Georgia second, and Tennessee third. So that it is seen that Tennessee fares very well in this proportion.

### WHAT ROADS IMPROVED.

Under the terms of this act the State highway commissions of the several States have control of the distribution of the money. In other words, the State highway department of Tennessee shall furnish to the Secretary of Agriculture plans, specifications, and estimates, and designate the roads that are to be improved. If the Secretary of Agriculture approves these plans, specifications, estimates, and roads he will notify the State highway department of Tennessee and certify his approval to the Secretary of the Treasury, and thereupon the Secretary of the Treasury shall place the fund to the credit of that State. Rules and regulations governing the operation of the act will be formulated by the Secretary of Agriculture, probably after conference with the officers of the various State highway commissions, which conference will take place soon.

### HALF-AND-HALF PLAN.

The funds are to be distributed upon the half-and-half plan. In other words, the State will pay 50 per cent of the total estimated cost of any road designated by the State highway department and approved by the Secretary of Agriculture, and the Federal Government will pay the other half. The Secretary of Agriculture is given authority to make payments on said construction as the work progresses, but they shall not be more than the United States pro rata part of labor and material which have been actually put into the construction in conformity to such plans and specifications. It is also provided that such roads shall not cost in excess of $10,000 per mile, exclusive of cost of bridges of more than 25 feet clear span. All roads are to be built under the direction and supervision of the State highway department, and subject to the inspection and approval of the Secretary of Agriculture. Payments for this work are to be made by the Secretary of the Treasury on warrants drawn by the Secretary of Agriculture to such official or officials, or depository.

### CREATION OF STATE HIGHWAY DEPARTMENT.

I happened to be in Nashville a number of times in the spring of 1915, while the State legislature was in session, and privately urged, among my friends in the legislature, the passage of a highway commission bill. I had talks with a number of senators and representatives about it. I recall that Senator W. A. Johnson, of Shelby County, and Senator J. J. Murray, of Marshall County, were taking an active hand for the measure. I was delighted to see the same pass, for I then felt that it would be necessary to have a highway commission in order to make the proposed Federal law effective in Tennessee. The Johnson bill provides for this very thing.

### ADDITIONAL LEGISLATION MAY BE NEEDED.

Section 12, of the State highway department act, known as the Johnson bill, provides:

> That all moneys accruing from annual registration and licensing of automobiles in the State under any law now in existence, or that may hereafter be enacted, over and above the necessary expense incident to the collection of same, and all penalties paid for the violation of such laws which are paid into the State treasury, shall be set aside as a highway fund, and shall be available for the purposes of this act, and expended under the direction of the State highway department, for the maintenance of public roads in the respective counties of the State in the same proportion as collected from said respective counties, after deducting 10 per cent of the same for the maintenance of the said highway department.

I do not know how much money can be derived from this source. It will doubtless be an ever-increasing sum as the number of automobiles increases in the State, but it will be seen from a reading of this section this sum can not be expended in accordance with the Federal act. In other words, the use of this fund is now restricted under the terms of the State highway law, and either other funds must be raised in order to give the State its 50 per cent necessary to secure the benefits of the Federal act, or the highway act must be changed so that the highway commission can use all of this fund if necessary for the purpose. Of course, this is a matter for our State legislature, and I am sure, under recommendations from Gov. Rye, the law will be changed so as to permit Tennessee to get the full benefits of the Federal act. I want to suggest to the Tennessee State highway department and its officers that they should have prepared at the earliest moment possible such an amendment to the present highway department law as will fully effectuate the purposes desired. From my recollection of what the automobile tax is I should say that after the first year the entire tax will not be sufficient to produce the State's one-half, even if allowed to be spent in this way. So that it will be necessary to raise that half, or a portion of it at least, by other methods of taxation. As to what particular method should be adopted this is a matter entirely for the State legislature; but I want to urge that some method be adopted immediately upon the assemblying of the next legislature. It must be done promptly, as the tax must be levied and collected before June 30, 1917, if the State is to receive the benefits of this year's Federal appropriation.

There is another plan by which the State can raise the money—i. e., it can require the counties through which these roads are to be built to contribute pro rata to the cost thereof. As I recall, however, counties have no authority to appropriate money unless authorized by law, and therefore the legislature would have to confer this authority upon the counties. All this, however, is simply a suggestion. I want to impress upon the people of Tennessee, however, the importance of having the legislature take steps as soon as it is organized next winter to raise the money necessary to secure the benefits of this Federal legislation.

WHAT TENNESSEE ROADS WILL RECEIVE.

If Tennessee raises her half, as I am sure she will, there will be expended within the next five years in Tennessee the sum of $3,424,602.40 on permanent highways in the State. The Federal act requires that the money shall only be spent upon "such projects as may be substantial in character." These funds can be expended upon any rural road and other roads in the State receiving the approval of the highway department and the Secretary of Agriculture.

STATE HIGHWAY COMMISSION.

It will thus be seen that the State highway commission will at once become a commission of large influence and power. These roads will be of the greatest benefit to the counties through which they pass and to the cities and towns into which they run. The State highway commission fixes and locates the roads to be thus improved. Those counties and sections which desire to get the benefits of the act will have to first obtain the approval of the State highway commission. Without this they can not get any consideration. I am sure that this new department of our State, just authorized and established last year, will go to the utmost lengths in being fair and just toward all the sections of the State and divide the benefits to the best advantage to the greatest number of people.

I am very proud of the part I have taken in securing this much-needed piece of national legislation. It is one of the many great pieces of legislation enacted by this Democratic administration. It will accomplish great things for Tennessee, and it will give an impetus to road building in our State that it has never had before. The various counties are already doing much in that line, but with the example of the State and National Governments before them they will accomplish greater and larger things. This is my firm belief.

---

**Military Highway, California.**

---

## EXTENSION OF REMARKS

OF

## HON. JOHN E. RAKER,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 25, 1916.*

Mr. RAKER. Mr. Speaker, in pursuance of the permission of the House granted me to extend my remarks in the RECORD on national defense highway and post road in California, I am inserting an article by Walter Gillett Scott, executive secretary Inyo Good Road Club, chairman division of national parks, and member council advisors National Defense Highway Association, California, which article will appear in a future issue of the Engineering and Mining Journal, of New York.

The article relates to H. R. 16788, and is as follows:

A MILITARY NATIONAL-DEFENSE HIGHWAY USEFUL TO THE MINING INDUSTRY.

[By W. G. Scott.]

Hon. JOHN E. RAKER, Member of the House of Representatives from the second district of California, on July 5, 1916, introduced in Congress H. R. 16788—a bill to acquire, construct, and maintain a military and national-defense highway and post road extending from Los Angeles, Cal., through Mojave, Freeman, along the east base of the Sierra Nevada Mountains, through Lone Pine, Independence, Big Pine, Bishop, along the west side of Lake Mono, through Bridgeport, Markleeville, Tallac, Tahoe, Truckee, Downieville, Quincy, Susanville, and Alturas; thence along the east side of Goose Lake, past the towns of Fairport and New Pine Creek, all in California, to Lakeview, Oreg.

This great highway, while primarily a preparedness measure, has so much to commend it, aside from a distinctive military character, that it is entitled to special consideration.

By way of explanation it is proper to say that the State highway system of California as originally planned comprises two main trunk highways—one along the coast from Oregon to Lower California, and another practically parallel in the interior, extending longitudinally through the great valleys between the Coast Range and the Sierras from the northern to the southern boundary of the State.

The necessity for a third main-trunk highway of similar general course and length, through trans-Sierra California, adjacent to Nevada is so apparent that the State is now actively engaged in the creation of such a highway.

The eastern face of the Sierra Nevada Mountains differs from the western slope very materially, being precipitous, with a noticeable absence of foothills.

This presents a topography favorable for a road along the east base of the Sierras, and for years such a thoroughfare has been in use.

The Inyo Good Road Club, of Bishop, christened it El Camino Sierra (the Mountain Highway), and has brought it into great prominence for automobile touring because of its wonderful scenic attractions.

Before the outbreak of the European war the club began exploitation of its value as an adjunct of the Pacific coast defense system, claiming that if an invading army should effect a landing on the ocean shore the coast highway and railway lines would be at once seized.

The defenders would then establish a defense line along the main trunk highway farther inland.

If again forced back, the next line of defense would be along the east base of the Sierras.

Should the invaders attempt to advance with an extended front formation and the usual equipment of transportation, they would find their progress checked by an insurmountable barrier nearly the length of California, save where the passes present points of least resistance.

The most important of these passes, which are less than a dozen in number, are now traversed by thoroughfares—some are unimproved, but all are utilized more or less for motor-car travel.

Chief attention would at once be concentrated on these localities.

In engineering parlance they would become "critical areas."

With the main great motor-truck highway along the east base of the mountains, connecting with all the lateral or pass roads, 5,000 commandeered automobiles and trucks could rush a defending force of 25,000 men from one pass to another 100 miles away between sun and sun.

With the defenders holding the passes and all the numerous points of vantage therein, previously determined and mapped by military survey and plans for the most efficient resistance carefully prearranged, the invaders compelled to adopt a narrowed front, attempting to force their way through the restricted area, would be subject to a terrible, destructive flank, cross, and enfilading attack.

Even if the advancing column was of largely superior numbers, repulse would be practically a foregone conclusion, and to persist in a forward movement would mean annihilation.

Brief reflection shows conclusively that the third trunk highway is the master key to the Sierras, which form a bulwark of superhuman efficiency for almost 200 leagues.

The purpose of this mention is not solely to emphasize the great worth of this road from a national-defense viewpoint.

Its establishment on the improved basis suggested would immediately introduce a powerful factor for social, commercial, and industrial progress of advantage to California, but of still greater perpetual benefit to the Nation.

We will call attention to only one phase of the wonderful results certain to immediately follow the improvement of this great thoroughfare.

That is the development of the mining industry in a large section of California now isolated because of lack of transportation in other than very limited way.

This motor-truck road would traverse the greater part of the most highly mineralized portion of the Golden State and would give great impetus to the precious-metal production of Modoc, Lassen, Plumas, Sierra, Nevada, Placer, El Dorado, Alpine, Mono, and Inyo Counties, within which combined area lies mineral wealth unsurpassed in any other territory of like extent known to the mining world.

It is an incontrovertible truth that the ideal measure of preparedness most beneficial to the people and most valuable to the Nation is that which simultaneously prevents war, promotes peace, and increases prosperity.

And it is an undeniable fact that of all the measures suggested for extended and permanent coast protection the conversion of El Camino Sierra into a motor-truck military national-defense highway, as provided for in the bill introduced by Mr. RAKER, of California, most near approaches the ideal.

---

**To Provide for a Tax Upon All Persons, Firms, or Corporations Engaged in Interstate Mail-Order Business.**

---

## SPEECH

OF

## HON. EDWARD E. BROWNE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 2, 1916.*

Mr. BROWNE. Mr. Speaker, I introduced bill H. R. 712 December 6, 1915. This bill proposes to tax mail-order houses doing an interstate business. It provides that any person or corporation conducting an interstate mail-order business for the purpose of selling goods, wares, and merchandise direct to the consumer shall pay a tax of 1 per cent upon the total cash value of its sales within any State.

This bill further provides that the amount of the tax shall be ascertained by the Secretary of the Treasury, who shall compel the mail-order houses to report the gross amount of goods sold by them in each State.

The bill provides that the tax collected by the Government shall be apportioned to the respective States in the ratio of the actual amount of goods sold in each State.

Mr. Speaker, although many petitions have been filed in favor of this bill it has not been reported by the committee.

A provision in the present pending revenue bill taxing mail-order houses would not only be a just but a popular measure.

HEAVY TAXES ON ALL OTHER BUSINESS.

Almost every business has been taxed heavily to raise funds to meet the tremendous expenditures of the Government.

The local, State, and National Governments are levying taxes upon the people in many different ways. The National Government is, in my opinion, infringing upon the prerogatives of the State in collecting taxes from the people of the various States, which is practically resulting in double taxation.

Why exempt the mail-order houses from taxation? Why not make them stand their share of this great tax burden?

Wisconsin, the State which I have the honor in part to represent, will pay to the United States Government under the proposed revenue bill over $20,000,000, considerably more than it takes to run the whole State government and support all its institutions.

MAGNITUDE OF MAIL-ORDER BUSINESS.

The large mail-order houses are doing millions of dollars a year business through the State of Wisconsin, and a proportionate amount of business in all the other States of the Union, and yet they contribute nothing toward the support of any State or local government outside of the places where they are located, and then they contribute only a trifle compared with the amount of business they do.

There are at the present time over 1,000 mail-order houses in the United States doing, it is estimated, about $1,000,000,000 worth of business annually.

THIS BILL IS A TAX MEASURE.

The advocates of this legislation are not attempting to put the mail-order houses out of business. They are simply attempting to make the mail-order houses pay their just share of the taxes.

The tax of 1 per cent on the gross sales is certainly a conservative tax. Every merchant pays a tax amounting to a great deal more than 1 per cent on his gross sales.

PAY TAXES ONLY ON SAMPLES.

The mail-order house keeps in stock only a sample of the great list of articles that it sells, and has its contracts with the manufacturer of these articles to send the same direct to the customer when the mail-order house obtains a customer and sends the order.

In this way the mail-order house runs no risk of goods getting shopworn, and all the tax that it pays is the tax on these samples that it has in stock, which is a very small tax in proportion to the business it does.

It employs the minimum amount of help and is located generally so that it pays the minimum amount of rent, as location in a city is a matter of little value to a concern that does all its selling through the mails.

USE OF MAILS.

The mail-order houses use the United States mails to send out their large catalogues, the Post Office Department carrying tons of this kind of mail at a great loss. It many times sends its catalogues and wares by freight to the more remote points, and then sends them out from the nearest zone to its prospective customers, thus using the parcel post for its convenience at a loss to the Government through its Post Office Department.

The mail-order house is making more money to-day than most any business institution and without any responsibilities or obligation to the thousands of communities where it conducts its business in competition with the local merchant. In fact, it is the beneficiary of more favors from the United States Government than any private institution, and yet it pays only a trifle toward the support of the Government.

FEDERAL GOVERNMENT ALONE CAN TAX.

The State and local communities have no power to deal with an institution doing an interstate business. The Federal Government alone has the power and can and should meet the problem.

PEDDLERS PAY A LICENSE.

Every State and municipality in the United States has laws compelling transient merchants and peddlers to take out State and local licenses before they can do business in a locality. The justice of these laws is recognized by everybody. They are based upon the just principle that the local merchant and business man pays a heavy tax to support the State, county, and city or village government where he conducts his business and lives.

The tax the home merchant pays is used in supporting the schools, affording police and fire protection, providing roads, bridges, and sidewalks, and lighting the city.

Therefore it is apparent that it would be unjust to allow a transient merchant or peddler, who pays nothing toward the support of these things, who feels no obligation or interest in the community, to compete with the local merchant without paying the taxes that the local merchant is compelled to pay.

The transient merchant or peddler, therefore, is compelled to pay a State and local license.

The mail-order house is allowed to do business in every locality in the United States without paying any license, fee, or tax to the community. The competition of this institution is manifestly more unfair than the competition of the peddler, and yet we discriminate against the peddler, the individual man, and in favor of the mail-order house, the large corporation.

The mail-order house does not leave one cent in the community where it does thousands of dollars' worth of business. The peddler stays over night, spends a few dollars for meals and lodging in every community.

The mail-order house sends out hundreds of thousands of catalogues through the mails. Each catalogue is a more effective salesman than the peddler that goes about with his limited stock. Each catalogue, which advertises everything from a penknife to an automobile, goes out over the rural routes into the homes of the people where it stays over night and remains until a later and revised edition takes its place.

WHAT THE MERCHANT AND BUSINESS MAN DOES FOR THE COMMUNITY.

Besides paying his share toward the taxes which go to support the community, the merchant and business man helps the municipality where he lives and the community tributary thereto in many ways.

When the school, the church, the lodge, the public library, the community organizations want to put on an entertainment the merchant and business man is the first man approached for the buying of the tickets, furnishing prizes and premiums, advertising in the programs, and so forth.

The progressive farmer and the progressive merchant invariably combine whenever there is an item of local benefit or civic improvement discussed and when money is needed for an advancement of civlization, education, or religion.

THE MAIL-ORDER HOUSE IS THE SMALL TOWN WRECKER.

What do the mail-order houses do for the community? Nothing. They pay no taxes to the community. They support no schools, churches, libraries, lecture courses, and do not even send an agent to the community to spend a few dollars at the hotel for board and lodging. They do a cash business, and if there is any trouble about their goods the purchaser has to go out of the State to the State where this corporation has its home and bring an action. This, of course, is never done, and the purchaser sustains his loss.

Hundreds of thousands of dollars are annually taken out of the small localities which, if expended in their natural channels, would help the small merchant and tradesman and business man and make the village and small city more prosperous.

SMALL CITY AND VILLAGE NECESSARY FOR THE COMMUNITY.

The small village and city are necessary to every prosperous community. They are the social center for the community. Within these municipalities are located the high school, the bank, the church, the dry goods store, blacksmith shop, creamery, and the business and professional men.

CITY AND COUNTY TRIBUTARY THERETO DEPENDENT UPON EACH OTHER.

The city and village and the rural community surrounding it are mutually beneficial and dependent upon each other, and you can not injure one without injuring the other.

The boundary limits of the city and village and the township is simply an imaginary line. They have their distinct local governments, yet the resident of the city or village takes as much pride in the farming country tributary as he does in his own little municipality, and the farmer takes as much pride in the prosperity of the village or the city where he trades and markets his products as if he lived over this imaginary line within the village or city limits.

Any legislation which is unfair and harmful to the merchant or business man or to the farmer is equally injurious, if not directly, indirectly, to all. You can not injure or obliterate the little city or village without injuring the whole community that is tributary thereto.

FRAUDULENT ADVERTISING MATTER.

I believe that this legislation should be followed by a law penalizing untruthful, misleading, and fraudulent advertising matter that is sent through the United States mails.

I am not asking any favors for the village or city merchant or business man. I am simply asking that he meet his competitors on an equal footing, and that the large mail-order houses be no longer the petted children of legislation and exempted from paying taxes, but that the Federal Government, which alone has the power of taxing them, make them stand their just share of the burdens of supporting this Government.

I consider the store and place of business in the city and village, a public necessity, and I therefore want it to be given a fair chance.

## Exercises Attending the Unveiling of the Statuary of the Pediment of the House Wing of the United States Capitol Building.

On Thursday, July 27, 1916, the following resolution, introduced by Mr. SLAYDEN, chairman of the Committee on the Library, was agreed to:

*Resolved*, That the Committee on the Library shall arrange for appropriate exercises at the unveiling of the pediment on the east front of the House wing of the Capitol at 10.30 o'clock a. m., Wednesday, August 2; and be it further

*Resolved*, That the Members of the Senate be invited to be present at the exercises.

*Wednesday, August 2, 1916—10.30 a. m.*

ORDER OF EXERCISES.

Music, United States Marine Band, W. H Santelmann, director.
Address, Hon. JAMES L. SLAYDEN, M. C., chairman House Committee on Library and member of commission.
Unveiling of the statuary, accompanied by music by the United States Marine Band.
Address, Paul W. Bartlett, sculptor of the pediment statuary.
Address, Hon. CHAMP CLARK, Speaker United States House of Representatives, chairman of the commission.
Benediction, Rev. Forrest J. Prettyman, D. D., Chaplain United States Senate.
Music, United States Marine Band.

PROCEEDINGS AT THE UNVEILING.

Mr. SLAYDEN. Ladies and gentlemen, I am this morning in receipt of a telegram from the former chairman of the House Committee on the Library, the gentleman who proposed the appropriation for the procurement of this statuary. I will read his telegram to you:

BOSTON, MASS., *August 1, 1916.*

Hon. JAMES L. SLAYDEN,
*Committee on the Library,*
*House of Representatives, Washington, D. C.:*

Only just received your letter. Greatly regret can not be present at unveiling of statuary in House pediment. I take great pride in having been impressed with something very obvious and introducing a bill for statuary for the House pediment which had been overlooked for over half a century, and am also glad I was able to help in securing services of Mr. Bartlett. I congratulate you that you are about to unveil what I think is the finest large statuary group in America. If I had known earlier of the unveiling, I should have come to Washington to witness it. With thanks for your thought in inviting me to be present,

SAMUEL W. MCCALL.

The original members of the commission for procuring statuary for the pediment of the House wing of the Capitol were the then Speaker, JOSEPH G. CANNON, of Illinois; Senators George P. Wetmore, of Rhode Island; Henry C. Hansbrough, of North Dakota; Frank O. Briggs, of New Jersey; John W. Daniel, of Virginia; FRANCIS G. NEWLANDS, of Nevada; and Representatives Samuel W. McCall, of Massachusetts; James P. Connor, of Iowa; EDWARD L. HAMILTON, of Michigan; William M. Howard, of Georgia; and Charles R. Thomas, of North Carolina. Associated with them was Elliott Woods, then and now the efficient Superintendent of the Capitol. [Applause.]

Unfortunately some of these distinguished gentlemen did not live to see the fruit of their labors, but, like the fathers who selected the architect of the Capitol, they exercised good judgment, and perhaps builded better than they knew.

The act by which this work was authorized was approved April 16, 1908, and to us Americans, with our unmatched genius for hurry, eight years seem a long time to wait. But we should try to realize that the creative artist can not get inspiration by contract, nor, like the handicraftsman, work his eight hours a day, six days in the week, and do his best, and since seeing the satisfactory result of Mr. Bartlett's labors I am glad that he was given all the time he needed.

If Rome had been built in a day, it would not have remained to be the wonder and delight of the centuries. "Our little systems have their day," governments rise and fall, customs change, and races supersede one another, but true art alone, especially that of the sculptor and architect, survives unchanging and a joy forever, its beauty increasing with its age.

I suppose there are still a few people who believe that such an investment as this is a waste of public money, people who mistake crudeness and bareness for the noble simplicity that should characterize a democracy. They seem to resent beauty and dignity in public buildings that house the legislative and executive bodies of the Government.

But that is not true of the people, and if any such Philistines remain they should stand for an hour on this plaza and observe their wondering and delighted fellow countrymen when viewing the Capitol for the first time. In their glowing faces one can read pride of ownership and pleasure in its magnificence. [Applause.]

After seeing that I am sure they would never again complain of its cost. These travelers take away with them an appreciation and heightened standard of beauty that will bring forth fruit according to its kind in many a town and village remote from the Capitol.

This pediment seems to me a fitting adornment of one of the greatest buildings ever constructed. Every American is justly proud of this temple of democracy, open to all the people all the time, and into which his prayers and his commands never fail to penetrate no matter what critics may say to the contrary. No decoration is too noble for it, nothing is too good for the people of our Republic, to whose use this house is consecrated and whose taste it reflects.

Beauty has its value, its moral, economic, and intellectual value. It is easier to sin amid ugliness than when surrounded by beauty, and the importance of attractive surroundings in legislative work should not be overlooked. The elevating influence and inspiration of such an environment is often unconsciously reflected in the law.

In this pediment we have the artist's dream of the grandeur of the arts of agriculture and the industries prospering under the conditions of peace.

In these days of almost universal war and horrors that have spread over three great divisions of the earth, of a war that has even colored the waters of American seas with the blood of men it is pleasant to turn to the contemplation of the peaceful arts, the things by which nations are built up instead of being destroyed.

Let us all therefore rejoice in the thought that this work of an American sculptor, under the direction of the American Congress, will give pleasure and profit to untold generations of free, happy, American citizens. [Applause.]

Next on this program is the unveiling of the statuary, which will be followed by an address by the author of it, Mr. Paul W. Bartlett.

[The unveiling of the statuary then took place.]

Mr. SLAYDEN. Ladies and gentlemen, I have now the pleasure of presenting to you Mr. Paul W. Bartlett, sculptor of the pediment statuary.

ADDRESS OF PAUL W. BARTLETT.

Mr. Chairman, gentlemen of the Senate, gentlemen of the House, ladies, and gentlemen, it is certainly very unusual for an artist to be invited to speak at the unveiling of his own production, but this ceremony is unusual in so many ways that I hope I may be forgiven for having accepted the invitation.

To be able to leave one's imprint in sculpture on the noblest building of this country is a great honor.

To have the opportunity to make an effort to add to its grandeur and beauty is, without doubt, a rare privilege.

It has also been a great responsibility, and you may well believe that the responsibility of this privilege has never been forgotten for a moment during these long years of work and study.

The preliminary negotiations concerning this undertaking brought me in contact with Senators George Peabody Wetmore and the Hon. Samuel W. McCall, chairmen, at that time, of the Senate and House Committees on the Library.

When we came to discuss the subject or theme to be represented on the pediment, I was told that there was a vague feeling in the committee that the subject should be taken from the history of the United States.

We came, however, to the conclusion that the theme should be of the present rather than of the past.

We thought because the House represents in its largest sense the people, that the people—the life and labors of the people—should be portrayed on this building, this temple of democracy. Hence this conception.

An allegorical group consisting of two figures, "Peace protecting genius," fills the center of the pediment. "Peace," an armed "peace," stands erect, draped in a mantle which almost completely hides her breastplate and coat of mail; her left arm rests on her buckler, which is supported by the altar at her side; in the background the "olive tree of peace." Her right arm is extended in a gesture of protection over the youthful and winged figure of "Genius," who nestles confidingly at her feet and holds in his right hand the torch of "Immortality." The composition is completed by two other groups, symbolizing and typifying the two great fundamental powers of labor, the two great sources of wealth—Agriculture and Industry.

The most modest of our farmers and laborers can find in these groups the symbol of his own self and of his endeavors. He may even find his own resemblance there, and he will see that his helpmate, his children, his cattle, and the harvest of his fields have been exalted and carved in marble forms on the Capitol of the United States. The printer, the iron and steel worker, the founder may do the same and enjoy the same pro-

found satisfaction. The toiling factory girl, spinner or weaver of textiles, will observe that she has not been forgotten, and those who are devoted to the sea can discover a group which will remind them of the joys of their vocation.

A wave terminates the sculpture at either end of the pediment, and is meant to indicate that all this humanity, all its power and energy, are comprised between the shores of two oceans—the Atlantic and the Pacific.

So much for the poetic and philosophic.

Permit me now to say a few words about the technique: For a real artist every new subject, every new undertaking, is a new problem and requires a new solution, adapted, of course, to the special characteristics of the case in hand. Any art which is not based on this principle is not a "living" art. Any effort to use an old solution for a new problem is the admission of artistic impotence, and the artist in so doing not only eludes the difficulties of his new problem but also loses his opportunity to discover, perhaps, some new form of beauty.

Now, one of the important problems to be solved in this case was the amalgamation of the living forms of to-day with the classic details of a semiclassic style.

In using our brawny types of men and women from factory and field, in modeling their simple working clothes, it was necessary to execute these figures in such a manner that they should not conflict with this distinguished but rather delicate architecture. It was necessary that they should have a distinctive decorative character, in harmony with their immediate surroundings. Too much realism would have been ugly; too much classicism would have been fatal.

Usually pediments are composed for a general front view, and are approached by a spacious avenue forming a vista. This happens here only for the central pediment. The fact that this building has such a wide façade and three pediments, that it is generally approached by the sides, and that a person standing on the Plaza has a slanting view of at least two pediments, changes entirely the ordinary scheme and has necessitated a new principle of composition. The means employed to meet this contingency are not very visible from the Plaza—they were not meant to be visible—but great care has been used in the effort to make the side views equal in interest to the full front view.

There were other problems, such as the scale and grouping of the figures, the spacing of the groups, and so forth, of which I will not speak. Suffice it to say that with time and study they were solved to my satisfaction. The method of work was as follows: First a small sketch was made, then a larger one, and then another. These were changed, figures were taken away and others put in their places, so on and on in a continual effort to improve the scheme until the final models were finished, ready to be carved in marble, erected, doweled, and cemented in place.

Permit me now on this momentous occasion to sincerely thank the Committee on the Library for their confidence, and for having permitted me to carry out this work in my own way and within my own time.

I also desire to express my appreciation for the kindness and intelligent interest which has been bestowed upon me by Mr. Elliott Woods, Superintendent of the Capitol, and by his collaborators. They have never failed me since I first met them in 1909.

Mr. SLAYDEN. Ladies and gentlemen, a few minutes ago my friend Mr. MANN pointed to the pediment and said that that was the pièce de résistance, as they call it out in Illinois; but I knew just what it was to be—first, the speech of Mr. Bartlett, and then that of our distinguished Speaker, the Hon. CHAMP CLARK, who will now address you. [Applause.]

ADDRESS OF SPEAKER CLARK.

Ladies and gentlemen, Mr. Chairman SLAYDEN and Mr. Bartlett, the distinguished artist, have so thoroughly described the beautiful statuary that it would be superfluous to say anything more about that. It is universally conceded that Washington is the finest capital city in the world. [Applause.] The United States has the largest homogeneous population of all the nations of the earth. We have the most stately capitol building in the world, which has become the model for capitol buildings everywhere.

I, as speaker of the House of Representatives, accept this statuary on behalf of the Congress and the people. This is the finishing touch to the Capitol Building, and especially to the House of Representatives. The first man who ever lifted up his voice in an oratorical way in the splendid Hall of the House was Samuel Sullivan Cox, popularly named "Sunset Cox," of Ohio, in 1857; and if all the oratory that has been uttered in it since were printed in books the world would hardly contain them. [Laughter.]

The Constitutional Convention was the wisest set of men that ever met under one roof. [Applause.] The wisest thing that they did was to divide the governmental machinery of this country into three separate departments. The next wisest was to divide the Congress into two branches. Some lady asked George Washington at a great dinner what the Senate was created for, and why they had two legislative branches instead of only one. He said that the Senate would perform the same function for legislation that a saucer did for tea, that they would pour the hot tea of the House into the saucer of the Senate to cool off. [Laughter.] Evidently Gen. Washington was not up to date in pink-tea etiquette or he would not have said anything about pouring your tea into a saucer.

This Republic is the only real republic that ever existed on the face of the earth. [Applause.] We talk about the republics of Greece and Rome, and the rest of them. They were simply oligarchies. The intricate and delicate and elaborate system of checks and balances in our system of government is what has preserved it to the present day, and what will preserve it, let us hope, for all time to come. [Applause.]

The idea of free government is not new. We did not originate it. We have developed it and put it into practice. It has been in the minds of men from a time whereof the memory of man runneth not to the contrary. Whoever wrote the Shakespeare plays put these words into the mouth of Brutus in his speech defending himself for the assassination of Cæsar:

> Here comes his body, mourned by Mark Anthony; who, though he had no hand in his death, shall receive the benefit of his dying, a place in the commonwealth; as which of you shall not?

There is the case in a nutshell, the essence of representative government—"a place in the commonwealth."

When Frederick Augustus Muhlenberg called the first House of Representatives to order he presided over 56 men. North Carolina and Rhode Island had not gotten in then. When they did come in, they increased his little flock to 65. I preside over 435 Representatives, two Territorial Delegates, and three Resident Commissioners. A couple of years ago they rededicated the old Congressional Hall in Philadelphia, after having fixed it up handsomely. President Wilson and myself made speeches. Going over there I figured it out that if we had the same ratio for Representatives now that we had under the first census and the same population that we have now, we would have 2,776 Members in the House of Representatives. That is one index to our marvelous growth.

The legislative body in every free country is the most important of the three branches—judicial, legislative, and executive. We come from the people, we represent the people, and we reflect the will of the people. [Applause.] I undertake to say without fear of successful contradiction that when the American people make up their minds that they want a thing The Congress will grant it to them as soon as it finds out that the people desire it. I think the Congress of the United States is the greatest legislative body that ever was on the face of the earth, and I take pride in that fact. Yet every evil-disposed person in the land can find some slander to utter about the American Congress. They revel in such foul work. It puzzled me a long time to find out why certain people, who could pass a great tariff bill overnight, or enact any other great measure while you wait, did not come down here and get into Congress and do those things. Finally one of them came into my room one day and was intimating that we were a lot of chuckleheads, and I said to him, "It has always surprised me that men like you, who know everything, who can do everything without any consideration, do not break into Congress and do it." He said, "Well, everybody does not want to come to Congress." I replied, "There are not a thousand men in America who would not come to one House or the other of Congress if they could get here." I said, "I will tell you why you don't come into Congress. You don't come down here because you can't get votes enough." [Laughter.]

Each one of these three departments ought to attend strictly to its own business. [Applause.] It would make a very interesting theme for a speech, if I had time to make one, to show how the balance of power has oscillated between the executive and the legislative. Sometimes the legislative has reduced the executive to a nullity, and sometimes the executive has come close to reducing The Congress to a nullity, but in the course of time these things even themselves up.

How many new propositions do you suppose our system of government rests on? On three. There are two of them in the Declaration of Independence and one in the Constitution. "All men are created equal." That is one of them. "All Governments derive their just powers from the consent of the governed." That is two, and they form the basis of republican institutions. The third one is—hardly anybody ever reads it—

the preamble to the Constitution, one of the finest sentences ever written, and one of the most comprehensive:

We, the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

[Applause.]

There it all is. That is our chart and our creed. What courtship is to marriage, what the flower is to the fruit, what youth is to manhood, that is what the Declaration of Independence is to the Constitution of the United States. [Applause.] Since Washington on Yorktown's blood-stained heights made good Jefferson's declaration thrones have been crumbling, crowns have been tumbling, and dynasties have been fleeing for their lives. [Applause.]

When our fathers proclaimed this Republic at Philadelphia, on the 4th of July, 1776, there was only one other Republic on the face of the earth—Switzerland—and the fathers were not certain that this one would live until Christmas. It was an even break whether it would or not. Now, thanks be to Almighty God, there are 26 Republics in this world. [Applause.] In a very large sense we made them, every one. Mark Twain, the greatest Missourian that ever lived, and the greatest literary American that ever lived [applause], once said, "Blessed be the man who bloweth his own horn, lest it be not blown." [Laughter.]

That dictum of the great Missourian applies to nations as well as to individuals. We did it—not by the mailed hand, not by conquering armies. We did it by the wholesomeness of our example [applause], by teaching all creation that men can govern themselves. Why, before that it was supposed that power descended from on high and lighted on the heads of a few tall men, and then a little of it trickled down to the great body of the people below. We reverse all that. We make it begin at the bottom and, like the sap in the trees, go up, and it will go up forever. [Applause.]

Not a single one of these South American or Central American Republics could have existed six months if it had not been for us. Some of them could stagger along now, maybe, but I am not certain about that. We gave them a breathing spell. We gave them a chance to live. What did it? The Monroe doctrine. I am not going to expand on that. What is it? The simplest proposition ever put into print, that we would regard the establishment of its system of government by any European nation in this hemisphere as an unfriendly act. That was a very modest declaration, was it not? We were a modest people then. [Laughter.] We have outgrown our modesty. But the Monroe doctrine has grown with our growth, and strengthened with our strength, until to-day it is this: That for political purposes we hereby take the entire Western Hemisphere under the shadow of our wing, and warn the nations of the earth not to touch the least of these Republics south of us, lest they die. That is the Monroe doctrine. [Applause.] We do not want their territory or their land. We propose that they shall be free, because we intend to remain free ourselves.

Col. Roosevelt in one of his books says that James Monroe was a mediocre President. Col. Roosevelt—I am very fond of him personally—will be lucky if he finally secures as high a place and as great a space in history as James Monroe does. [Applause.] I like Roosevelt's style sometimes. He went down to Chile and proclaimed the Monroe doctrine there much as I have proclaimed it here, and he came near getting mobbed. I suppose that is what he was after. [Laughter.]

Certain dillettante writers and speakers who say the Monroe doctrine is played out are mistaken. They do not know what they are talking about. We will strengthen it and preserve it. It is the political life preserver of the Western World. I like to say a good thing about a Republican when I can find one who deserves it. [Laughter.] I like to think about what one Secretary of State did under the Monroe doctrine. William H. Seward, a great man, Secretary of State under Lincoln and Johnson, came very near being President in 1860, but not half as near as I did in 1912. [Laughter and applause.] When we had our Civil War we did not have any time to attend to anybody else's business. We had hardly enough to attend to our own.

Louis Napoleon, the nephew of his uncle, the Emperor of the French, the greatest monarch then on earth, with his arms glittering from China to Peru, concluded it was a good time to smash the Monroe doctrine, sent over the Archduke Maximilian, set him up on a tinsel imperial throne, clapped a tinsel imperial crown on his head, and backed him up with 80,000 French bayonets under Marshal Bazaine. They were getting along tiptop until we made peace among ourselves. Immediately William H. Seward sent word to Louis Napoleon that it was high time to get out of Mexico, and not stand on the order of his going—and he went like the devil was after him. [Applause and laughter.]

That is what a Republican Secretary of State did. Nobody ever tried to violate the Monroe doctrine after that until Great Britain undertook to steal a piece of Venezuela, and Grover Cleveland shook his fist in the face of the British lion and forbade him to put his paw on Venezuela, and he did not do it. [Applause and laughter.] That is what a Democratic President did. At that time we did not have a battleship to our name, but Johnnie Bull knew where we could get them if we wanted them; he knew we had the stuff to buy them with; he wisely let us alone; and from that day to this nobody has ever tried to infringe on the Monroe doctrine. Those are two of the proudest chapters in our history—one written by a Republican Secretary of State, the other by a Democratic President.

A great many people make a mistake as to where the line of demarcation is between a free country and a despotism. It is as plain as the nose on your face when once correctly stated. Most people think if there is a hereditary head to the government it is necessarily a despotism, and that if there is an elective head it is necessarily free. That has not a thing in the world to do with it—not a thing. A country can be just as free with a hereditary head as it can be with an elective president, provided it has the right sort of a constitution. I will tell you where the line of demarcation is. Any country that has a legislative body which controls the purse strings thereof is free, and if it has not it is not free. Out West where I live—I do not know whether it has percolated to the East or not—there is a saying "that money makes the mare go."

Money makes the Government go, and if we should refuse to appropriate the money to run this Government, it would stand stock-still at midnight on the 30th day of next June. Patriots would not run it, most of them, without they got their pay. It makes no difference what we call it. We call our legislative body the Congress. When people get mad at Congress, and can not find anything else mean to say, they say we talk too much. Well, I used to be rather inclined to think sometimes that the Senate does talk too much [laughter]; but I have somewhat changed my notion about that. There ought to be some place in this Government where a thing can be really and thoroughly and minutely discussed. Now, if the Senate will let us go home right away, I will add some other compliment to that. [Laughter.] Those people who growl about Congress talking too much had better get out their dictionary and study it a little. What do you suppose the word "Parliament" means in the dictionary sense? That is the oldest legislative body in the world. It literally means a talking body. Bless your souls, that is what it was elected for, to talk; not to indulge in foolish talk, but to talk about the principles of government, the business of the country, and things like that. In France it is called the Assembly, in Germany the Reichstag, in Scandinavia the Storthing, and down in Bulgaria it is the Sobranje. There have been three half-baked Dumas up in St. Petersburg. Somebody will say they ran them out. Of course they did. That is the history of legislative progress the world over. How many Parliaments were run out of Westminster before they found one that could stay there in spite of the king? What was the American Congress during the Revolution? It was a legislative body on wheels, and it met where the British soldiers were not. That was the mode of its being. I am not a prophet or the son of a prophet, or the seventh son of a seventh son, but I will risk one prediction: Within less than 20 years they will have a Duma at St. Petersburg that will stay there until it gets ready to leave, or the people of that country will run the Czar and the grand dukes out of Russia. That has been the history of such transactions since the world began.

What a fine thing it is to be an American—how glorious, how inspiring.

Those of you who read the Bible—and I hope you all do—remember that after Paul had been bound the chief captain ordered the centurion to take him away and scourge him. Paul took a flank move on him. Of course, I am giving a free translation. I have always believed that Paul would have made one of the most skillful politicians and lawyers that ever lived. Paul said to the centurion who was about to scourge him: "Is it lawful to scourge a Roman citizen?" That question scared the centurion half to death. He rushed off to the chief captain as hard as he could clatter, and said: "You had better be careful; that man is a Roman citizen," which startled the chief captain greatly—startled him so that Paul was not scourged.

When that transaction took place Rome was mistress of the civilized world.

The power and dignity inherent in Roman citizenship was demonstrated by the terror which seized those who intended to scourge him, when he invoked that citizenship.

It was a great boon to be a Roman citizen when Rome was in the plenitude of imperial power; but it is a far greater boon to be a plain American citizen, heir of all the ages. [Applause.]

Ladies and gentlemen, everybody has something to do in this world, if he could find out what it is. Our mission in the world has been to carry government of the people, by the people, and for the people to the ends of the earth as missionaries therefor, and we have worked at it faithfully. We divide into parties on domestic issues. It is a very good thing that we do, so that one may watch the other; but when it comes to questions that affect the honor, the glory, the prosperity of the American Republic, we are one. [Applause.] I am happy to give it as my opinion that the people in this country who are not thoroughly patriotic, who would not be absolutely true if the supreme test should come, do not constitute one-tenth of 1 per cent of the 100,000,000 people betwixt the two seas. [Applause.] We are supposed to have different ways of explaining and expressing our patriotism. We here and now finish the Capitol building. May it stand forever as the emblem and symbol of a free people, and may our missionary work never end until all people everywhere are free. [Applause.]

Mr. SLAYDEN. Dr. Prettyman, Chaplain of the Senate, will pronounce the benediction.

Rev. Forrest J. Prettyman, D. D., Chaplain of the Senate, pronounced the benediction, as follows:

Now may the peace of God, which passeth all understanding, keep your hearts and minds in the knowledge and love of God and of his Son Jesus Christ our Lord; and the blessing of God Almighty, Father, Son, and Holy Spirit, be with us all, now and forever. Amen.

---

**Homesteads.**

## EXTENSION OF REMARKS
OF
# HON. FRANK W. MONDELL,
OF WYOMING,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 4, 1916.*

Mr. MONDELL. Mr. Speaker, in December, 1907, at the beginning of the Sixtieth Congress, I introduced a bill providing for a homestead of 320 acres, or, as I styled it, a bill for an enlarged homestead, the first general bill introduced in Congress, so far as I know, proposing a homestead larger than the old 160-acre homestead of the sixties.

The enlarged-homestead idea was opposed and combated vigorously from the very start. It was assailed on the one hand by certain classes of stock interests because it was believed it would result in the settlement of lands that would otherwise remain stock ranges, and on the other hand by those who claimed that it would be utilized by the stock interests for the purpose of acquiring enormous acreages for grazing purposes.

These forces in opposition were particularly active in the House of Representatives, so much so that a conference report on the bill was voted down in the House, and the measure would have ended its career then and there had not the Speaker, Hon. JOSEPH G. CANNON, declined to recognize for that purpose at least two Members who were on their feet attempting to secure recognition to make a motion to lay the bill on the table. So powerful and persistent was this opposition that the enlarged-homestead act did not become a law until February 19, 1909. The first designations were made several months later, and the first entries under the act in the fiscal year 1910.

The enlarged-homestead law has abundantly justified its enactment and has clearly demonstrated the wisdom of its essential features. Practically none of the fears expressed in regard to it have been realized, and the claims made for the measure by its friends and proponents have been more than fulfilled. It is true that some lands have been entered under the act which are not susceptible of continuous successful and profitable cultivation. It is true that considerable areas have been taken of doubtful value for the purposes of cultivation under any system.

This, of course, was inevitable. It had occurred the country over under the 160-acre homestead law. It would occur to a certain extent under any homestead law which, like the 320-acre homestead, contemplated some cultivation, for the 320-acre law, let it be remembered, is a farming and not a grazing homestead law. In the main, however, the lands taken under the 320-acre act have been selected with some care, and the act has encouraged agricultural and farming development over large and widely scattered areas where up to the time of the passage of the act the homesteader had made but little attempt at settlement and many prosperous and permanent communities have been built up under the stimulus of the act.

The following table, beginning with the fiscal year 1910, when the first entries were made, and including nine months of the fiscal years 1916, or up to March 30 of this year, gives the acreage of lands entered under the enlarged homestead law in the United States, amounting to over 41,000,000 acres, as follows:

| | Acres. |
|---|---|
| 1910 | 7,209,402.68 |
| 1911 | 2,799,159.01 |
| 1912 | 2,504,583.10 |
| 1913 | 6,293,737.81 |
| 1914 | 7,753,616.38 |
| 1915 | 8,620,460.98 |
| 1916 (9 months only) | 6,730,248.41 |
| Total | 41,911,208.37 |

This acreage is sufficient to furnish over a hundred and twenty-eight thousand 320-acre homesteads, and, assuming that these homesteads were occupied by families of five, would provide homes for about 640,000 people.

EFFECT OF THE LAW IN WYOMING.

In Wyoming the enlarged-homestead law has led to the successful settlement of large areas. It has given the State many prosperous new communities. While there have been some mistakes made in filing upon and attempting to cultivate lands that are not suitable for farming purposes, in the main a considerable portion of the land entered has with careful and thorough cultivation proven to be susceptible of producing a variety of crops. Where dairying and stock raising have been carried on in connection with farming the results have been especially encouraging. Some of the localities in which settlements have been made have proven to be even more favorable than was anticipated, and out of the whole area taken it may be safely said that a comparatively small proportion of the ventures have been permanent failures.

The effect of the law in Wyoming in the matter of acreage taken has been remarkable. Up to the time of the passage of the enlarged-homestead act the total acreage of all original homestead entries in the State from the time homesteads were first taken had amounted to 4,544,299 acres.

The total acreage of entries under the enlarged homestead act in Wyoming since its passage up to March 30, 1916, was 4,808,122 acres. It will be seen that in the six years during which the enlarged homestead law has been in operation 263,825 more acres were entered in the State under that act than under the homestead law than in all of the years of homesteading prior to that time. The acreage of enlarged homesteads in Wyoming is sufficient to furnish over 15,000 entries of 320 acres each, which at the rate of 5 persons to a family would afford homes for 75,000 people.

It may be interesting to note the fluctuations of homestead settlement in the State in the last 10 years, which is graphically shown by the following table, which includes entries under the enlarged homestead and the old 160-acre laws:

| | |
|---|---|
| 1907 | 460,958.27 |
| 1908 | 472,983.38 |
| 1909 | 566,880.79 |
| 1910 | 977,429.94 |
| 1911 | 487,563.69 |
| 1912 | 367,610.44 |
| 1913 | 579,962.45 |
| 1914 | 813,543.66 |
| 1915 | 679,677.16 |
| 1916 (9 months only) | 700,615.95 |
| Total | 6,107,224.83 |

GRAZING HOMESTEADS.

In July, 1913, during the Sixty-third Congress, I introduced a bill for a grazing homestead, which was intended to be the next step beyond the enlarged homestead law in homestead development. My thought was that within a reasonable time the lands which might be entered and utilized under the 320-acre law would become exhausted and that a grazing-homestead measure would then provide for the settlement of lands which could only, in the main, be utilized for grazing purposes.

My bill provided for a homestead of 640 to 1,280 acres, depending upon its grass-producing capacity. It did not require any cultivation, but a certain amount of improvement in lieu of the same. As the Congress was Democratic, there was no disposition to take up a measure introduced by a Republican Member, but later a bill for a 640-acre homestead, known as a stock-raising homestead bill, was introduced by a Democratic Member, Mr. Fergusson, of New Mexico, and was reported, but got no further.

In the present Congress a bill for a stock-raising homestead of 640 acres was drafted along the lines of the Fergusson bill

and introduced by Mr. FERRIS, of Oklahoma, chairman of the Committee on Public Lands. This bill passed the House, and is now, and has been for a number of months, before the Senate, where it was reported, with some amendments which if adopted would greatly improve the bill. At this time it is uncertain as to whether it will become a law at this session of Congress.

One of the criticisms that this bill is meeting, and which has jeopardized its passage, is the claim that there are very considerable areas of land upon which a family can not be supported on 640 acres. This objection would have been largely obviated by the provision of the bill which I introduced for a homestead as large as two sections on lands that do not have a considerable production of grass. The bill is also subject to the criticism that it requires a final and conclusive designation by the Secretary before entries can be made under it, which will naturally delay the beginning of the operation of the law. It is open to the further objection that it is the first land law proposing the reservation of all minerals, and it would undoubtedly require supplemental legislation to make clear and definite the character of the title which the entryman would secure.

As the RECORD shows, efforts were made during the passage of the measure through the House to improve it by amendment. Some amendments were adopted which improved the bill, but it was impossible to secure the adoption of amendments to cover some of its most serious faults. Some of these, if not secured in the Senate, can no doubt be obtained by amendment later.

## Direct Marketing of Farm Products Between Producer and Consumer by Parcel Post.

EXTENSION OF REMARKS

OF

# HON. CHARLES H. RANDALL,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 4, 1916.*

Mr. RANDALL. Mr. Speaker, the Post Office appropriation bill provides an appropriation of $10,000, with which the Post Office Department is authorized to conduct experiments in direct dealing between producer and consumer through the Parcel Post Service, employing mail-order methods. This is in accordance with the purpose of H. R. 10848, which I introduced on February 4 of this year.

A trial was made at Sacramento, Cal., during May and June, 1916, of a plan for direct dealing in farm products between producer and consumer, employing the Parcel Post Service.

A report presented by Mr. Joseph Holmes, master of the California State Grange, is as follows:

"The committee appointed by Sacramento County Pomona Grange to demonstrate the plan of direct dealing between producer and consumer as proposed by Mr. David Lubin, desires to submit the following report:

"In our search for an office Mr. Glen Andrus, secretary of the Sacramento Chamber of Commerce, very kindly offered us a very convenient space and desk room in the front of his office. Here we proceeded to fit up the office with a desk, a phone, and the card rack. Miss Mamie Sanford, master of the Sacramento Grange, was employed as office clerk, and Mr. B. F. McLeod, master of Orangevale Grange, was secured as carrier.

"Everything being ready, we opened for business May 3, 1916. The first two days the business was small but very important for two reasons.

"First. The business so aroused the ire of some of the little retail merchants of Sacramento that they swore dire and terrible things against the chamber of commerce, even to withdrawing their support from it if the 'farmers' market,' as they called it, was not thrown out of the chamber of commerce room.

"Second. Naturally this kind of publicity served to thoroughly advertise the plan, and the people were curious to know more about it.

"Mr. Joseph Holmes, master of California State Grange, not being desirous of causing any serious disruption in the chamber of commerce, gracefully offered to withdraw the 'farmers' market' from its said precincts and cast about for a new location. This was done, and through the courtesy of the Brooke Realty Co., 807 J Street, a very convenient room was secured, to which our office equipment was at once moved.

"Here we continued the business uninterrupted for 39 days, until June 17, 1916. During this time 41 producers and 99 consumers took part in the demonstration, and 460 transactions were made. The people generally were very willing and anxious to give the plan a trial. And not only locally but from distant parts of the State came many inquiries regarding this new marketing plan. All who participated in the demonstration were well pleased, as can be seen by the following reports: Mr. J. P. Goldsmith, of Folsom, writes: 'During the past few weeks I have been selling new potatoes and sweet potato plants through the direct marketing system. Much more important than the production is the marketing question, and I believe that this method solves that. I have sold at a third more profit through this experiment, and the consumer has been able to buy lower than heretofore. Another point, there is a big gain in time, which is equivalent to money to the producer, as it takes but very little time to make out a card, whereas in the old method I had to go to market, and many times returned home with my produce, being unable to sell at an advantage. If this marketing plan goes into effect I will use every inch available of my land, some of which is now idle. Would like to see this plan go into effect at once.'"

Mr. J. L. Patterson, of Folsom, writes as follows:

"I would like very much to see this direct marketing go into effect, because it gives the small farmers better opportunities. It makes it possible for the small farmer to make a good living from small holdings, because it would dispose of the surplus which now goes to waste, as it doesn't pay the farmer to take a small supply to market.

"The defect in this new system at present seems to be the lack of knowledge of the farmers on the average market price on different staples, but this could be overcome by average quotation being sent broadcast so that the farmer could know what to charge. I have sold during this experiment eggs and dressed chickens at prices higher than I have been in the habit of getting, and these prices in turn were lower to the consumer than he has been in the habit of paying."

Direct marketing will encourage the farmer to make greater use of his land according to J. B. Ireland, of Orangevale, who says:

"It has been my pleasure to sell cherries, peas, beans, and new potatoes through this direct-marketing experiment, and I have been able to get considerably better profit. If this plan is put into operation I will utilize all the waste space on my land and also would sell certain products that now doesn't pay me to market. It would make my farm much more valuable."

The consumers were well pleased by the service of the direct-marketing plan, as will be seen by the following testimonials:

Mrs. Ben Blow, of the Parkview Apartments, writes:

"I am more than pleased with the direct-marketing plan. The expediency with which my orders were filled and the freshness of the produce agreeably surprised me. I hope that it will be adopted officially. I know it will be a success."

Rev. A. B. Patten, of 2631 I Street, reports:

"Excellent service is rendered the consumer by this new plan. The produce is far fresher than what one can buy in the markets. We have long needed something like this direct-marketing idea, and I am sure it will considerably lower the cost of living. I am well satisfied with the orders I placed with it."

Mrs. W. E. Sanford, 621 P Street, writes:

"The articles I purchased through the direct-marketing experiment were far fresher than I have ever obtained before, and they were also far cheaper. I hope that Congress will not delay action on placing the direct marketing under the Post Office. It is what we housewives have so long dreamed about and hoped for."

Joseph Clark, 1511 K Street:

"Direct marketing is fine, simply fine. It's the best idea advanced in a century. It will do more for the farmers of the country than anything else ever thought of. It will also cut the cost of living and will enable even the poorest families to have fresh fruit and vegetables."

Mrs. Albert Elkus, of 1515 N Street, reports:

"Produce purchased through direct marketing is cheaper and far fresher than bought in the old way in the markets. As soon as the experiment started I purchased two of the coupon books, and am more than satisfied with the service."

B. F. McLeod, of Orangevale, reports:

"Having acted as your transportation agent during this demonstration, which brought me in contact with all of the producers and all of the consumers, I will say that without exception all have been highly pleased with the scheme, and have expressed the wish that it might be made permanent. Many of the housewives have said that not only has it been a big saving to them as to price, but the quality and freshness of the produce appeals to them."

We, as a committee, believe the plan has great possibilities, and if taken up by the Government would serve a great need of the day. The card system is very simple and yet so ingeniously arranged as to answer all questions of the prospective buyer. A space is left for the quantity, which must be either one box, one dozen, 1 pound, one single article, one sack, one crate, with the price plainly marked below. If a producer has a dozen boxes of cherries for sale, he sends in a dozen cards, each calling for one box. The lower end of the card is perforated with the price and date and space for the goods. This is retained by the farmer to show that he has filled the order.

If the purchaser goes to the market room, he fills in the card for the desired produce and hands it to the attendant, with the money or coupons purchased in book form. The order and money or coupons is then forwarded by mail to the farmer, and the delivery is made direct to the purchaser.

If this system can be made official, these cards will be sent through the mail and the delivery will be made by parcel post. In other words, this system will open up a world-wide market for the farmer, and the consumer will also participate in its consequent benefits.

Jos. HOLMES,
*Master California State Grange.*
M. T. HUNT,
G. H. SLAWSON,
MAMIE L. SANFORD,
LOUISE L. NORTHE,
Mrs. CLARA C. NAUMAN,
*Committee.*

**Flood Conditions in Alabama.**

## EXTENSION OF REMARKS

OF

# HON. OSCAR L. GRAY,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 4, 1916.*

Mr. GRAY of Alabama. Under leave to extend my remarks I insert in the RECORD the following resolutions, letters, petitions, telegrams, and so forth:

COMMERCIAL CLUB OF DEMOPOLIS,
*Demopolis, Ala., July 14, 1916.*

Hon. OSCAR L. GRAY,
*House of Representatives, Washington, D. C.*

DEAR MR. GRAY: At the request of our commercial club I have this morning sent you a telegram telling you of the desperate need of the river farmers in this section. The river is already over the whole country, and farmer after farmer has had his all swept away. They are going to be in a starving condition and it is necessary for some immediate help. We can not hope for this from our State, for the financial condition of this State will not warrant it; therefore we must depend on the National Government and on what help we can offer locally.

We are going to do all in our power, but this will not meet the demand by any means, so we hope you will take up this matter and push it and secure some appropriation that will relieve this immediate necessity. It is too late to replant anything. The whole crop is a total loss.

Yours, truly,

H. W. HAYDEN, *President.*
Dr. T. C. REID, *Secretary.*

---

DEMOPOLIS, ALA., *July 18.*

Hon. O. L. GRAY,
*House of Representatives, Washington, D. C.*

MY DEAR MR. GRAY: First, I want to thank you for your splendid efforts in our behalf in this section and to say to you that our telegrams do not half express the true conditions of suffering and loss. It is horrible, but we are doing our very best to relieve all in need, and at the same time trying to do it intelligently.

Our relief committee, actively in charge, is composed of Mr. W. S. Prout, Hon. J. B. Wilson, Messrs. L. S. Shertzer, L. Foida, and myself, but we are being assisted in active work and advice by practically all our people.

We are badly in need of every variety of seed, especially turnip, rape, and fall garden seed. I am writing Senator UNDERWOOD in this mail, asking him to also join you in securing liberal quota of seed for us at once.

Whatever seed you can send I would suggest be sent in care of the relief committee of Commercial Club of Demopolis, as we are using every effort to have a complete system so as to avoid missing any worthy person, and at the same time be protected against those who would take advantage of conditions.

Our people are very appreciative of the splendid assistance you have already rendered us.

Our committee expects to extend its work to Choctaw County, and I would thank you if you would write me a short letter telling me that if we get aid you will expect this to be done. Local committees in the several neighborhoods of Choctaw can keep us posted, and through them the people there can be relieved. The people of Linden are now cooperating with us as to their section on the river.

With best wishes.

Yours, very truly,

JESSE B. HEARIN.

Practically every man in Demopolis, as well as the municipality itself, is giving aid to the flood sufferers.

SALITPA, ALA., *July 15, 1916.*

Hon. O. L. GRAY, M. C.,
*Washington, D. C.*

DEAR SIR: We are sending you a petition to-day which speaks for itself. It was hurriedly gotten up. Seventy-five others would have signed it if they had had an opportunity.

I could not explain half how bad it is here. If you can do anything we will greatly appreciate it. Lots of persons here have no means of support. Everything in the way of a crop has been washed away. I have been requested to say to you that if any help can be obtained that A. E. May, sr., H. W. Porter, and J. D. Doyle will make us a satisfactory committee to look after it.

Yours, truly,

J. D. DOYLE.

---

To Hon. OSCAR L. GRAY, M. C.:

We, the undersigned citizens of Salitpa, Clarke County, Ala., petition your honorable body, the Congress of the Federal Government, for some aid in our destitute condition which has been caused by the recent storm that swept over this county. We are all farmers on low bottom lands; the high creeks and river have destroyed our crops, and many—yes, many—have been left in a destitute condition.

This is the first time in our history we have ever asked for help, and under no circumstances would we do it now if it could be avoided, but it can not.

J. I. Pitman, J. B. Atchinson, J. D. Doyle, C. C. May, Jno. C. McCorquariole, P. W. Robinson, W. N. Molton, S. J. Atchinson, Allen E. May, sr., Jno. T. Pitman, W. W. White, D. C. Waite, J. E. Beck, N. A. Molton, C. F. McCorquariole, Coma Doyle, C. G. Carter, M. M. Waite, G. D. Calhoun, J. B. Porter, H. W. Porter, H. B. Shellito, G. W. McVay, W. F. McCorquariole, W. A. McCorquariole, S. M. York, A. D. Mitchell, C. M. Doyle, S. B. Fleming.

---

BUTLER, ALA., *July 20, 1916.*

Hon. O. L. GRAY, M. C.,
*Washington, D. C.*

DEAR SIR: The weather conditions here for the past 15 days have been bad; the river has covered every field of cotton and corn in the river valley; the large creeks of this county are overflowed to-day for the third time in two weeks. In the Ticumbum, Oktuppa, and other creek valleys the crops are a total loss. Actual suffering is occurring all along the river; negroes who at this season of the year live on corn, garden vegetables, etc., have nothing to eat and no labor to do. The mills are idle, the farms are all under water, and, as one negro told me to-day, all he had for his children for the past three days was boiled catfish. The condition is very bad. I don't know anything to suggest; when the waters go away, possibly the negroes can find work at the sawmills and live; otherwise they will have to move somewhere, as it will be June of next year before anything to eat can be raised to amount to much. No corn left in all the rich valleys of the county and the hill-land corn is down and will produce very little under the most favorable conditions. The landowners have turned the mules in the pastures, the old crop of corn is gone, and no bread in the country for the persons who have no money to buy it. I thought that you would like to know the actual conditions. Yesterday I met a drove of negroes going to Littlejohn to hunt work, and this concern has more men now than they have work to do.

It will be weeks before the river goes in, as it is now as high as it reached in 1892, and rose 4 inches last night.

I hope you are well.

Sincerely, yours,

W. H. LINDSEY.

---

THE KING LUMBER CO.,
*Consul, Ala., July 21, 1916.*

Hon. O. L. GRAY,
*Washington, D. C.*

MY DEAR SIR: I am informed that an appeal has been made to Congress for an appropriation of $75,000 for the benefit of people who have lost their entire crops by the recent floods, this fund, if appropriated, to be used for the relief of people only in the territory tributary to Demopolis, Linden, and Myrtlewood.

This fund, if appropriated, should be used for the relief of all the people of the county who have become destitute and who are surely in need of the necessities of life.

It is a fact that everyone who had their crops on the several creeks in the county, namely, Horse, Beaver, Chickasawbogue, Dry, Poplar, Turkey, and other streams, have lost all and are as much in need as are the river-land farmers. I sincerely trust that you may be able to secure aid for the destitute people, and that all who are really in need shall be provided for out of any fund that may be appropriated, and to this end I would suggest that a committee composed of intelligent and honest men living in different sections of the county be named to handle or distribute the funds.

Yours, truly,

J. J. KING.

---

LAYACA, ALA., *July 21, 1916.*

Hon. OSCAR L. GRAY,
*Washington, D. C.*

DEAR SIR: The storm and continuous rains, with overflow of river and large creeks, has caused such havoc among the negroes along the creeks from Tickabum and Suquabowa Creeks that we are constrained to seek aid for them. We, the white people of this section, have fed them until now, but having lost what we have furnished them we are unable to take them over, and there is much distress among them, and unless something is done speedily some of them must all but perish. They need something to eat and medicine. There is no work for them to do here, and they are unable to move where they might find it. As you know, there are but few white people here. In this school district, No. 18, there are over 200 negro children and not over 5 or 6 white children; this will give you some idea of the ratio—at least 30 negroes to every white man. There must be at least 50 families who need aid in this district. Will our Government do anything for these unfortunate people? It seems to be anxious to send aid to the starving Poles, but these negroes are here among us—make the majority of our cotton—and it seems to us this should be attended to first. There are no white people here in extremity; they, too, have suffered a great loss, but can live, and ask no aid, but are unable to do for these negroes what should and

must be done. We do not know what other sections have suffered, but all along the river in our county—Choctaw—is pretty much the same. Please use your influence to have something done for them.

Signed by the following white citizens, constituting the entire inhabitants (white) of this section,

Yours, truly,

H. C. WILCOX.
G. W. TILLMON.
W. C. TILLMON.

WOMACK HILL, ALA., *July 24, 1916.*

To Hon. OSCAR L. GRAY,
*Congressman First District of Alabama, Washington, D. C.*

SIR: We, the undersigned citizens of Choctaw County, Ala., respectfully call to your attention the destitution existing among the people of this county caused by the recent floods and storms. Want exists all along the Tombigbee River; the crops are a total loss; the food supply is exhausted; and the tenant class, as well as others, are in immediate need of bread. The people who are able to aid have done to their utmost, and unless some immediate relief is given, starvation will exist among many people.

We request that you take some action toward securing some relief, and to this end we respectfully ask that you call to the attention of Senators UNDERWOOD and BANKHEAD the conditions that confront us.

Respectfully submitted.

Chas. F. Daniels, T. R. Lenoir, M. D., Mrs. L. M. Thompson, S. A. McLauchlin, J. L. Parker, George Fluker, W. A. Gibson, Mrs. T. R. Lenoir, W. E. Lenoir, Mrs. Anna Lenoir, Miss Willie D. Lenoir, E. T. Lenoir, J. H. Thompson, E. L. Moore, J. A. Moore, A. G. Moore, C. Butler, Mrs. R. C. Mozingo, F. L. Mozingo, C. L. Carlisle, J. M. Mozingo, Jas. Moore, Alex. Cox, J. W. Mozingo, W. O. Dansby, J. A. Norton, S. A. Haward, Anthony McGrew, Denton Moseley, Chas. Pace, Lee Pace, H. Thornton, R. Herben, Seretta Herben, Dave Cox, Mamie Cox, Peter Floker, Annie Floker, Tom Ford, M. Ford, Jas. Odom, J. P., Ray Martin, E. A. Cox, A. B. Meador, L. C. Meador, W. M. Elliott, G. B. Martin, A. J. Martin, A. Towner, Geo. Coleman, J. F. Harvey.

---

MYRTLEWOOD, ALA.

To Senators JOHN H. BANKHEAD and OSCAR UNDERWOOD and Hon. OSCAR L. GRAY, *Washington, D. C.:*

The storm and flood along the Warrior and Tombigbee Rivers have simply destroyed all crops in the river bottoms. The destruction is complete and the loss is comparatively as great as any of the floods on the Mississippi. Our white people can probably take care of themselves, but the negroes have lost their all, and will be without food and clothing until another crop can be planted and marketed.

A moderate estimate of the families in need will be 100 families.

The entire river front for more than 150 miles has been inundated and crops are literally ruined. Nothing can be saved, and it is too late to replant for another crop this year.

Please present the situation to Congress and ask for some assistance, which was so readily granted to San Francisco and to the flood sufferers along the Mississippi.

The difference here is the Mississippi floods have been in the spring. Our flood is in July, and the waters are still rising and covering every cultivated acre for many miles. The situation is distressing.

In addition, we are in the midst of the boll-weevil section, and all property of the negroes has been swept away before this by their ravages.

The following is what we consider a conservative estimate of the damage done in Myrtlewood beat:

| | |
|---|---|
| Number of acres of cotton ruined | 800 |
| Number of acres of corn ruined | 2,200 |
| We estimate that the crop thus destroyed would be valued at | $108,000 |

J. S. Smith, W. D. Poellnitz, W. R. Carter, T. V. Carter, B. B. Bauler, K. C. Carter, M. F. Meador, C. R. Evans, C. C. Battor, C. P. Carter, Waldo Compton, Eli Poellnitz, F. C. Carter, E. L. Carter, J. D. Carter, J. S. Coats, E. A. Meador.

Hon. O. L. GRAY, M. C.:

At a citizens' meeting held in River Hill Beat on July 23, 1916, L. E. McLeod was elected chairman and W. A. McCorquodale secretary.

The following committee was appointed to draft resolutions. Said committee was composed of J. T. Pitman, chairman; L. E. McLeod, P. W. Robinson, and J. D. Doyle. After which the following resolution was submitted and adopted:

Whereas on the 5th of July last our county was visited by a rain and wind storm, which left destruction in its path, and all lowlands have been flooded to that extent that many of our citizens were left in a destitute condition and in need of immediate aid; and

Whereas a great majority of our farmers are left in such condition that unless they are aided they will be compelled to sacrifice their stock and farms and seek other employment in other parts of the country: Therefore be it

*Resolved* That we, the citizens of Salitpa, Clarke County, Ala., feel called upon to ask our Representatives in the Senate and House of the United States to make a thorough investigation of the conditions and render such assistance as in their judgment our people need.

L. E. MCLEOD,
J. T. PITMAN,
J. D. DOYLE,
T. W. ROBINSON,
*Committee.*

[Telegram.]

MOBILE, ALA., *July 19, 1916.*

Hon. OSCAR L. GRAY,
*Washington, D. C.:*

Chamber of commerce directors earnestly urge prompt and generous regard for needs of farmers in the storm-swept region. Mobile County and adjacent territory have ample time to grow emergency crop. No seed is available in this zone, and many farmers are in debt for expense of crops now destroyed and without means to buy seed. Local interests will be overburdened by carrying farm debts already matured. With Government aid for reseeding, our long crop season will soon make good the loss and save the farmers extreme suffering and discouragement.

MOBILE CHAMBER OF COMMERCE,
WM. CLEMENS, *Secretary.*

## Brief Submitted to the Judiciary Committee on H. Snowden Marshall Impeachment Case.

---

## EXTENSION OF REMARKS

OF

## HON. FRANK BUCHANAN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 4, 1916.*

Mr. BUCHANAN of Illinois. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I insert the brief submitted by myself to the Committee on the Judiciary on the H. Snowden Marshall impeachment case, as follows:

Mr. Chairman and gentlemen of the committee, I desire to thank the committee for extending to me the opportunity to submit a statement in regard to this matter, and I shall make my brief as short as the facts in the matter will permit.

No doubt every member of the committee understands what officials are subject to impeachment, and also what are impeachable offenses. Section 4, Article II, of the Constitution of the United States provides that "The President, the Vice President, and all civil officers of the United States shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors." Under that clause of the Constitution there can be no doubt that a Federal district attorney is subject to removal from office by impeachment. Although the question of what are impeachable offenses has never been clearly defined nor finally settled, we are able to gather a fairly comprehensive idea of the subject from opinions expressed in former cases and also by text writers. Foster, in his work on the Constitution, says in part, as follows:

An impeachable offense may consist of treason, bribery, or a breach of official duty by malfeasance or misfeasance, including conduct such as drunkenness, when habitual or in the performance of official duties, gross indecency and profanity, obscenity or other language used in the discharge of an official function which tends to bring the office into disrepute, or an abuse or reckless exercise of a discretionary power, as well as a breach or omission of an official duty imposed by statute or common law; or a public speech when off duty which encourages insurrection.

Mr. Rawle, in his treatise on the Constitution, page 210, says:

Its foundation is that a subject intrusted with the administration of public affairs may sometimes infringe the rights of the people and be guilty of such crimes as the ordinary magistrate either dare not or can not punish.

The delegation of important trusts, affecting the higher interests of society, is always from various causes liable to abuse. The fondness frequently felt for the inordinate extension of power, the influence of party and of prejudice, the seductions of foreign States, or the basest appetities for illegitimate emoluments are sometimes productive of what are not inaptly termed political offenses, which it would be difficult to take cognizance of in the ordinary course of judicial proceedings.

Again, Mr. Foster, in his Commentaries on the Constitution of the United States, volume 1, page 569, says:

The object of the grant of the power of impeachment was to free the Commonwealth from the danger caused by the retention of an unworthy public servant.

Mr. Manager Benjamin F. Butler, of Massachusetts, during the impeachment trial of Andrew Johnson, President of the United States, very learnedly argued as follows:

We define, therefore, an impeachable high crime or misdemeanor to be one in its nature or consequences subversive of some fundamental or essential principle of government, or highly prejudicial to the public interest, and this may consist of a violation of the Constitution, of law, of an official oath, or of duty, by an act committed or omitted, or, without having violated a positive law, by the abuse of discretionary powers from improper motives for any improper purpose.

In view of the authorities I have just cited, I maintain that if Mr. Marshall has been proven guilty of any breach of official duty by malfeasance or misfeasance in office, or the abuse or reckless exercise of discretionary power, he has been proven guilty of an impeachable offense, and it is, therefore, the duty of this committee to recommend his impeachment.

I want to add here, gentlemen, that the right of a Member of Congress to impeach a Federal official carries with it the duty to exercise that power if the Member has information that leads him to honestly believe that any official has been guilty of gross and willful misconduct in the discharge of the duties of his office. It is the only redress reserved to the people to rid themselves of corrupt public officials. I would have considered myself negligent of my duty as a Member of the House if I had failed to bring impeachment charges against Mr. Marshall; also would consider this committee negligent of its duty as the authorized tribunal of the people in this matter if it fails to recommend the impeachment of Mr. Marshall for the gross official misconduct of which he has been proven guilty.

It is my purpose, gentlemen, to point out to this committee that Mr. Marshall has been proven guilty by the uncontroverted evidence before the committee, not only of maladministration of office and arbitrary and oppressive conduct, but that he has been proven guilty of indictable offenses as well, and if that be true, there is but one thing that this committee can consistently do, and that is to recommend that Mr. Marshall be impeached.

The first abuse of the powers of his office which I charge against Mr. Marshall is the corrupt and fraudulent use of the grand-jury subpœna, by which he has compelled witnesses, under the guise of appearing before the grand jury and sometimes when no grand jury was even in session, to come to his office where they have been interrogated, threatened, grossly insulted, and thrown into prison, in order to elicit from them false testimony to suit his foul ends and purposes. There is an abundance of testimony in the record proving this unlawful and unheard of procedure, and I shall not burden the committee by undertaking to point out all of it. It is sufficient to say that it was done in the Kugal case, in the Tanzer case, and others that were brought to the attention of the committee.

On page 268 of the hearings, Mr. Gilchrist, clerk of the United States District Court for the Southern District of New York, testified as follows:

Mr. GARD. Do you ever issue subpœnas in your office to anybody, or are they all issued in blank?
Mr. GILCHRIST. They are all issued in blank, practically.
Mr. GARD. All issued in blank, practically?
Mr. GILCHRIST. Yes, sir.
Mr. GARD. In other words, this is your practice: The district attorney may say, "I want some subpœnas"——
Mr. GILCHRIST (interposing). Yes, sir.
Mr. GARD (continuing). Whereupon you send up 50 or 100 blank subpœnas?
Mr. GILCHRIST. As many as they want. For example, they come and say: "We want subpœnas for use in the case of John Brown. We will send the list when we make them out." We send the subpœnas and the necessary tickets then.

On page 269, he says:

The subpœnas, as I have seen them, will bear on their top, for example, the United States subpœnas—a blank for the name of the witness, "will report to Room 208, district attorney's office," which is the clerk's office of the criminal branch—the district attorney's office. They report there before they try the case. Down below he will be required to attend the trial before so-and-so in the case of so-and-so. On top they put with a rubber stamp, "Witness will report at 208" at a certain time.
Mr. GARD. That may be the district attorney's office?
Mr. GILCHRIST. That is his office.
Mr. GARD. In other words, they report there before they go to the grand jury?
Mr. GILCHRIST. Before they go there, they report there; yes, sir.

On page 265, he made the following statement:

Mr. CARLIN. Is there any authority of law for issuing subpœnas in blank, addressed to no one?
Mr. GILCHRIST. I do not know of any authority to have them filled up before the clerk signs them.

On pages 443 and 444, the following testimony by Mr. Goodman on this abuse of the subpœna will be found:

Mr. WALSH. Well, after this interview what happened?
Mr. GOODMAN. I had been called about thirty or forty times on different occasions to show receipts, and he sent me several different places to try to identify different people.
Mr. WALSH. At any time did Mr. Hershenstein ask you to change your statement that you had made to him?
Mr. GOODMAN. Several times I came up there, and he always asked me, "Are you ready to change your story?" I told him I had no story to change, only the facts on the receipts that we had. * * *
Mr. WALSH. About how many times were you brought down to the district attorney's office before you were brought before the grand jury?
Mr. GOODMAN. Probably twenty-five or thirty times.
Mr. WALSH. Were you subpœnaed upon each occasion?
Mr. GOODMAN. He had a subpœna, and he told me that any time he rings me up I should come up without sending the marshal down.
Mr. WALSH. Who said that to you?
Mr. GOODMAN. Mr. Hershenstein. * * *
Mr. WALSH. Did you have any talk with Mr. Wood in reference to the matter?
Mr. GOODMAN. On one occasion, in Mr. Hershenstein's office, I was called in there, and Mr. Wood was present, and he says to Mr. Wood: "I think this fellow is not telling the truth; he is lying all the way through"; and he asked Mr. Wood, "What shall we do with him?"; and they started talking, and he says, "The best thing we can do is to indict this fellow, and he will change his story." I told them to go as far as they wanted; that I had told the truth.

Mr. Feldman, another witness, testified as follows on this point:

Mr. WALSH. Were you at any time subpœnaed to appear before the grand jury in New York in connection with the case of the United States v. Kugel?
Mr. FELDMAN. Yes, sir.
Mr. WALSH. On how many occasions were you called?
Mr. FELDMAN. I was here for one full week and half of the next week.
Mr. WALSH. When you first appeared here in response to the subpœna did you go before the grand jury?
Mr. FELDMAN. No, sir.
Mr. WALSH. Where did you go? What took place?
Mr. FELDMAN. I went to Mr. Hershenstein's office. Mr. Hershenstein questioned me what I knew about the Rogal & Brass case, and after I gave him the facts of the case he said that this would not do; that I would have to change my story. He said, "That don't sound right to me." And after asking me several more questions, to which I answered, he questioned me for fully two hours and told me to come back in the afternoon. In the afternoon it was a repetition of the same thing I had in the morning. Then he told me to come the next morning. The next morning he called me into the office again, and a man, whom I afterwards learned was Mr. Rogal, was in the office, and he spoke to him for a few minutes and then told him to go out, and he asked me the same questions over and over again. That happened all the same day—practically what happened the first day. The third day was a repetition of what had gone on before. That went on for nearly a week, and in the meantime he called in a stenographer and told him to copy down whatever questions were asked and answered * * * and then Mr. Hershenstein asked me to tell him the story over and over again, and called me down, and called me a liar, and threatened me, and told me he would send me to jail if I did not involve Mr. Kugel. I tod him Mr Kugel had nothing to do with any of my actions. He said: "If you don't involve Mr. Kugel, we will send you to jail. I will have you indicted."

And on page 497 he said:

Mr. Hershenstein called me in again, and Mr. Adams was there, and after Mr. Hershenstein asked me several more questions Mr. Adams butted in and said: "Oh, he would not involve Kugel for you. Give him the dumps; send him away." And Mr. Hershenstein threatened to send me away for two years if I did not involve Mr. Kugel.
Mr. NELSON. To send you away?
Mr. FELDMAN. Yes, sir.
Mr. GARD. What did he say?
Mr. FELDMAN. "Send you to prison."
Mr. GARD. What was his language, if you can recall?
Mr. FELDMAN. "I will send you to prison if you don't involve Mr. Kugel. We don't want you; we want Mr. Kugel," he said to me; those were his very words.

There has been an attempt on the part of some of Mr. Marshall's friends to reflect upon the character of some of these witnesses and the credibility of their testimony, but the existence of this abuse of the grand jury subpœna has been testified to by the clerk of the District Court for the Southern District of New York and has been harshly condemned by no less a distinguished person than Judge Mayer, a personal and close friend of Mr. Marshall.

Under this abuse of the grand jury subpœna it became necessary for Judge Mayer, according to his own testimony, to issue a writ of oral habeas corpus, as he called it, ordering the release of a certain old man who had been held in custody under one of these subpœnas by the district attorney's office, and in condemnation of such proceedings Judge Mayer made the following statement before the subcommittee (p. 238):

* * * Wherever it happens, I have been bitterly opposed to that practice ever since I first heard of it, and my first hearing of it was when Mr. Jerome originated the "John Doe" procedure and would serve men with a subpœna, and the men would be taken into the assistant's office practically helpless. I have been consistently bitter against that. I think it is wrong, I think it is unfair, and I think it is un-American.

And on page 239 he further states:

If a man is subpœnaed to go before the grand jury, he ought to go before the grand jury and no other place.

A further abuse of the grand jury subpœna by the district attorney's office is the calling of the witnesses of the defendant before the grand jury on the eve of the trial and there interrogating them and cross-examining them in order to get an unfair advantage of the knowledge of what the defendant's witnesses will testify to, which is, in effect, burglarizing the consciences of

the witnesses of the defendant by means of the grand jury system.

In his statement before this committee Mr. Slade had the following to say on this practice (p. 93):

Mr. SLADE. The procedure in New York stands by itself; there is no comparison. You simly can not get at it. No living man knows what the procedure is to be.

As an illustration, a case is marked on the calendar. The defendant comes in with his witnesses in a criminal case. The district attorney sends out his secret-service men and discovers who the witnesses are, and each of them receives a subpœna to appear before the grand jury on the eve of the trial, and each witness is examined as to what he will testify in favor of the defendant; and to our great surprise, when the trial comes on, we will find the Government witnesses changing the testimony to meet the conditions.

In the case of United States against Kugal the attorney for the defendant, Frank Moss, former district attorney for the southern district of New York, was compelled to address two letters to the district attorney, protesting against this abuse of the subpœna, in order to protect the interests of his client. His letters are as follows:

EXHIBIT No. 27, MARCH 1, 1916.

UNITED STATES V. KUGEL.

MARCH 12, 1914.

Hon. H. SNOWDEN MARSHALL,
*United States District Attorney.*

MY DEAR SIR: The other day an agent of the Government called upon the defendant Feldman at New Haven and interviewed him, without any notice to his attorney, whose office is in New Haven.

Yesterday Mr. Slade was called before the grand jury.

To-day Mr. Kugel's clerks have received subpœnas to appear for examination.

As to this last matter, if it were in the State court, it would be under the provision of section 835 of the code.

It is obvious to me that the Government is using the process of the grand jury to break into our case; to secure alleged statements of witnesses—and to do it in such a way as to deprive them, and deprive us, of a knowledge of the questions asked and answers given.

I wish to register my protest against this method of procedure, and I make it in the form of a letter, so that I may be able to refer to it in the future.

Yours, truly, FRANK MOSS.

P. S.—I find that one of Mr. Kugel's former clerks, a young lady, was subpœnaed last night, about midnight, at her home—frightened—and was required to be present in the courthouse at half past 8 this morning. If nothing else is done to our witnesses, such a course tends to frighten them, make them fear the Government, and make them afraid to testify freely and without constraint.

EXHIBIT No. 28, MARCH 1, 1916.

UNITED STATES V. KUGEL.

MARCH 18, 1914.

Hon. H. SNOWDEN MARSHALL,
*United States District Attorney,*
*Post Office Building, New York City.*

MY DEAR MR. MARSHALL: This case is on the calendar, and has been called a number of days, and is marked for Monday.

A grand-jury subpœna requires the presence and testimony this morning of Mr. Saxe, the partner of Mr. Kugel (and one of the firm which represented Rogal & Brass in the bankruptcy). Mr. Saxe is of counsel for Kugel in the pending case, and I am counsel with him.

The situation is that on the eve of the trial you are preparing your case in my camp under the secrecy of grand-jury procedure, using my associate as a witness, and calling upon the defendant's partner to testify concerning every matter which puts Kugel now in as a defendant. For reasons sufficient to you I have been denied an examination of Brass's statement. This is a situation entirely new to me, and it bewilders me though I have had some experience in preparing and prosecuting cases. I request you to countermand this subpœna in the interest of fair play.

Yours, truly, FRANK MOSS.

On page 603 Mr. Wood, first asistant in Marshall's office, in the following language admits that these protests were received and duly referred to Mr. Marshall and that he took no action on them.

Mr. GARD. In the Kugel-Feldman cases, do you remember calling to the grand jury the professional partner and personal friend of Mr. Kugel, whose name was Saxe?

Mr. WOOD. I remember that he was called.

Mr. GARD. Do you remember the letter of Mr. Moss protesting against such action?

Mr. WOOD. I do, sir.

Mr. GARD. Do you also remember the letter of Mr. Moss which protested against interview by agents of the Government of the defendant Feldman, in New Haven, without notice to his attorney?

Mr. WOOD. Well, I remember that there were a couple of letters written, but just what the substance of them were I don't know.

Mr. GARD. Were these letters transmitted to Mr. Marshall, the district attorney?

Mr. WOOD. They were.

Mr. GARD. They came to his personal knowledge?

Mr. WOOD. They did.

Mr. GARD. Did he take any action on them?

Mr. WOOD. I think not.

In further reference to the abuse of the subpœna in the Kugel case, I desire to point out the testimony of Mr. Saxe, partner and associate counsel for Mr. Kugel, who was called before the grand jury (p. 489):

Mr. WALSH. Were you subpœnaed, Mr. Saxe, at any time just previous to the trial of the action?

Mr. SAXE. Yes; that was the last time, while the case was on the day calendar, being adjourned from day to day. Two or three days before the case actually started in the trial in court I was subpœnaed before the grand jury. * * *

Mr. WALSH. Upon that occasion were you interrogated in reference to the Kugel case?

Mr. SAXE. Every angle of the Kugel case, from the beginning to the end of it, for nearly an hour and a half or two hours.

In addition to Mr. Saxe, every other witness of the defendant, Kugel, was called before the grand jury and forced to testify in regard to the case, among whom were Kugel's sick father, whose death was undoubtedly hastened in consequence thereof; Dorothy Handilman, telephone operator in the building where Mr. Kugel had his office; and Sophie Jettleson, Kugel's stenographer and typewriter.

What was done in the Kugel case seems to have been the common practice. The witnesses in the Rae Tanzer case and in the Slade case were not only brought before the district attorney for interrogation and intimidation but they were called before the grand jury for the purpose of securing testimony upon which to base an indictment against the defendants.

The abuse of the grand jury subpœna, compelling defendants and their attorneys to appear before the grand jury and forced to give testimony upon which indictments were returned, both against the defendants and their counsel.

The following extracts from a few of the witnesses is sufficient to illustrate the extent to which this infamous practice has been carried on:

On page 426, Simon Kugel, an attorney for Rogal & Brass, indicted bankrupts, was compelled by a subpœna to produce the books and papers connected with his case and to testify before the grand jury, and in consequence of such testimony he was indicted.

Aaron J. Feldman was called as a witness in the Simon Kugal case, and just prior to the trial thereof he was called before the grand jury and subjected to many indignities. On page 497, in answer to a question by Mr. Nelson, "You were not indicted?" Mr. Feldman answered, "Yes, sir." Mr. Nelson answered, "Oh, you were indicted." Mr. Feldman said, "Yes, sir; I was indicted the day after I was before the grand jury."

Another illustration of the corrupt use of the indictment is revealed in the case of Bard & Keen, wherein Bard & Keen were engaged in the sale of photoplay films, for which they had a contract with the Film & Photo-Play Co., located at Colorado Springs, Colo. Roger B. Wood, first assistant in Marshall's office, was employed as an attorney by this Colorado company to secure the possession of these films, and when he failed in his effort, after making demand for their return, Bard & Keen refusing to surrender them, and Mr. Wood, knowing that he would be defeated in a civil action to recover them, he then, with the knowledge and consent of Mr. Marshall, employed all of the powers of this great office to indict Bard & Keen.

This is practically admitted by Mr. Wood himself and by every other witness who testified concerning the matter.

On page 591 Mr. Wood admits that he went to the office of Bard & Keen for the purpose of securing possession of these films, and in his own language said:

I told them—

Keen, and so forth—

I would have to see what proceedings could be taken to recover the property.

On page 593 Mr. CARLIN asked:

Did you report to Mr. Marshall, either before or after this warrant was sworn out, your connection with the matter?

And Mr. Wood replied:

I made a full and complete statement as soon as I heard the question had been raised.

Mr. Wood, through Hershenstein, another assistant of Mr. Marshall, caused a criminal complaint in the Federal court to be filed against Bard & Keen, with the sole purpose, undoubtedly, of compelling these gentlemen to surrender the films in question. He had Bard arrested and lodged in jail at a late hour, when it was impracticable for him to furnish bail, caused excessive bail to be fixed on both Bard and Keen—one $5,000, the other $10,000—and while these gentlemen were in the custody of the United States marshal Wood caused their office to be burglarized, and took all their books, papers, and other effects.

It was not until Mr. Henry A. Wise, an intimate friend of Mr. Marshall, was employed by Bard & Keen that there was any disposition to "let up" in the persecution of these defendants. Through the agency of Mr. Wise an agreement was made with Mr. Marshall to submit this whole matter to a reputable attorney, William L. Wemple, as an arbitrator, which is admittedly an extraordinary proceeding, and is in itself an admission that this procedure was irregular and unlawful. After

hearing all the facts Mr. Wemple decided that there was no criminal offense against Bard & Keen, but, nevertheless, the defendants were held in custody until they had delivered to the said Wood the films demanded.

After it had been decided that there was no case in the Federal courts against Bard & Keen Mr. Wood hounded them by trying to secure an indictment against them in the State courts, and, on page 595, in answer to a question as to what he had to do with an effort to secure their indictment in a State court, he said:

I spoke to Mr. Marshall about the matter. I asked him if this was a good case for the State authorities, and he thought it was. "Well, then," I said, "ought we not to send it there," and he said, "Yes."

The extent to which Mr. Marshall and his subordinates used the powers of the district attorney's office to defeat these civil actions in the State courts is most astounding. Hon. Martin W. Littleton says he "wrenched" the jurisdiction of the court in the Rae Tanzer case. One of her witnesses, Frank D. Safford, who was the clerk at the Kensington hotel, identified James W. Osborne as the mysterious Oliver Osborne. He was indicted in the Federal court by Mr. Marshall for perjury upon the affidavit of Mr. Mayhew, a post-office inspector. This affidavit was procured at the instance of Mr. Wood and all of the evidence in this case shows that it was perjured. Mr. Littleton, in referring to it in his testimony, on page 816, says:

According to the evidence in this case Mayhew admitted that he made a positive affidavit as to a state of facts which he did not know of, and which, in my opinion, under the law of the State of New York, amounted to false swearing or perjury, and he stated when crowded on the question as to why he did it, that he was directed to do so by Mr. Roger B. Wood, assistant district attorney.

If this affidavit was perjury, and Mr. Wood knew it, he therefore became an accessory before the fact which, under all criminal law, makes him equally guilty with Mr. Mayhew as principal. He was undoubtedly guilty of subornation of perjury, and all of the evidence in this case shows not one single word to the contrary. Under this perjured affidavit Safford was arrested and his bail fixed at $15,000 and placed in prison, and in his affidavit he says, on page 875:

I was placed in murderer's row alone with instructions to show me no mercy.

When he was taken before the grand jury, he was subjected to indignities by Mr. Marshall, which is shown from the following extract from his statement under oath:

I appeared before the grand jury, and upon my entrance was saluted with the interruption by Mr. Marshall, "Safford, don't you know you are a thief?" And I said, "I do not." "You wrote this letter asking to make a statement to the jury and waiving immunity?" "I did; and would like to have the jury know exactly how I am situated in this matter." They then allowed me to tell my story of leaving the Kensington, and in detail about as I have stated previously in this affidavit, and I was interrupted by the district attorney, Marshall, who said: "Safford, you are lying; you have been coached; go back to your cell and think." And he turned to the grand jury and said: "Gentlemen, I do not want to ask this man any questions; he has been coached and is lying."

Through the corrupt practice of the Federal court and the district attorney's office, Safford was deprived of a fair and impartial trial, and in consequence thereof he was convicted of perjury, but the case has been reversed by the circuit court of appeals in which some of the injustices of that trial were clearly pointed out.

The corrupt methods by which Rae Tanzer, her attorneys, and her witnesses were indicted can be best illustrated by reference to the evidence of what is known as the composite picture. That picture was a fraud and was concocted in Marshall's office; in fact, it was a conspiracy for the purpose of manufacturing evidence upon which to indict private citizens to defeat the ends of justice in a civil suit in a State court. Samuel Hershenstein, one of Marshall's assistants, testified before the subcommittee and, on page 869, he gives the names of the conspirators. In answer to a question as to who was present in Marshall's office at the time when the plan was formulated, he replied as follows: "There was Mr. Offley, chief of the bureau of investigation; Mr. Le Gendre, the photographer; Mr. Wood; Mr. Marshall; myself; and Mr. James W. Osborne." Further on in his testimony he reveals the plan of the conspirators and the name of the man who authorized the composite picture to be made, in the following extract from his testimony, page 869:

Mr. CARLIN. Were you there when Le Gendre was engaged to make the picture?

Mr. HERSHENSTEIN. I do not think so. I am quite certain I was not. Engaged to make the picture? Oh, just a moment. Either Mr. Offley or Mr. Baker, of the Department of Justice, was there, and after Mr. Wood told me of the substance of the conversation, why, I do remember when Mr. Le Gendre was told to go ahead in his work, and the purpose of it, as I understood it——

Mr. CARLIN (interposing). Who told him to go ahead?

Mr. HERSHENSTEIN. Mr. Marshall. Mr. Marshall. The purpose being to have the Slades carry out their former intention of what they had in mind.

After having secured the perpetration of this miserable fraud, he used the fraudulent composite picture to secure an indictment against the Slades and others, as is admitted by the testimony of Mr. Hershenstein on page 870, which is as follows:

Mr. Slade, or the Slades, were indicted for a conspiracy to obstruct justice, one of the charges of the indictment being the attempt to get a picture whereby it could be shown that the girl and Mr. Osborne were at one time and place together.

Mr. Le Gendre was a photographer for the New York World and sought a picture of the Slade brothers in the first instance for the benefit of his paper, but the suggestion of the making of the composite picture led him off into a private matter at the instance of Mr. Osborne and Mr. Marshall, the details of which he recounts in his testimony on page 683, in the following language:

Mr. CARLIN. The truth is that instead of making the picture for Slade you made it for Mr. Marshall?

Mr. LE GENDRE. No; I made it at the suggestion of Mr. Osborne.

Mr. CARLIN. Who paid you for it?

Mr. LE GENDRE. Nobody paid me.

Mr. NELSON. But Mr. Marshall knew that you were about to make the picture?

Mr. LE GENDRE. Why, he knew that I was going to make that picture; yes. Because Mr. Osborne had suggested it.

Mr. NELSON. In his presence?

Mr. LE GENDRE. He asked me could I make it.

Mr. NELSON. That is, Mr. Osborne suggested it in the presence of Mr. Marshall?

Mr. LE GENDRE. In the presence of Mr. Marshall, Mr. Wood, and Mr. Hershenstein. That was to save him from going up there.

Mr. CARLIN. Who did you deliver the picture to?

Mr. LE GENDRE. To Mr. Wood; and Mr. Wood took it and walked into Mr. Marshall's office with it in his hand.

That Slade & Slade knew nothing about the manufacture of this piece of evidence is shown by Mr. Le Gendre's testimony on pages 679 and 680, which reads as follows:

Mr. WALSH. Did Mr. Slade ever ask you to get any picture for them?

Mr. LE GENDRE. No.

Mr. WALSH. Did they ever ask you or suggest to you the taking of this picture that you subsequently made up of Mr. Osborne and Miss Tanzer together?

Mr. LE GENDRE. No.

Mr. WALSH. Did they ever see that picture?

Mr. LE GENDRE. No.

Mr. WALSH. Did they ever at any time suggest to you an improper method for the making of a photograph of Miss Tanzer and Mr. Osborne?

Mr. LE GENDRE. No.

In order to bring the full power of the office of Mr. Marshall in the defense of this civil action is was necessary for him to transfer the whole proceedings from the State court to the Federal court. This he did by perjured and manufactured evidence and conspiracy, and as a result thereof indicted Rae Tanzer twice in the Federal court, also her attorneys, Slade & Slade, and all of her witnesses.

Hon. Martin W. Littleton, an ex-Member of the House, characterizes this whole proceeding as a "wrenching" of the jurisdiction of the courts. He says, "That if the Slades had brought a blackmailing suit, as it was claimed, there was a statute against blackmailing in the State, and the courts of the State were open, and that none of it had any logical or rightful place in the Federal jurisdiction." (811.)

THE OSBORNE CONSPIRACY.

The record facts show—page 716—that Rae Tanzer brought a civil action in the New York Supreme Court against James W. Osborne on the 16th day of March, 1915. Three days thereafter, on March 19, 1915, Rae Tanzer was arrested on a warrant issued out of the United States district court for the southern district of New York on an alleged affidavit by the defendant, James W. Osborne, charging her with a scheme to defraud by use of the mails in having written a letter to the said Osborne, and appeared before United States Commissioner Houghton on March 24, 1915, by her attorneys, Messrs. Slade & Slade, where she called as witnesses to sustain her contention that James W. Osborne was the man who had seduced her, one Safford, and Rose and Dora Tanzer. Thereupon and on the 3d day of April, 1915, Safford and Rose and Dora Tanzer, who testified before said commissioner, were arrested on a complaint sworn to by Post Office Inspector Swain, charged with perjury before said commissioner, and Maxwell and David Slade were arrested, charged with conspiracy to obstruct justice, as was also McCullough, a detective employed to get evidence for Miss Tanzer in the civil action. All of them were finally indicted by the grand jury of the United States district court for the southern district of New York. The indictment against the Slades and McCullough, after alleging that they procured Safford to falsely identify James W. Osborne, alleges as follows:

And in and by arranging for the preparation of a false and misleading photograph, which was to be taken in such a manner as falsely to indicate that the said James W. Osborne and the said Rae Tanzer had theretofore willingly been photographed together, which said false and misleading photograph the defendants intended to use as evidence in any

judicial proceedings which might ensue in the district court for the southern district of New York, after the termination of the said hearing before said commissioner.

And under the heading of "Overt acts" as follows:

And in pursuance of the said conspiracy and to effect the objects thereof the defendants, Maxwell Slade and David Slade, at their office at 200 Broadway in the city, county, and southern district of New York, on the 23d of March, 1915, had a conversation with one Clarence Le Gendre.

Le Gendre is the only person named in the indictment as having conspired with the Slades to manufacture this picture, and his testimony, besides that of Maxwell and David Slade, is to the contrary. It becomes self-evident that a conspiracy was entered into by H. Snowden Marshall, James W. Osborne, and others to indict everyone connected with the plaintiff in the civil action, to prostitute the office of the United States district attorney for the southern district of New York; to oppress law-abiding citizens; to illegally shield and protect James W. Osborne; to use the grand jury for illegal purposes; to use the processes of the United States courts illegally; to obtain indictments without any evidence; and, by allowing said indictments to become public and published in the newspapers, to use the said office for the purpose of slandering, libeling, and ruining reputable citizens and members of the bar. Le Gendre testified before this committee that James W. Osborne and Mr. Marshall suggested the manufacturing of this fake photograph, and that he never told the grand jury that the Slades had ever authorized him or agreed with him to fake or manufacture the said photograph; and yet they were indicted for doing it.

The only other overt act charged against the Slades in the indictment was that they assisted in the identification of James W. Osborne while in the court room, a charge so ridiculous that every member of the committee must see immediately that it was merely a part of the general conspiracy, for they were the attorneys in the matter and had a right to talk to and ask the various witnesses whether they could identify the said James W. Osborne.

This part of the charge is covered in the testimony of Hon. Martin W. Littleton before this committee, and as there explained becomes so ridiculous it is almost impossible to believe the facts to be true at this day and age, which are, in effect, as follows:

James W. Osborne having testified in the examination before Commissioner Houghton on the arrest of Rae Tanzer that he was not at a certain hotel with her on a certain day when Safford was the clerk of the hotel, a stranger to the Slades, they brought him to New York for the purpose of seeing James W. Osborne in the court room at the hearing, and, when he said James W. Osborne was the man, put him on the witness stand, had him testify, as it was their duty to their client, irrespective of the truth or falsity of his statement, for it has never been alleged that they knew, of their knowledge or through any information that they had obtained, that James W. Osborne was not at the hotel on the day that Safford and Rae Tanzer swore he was; and while it is true that Safford was afterwards tried and convicted for perjury, yet it is far from showing that the Slades knew of the untruth, and the conviction has been reversed by the circuit court of appeals, which has said, in so many words, that the defendant never had a fair trial. (See opinion, circuit court of appeals, May, 1916, which ends by saying: "Without going further into the record, it is enough to say that the defendant had a right to be tried in accordance with the rules of law. The judgment is reversed.")

This conspiracy certainly makes a clear case against Mr. Marshall, and ought to be enough in itself to sustain the impeachment charges against a high public official, for if it is going to be permitted as a precedent that a United States district attorney can debase his office to the extent shown in this transaction by the actual commission of crime, namely, conspiracy to wrongfully use the processes of the court to obstruct justice and to oppress citizens of good repute—for the testimony shows that the Slades were of excellent repute until that time, (see p. 1321, Littleton's testimony)—and to misuse the grand jury, as done in this case, then all the bulwarks of our liberty and law are at the mercy of any man daring to use them for sordid, personal, or tyrannical purposes.

THE TANZER CONSPIRACY.

Rae Tanzer was arrested three days after she brought a civil suit for breach of promise against James W. Osborne in the New York Supreme Court (pp. 704 and 717), because she wrote a letter to James W. Osborne, charging her with the crime of using the mails to defraud. Copy of the letter has been submitted to the committee and is referred to in the testimony. It is only necessary to read this letter to see at a glance that her arrest was not based on the commission of a crime, but must have been caused by a conspiracy of those in charge of the process of the United States district attorney for the southern district of New York, and as Mr. Marshall had the said affidavit drawn in his office and had it presented and appeared in person and with his associates in prosecution, he certainly has been guilty of the vilest conspiracy to interfere with justice and to break up a legal action brought by a plaintiff in another court by "wrenching" the jurisdiction of a court in which he had power, arresting the plaintiff in the civil action, her witnesses, and all her relatives, for her sisters were also indicted for the testimony they gave at her hearing.

The warrant of arrest and the indictment were based on this affidavit, as a result of which this young girl had to actually spend time in a prison cell and to get bondsmen and employ attorneys; and there can be no doubt in the mind of any person who reads the letter for writing which she was arrested and indicted, that the arrest was improperly secured. If it were not so serious it would be a joke and fit for a farce comedy, that a love letter can be the basis of using the mails to defraud. To further harass her he afterwards obtained an indictment against her for her testimony on the hearing as perjury. In this connection it must be pointed out that if the jurisdiction of the United States district court for the southern district of New York had not been wrongfully asserted to arrest Rae Tanzer, or "wrenched," as Mr. Littleton puts it, there could never have been any indictment of Safford, McCullough, Maxwell Slade, David Slade, Rose Tanzer, or Dora Tanzer. Hence this conspiracy to arrest Rae Tanzer resulted in the public disgrace of all these persons, the ruination of character, oppression such as has never been equaled in this country. In aid of this conspiracy the defendant Marshall and his assistants obtained from this little girl a retraction of her identification of James W. Osborne through fraud and deceit, when she believed she was giving it under a written agreement of immunity and for the purpose of avoiding further disgrace of her family, her former attorneys, and the witnesses, all of whom had acted for her without compensation (p. 116).

Here we have Safford, a man of 62, Dora and Rose Tanzer, two respectable young working women, and the ruined girl herself, Rae Tanzer, testifying to and identifying the man who seduced her. Under what theory could the United States courts or the United States district attorney's office get jurisdiction? It defies reason to base jurisdiction on the letter she wrote, and all the other indictments arose out of the charges based on that letter.

The Tanzer-Osborne matter forms the most amazing and disgraceful exhibition of malpractice and the commission of crime by a public officer ever submitted to any court in this country.

THE TRIBUNE CONSPIRACY.

The testimony of Mr. Victor A. Watson (p. 970) was in effect as follows: That in the year 1914 and the early part of 1915, he called on Mr. Marshall and submitted to him various complaints in reference to a scheme to defraud by use of the mails. The Tribune, a New York newspaper, was obtaining large sums of money by falsely representing certain property which it was selling and using the mails in carrying out the fraud, and Watson, together with two post-office inspectors, and an assistant of Mr. Marshall, then conducted further investigations as a result of which all of them came to the conclusion that a good case had been made out agninst the New York Tribune, but when the matter was finally submitted to Mr. Marshall he failed and neglected to prosecute, and Mr. Marshall said, referring to Mr. Henry Wise, the attorney for the Tribune, who testified before this committee and who was the United States district attorney preceding Mr. Marshall (see p. 923):

> However, I have decided that the best thing we can do is to delay the case and I have so written Henry Wise.

And Watson testified (p. 923):

> To say that I was astonished is expressing it mildly. I said, "Mr. Marshall, isn't that rather unusual—why the letter to Mr. Wise?"
> He (Marshall) smiled and said, "Well, I want to let Henry collect his fee and get away on his vacation."

And on the same page Mr. Watson further states that nothing further has been done in the matter.

This instance of where information was brought to the attention of Mr. Marshall, showing the commission of a crime, whereby thousands of dollars were being obtained from the people fraudulently, and the refusal or neglect of Mr. Marshall to proceed, is a clear instance falling under the impeachment charges, and one needs only to read the testimony in order to see that a strong case had been made and that Mr. Marshall was more interested in letting "Henry" collect his fee and get away on his vacation than prosecuting a public offender of large caliber, and is another evidence of a conspiracy entered into by him to evade the laws of the United States.

Compare this with his acts in the Osborne-Tanzer case:

I have not attempted, gentlemen, to cover in detail the irregularities and misconduct in office on the part of Mr. Marshall, because I believe the committee is cognizant of these wrongs as well as myself. I have merely attempted to draw your attention to some of these offenses in order to show that my charges against Mr. Marshall have been sustained by the evidence, and that Mr. Marshall has proven himself utterly unfit to retain the responsible position which he now occupies.

His gross neglect and refusal to prosecute wrongdoers of the large type is in strong contrast with his pernicious persecution of innocent persons. His untiring efforts to shield his friends, for whom he has destroyed material evidence, falsified indictments, and committed perjury and subornation of perjury, become all the more criminal when compared with his zeal in prosecuting defendants against whom his wrath has been directed. And as a further evidence of the absolute inequality of justice as administered by Mr. Marshall we find him using every means possible to shield from the law such crimes as were committed by the New York Tribune, Mr. Silva, and Mr. Strauss.

I might further add in this connection that my charges of gross misconduct in the prosecution of the Tobacco Trust have been substantiated. Mr. Ochs, chairman of the Retail Tobacconists' Association, Mr. Locker, a tobacco wholesaler and jobber, and Mr. Thompson, the assistant of Mr. Marshall who investigated the charges against the Tobacco Trust, have all testified that the trust is now operating in violation of the antitrust law and the decree of the United States Supreme Court, and yet Mr. Marshall refuses to prosecute the trust as directed by the Attorney General, the result being that the people are being robbed of millions of dollars annually.

As I stated previously, gentlemen, it is not my intention to go over this entire matter in detail. Mr. Marshall has been charged with gross misconduct and malfeasance in office and the charges have been sustained by the uncontroverted evidence before the committee.

Mr. Marshall has been proven guilty and should be impeached, and I respectfully urge that the committee find accordingly.

---

## Rural Credits.

## SPEECH

OF

# HON. T. H. CARAWAY,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, June 27, 1916.*

The House had under consideration the conference report on S. 2986, the rural-credits bill.

Mr. CARAWAY. Mr. Speaker, in adopting this conference report we shall give to the farmers of this country a rural-credits system. That is a goal for which many of us have devoted the greater part of our congressional careers. Its attainment brings both joy and regret. We rejoice that a rural-credits law is to be on the statute books. We regret that its terms in some respects do not embody all for which we have in the past hoped and striven. I came to Congress with fixed convictions concerning this kind of legislation. I believe I understand the problems with which farmers contend. I have spent my life among them. All my people before me as far back as I can trace my ancestry were farmer folk. All my kith and kin are farmers. It necessarily follows that both my interests and my sympathies lead me to engage with them in their struggles against unjust economic conditions. And, however I may differ in detail with the committee that drafted this legislatin, in the whole I approve it, and wish here and now to congratulate the committee on the successful conclusion of its work. [Applause.] No question has arisen in Congress about which there have been more divergent opinions than that of rural credits, and this bill as nearly, if not more so than any other, harmonizes these conflicting views. If it does not accomplish all that we wish, we must remember that legislation is a compromise, a compromise not only of men and ideas but of sections. As such, I accept this legislation. If it be defective, time will disclose these, and a succeeding Congress will correct them. That the farmers have waited long and waited patiently for relief from unsound economic conditions that have stripped them of their profits is not to the credit of Congress. Opportunities to grant them relief have heretofore been frittered away because all could not agree merely as to detail respecting the provisions of a bill to grant them relief. Too many men entrusted with opportunity and power have refused to help, because in the enactment of a law each could not play the major rôle. This Congress and the American farmers, and, aye, the American people, both producers and consumers, are to be congratulated that that spirit has not prevailed here. This legislation, the conference report of which we shall adopt to-day, embodies no one man's work. Most of us have suggested changes. Some were accepted, others rejected; but we realize, I believe—I know I do—that it is easier to remedy defects in existing laws than to write new ones, therefore I am persuaded the majority of this Congress will accept this bill, and if perchance it does not grant all the relief we feel the American farmer is entitled to receive at our hands, we here and now pledge ourselves to correct these mistakes as time may disclose the necessity therefor.

INTEREST RATE ON FARM LOANS ALREADY LOWERED.

There is one thing I do know: That since this House passed this measure a few weeks ago the interest rate on farm loans in my own State has dropped at least 1 per cent. [Applause.] The rate of interest prevailing heretofore in that State on farm loans was from 8 to 10 per cent. Eight per cent was the lowest, and that only on large loans and on the very best of security; but since it has become apparent that this bill in some form was to become a law, advertisements have appeared in the daily papers in Arkansas offering to loan money to farmers on their lands in that State without the cost of appraisement, examination of title, or commissions, and on most favorable terms, at 7 per cent. I, myself, am recently in receipt of a letter from a large insurance company in the East offering to loan money in Arkansas on somewhat unfavorable terms at 6 per cent. From this and other information I am convinced that when this bill shall have been enacted into law the interest rate on farm loans in the South will be lowered at least 25 per cent; that is, the rate on private money loaned by private persons. This will be a saving to the farmers of the Southland of enormous sums that heretofore have been unjustly wrung from them by the money lenders of this country.

CARAWAY BILL OFFERED AS SUBSTITUTE.

I introduced a rural-credits bill during my first session in this House that embodied ideas and ideals that have been approved by farm organizations in every State in this Union. Its terms were simple and easy to comprehend. It was indorsed by the legislative council of the National Farmers' Union and many of the State organizations. I have consistently and continuously pressed for its passage. I offered it as a substitute for this pending measure on the 9th day of May, 1916. The Committee of the Whole adopted it by a rising vote of nearly 2 to 1. It was defeated, however, on a call for tellers. This bill we are now considering as a substitute for a Senate bill was then again laid before the committee for consideration. It is infinitely a better bill than the one introduced by the joint committee authorized by a joint resolution in the Sixty-third Congress to investigate the question of rural credits. The Senate bill was a better bill than that committee bill, but the Committee on Banking and Currency in the House that reported out this measure has greatly improved the Senate bill. We amended this Senate bill in its passage through the House, and it then went to conference. The conferees bring back this proposed measure on which we are about to vote. In some respects it is even better than the Senate bill as amended in the House, but in others not so good. It is so good, however, that it will command the vote of every true friend of the farmer in this House. I shall discuss some of its provisions briefly. I trust the committee and the House will not think me presumptuous in calling attention to the fact that this proposed law contains many of the provisions of the bill I introduced, and that many of these provisions at that time had been contained in no other proposed bill on this subject.

SIMILARITY OF SOME PROVISIONS OF THE TWO MEASURES.

First. There is created a board known as the Farm Loan Board. This is in the Department of the Treasury.

Second. The Federal farm-loan commissioners are to be appointed by the President by and with the consent of the Senate, and of this board the Secretary of the Treasury is to be a member.

Third. Loans are to be made to farmers, and farmers only.

Fourth. These loans are to be granted both on the lands and the improvements thereon. This provision was contained in my bill, and had been provided for in no other prior to its introduction.

Fifth. The agents and employees of the system are to be selected for fitness and without any regard to the civil-service requirements. The advantage of this was pointed out by me

in a speech on this subject delivered in the House on the 15th day of February, 1915, and that was the first suggestion that these employees should be selected solely for their fitness and without any reference to the provisions of the civil-service regulations.

Sixth. The farmers are to be permitted to borrow money not only to improve the lands that they then might own but to acquire lands on which they shall shortly fix their homes.

Seventh. The mortgages executed to secure these loans are exempted from taxation—National, State, and municipal. This is a just provision, as heretofore a farmer who borrowed money on his lands was taxed both on the lands and on the mortgage, because the lender increased the interest rate to cover the tax he had to pay on the mortgage. This bill relieves him of this double taxation.

Eighth. This bill grants to the farmer the privilege to repay his loan in full or in part any time after the expiration of 5 years, even if in its terms his loan was to run for 40 years. This is a great advantage to the borrower, as it enables him to adjust his loan at any time after 5 years to meet a falling interest rate, or for any other purpose, while at the same time, if he prefers it to remain, he is guaranteed against a raise in his interest rate for a full period of 40 years.

Ninth. The bill fixes both the minimum and maximum amount that may be loaned to any one person. This provision was carried in my bill for the first time, so far as I know, and it was

56280—16218

included in this measure on an amendment offered by me in the House.

Tenth. It grants to the borrower the right to have his lands reappraised at any time. This is a valuable right. He may under its provisions, if the security will justify it, by that means procure an additional loan on his lands or he may take advantage of any difference in the interest rate in his favor.

Eleventh. The amortization plan is adopted. This enables the farmer, as the term implies, to pay off his loan in annual installments. These installments will be a very little more than the annual interest rate. The advantage is obvious. At the expiration of the period for which the loan was made the borrower will have discharged his entire indebtedness with these small annual payments. The advantages of this will be more particularly set out in tables I shall include in these remarks.

Twelfth. There is a provision in this bill whereby the Federal land bank, through its agents, may extend the time in which interest and amortization sums must be paid for a period of two years, if the reasons offered by the borrower which he alleges make it impossible for him to pay are thought to be good. This is a most valuable provision. It will prevent a borrower from losing his lands by foreclosure where misfortune may have overtaken him. It grants him a respite of two years before any additional burdens are laid upon him.

The above provisions are the more important ones that were contained in the bill I introduced. I shall now briefly discuss other provisions of this bill. This I shall not do, however, in detail. I undertook to do that in a speech when this measure first came into the House. The act consists of 35 sections, most of which deal with the organization of the various agencies to carry it into effect.

Section 1 sets out the title of the act.

Section 2 is one of definitions.

Section 3 provides the method of appointment of the members of the Federal Farm Loan Board, specifying their terms of office and salaries. It also gives to them the power to select all their subordinates. This board is charged with a further duty of having prepared printed instructions to farmers who wish to become borrowers under the system, as well as literature calling to the attention of those who wish to purchase the bonds issued under the provisions of this act the advantages of these investments.

Section 4 divides the continental United States, excluding Alaska, into 12 districts, and provides that there shall be established in each of these districts a Federal land bank. The directors of these banks, after their organization, shall be elected by the stockholders therein. These stockholders are to be the borrowers under the system.

GOVERNMENT AID TO FARMERS.

Section 5 provides that the Federal land banks each shall have a capital stock of not less than $750,000. This capital, if private parties do not subscribe it within 30 days after the books are opened for subscription, shall be advanced by the National Government. It further provides that on these funds so advanced the Government shall be paid no dividends or interest. In other words, the Treasury of the United States is open to the farmers for the entire capital of these banks, amounting to $9,000,000, and the use of these funds is to cost the farmers nothing. This is a substantial and valuable aid extended by the National Government to the farmers of this country.

Section 6, under certain circumstances, makes these Federal land banks Government depositaries, and at all times Federal agencies.

Section 7 deals with the terms and conditions under which farmers may become borrowers. It gives to the farmers who wish to borrow money under the system complete control of all the machinery by which the loans are to be made. It enables him to deal with his own friends and his neighbors. They appraise his lands. They employ their own agents and arrange all the details of the loans in their immediate community. This takes from them the hardship of being compelled, as now, to deal through foreign agencies. This section also contains the provision limiting the amount to be loaned to any one borrower at not more than $10,000. It provides further that these loans shall be made on none but agricultural lands; that is, farm lands; but not necessarily improved. It grants to him permission to use this money so borrowed in improving his lands, building houses, buying stock, machinery, and all necessary equipment for his farm, as well as permission to pay off existing indebtedness for whatever purpose it may have been incurred. It contains a further and most wholesome provision that no one shall hold lands where the aggregate of the indebtedness for money borrowed under this system is in excess of $10,000. This provision will prevent the use of the system by land speculators who wish to borrow money for the purpose of buying lands for speculative purposes. I am pleased to say that this provision came into the bill through an amendment offered by myself.

Section 8 sets out the provisions for the organization of what is known as the National Farm Loan Associations. These are to be associations of farmers who wish to become borrowers. Under the provisions of the bill they associate themselves together in a corporation, with all the powers incident thereto, and with but little, if any, expense.

Section 9 deals with the same subject, and provides the conditions and restrictions incident to the organization.

Section 10 sets forth the manner of appraising lands on which loans are sought.

Section 11 also deals with the national farm loan associations, its powers, obligations, and exemptions.

INTEREST RATE NOT TO EXCEED 6 PER CENT.

Section 12 contains further provisions with reference to the national farm-loan associations, setting forth the restrictions, opportunities, and advantages of borrowing under the system. It contains provisions with reference to the uses for which the money borrowed under this system may be used. It also contains a most helpful restriction; that is, that the interest rate shall not be in excess of 6 per cent. It may be much less. It also provides that the borrower shall not be required or permitted to pay any commissions or gratuities of any kind to any official or person through whom the loan is negotiated. There is a restriction, however, that the sum borrowed shall not be in excess of 50 per cent of the value of the land, and 20 per cent of the value of the permanent insured improvements thereon. The House bill provided 60 per cent of the value of the lands might be loaned and 20 per cent of the value of the improvements. The conferees have reduced that to 50 per cent of the value of the lands and 20 per cent on the improvements. The provision, however, permitting the loans to be made on the improvements is a wise one. This provision was carried for the first time in the bill I introduced. Its advantages were called to the attention of the House in a speech to which I referred a short time ago. I think it will prove to be of great advantage. This section also contains a provision for reappraisement, the advantages of which I have heretofore pointed out.

Section 13 defines the powers of the Federal land banks.

Section 14 contains the restrictions on these banks.

Section 15 provides that where national farm-loan associations for any reason have not been organized farmers who wish to borrow may do so through agents of the Federal land banks, subject to the same conditions and restrictions, and at the same rate of interest. The agents are to be banks or trust companies and may receive not more than one-half of 1 per cent for their commission in making these loans and collecting the interest thereon.

Section 16 is the section most criticized by the friends of this proposed legislation. This section gives to private capital the right under certain conditions to organize joint-stock land banks, which are authorized to loan money on first mortgages on farm lands and to issue bonds based on this collateral.

FARMER'S LOAN EXEMPT FROM TAXATION.

These bonds are exempted from taxation—National, State, and municipal. This is a great advantage, and one that many of us thought ought not to be granted unless with certain restrictions. It is believed by many that it will cripple the entire system; that these joint-stock land banks which are permitted to loan money in any amount on farm lands to any person and for any purpose, whether the person be farmer or speculator, will defeat the very object sought to be accomplished by the enactment of legislation of this kind; that is, that it will increase and not decrease the number of tenant farmers in this country, because we all recognize that the price of land in some respects, at least, is governed by the rate of interest that is charged for money loaned on these lands. Therefore to exempt private capital loaned on these lands from any of the burdens of taxation will give to those institutions a most decisive advantage. Those who deal with them, it is presumed, will be permitted to share in these advantages, because the bill itself provides that these banks shall not be permitted to charge a rate of interest in excess of 1 per cent above the rate borne by the bonds that they may issue and sell. It is apparent, then, if we cheapen the rate of interest on money to be loaned on certain agricultural lands by exempting the money so loaned from its burden of taxation, we will raise the price of these lands. This is inevitable. This will, as a matter of fact, then, make more difficult for those who are now without lands to become the owners thereof, and will inevitably lead to an increase of tenant farmers and to a larger number of absentee landlords. It will start an era of speculation and, I fear, an inflation of land values. This will of course lessen the opportunity of the poor man to buy lands. Another disadvantage incident to this section will be that these joint-land banks are without restrictions as to the locality, save that they must be confined to not more than two States, and they can relieve the borrower of any restrictions as to the uses for which he wishes to borrow the money or as to the nature and kind of business in which he is engaged. The more desirable loans will go to these joint-stock land banks, and thereby make it more difficult for genuine farmers to form associations and take advantage of the provisions of this measure. If these bad results shall follow—and I fear they may—I am certain a succeeding Congress will repeal this section.

In section 17 are the provisions incident to the Federal farm-loan board.

Section 18 embraces the provisions and conditions under which the Federal land banks may issue bonds. These bonds are secured by first mortgages on farm lands. The banks may issue these bonds to the extent of twenty times their capital stock.

Section 19 amplifies this provision.

Section 20 deals with the bonds to be issued under the provisions of this act, and prescribes that their denominations shall be in amounts of $25, $50, $100, $500, and $1,000, and in series of not less than $50,000. It provides the manner in which they shall be engraved and the expense incident thereto.

Section 21 makes each of the farm-land banks liable for the payment of any bonds issued by any of the other banks. In other words, it makes each bank liable for all the obligations of every one of the other 11 banks. This is a most helpful provision. It assures the payment of all bonds issued hereunder. It will also cheapen the interest rate and in a great measure tend to equalize the interest rates throughout the various sections, so that money on farm lands may be borrowed as cheaply in my State as it may in Massachusetts.

AMORTIZATION PLAN.

Section 22 provides for the amortization and interest payments. The amortization plan as applied to farm loans is the most helpful provision of this bill. It will enable the borrower to repay his loan in annual installments that are little in excess of his interest rate. The burden of repayment, distributed thereby through a number of years, is so slight as to hardly be appreciated. As an illustration of the advantages of this system I am inserting the following tables at this place. A careful study of this table will disclose the fact that a loan at 6 per cent running for 40 years will be repaid at an annual repayment of but a little more than 6¼ per cent, the 6 per cent being the interest and the fraction of 1 per cent being that part of the principal repaid at each annual interest-paying period. As pointed out, the borrower has the option of paying all or any part of his obligation at the expiration of five years. Should he desire that his loan should run for 20 years, we will say, the table given below will illustrate how a loan of $1,000, bearing interest at the rate of 5 per cent, will be retired in 20 years at an annual payment of $80.24. A study of the columns shows how from year to year the interest is reduced and the portion of the payment which goes to discharge the principal steadily increases, the final payment canceling the debt:

*Table showing the repayment of a loan of $1,000 in 20 years at 5 per cent.*

| Annual period. | Total annual payment. | Interest at 5 per cent. | Paid on principal. | Amount of principal still unpaid. |
|---|---|---|---|---|
| 1 | $80.24 | $50.00 | $30.24 | $969.76 |
| 2 | 80.24 | 48.48 | 31.75 | 938.00 |
| 3 | 80.24 | 46.90 | 33.34 | 904.67 |
| 4 | 80.24 | 45.23 | 35.01 | 869.66 |
| 5 | 80.24 | 43.48 | 36.76 | 832.90 |
| 6 | 80.24 | 41.64 | 38.59 | 794.31 |
| 7 | 80.24 | 39.71 | 40.52 | 753.79 |
| 8 | 80.24 | 37.68 | 42.55 | 711.23 |
| 9 | 80.24 | 35.55 | 44.68 | 666.56 |
| 10 | 80.24 | 33.32 | 46.91 | 619.64 |
| 11 | 80.24 | 30.98 | 49.25 | 570.39 |
| 12 | 80.24 | 28.51 | 51.72 | 518.67 |
| 13 | 80.24 | 25.93 | 54.31 | 464.36 |
| 14 | 80.24 | 23.21 | 57.02 | 407.34 |
| 15 | 80.24 | 20.36 | 59.87 | 347.46 |
| 16 | 80.24 | 17.37 | 62.87 | 284.60 |
| 17 | 80.24 | 14.23 | 66.01 | 218.59 |
| 18 | 80.24 | 10.93 | 69.31 | 149.28 |
| 19 | 80.24 | 7.46 | 72.78 | 76.50 |
| 20 | 80.24 | 3.82 | 76.54 | ..... |
| Total | 1,604.80 | 604.80 | 1,000.00 | ..... |

The following table will show what would be the annual payment required to repay $1,000 in 36 years at 6 per cent; that is, an annual payment of $68.39 will pay the interest and repay the principal of $1,000 drawing interest at 6 per cent within the period of 36 years. One thing that should not be lost sight of is that under this system the borrower and not the lender has the option of fixing the time of his loan, whether it should be for a long or short period. This is a reversal of the conditions that now exist:

*Table showing the repayment of a loan of $1,000 in 36 years at 6 per cent.*

| Annual periods. | Total annual payment. | Interest at 6 per cent. | Paid on principal. | Amount of principal still unpaid. |
|---|---|---|---|---|
| 1 | $68.39 | $60.00 | $8.39 | $991.61 |
| 2 | 68.39 | 59.49 | 8.90 | 982.71 |
| 3 | 68.39 | 58.96 | 9.43 | 973.28 |
| 4 | 68.39 | 58.40 | 9.99 | 963.39 |
| 5 | 68.39 | 57.80 | 10.59 | 952.80 |
| 6 | 68.39 | 57.16 | 11.23 | 941.57 |
| 7 | 68.39 | 56.49 | 11.90 | 929.68 |
| 8 | 68.39 | 55.79 | 12.60 | 917.08 |
| 9 | 68.39 | 55.02 | 13.37 | 903.71 |
| 10 | 68.39 | 54.28 | 14.11 | 889.60 |
| 11 | 68.39 | 53.37 | 15.02 | 874.58 |
| 12 | 68.39 | 52.47 | 15.92 | 858.66 |
| 13 | 68.39 | 51.52 | 16.87 | 841.79 |
| 14 | 68.39 | 50.50 | 17.89 | 823.89 |
| 15 | 68.39 | 49.43 | 18.96 | 804.93 |
| 16 | 68.39 | 48.29 | 20.10 | 784.83 |
| 17 | 68.39 | 47.08 | 21.31 | 763.52 |
| 18 | 68.39 | 45.81 | 22.58 | 740.94 |
| 19 | 68.39 | 44.45 | 23.94 | 717.00 |
| 20 | 68.39 | 43.02 | 25.37 | 691.63 |
| 21 | 68.39 | 41.49 | 26.90 | 664.73 |
| 22 | 68.39 | 39.88 | 28.51 | 636.22 |
| 23 | 68.39 | 38.17 | 30.22 | 606.00 |
| 24 | 68.39 | 36.36 | 32.03 | 573.97 |
| 25 | 68.39 | 34.43 | 33.96 | 540.01 |
| 26 | 68.39 | 32.40 | 35.99 | 504.02 |
| 27 | 68.39 | 30.24 | 38.15 | 465.87 |
| 28 | 68.39 | 27.94 | 40.45 | 425.42 |
| 29 | 68.39 | 25.52 | 42.87 | 382.55 |
| 30 | 68.39 | 22.95 | 45.44 | 337.01 |
| 31 | 68.39 | 20.22 | 48.17 | 288.84 |
| 32 | 68.39 | 17.33 | 51.06 | 237.78 |
| 33 | 68.39 | 15.26 | 53.13 | 184.65 |
| 34 | 68.39 | 11.07 | 57.32 | 127.33 |
| 35 | 68.39 | 7.63 | 60.76 | 66.57 |
| 36 | 70.56 | 3.99 | 66.57 | ..... |
| Total | 2,464.21 | 1,464.21 | 1,000.00 | ..... |

Section 23 deals with reserves and their manner of accumulation.

Section 24 contains other provisions dealing with the same subject and also provides the means by which the interest and amortization payments of any borrower who is unable to meet his obligation may be taken care of for a period not exceeding two years. This is a wise and sympathetic provision.

Section 25 deals with defaults made by borrowers and the manner in which these defaults are cared for, and results in extension of loans so that no deserving and honest borrower will be harshly dealt with should misfortune overtake him.

Section 26 deals with the tax exemptions of the assets of these banks which are exempted from taxation, except their real estate.

FARMERS' BONDS TO BE LEGAL INVESTMENTS FOR TRUST FUNDS.

Section 27 makes the bonds issued by both the Federal land banks and the joint-stock land banks legal investments for all fiduciary and trust funds, and provides also that they may be accepted as security for all public deposits. This provision gives to these bonds the advantages heretofore accorded only to United States bonds. It will greatly increase the demand for these bonds, and result in a lower interest rate to the farmer who borrows under the system, and ultimately enables him to borrow at an interest rate very little, if any, higher than the Government pays.

Section 28 deals with the examination of the Federal land banks. It provides that these banks shall be examined pretty much as national banks now are.

Section 29 provides the means of dissolution of banks or the appointment of receivers in case of insolvency.

Section 30 gives to the farm-loan commissioner who shall be appointed under the provisions of this bill the authority to inquire into the laws of the various States, to determine whether those laws grant adequate security to a lender of money in that State. The power is also granted to withhold the right to issue bonds based on mortgages in those States until the legislature shall have amended the law to meet the requirements of the provisions of this section.

Section 31 sets forth the penalties for the violations of the provisions of this act, whether committed by officials and employees of the banks, or by one seeking to become a borrower therefrom.

GOVERNMENT DEPOSITS IN AID OF THE SYSTEM.

Section 32 grants to the Secretary of the Treasury the authority to deposit Government funds in any of the Federal land banks if the bank shall find itself temporarily without means to meet its obligations. The aggregate of all such sums to be deposited at any one time shall not be in excess of $6,000,000. This provision again extends the resources of the National Treasury to the farmers who are to be borrowers under the system. It will enable the bank that handles his securities to meet all obligations, whether the borrower has been able to pay promptly his debt or not. It is a direct and substantial Federal aid to the borrowing farmers of this land.

Section 33 makes an appropriation for the carrying into effect of this act.

Section 34 limits the effect of an adverse court decision, if any shall be rendered on this act.

Section 35, the concluding section, contains the ordinary provision for repealing all laws and parts of laws in conflict with this act.

A WRONG RIGHTED.

There are more than 6,000,000 farmers in this country. These farmers owe more than $6,000,000,000. They have an aggregate wealth of $41,000,000,000. They possess the best security in the world, and yet, under existing conditions, their average interest rate on this vast indebtedness is 8½ per cent. In other words, they pay the enormous sum of $510,000,000 annually as interest on their indebtedness. The report of the commissioners appointed to inquire into this question sets forth the fact that they can not pay in excess of 6 per cent and prosper. In other words, the farmers of these United States, the producers of its wealth, and, in the last analysis, the owners of it, are compelled to pay $150,000,000 annually as interest in excess of that which they can afford to pay. This vast sum has been wrung from them every year as a tribute to a system which is not adapted to their needs and which the enactment of this law it is hoped will remedy. It will permit the farmers of this country to retain this vast sum to enrich them and their families. Against the burdens of this false economic system the farmers everywhere have long cried out. Political platforms have long promised relief, but it has been left for this Congress to grant them emancipation. In doing this we have but discharged a duty for those whose commissions we bear, and in doing it we are but keeping faith with the American farmer. By this legislation, if it accomplishes what we hope it will, we shall have lifted from them these burdens which they should never have borne, and then, indeed, our land will "flow with milk and honey." Plenty will take the place of want. Good roads will stretch out their arms from neighborhood to neighborhood, and the church and schoolhouse will spring up by their side. Discontent and unrest will disappear, good cheer and understanding will replace distrust and suspicion, and that ideal condition will come again where each farmer will be, I sincerely hope, the owner of the field he tills and of the rooftree that shelters him and his. [Applause.]

## History of Democratic Congress on Labor Legislation.

PROMISES AND PERFORMANCES.

"Thus, the workers have before them the platform declarations of the Republican, Democratic, and Progressive Parties upon the subjects which most directly affect them. Now, the workers must make up their minds as to which of these political parties is most likely, if intrusted with power, to carry their declarations into effect, and to the adequacy of the response which each party made to labor's demands. For 30 years wage earners had vainly endeavored to secure the amendment of the Sherman antitrust law so as to place voluntary organizations of toilers outside the pale of antitrust legislation that they should not be regarded in the same category as trusts and organizations organized for profit. For 30 years organized labor had been vainly knocking at the door of Congress to secure relief from the injunction abuse and to have restored the right of trial by jury in contempt cases. For 30 years the workers of America had vainly asked Congress to relieve the seamen from the position of bondmen, and all this occurred under the domination of Congress and the Presidency by the Republican Party. The Democratic Congress passed and President Wilson signed the Clayton antitrust law. * * * The Democratic Congress passed the seamen's act and President Wilson signed the act."—(Samuel Gompers, president American Federation of Labor, in Federationist.)

## EXTENSION OF REMARKS

OF

## HON. CYRUS CLINE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 2, 1916.*

Mr. CLINE. Mr. Speaker, my purpose is to call the attention of the laboring men of this country to the legislation of the Democratic Party in their interest since we came into power in the House of Representatives six years ago in contrast with the inactivity of the Republican Party, that for 14 years has all the auxiliaries of legislation. The Democratic Party has only been in power in all branches of the Government for three years, but in that three years its record of accomplishment, of promises made and kept, is a magnificent one. That record emphasizes the response of the people's representatives to the sentiment of the country based upon broad, comprehensive propositions well considered. The Democratic Party proceeds upon the theory that these rights that touch the human side of life are paramount; that the American home whose roof shelters the American workman and which is fundamentally the unit of our Government and our civilization should have all the aids that make for a better condition. A virgin field of legislation opened up before the Democratic House of Representatives when it was returned to power six years ago. We began immediately to enact those laws that labor had demanded of the Republican Party for years, which demands had been denied. The growth of public sentiment and the development of economic conditions forced consideration of these propositions upon the public mind. Our constructive program embraced the following legislation:

First. A law creating a Department of Labor, having for its head a Secretary who became a member of the President's Cabinet.

Second. The Underwood tariff act which reduced the tariff on necessities, increased them on luxuries, and placed a tax on incomes.

Third. A law extending the operations of the eight-hour law to all work done by the Government as well as all work done for the Government.

Fourth. A Children's Bureau to promote the physical and moral interests of children.

Fifth. An Industrial Commission to investigate the entire relations between employee and employer. This commission has already made its report and it constitutes one of the most valuable contributions to the subject of our industrial relations.

Sixth. The act creating the Bureau of Mines amended and strengthened so that accidents may be lessened, and providing better means for preventing accidents and increasing efficiency in rescue work when accidents occur.

Seventh. An eight-hour provision included in the fortifications bill applying to all persons working for the Government in the manufacture of arms and powder.

Eighth. An eight-hour law for Government post-office clerks and carriers.

Ninth. An eight-hour day for those engaged in mining coal for the Navy.

Tenth. An eight-hour day for females engaged in work in the District of Columbia over which Congress has jurisdiction.

Eleventh. A provision in the Post Office appropriation bill removing the "gag" rule made by Executive order of Roosevelt and enlarged by Taft that made it impossible for clerks to

appeal to Members of Congress with their grievances without being subject to removal.

Twelfth. Prohibition of importation of convict-made goods or goods made by persons detained by law or made by paupers.

Thirteenth. Convict-labor bill requiring that all goods shall conform to the regulation of their separate States before they shall be admitted to interstate commerce.

Fourteenth. The seaman's bill designed to promote the condition of seamen and insure the safety of travel by sea.

Fifteenth. A law providing for a Board of Mediation and Conciliation. This board has successfully adjusted many disputes between employer and employee where the question of hours of labor and wages were involved.

Sixteenth. A law creating a Bureau of Safety Devices in the Department of Labor. The work of this bureau is to study the entire field of safety devices on common carriers so that the appalling number of accidents in the industrial works shall be very materially lessened.

Seventeenth. An act amending and extending an act entitled "An act to promote safety of employees and travelers upon railroads by compelling common carriers engaged in interstate commerce to equip their locomotives with safe and suitable boilers and appurtenances thereunto," to cover the entire locomotive and tender.

Eighteenth. As a result there was an order by the Interstate Commerce Commission requiring railroads engaged in interstate traffic to equip their locomotives with high-power headlights.

I have called attention to 18 specific acts in which labor has been and is directly interested. I call your attention to four more most important epoch-making pieces of labor legislation, and do so for the purpose of enlarging my remarks upon them.

First. The amendment of the Sherman antitrust law so as to exempt labor organizations from the operation of the act. There has been a disposition on the part of judges in Federal courts to include labor organizations with the class of trusts, monopolies, and combinations in restraint of trade that the enactment of this law was designed to control. Everybody now knows that it was not the intention of Congress to bring within the scope of the act the relation of the employer and employee. It is settled beyond cavil now that the Congress of the United States never intended to include labor organizations as a body within the provision of the law that mulcts them in "threefold" damages should they commit a tort. That would be a penalty for a trust or a monopoly to respond to. People imagined that if labor was exempted from the operation of the Sheriman antitrust law, labor organizations would assume that they had a license to do things and commit acts of depredation that other bodies of citizens or other combinations would not be at liberty to do or commit. That supposition grew out of the idea that labor was a commodity, that the man who wanted labor could go into the market and buy the same as he would a ton of coal? That error crept into the public mind through the conditions under which labor is compelled under abnormal conditions frequently to employ itself. Labor can never be a commodity to be bought and sold. It can not be under a democratic form of government. That question was settled by the Civil War, and settled forever. It has been well stated that the legal attributes of a commodity was property. The legal attributes of a workingman is his sovereignty, his citizenship. Then, too, if no other reason obtained, there is the very highest social and economic reasons why commodity—property and the workingman—and his sovereignty should not be classified on a common plane for legislative purposes.

Second. The trial of cases of indirect contempt must be by a jury if the party charged demands a jury. No Federal judge, and I care not how exalted his station, ought to have a right to determine the facts upon which he may pass judgment when he himself is an interested party. It is contrary to the very fundamental principles of enlightened American jurisprudence. The indirect contempt is a fact to be determined and should be referred to a jury always of the peers of the party charged with the offense. There is nothing so sacred about the judiciary that the life and liberty of a single person or any number of citizens may not be intrusted to the judgment of a jury and with the full knowledge that the rights and dignity of the courts will be maintained. In my opinion no sounder principle was ever enacted into law than the question whether a man charged with indirect contempt is guilty or not should be submitted to a jury for trial.

Third. The child labor-bill provides:

That it shall be unlawful for any producer, manufacturer, or dealer to ship or deliver for shipment in interstate commerce the products of any mine or quarry which have been produced in whole or in part by the labor of children under the age of 16 years or the products of any mill, cannery, workshop, or manufacturing establishment which have been produced in whole or in part by the labor of children under the age of 14 years, or by the labor of children between the ages of 14 years and 16 years, who work more than eight hours in any one day or more than six days in any week or after the hour of 7 o'clock post meridian or before the hour of 7 o'clock antemeridian.

No more important legislation has ever claimed the attention of Congress than the child-labor bill. Congress thought it to be its duty to take out of interstate commerce convict-made goods, so that they should not come into competition with the product of free labor. If the State is remiss in protecting its childhood from the debasing effects of toil upon tender years, the sovereign power of the Federal Government ought to intervene. The Government must stand between the child and the great corporations that through their greed and avarice would coin the tender years of childhood into dividends on stock investments. Products from such labor are denied, and of right ought to be denied, the privilege of interstate commerce. Such legislation appeals to the sympathies of every man for the child and his duty to protect it.

Fourth. The last and most important legislative act of Congress was to pass the Federal compensation act providing for compensation to men receiving injury while employed in the Federal service. We have eliminated the problem, "Should Congress pass a compensation act?" We are now to determine what the details of the bill should be and how it shall be administered. The Federal Government is the largest employer of labor in the United States. There are 500,000 men and women doing its business. No one questions now the policy of protecting to some extent those employed in the Government service when injured in the line of employment. The States and the Federal Government have cast aside those defenses that so long stood as an answer to the man who was injured in the employ of corporations—negligence of the employee, assumption of risk, and injury by fellow servant. We are living in a progressive age where humanitarianism prevails. Employment has become so great, machinery so complicated, and with it the liability to injury has so increased that the man entering the employment of a corporation that reaps the entire profits of his toil ought not to compel him to assume the entire hazard of his employment. There are numerous reasons why he should not wholly take the burden. Thirty-four States of the Union have, through their respective legislatures, compelled corporations to respond to the employee for injuries sustained when in their employ. Employers of labor themslves have found that it was a wiser provision instead of a burden to their business; that it was a much cheaper way than to fight lawsuits. Besides, it established a closer and more friendly relation between the employee and employer. Not only is the worker benefited but the family dependent upon the employment of the father is not left destitute through his injury.

Briefly, the acts enumerated are of direct interest to every laboring man. It may not be improper to remind you of other progressive legislation in which the worker is indirectly benefited. The Democratic Party has been as faithful to every other class of citizens as it has to the worker.

(1) For the agricultural classes we passed the agricultural-extension act, appropriating $10,000 annually to each State for experimental and demonstration purposes.

(2) It created a bureau of markets to give information for marketing farm products.

(3) A bill preventing gambling in farm products, grain-grading bill, and so forth.

(4) A rural credits bill, which will aid the farmer in getting money on long time and at low rates of interest not exceeding 6 per cent.

(5) The good-roads act, directing the Federal Government to aid the States build roads.

In addition, we did not forget the soldier who saved the Union in 1861–1865. We increased his pension, increased the widow's pension when she became 70 years from $12 to $20 per month, passed a Spanish-American War widow pension bill, and raised the limitation so that widows who married after 1890 could be pensioned.

A few of the legislative acts of general and universal character affecting beneficially everybody are as follows:

First. A bill creating a parcel post, which is saving to the common people of the country $11,000,000 annually that formerly went into the maw of the express companies.

Second. A new currency system, that took the surplus cash out of the Wall Street banks, where the Republican Party left it, and placed it within the reach of the business of the country and not in the control of any class of men. An absolute anti-panic remedy that has done more to restore confidence, steady business, and bring permanent and universal prosperity than any single piece of legislation.

Third. Antitrust laws to prevent combinations in restraint of trade, give small business an equal chance, and protect the people against reprehensible schemes of great corporations.

Fourth. An income-tax law which last year lifted a burden of $124,000,000 from the shoulders of the common people and placed it on the shoulders of those who possess the wealth of the country. It is not improper to state that there is not a civilized government in the world but that recognizes the income tax as the most equitable system of taxation ever devised. Neither is it improper to state that every leading standpat Republican is squarely against the income tax and voted against it on the 10th day of July this year. Every candidate for the Presidency on the Republican ticket at Chicago is against the income tax, and most of them have voted against it. Candidate Hughes sent a message to the New York Legislature asking the legislature to reject the amendment to the Constitution so that Congress could not pass an income-tax law. Ex-President Taft is against an income tax, and so stated in his letter accepting the nomination for the Presidency in 1912. Leading Republicans in Congress have spoken against the income-tax measure in the present session. The Democratic Party passed the preparedness bills providing for a larger Army and larger Navy in response to the demands of the country. We levied a special tax on munitions of war, on inheritances when estates were over $50,000, and an income tax, and every leading Republican voted against it in this House, and they will do the same thing in the Senate. Does the laboring man want to take the chances of the repeal of the income tax by turning the Government over to the Republicans? Their announced method of raising the enormous amount of money necessary to meet the burdens of preparedness is to reenact the Payne-Aldrich tariff bill or a similar measure. They propose to tax the coat on the laboring man's back, the wearing apparel of the wife, and the food on the table for his children provided by the laborer's work instead of taxing the swollen fortunes amassed under a high protective system.

The welfare of the laborer, the farmer, the banker, the commercial man, the manufacturer, the professional man—in fact, every field of activity now so abundantly blessed by prosperity—have been included in the program of constructive legislation by the Democratic Party. The welfare of the laborer is so intimately and directly interwoven with the welfare of the whole country that legislation for their benefit must necessarily be a benefit and a blessing for all.

The foregoing comprises substantially the important legislative activity of the Democratic Party. It touches all phases of our industrial and economic life, making a record for the present administration unparalleled in the legislative history of the country.

---

## Appropriations for the Department of Agriculture for the Year Ending June 30, 1917, and for Other Purposes.

---

### EXTENSION OF REMARKS

OF

### HON. EDWARD H. WASON,

OF NEW HAMPSHIRE,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 4, 1916.*

Mr. WASON. Mr. Speaker, the subject before the House at this time is an amendment to the Agricultural appropriation bill for the fiscal year 1917. This amendment has been adopted by the Senate and provides for the appropriation of $3,000,000 to be used under the terms of the Weeks Act, so called, which passed Congress in 1911, for purchasing of land in proposed reservations, known as the Appalachian system of national forest reservations.

A large portion of the acreage of the White Mountain Forest Reservation is within the confines of the congressional district of New Hempshire which I have the honor to represent. Therefore I feel it my duty to trespass upon the time of the House and ask your indulgence and patience while I briefly recall some of the reasons which support the wisdom of the Nation-wide policy of forest reservations.

Congress extended the policy of Federal reservations to the Atlantic States, in what is known as the Weeks Act, above referred to, and in that act $3,000,000 was appropriated for the years 1910 and 1911 for the so-called White Mountain Reservation and the Southern Appalachian Reservation. From the report of the National Forest Reservation Commission for the fiscal year ending June 30, 1915, it appears that—

> These appropriations at the start were made available only during the fiscal years for which they were made, consequently the appropriation nominally made for the year 1910 never actually became available; that for the year 1911 was available too short a period to be economically utilized, and all of it but $17,320.76 reverted to the Treasury. Appropriations for the years 1912 to 1915, by amendment to the act, were made available until expended.

The net sum with which the commission has worked, therefore, is $8,017,320.76. To restore the appropriations for the years 1910 and 1911, which lapsed, this amendment is offered and its adoption urged.

The Secretary of Agriculture in his report to Congress, in 1908, on the Southern Appalachian and White Mountain watersheds said:

> The forest bears a vital relation to successful utilization of water power and effectual artificial storage. No matter what its purpose or design, any reservoir system developed in the Southern Appalachians is foredoomed to failure unless the watersheds which feed it are kept under forest. The present torrential discharge of the streams is due to the extent to which the forest has been cut away or damaged. The more this sole equalizing factor is lessened, the more extreme will be the floods on the one hand and low-water stages on the other. A mountain watershed denuded of its forest, with its surface hardened and baked by exposure, will discharge its fallen rain into the streams so quickly that overwhelming floods will descend in wet seasons. In discharging in this torrential way the water carries along great portions of the land itself. Deep gullies are washed in the fields, and the soil, sand, gravel, and stone are carried down the streams to points where the current slackens. The stone and gravel are likely to be dropped in the upper channel of the stream, to be rolled along by subsequent floods, but the sand and silt are carried down to the still water of the first reservoir, where they are deposited. It is this silting up that makes uncertain any reservoir system outside the limits of a forested watershed.
>
> Since the extensive removal of the forest on the upper watersheds there has been a vast accumulation of silt, sand, and gravel in the upper stream courses. Examples of reservoirs completely filled are already to be seen on almost every stream. Removal of the silt is usually impracticable. If sluiced out of the highest reservoir, it gathers in the next below, and so on through whatever system may have been developed. If perchance it should pass the last reservoir, the silt is then free for deposit in the navigable stretches of the stream.
>
> Regardless of whether there are reservoirs, the ultimate deposit of the detritus is in the navigable sections, whence its removal can be accomplished only by a stream dredge at the expense of the Government.
>
> In the degree that the forests are damaged on the high watersheds, then, inevitable damage results to water power and navigation through increased extremes of high and low water and through vast deposits of gravel, sand, and silt in the stream channels and in any reservoir which may have been constructed.

After many years of study and work on the part of many individuals and organizations, a widespread sentiment and earnest efforts convinced Congress that forest reservations in the Atlantic States should be provided for. In 1911 the Weeks Act was passed, which provided for a national forest reservation in the White Mountains and the Southern Appalachian Mountains. An examination of that act shows that this project was established upon the basis of an appropriation of $11,000,000, $1,000,000 for the year 1910, and $2,000,000 for the year 1911, which, as I have before mentioned, reverted to the Treasury and was not utilized. Hence we feel that the sum of $3,000,000 ought to be reappropriated in order that the working force of the department could complete the project. To disband the force on account of failure to pass necessary appropriations would be unbusinesslike, and the National Forests Commission is emphatic in its recommendation that the work should be carried forward in a systematic way until its completion.

If this Congress should fail or refuse to reappropriate and make available this money that had been previously appropriated for this purpose, that policy would be a repudiation of governmental obligations that Congress entered into with the people in 1911. I believe that Congress is in honor bound to keep those obligations, and I am not in sympathy with the discontinuance of this Government's undertaking. The project is well under way, as will be noted by an examination of the following table:

| State and area. | Headquarters. | Acquired. | Additional approved for purchase. | Total. |
|---|---|---|---|---|
| NEW HAMPSHIRE. | | | | |
| White Mountain | Gorham | *Acres.* 106,012.67 | *Acres.* 160,258.90 | *Acres.* 266,271.57 |
| VIRGINIA. | | | | |
| Massanutten | Woodstock | 3,683.86 | 50,006.07 | 53,689.93 |

| Unaka | Johnson City | | 18,055.58 | 18,055.58 |
| White Top (part) | Abingdon, Va. | 27,809.44 | 46,468.93 | 74,278.37 |
| Total | | 72,930.88 | 190,916.80 | 263,847.68 |
| Grand total | | 348,275.66 | 936,837.93 | 1,285,113.59 |

| | |
|---|---|
| Approved acreage | 1,317,551.00 |
| Surveyed acreage | 1,285,113.59 |
| Difference | 32,437.41 |

You will notice that the Government has acquired up to June 30, 1915, 348,275 acres of land and has surveyed and approved for purchase 1,285,113 acres in the States of New Hampshire, Virginia, North Carolina, South Carolina, Georgia, West Virginia, and Tennessee.

As evidence of our sincerity in asking for money from the Government for the establishment of national forest reservations, showing our own individual loyalty and belief, let me call your attention to the significant fact that the several Atlantic States are maintaining departments and annually appropriating money for reservations of their own and to assist the Government in the care and preservation of the national forests in the several regions acquired under the terms of the Weeks law.

I wish particularly to call your attention to the fact that the State of New Hampshire has purchased the Crawford Notch, one of the group of White Mountains. This tract contains about 6,000 acres and cost the State, in round numbers, nearly $100,000. What is true of this State, I am informed, is true of her sister States in the East, as an examination of the following authentic data conclusively shows:

FOREST ACTIVITIES OF THE SEVERAL STATES IN THE GENERAL REGIONS AFFECTED BY PURCHASES UNDER THE WEEK'S LAW.

Maine: Annual appropriation for forestry work, $71,400, of which $1,000 is expended for investigations and publications, $69,400 for fire protection, and $1,000 for nurseries and reforestation work.

New Hampshire: Annual appropriation for forestry work, $38,800, of which $9,400 is expended for investigations and publications, $20,900 for fire protection, $3,500 for nurseries and reforestation work, and $5,000 for the purchase of waste lands for State forests.

Vermont: This State makes an annual appropriation of $19,500, of which $6,000 is expended for administration, publications, and investigations, $2,000 for fire protection, $4,000 for nurseries and reforestation work, and $7,500 for the purchase of State forests.

Massachusetts: Total annual appropriation for forestry work, $83,000; for administration, publications, and investigations the amount expended is $20,000; for fire protection, $33,000; for nurseries and reforestation work, $10,000; and for the purchase and maintenance of State forests, $20,000.

Connecticut: Total appropriation for forestry, $7,500. Of this amount $2,500 is expended on administration, publications, and investigations, $3,500 for fire protection, and $1,500 for the purchase and maintenance of State forests.

Rhode Island: Expenditures for forestry, $3,000, $1,500 of which is for publications and investigations and $1,500 for fire protection.

New York: Total appropriation for forestry work, $177,840; amount expended for administration, publications, and investigations, $26,340; fire protection, $100,000; for nurseries and reforestation work, $55,000; for purchase and maintenance of State forests, $16,500.

New Jersey: Total appropriation for forestry, $43,000, of which $11,500 is expended for administration, publications, and investigative work; $21,500 for fire protection, and $10,000 for purchase and maintenance of State forests.

Pennsylvania: Total appropriation for forestry, $315,375. Expended for administration, publications, and investigations, $51,000; for fire protection, $100,000; for nurseries and reforestation work, $20,000; for purchase and maintenance of State forests, $144,375.

Maryland: Total appropriation for forestry work, $10,000, of which $5,000 is expended for administration, publications, and investigations; $3,000 for fire protection; and $2,000 for the purchase and maintenance of State forests.

Virginia: Total appropriation for forestry work, $5,000, all of which is to be expended in investigations and educational work.

West Virginia: Total appropriation for forestry work, $10,000, all of which is expended in fire protection.

North Carolina: Total appropriation, $23,000, of which $3,000 is expended for administration, publications, and investigations, and $20,000 for the purchase and maintenance of State forests.

Tennessee: Total appropriation, $3,000, which is expended in investigative work.

Kentucky: Total appropriation, $15,000, of which $5,500 is expended for administration, publications, and investigative work; $4,000 for fire protection; $2,500 for nurseries and reforestation work; and $3,000 for the purchase and maintenance of State forests.

Alabama: Total appropriation, $500, which is all expended in investigative work.

In addition to the work done by appropriations in the several States, I want to call your attention to a portion of a memorial addressed to the Secretary of Agriculture in September, 1915.

The movement for the Government to acquire large sections of the Appalachian and White Mountain Ranges is a conservation measure which thus far has been steadfastly carried out and which has received widespread public support. Before the bill became law numerous congressional hearings were held which were attended by representatives from many business as well as forestry and conservation organizations. These organizations have closely followed the work as it has gone on. In September, 1915, representatives of more than a dozen such organizations met with Secretary Houston in Washington, commended the way in which the National Forest Reservation Commission and the Agricultural Department had executed the law, and pledged their fullest support in continuing the work. A memorial was presented to the Secretary which embodied the following reasons for the continuation of appropriations:

1. Congress has begun the policy. It did so only after long consideration and discussion and after obtaining convincing proof of its necessity. Under the authority obtained and the appropriations a good start has been made. An effective procedure has been worked out; a force of experts has been trained; the machine which has been created for the work and which under the law is somewhat complicated is in motion.

2. It would be a great loss to have the program interrupted. The force which it took two or three years at the start to get together and train would be lost, so that when the work is taken up again a new force would have to be gotten together and trained. Touch would be lost with the landowners, and with it that intimate information as to titles, surveys, and values which is now making the work go forward effectively.

3. The wisdom of the Secretary of Agriculture has been shown in limiting at the start purchases to certain specific areas of great importance. But the purchases are not complete in any of these areas and undoubtedly can not be made so with the appropriation already made. If the purchases should stop now, the Government would be put to too high a cost for protecting and administering its lands, on account of intervening private lands. Furthermore, the work would not have gone far enough to accomplish the purpose which the legislation was intended to accomplish.

4. This program is of too great importance to be carried on intermittently. It is of the utmost national importance that the mountain watersheds be protected, so that the streams may be capable of the highest development, so that the soils should not be washed from the mountain sides nor the property of persons or communities ruined or damaged by floods which could in part be restrained, so that the river valley soils may not be destroyed as a result of the floods and debris from the mountains.

5. Finally, the continuation of this program is urged as a matter of economy. It is believed that it will cost less to carry it on than not to do so. Carried on it will mean an expenditure of $2,000,000 per year, with some three or four hundred thousand acres of mountain timberlands passing each year into the hands of the Government to be developed for timber production and to be utilized in many useful ways

by the public. In this case at any time in the future the property will be worth more than the cost. If the program is not carried on, the result will be the certain deterioration of these lands by fire and by unwise timber cutting and tillage, the loss of at least a portion of the soils, and likewise a loss in the navigability, power possibilities, and purity of the streams, increasing damage by floods to cities, communities, and persons along the rivers, and also to river valley soils. After all this loss has been sustained—and it will certainly amount to more than the cost of these lands—the necessity will still exist for the Federal Government to handle the situation, and the cost of doing so then will be greater than it is now.

American Forestry Association, Washington, D. C.: Henry S. Drinker, president, and president of Lehigh University, South Bethlehem, Pa., and P. S. Ridsdale, executive secretary, Washington.

Massachusetts Forestry Association, Boston, Mass.: Harris A. Reynolds, secretary, and Allen Chamberlain, Boston.

Society for the Protection of New Hampshire Forests, 6 Hancock Avenue, Boston, Mass.: Philip W. Ayres, forester, and delegation.

North Carolina Forestry Association, Chapel Hill, N. C.: Hugh McRae, Wilmington, N. C.

Appalachian Mountain Club, Boston, Mass.: Harvey N. Shepard, Boston.

Appalachian Park Association, Asheville, N. C.: George S. Powell, secretary.

Knoxville Board of Commerce, Knoxville, Tenn.: W. M. Goodman, Knoxville, Tenn.

New Hampshire State Board of Trade, Concord, N. H.: George B. Leighton, Dublin, of the State Forestry Commission.

Western New England Chamber of Commerce, Springfield, Mass.: Frank M. West, Springfield, Mass.

Pennsylvania Forestry Association, Philadelphia, Pa.: Herbert Welsh, Philadelphia.

Connecticut Valley Waterways Association, Springfield, Mass.: Ashton E. Hemphill, Holyoke, Mass.

Southern Commercial Congress, Washington, D. C.: Clarence J. Owens, managing director, Washington, D. C.

New Haven Chamber of Commerce, New Haven, Conn.: Charles E. Julin.

The following western associations have indorsed this proposition: San Francisco Chamber of Commerce, Los Angeles Chamber of Commerce, Minneapolis City Commerce Association, Commerce Club of Omaha, Portland (Oreg.) Chamber of Commerce, Spokane (Wash.) Chamber of Commerce, Seattle Chamber of Commerce, National Lumber Manufacturers' Association, and Chicago Association of Commerce. The merits of this proposition are recognized in all parts of the country, and we should grant these requests.

I desire to appeal to my colleagues from Arizona with your 12,288,125 acres of national forests, from Arkansas with your 1,169,379 acres of national forests, from California with your 19,866,203 acres of national forests, from Colorado with your 13,107,681 acres, from Florida with your 299,166 acres, from Idaho with your 17,868,826 acres, from Kansas with your 139,049 acres, from Michigan with your 83,157 acres, from Minnesota with your 987,377 acres, from Montana with your 16,104,734 acres, from Nebraska with your 198,056 acres, from Nevada with your 5,287,710 acres, from New Mexico with your 8,469,511 acres, from North Dakota with your 6,414 acres, from Oklahoma with your 61,480 acres, from Oregon with your 13,259,992 acres, from South Dakota with your 1,129,208 acres, from Utah with your 7,449,160 acres, from Washington with your 9,953,166 acres, and from Wyoming with your 8,385,288 acres to assist us in the East to authorize the Government to complete its plans with reference to the national forests in the Atlantic States and to the membership from the South and Middle West to treat us, by your vote and influence, as considerately and wisely as you have the western border of our country.

I am not envious of the great acreage of forests of the far West which the Government has acquired, for I believe in the soundness of the principles which induced our predecessors to appropriate the necessary money for their acquisition and their maintenance, but to our needs in the East, embraced in the confines of the Atlantic States, I plead for your consideration and aid.

Will you by your vote and influence place yourselves and your congressional districts on record denying the people of the Atlantic States an appropriation which will enable us to increase and extend our acreage of 348,275 when you realize that from the same source appropriations have heretofore been made which enabled the West to acquire 138,013,672 acres of national forests, as shown by Government statistics, above referred to?

Mr. Speaker, we are one people, embraced in the territory between the Atlantic and the Pacific and between Canada and the sea. We live under one Government. We all enjoy, directly or indirectly, the blessings of industrial development, the protection of one flag, one country, and one liberty. We are one great family under one parental care—our National Government. Can it be that that parent will deny the appropriation that it gave and provided for five years ago? Will we repudiate and abandon a policy and the authority contained in the Weeks Act, passed in 1911? I think not. I have faith in our Government; I have faith in the wisdom of her rulers; I have faith in the honor and integrity of our citizenship as represented in this body; and I have faith that we will appropriate this needed and necessary money to restore to the full extent the intent and purposes of the Weeks law, which was enacted to conserve the forests of the Appalachian Mountain system and preserve the great watersheds in that system which supply the great arteries of commerce and industries dependent thereon.

Permit me to call your attention to that portion of the report of the Secretary of Agriculture above mentioned:

> In the degree that the forests are damaged on the high watersheds, then, inevitable damage results to water power and navigation through increased extremes of high and low water and through vast deposits of gravel, sand, and silt in the stream channels and in any reservoir which may have been constructed.

Four of the most important rivers of New England have their rise and are supplied with water from the great watersheds forming the White Mountain region. The largest of these streams, the Connecticut River, rises in the lakes of the same name in northern New Hampshire; it forms the boundary line between that State and Vermont for the distance of about 180 miles, and flows across the western part of Massachusetts and the central part of Connecticut, a distance of 120 miles more. It has a drainage basin of 10,924 square miles, and about one-tenth of the same is in the White Mountains. This portion of its watershed averages 4,000 feet in elevation, including portions of the Presidential and Franconia ranges. Their slopes are steep and rocky; there are no large lakes or swamps to retard the flow of water, and only a dense forest covering those mountains prevent the quick and ready flow from them.

Another of these rivers is the Merrimack, which enjoys the reputation of being the most notable water-power stream for its length in the United States. It is formed by the Pemigewasset and Winnepesaukee Rivers. The source of the latter river is in the lake of the same name, while the Pemigewasset River rises in the Franconia Notch in the White Mountains and drains a large area of high mountainous country. This stream also depends upon the forest cover alone for its regularity of flow; it has no lakes or swamps to retard the flow of its waters. Between Franklin, N. H., and Newburyport, Mass., where the Merrimac River reaches the ocean, a distance of 110 miles, it has a fall of 269 feet, of which 185 feet is developed, representing approximately 50,000 net horsepower. Its great water powers are in Manchester, N. H., and Lowell and Lawrence, Mass. On the tributaries of the Merrimack valuable powers exist. Those at Franklin, N. H., on the Winnepesaukee, are equal in value to some on the main stream of the Merrimack.

The third river—the Saco—rises in Crawford Notch, in the heart of the White Mountains, and drains a larger proportion of the principal ranges than any other stream. None of the tributary streams from these mountains have lakes to restrain their waters, though, like the Merrimack at its lower levels it is the outlet of important lakes. Toward its headwaters it flows variably and has no water power. Farther down the stream in Maine we find water powers of great value; at Saco and Biddeford, at Union and Salmon Falls and Bar Mills are excellent water powers which are utilized. At Hiram, near its mouth, is found the most extensive power on the river. This river is more dependent upon the forest cover for the evenness of its flow than any river having its source in the White Mountains.

The fourth river is the Androscoggin; its drainage basin has a higher general elevation and a larger lake system than any other New England stream. It is formed by the union of the Magalloway River and the outlet of Umbagog Lake at Errol, N. H. At its headwaters are the Rangely Lakes, the outlet of which is controlled by dams. Hence the flow of the upper river is uniform. Down its course the river receives the drainage of the northern part of the principal ranges of the White Mountains through Peabody and Moose Rivers. There are no important lakes on this part of its drainage.

The water powers of the Androscoggin are at Berlin, N. H., Rumford Falls, Livermore Falls, Lewiston, and Berwick, Me. In the 167 miles between tidewater and Umbagog Lake there is a fall of 1,235 feet, of which 610 feet is used, giving about 120,000 net horsepower. Of the remaining 625 feet, possibly two-thirds can be utilized, giving about 60,000 horsepower, making a total of 180,000 horsepower.

Thus it will be seen that the watersheds and streams of the White Mountains are of great importance in furnishing power for great industries, and which are the basis of development of many of our prosperous centers in each of the New England States, except the State of Rhode Island.

These streams are dependent and influenced vitally in flow by the forests which cover the tops and slopes of these mountains. These streams which drain this mountainous area are all navigable in their lower courses. The Connecticut River is the more important for its commerce. The Androscoggin and Saco in their upper courses are used to a large extent for the driving of logs.

Upon these streams are located the extensive cotton, woolen, and paper mills of New England. Manufacturing enterprises on these streams represent more than $250,000,000 of capital invested.

Traffic movements upon the Connecticut River consists largely of coal, lumber, building material, and merchandise. It has a developed water power: Wheels, 3,110; horsepower, 292,899. A maximum of available water power of 491,000 horsepower.

Some of the important and flourishing cities or centers that have grown in consequence of these industries are Bellows Falls, in Vermont; Manchester, Franklin, and Berlin, in New Hampshire; Holyoke, Lowell, and Lawrence, in Massachusetts; Biddeford, Brunswick, and Lewiston, in the State of Maine, with populations ranging from 10,000 to 150,000.

Traffic movements upon the Merrimack River consist chiefly of coal and lumber. It has developed water power: Wheels, 1,466; horsepower, 161,333. Power available: Horsepower, assumed maximum, 190,000.

Traffic movements upon the Saco River consist chiefly of coal and building materials. Water power—power developed, used: Wheels, 237; horsepower, 25,332. Power available, maximum assumed, 69,000.

I have not information regarding the traffic movements and horsepower of the Androscoggin River.

From the foregoing general observations it is clearly noticeable that these streams are of vital importance to navigation in New England and that considerable traffic is handled thereon. More clearly is it seen that these rivers furnish power upon which a large proportion of our industrial development and maintenance depends. It therefore becomes our duty in a prudent, careful, and conservative way to maintain conditions that will give to these industrial centers an even and continuous flow of water, also maintain the same condition farther down the streams nearer their outlets for the traffic that constantly moves thereon.

From another viewpoint, which relates to the health and pleasure of the people living between the Atlantic coast and the Middle West; aye, to many of the American citizens residing west of the great Mississippi River. In these mountainous regions of New England, extending from the western part of Massachusetts, north through Vermont and New Hampshire, on either side of the Connecticut River, then deflecting northeast to the northern part of Maine, we find the inland health retreats and pleasure resorts of the Northeast. Near the central portion thereof, created centuries ago, are the picturesque mountains and gorges, collectively designated as the White Mountains, situated as they are northerly of the beautiful and placid waters of Lake Winnepesaukee, with their peaks rising to various altitudes thousands of feet above the level of the sea, each and every one having its characteristic and picturesque lines of beauty, and all bowing gracefully and obediently to Mount Washington, whose apex is 6,280 feet above the water level. Here are found locations for camps, homes, and pleasure resorts where many thousands of tired and careworn people enjoy rest and recreation for many months of the year.

Through this area the traveler, by vehicle, during the hot and burdensome days of July and August can wend his way in comfort, enjoying an atmosphere which is healthful and invigorating perfumed with the odor of the white pine, the fir, birch, and maple which grows on either side of the many highways. Radiating from these highways are paths and trails for the pedestrian and nature hunter to ascend or descend the mountain sides and from the apex of 75 mountains view the landscape for hundreds of miles around. It is in this country that the tired find rest; the sick find health; the weak find strength; the artist finds scenes to copy upon the canvas; the student and lover of nature, the fisherman and hunter each finds satisfaction for his time and efforts. It is here that the people from the crowded centers of the East, of the Middle West, and the extreme West and South go for vacations of different durations, and it is to this class of our population that our hostelries in the northern part of the State extend the hand of welcome and provide for every comfort of the visitor, which tends to make their stay healthful and enjoyable and impresses their soul with a real desire for an opportunity to return year after year and enjoy the grandeur, beauty, and varying scenes which nature possesses in northern New Hampshire, and which many describe as the "Switzerland of America."

In addition to the industrial benefit to New England and our country, these forests, if preserved and maintained, will prove a lasting benefit year by year to thousands and thousands of members of the great American human family, whose health, comfort, and pleasures we should always foster and preserve.

## Army Appropriation Bill.

### EXTENSION OF REMARKS
OF
### HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 9, 1916.*

Mr. BAILEY. Mr. Speaker, I strained my conscience almost to the breaking point when I voted for the Army appropriation bill as it passed the House, carrying the enormous total of $182,303,356.10, an increase of $81,000,000, or about 80 per cent over the amount carried in the bill for the fiscal year 1916.

The bill as it passed the Senate carried a total of $313,970,447.10, an increase over the House bill of $131,667,091. In conference the House conferees succeeded in paring the Senate figures down by $46,373,917, leaving a net increase in the appropriations over those carried in the original House bill of $85,293,174. There is nothing in the condition of the country to warrant this tremendous increase for military purposes. It is sheer extravagance to which I can not in good conscience lend my approval.

If the opportunity were offered, I should vote against this wasteful measure. As matters stand, the only thing left for me to do is to register my protest and to say to this House that, in my judgment, the chickens sent abroad to-day will, sooner or later, come home to roost. The American people will in good time make it clear that militarism and military extravagance have no proper place in this free Republic.

## Wage Increases.

### EXTENSION OF REMARKS

OF

# HON. THOMAS F. KONOP,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 4, 1916.*

Mr. KONOP. Mr. Speaker, the accompanying is a tabulation of wage increases from July 1, 1915, to May 15, 1916, as reported in the daily and trade papers of the country so far as it was possible to examine files. In the collection of the material 18 representative metropolitan daily newspapers were read, most of them for the whole period from July 1, 1915, to May 15, 1916. Twenty semimonthly or monthly trade journals and union-labor periodicals were read for the same period. In addition, there were about 100 weekly and monthly trade journals examined for the last two months of the period, so that in all the files of 128 papers were examined.

A card was made for each increase in wages noted in these journals. Some 3,000 cards resulted. Nothing was considered a wage increase which did not mean that more money was being received by the employees. For instance, a large number of cases were noted in which there was a reduction of hours without reduction of pay. These were eliminated as not being increases in wages.

The 3,000 wage-increase cards were then carefully sorted for duplicates and the number reduced to 1,486, and this number, from which every effort has been made to eliminate duplicates, was used as the basis for the following tabulation. The various statements have been tabulated by States and industries. No attempt has been made to classify by occupations. In many cases the industry classification has necessarily been made quite general. This general classification was found necessary owing to the indefinite character of many of the published newspaper statements upon which the tabulation is based.

Wherever possible the number of establishments involved and the number of employees affected by the increase of wages have been given, as also the date on which the increase became effective. In some instances, while the date upon which the increase was granted is not reported, the date upon which it became effective has been shown.

In the column of the detailed tabulation headed "Increase" is given the amount of the increase secured by the employees as nearly as that could be ascertained from the press notices. In some instances it was shown in the form of percentage; in others the increase in the hourly, daily, or weekly rate is given. The material is tabulated by States and under the State by industry within that State, except some 33 instances of increases by interstate establishments, such as railroads, iron and steel and other establishments operating in two or more States. These are brought together at the end of the tabulation.

Table II is a summary of all the statements included in Table I by States without regard to industry. This table shows for each State the total number of wage increases noted, the number of reports which showed establishments involved, and the total number of establishments involved, as published. It also shows the number of reports that give data relative to the number of employees that were affected by the increase and the aggregate number of employees who were reported to have received an increase in wages. Here again the interstate establishments are noted at the bottom of the table.

Interpreting the totals of this summary, it should be read as follows:

One thousand four hundred and eighty-six notices of wage increases were clipped from the papers examined. Of these 794 reported the number of establishments involved in the increase; 692 do not show the number of establishments involved. The 794 items showing the number of establishments involved reported 2,247 establishments as having been affected by the increase in wages. Of the 1,486 newspaper notices, 493 showed the number of employees affected, the number so reported being 1,901,322; but of the 1,486 notices, 993 did not show the number of employees affected.

TABLE I.—*Number of establishments which granted increase of wages, the amount of increase granted, and the number of employees affected, by States and industries, July 1, 1915, to May 15, 1916.*

| State and industry. | Number of establishments. | Increase. | Number of employees affected. | Date of increase. |

## The Philippine Bill.

### EXTENSION OF REMARKS
OF
### HON. NELSON E. MATTHEWS,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,
*Saturday, August 5, 1916.*

Mr. MATTHEWS. Mr. Speaker, availing myself of the privilege of extending my remarks on the Philippine bill in the RECORD, I will say that I have listened with a good deal of interest to the discussion of this bill and have learned a great many things I did not know concerning not only the islands but the people who inhabit them.

I am satisfied that the great mass of the people of the United States are not at all familiar with the conditions existing in the Philippine Islands previous to our taking them over and what has been accomplished there since 1898 and the great improvement made by the Filipino people in every direction.

Undoubtedly the question as to what to do with the Philippine Islands will for some time be one of the leading and interesting questions before our people.

I am now more than ever convinced that the fair, honorable, manly thing to do is to keep the islands and fulfill the obligations we assumed toward the people of the islands when we took possession, at least until such time as they may be capable of self-government. To turn them adrift now means to the islands a state of anarchy—something, at least, like the present conditions existing in Mexico.

As a part of my remarks I herewith insert an address delivered at Yale University by Hon. William H. Phipps, of Paulding, Ohio, at one time auditor general of the Philippine Islands under President Taft:

ADDRESS OF HON. WILLIAM H. PHIPPS.

THE SOCIAL AND ECONOMIC CONDITION OF THE PHILIPPINE ISLANDS AND THEIR SIGNIFICANCE TO THE AMERICAN PEOPLE AND THE GOVERNMENT AND TO THE FAR EASTERN QUESTION.

In the consideration of this problem it is well to divide it:

(a) Social conditions of the islands.

(b) Economic conditions and possibilities of the islands.

(c) Their significance to the American people generally.

(d) Their significance in connection with the eastern question.

Considering the proposition from social conditions in the islands we must first review the people themselves. Originally the islands were inhabited by negritos. Negritos are dwarf negroes, just as black as the negroes of Africa, but having neither their physique nor intelligence. At one time they were presumably the sole inhabitants of the archipelago. They have no fixed homes. Their intelligence is very low. They live in the fastness of the forest and their protection from the elements is constructed in the crudest possible way and is very temporary in its durability. They live largely upon wild game, roots, and herbs. Their method of capturing game is with the bow and arrow and a crude knife which they always carry. They are not robust and easily succumb to disease.

Something like 1,000 years ago, the exact time being conjecture, Malays came to the islands by way of Borneo. Take a map of Asia and you will observe that the Malay Peninsula extends south almost to the Equator and that by crossing from the Malay Peninsula to Sumatra, then travel to the southeast along the chain of islands to the east of Sumatra, which extends to a point probably not a hundred miles to Borneo, they could easily reach that island. Borneo is peopled by Malays. I have seen at Sandakan many small sailing boats from the Sulu Archipelgo. Chinese are smuggled into the Philippine Islands by Moros sailing in such boats from Sandakan along the northeast shore of Borneo to the islands of the Sulu Archipelago, and from there on through by Basilan to Mindanao. It was by the same route that the Malays came to the islands. The Malays drove the Negritos to the mountains and occupied all of the low, fertile plains of the entire group and the Negrito gradually decreased in number until now there are only about 30,000 of them left.

There are many Negritos in the Zambales Mountains and especially in the mountain Marivales, which lies across the bay from Manila. Occasionally they are seen in the city of Manila, but when seen there it is safe to conclude that they are there as slaves.

The islands were unknown to the white race until discovered by Maghallanes in the year 1521. It is worth while to note that Maghallanes, or Magellan as we known him, was killed on the island of Magtan April 25, 1521. Magtan is a small island across from the city of Cebu on the island of Cebu. A monument has been erected to his memory on the spot where he fell.

It is perhaps well that Magellan died here in the Philippines, else he might have suffered a fate similar to that of Columbus. As it was, the King, unable to lay his hands upon Magellan, sought his wife and children, who were placed in prison. Thus, came the Spaniard to the Philippine Islands, and he, like his predecessor the Malay, drove the native before him. The Spaniards appropriated to themselves most of the property acquired by Filipinos by long years of struggle with the native jungles. Long before the advent of Spaniards to the Philippine Islands the Chinese had traded with the semibarbarous Filipino islanders. These Chinese mainly came from Canton. Just when their visits to the islands begun we are not able to say, but the religious rites of the Chinese were firmly established with the natives before the advent of Magellan. The Chinese were largely on the island of Luzon, along the west coast down to Manila. It was due to the Chinese that a measure of prosperity was brought to the islands, and their established commercial relations excited the envy of the Spanish when they came to Manila, about the year 1570. There was an attempted conquest of the Philippine Islands by the Chinese in 1574, who sought to regain their former prestige, but in the end this attempt was frustrated, and a large portion of the army of Limahong, the Chinese general, fled to the mountains in north central Luzon, which is now inhabited by the Igorrotes, who show traces of the Chinese character.

The islands were visited early in their history by the Japanese, but until the advent of Spaniards there seemed to be no disposition on the part of either the Japanese or Chinese to control the islands nor to proselyte the natives to their religious belief. The inhabitants were not savages, entirely unreclaimed from barbarism on the advent of the Spanish. They had a culture of their own, undoubtedly absorbed largely from the Chinese. Possibly the Malays and Japanese contributed toward their redemption from a state of barbarism.

The Chinaman is distinctively a tradesman, and his expeditions to the islands were for the purpose of barter and trade, and they established stations at various points in the islands for that purpose. The Spaniard not only appropriated property of the natives to his own use, but sought to compel the natives to adopt the Christian religion. This they succeeded in doing in the northern part of the archipelago, but they almost wholly failed in the Sulu Archipelago and the island of Mindanao.

The interior of all islands was practically unknown to the Spaniards. They made but little attempt toward penetrating the interior, and no attempt whatever to better the condition of the natives inhabiting the interior. The mixture of blood resulting from settlement of Malays, Chinese, Japanese, and Spaniards has produced a peculiar race.

In the southern part of the archipelago the Malay race predominates. With the Christian population of Luzon, Negros, Penay, Cebu, and other of the larger islands the inhabitants are an admixture of original Negrito, Malay, Chinese, Japanese, and Spanish. They are divided into a great number of tribes, there being more than 30 tribes among the wild people and a score of tribes among the Christians.

As before stated, the Moros and Sulus are Mohammedans. They vigorously resent all attempts to force upon them the Christian or any other religion. The Mohammedan is a fighter and he despises the inhabitants of the remainder of the archipelago. The average Filipino is sly, cunning, crafty, and cowardly. He has little capacity for constructive work and less capacity for doing now what he may put off until to-morrow. Left to himself he will not perform even the necessary work for his well-being. I have sometimes doubted his capacity for real friendship. They are profuse in their adulation and profession of friendship and affection, but there have been a number of instances where they have turned on their best friends and stabbed them in the back. It is a well-known proverb among Americans that it is best not to go among Filipinos alone, especially out in the Provinces. The Filipino, as we understand him to be, is a mestizo, and the best of them are those in whom Chinese blood largely predominates. For instance, Jose Rizal was a mestizo of about 75 per cent Chinese and Spanish blood.

The larger percentage of Christian Filipinos are mestizos. They have some very lovable traits; they are nearly all musicians, but their music runs to plaintive airs. They, however, take readily to American ragtime music, and it is not uncommon to hear "There will be a hot time in the old town to-night," played as a funeral march; also "Dixie," "Yankee Doodle," and other American airs of the same sort are very popular.

We divide the Filipino into two general classes from a religious standpoint—7,000,000 Christian Filipinos and 1,000,000 non-Christians, 500,000 of which are Mohammedans. Between the Mohammedans and the Christians there is open warfare. The Christian Filipino has no liking for the Moro and, in fact is deadly afraid of him, for the Moro is a fighter who will fearlessly look a white man in the eye. He does not fear death and makes a good soldier, the Moro constabulary being the best native soldiers we have. The other half million non-Christians are called pagans. They are residents of the interior of the various islands, and have about the same sort of religion and worship that the American Indians originally had.

As to the Christian Filipino, while they profess the Christian religion, the church has resorted to various devices to hold them. They have many parades and fiestas. In these parades they carry images of Christ, of the Virgin Mary, and of many of the saints. These images are full size statues and are frequently carried on a platform on the shoulders of a dozen Filipinos. In conversing with Father McLain, who was for a time acting archbishop of the islands, I asked him why they did this and he said it was necessary to do so, necessary to give them something that they could see in order to have them appreciate the Christian religion, their mental capacity being such that they did not comprehend fully the Christian religion without these figures being presented to them as an ocular evidence of Christ. I heard Dr. Salebee say, in a lecture in Manila one night: "Scratch a Filipino and you find a pagan."

SLAVERY IN THE PHILIPPINES.

Until November, 1913, there was no law that was in effect generally throughout the islands prohibiting slavery. As auditor general of the Philippine Islands I was requested to make a report upon slavery. I made a thorough investigation of the question and made my report to the Secretary of War in the summer of 1913.

When the report was published the existence of slavery was denied by the delegates from the Philippine government to Washington and by local Filipino papers, but little effort was made to controvert the evidence that had been accumulated by Secretary Worcester and myself. I am thoroughly convinced that slavery did exist up to the time I left the islands and that a system of peonage was practiced in every province. I found that there were natives who made a business of going into the mountains and capturing negritos, bringing them down into the lowlands, and selling them as slaves. In a number of instances I traced the person so sold into slavery into the residences of Filipinos in the city of Manila. I found somewhere near a hundred cases of slavery in one locality on the island of Cebu, and in the Bicol Provinces I found about 3,000 slaves.

I have no doubt that were the Philippine people to be given an independent government the practice of slavery would be revived. There is a system there that is styled caciquism, which is very detrimental to the tao. The caciqui, who is a self-constituted boss, controls the labor of the tao, and he may not enter into a contract to perform any sort of work excepting through the caciqui who takes quite a share of the wages earned for his pay. The average Filipino has no idea or knowledge of

his individual rights. Practically all the poorer classes of the Philippines are slaves in the sense that they do the bidding of the caciqui and the rich Filipino. It is almost the universal rule for the rich Filipino or the buyer of products to rob the Filipino of the fruits of his labor, paying him only a fraction of what they are actually worth in the market. We found instances where Filipino traders would obtain signatures of mountain people of the tao class to a paper, which was in effect mortgaging to the tradesman the products of the person who signed the paper, and it frequently occurred that he would get his whole crop for a fraction of what it was worth.

Principles of sturdy honesty practiced by the Anglo-Saxons is not a part of the code of honor of the Filipino. The Filipino has many traits that are similar to those of the African negro. He is very fond of music, very fond of singing and dancing, and has the very peculiar habit of picking up and appropriating to his own use anything on which he can get his hands. They are also very fond of making public addresses and have a very ready flow of language. It has seemed to me that they are not overscrupulous in their efforts to mislead their audience.

Prior to our going to the Philippines their courts were in bad condition. In fact, it seems to have been the rule, rather than otherwise, to purchase decisions from the court, and litigants were very much astonished to learn that they could not buy decisions from American judges.

We have established a leper colony on the island of Culion and have gathered together there all the lepers of the islands, completely segregating them. This has been resented by the native Filipino, and in almost every session of their assembly they have introduced bills to repeal the law providing for this segregation, although the lepers in this colony are much better clothed, fed, and housed than most Filipinos, and at the same time the public is relieved from contact with this dread disease. When we went to the islands cholera and plague ran riot in almost every part of the islands. The city of Manila was almost like a great pesthouse. Its streets were filthy and muddy; little, if any, effort was made to cure cholera and plague. We have cleared the islands of both these diseases, and the death rate in the city of Manila will compare favorably with that of any city of the United States.

So much for the social side of native Filipino life.

ECONOMIC CONDITIONS AND POSSIBILITIES OF THE ISLANDS.

This division of the subject we will subdivide into two branches:

(a) Government finance, and

(b) Business interests and possibilities of the islands.

The statement has been frequently made that the Philippine Islands are costing the United States a large sum of money each year. If I remember correctly, and I think I do, I have seen it stated that the Philippine Islands were costing the United States from $40,000,000 to $45,000,000 per annum. I think Mr. Jones, the author of the Jones bill, which seeks to grant independence to the Philippine Islands, has made this statement, and various other persons have made similar statements. So far as I can see, there is no foundation for this statement, for all expenditures of the Philippine general, provincial, and municipal governments are paid from local revenues.

The general government of the Philippine Islands is supported by general revenues amounting to from ₱27,000,000 to ₱30,000,000 per annum. These revenues are produced in the following manner: Customs revenues (such as we have from our own customs duties) have ranged in the past four or five years from ₱15,000,000 to nearly ₱18,000,000 per annum. For instance, in the fiscal year 1912 customs revenues were nearly ₱18,000,000, while in the fiscal year 1913 customs revenues were ₱15,549,899.47, the decrease being due quite largely to the change in the tariff law and of the business unrest caused by agitation for the independence of the islands. Internal revenues for the fiscal year 1912, ₱9,459,421.33; 1913, ₱10,880,462.95. Other revenues, 1912, ₱3,733,699.88; 1913, ₱1,221,410.56. Added to this should be noted the friar lands bond sinking-fund accretions and the public works bond sinking fund for each year, so that the total revenues of the islands for 1912 were ₱31,270,884.06; 1913, ₱27,199,544.16; for the corresponding period the expenditures were somewhat less than the receipts for the respective years. Thus it is easily seen that the general government is conducted and all expenses paid from sources of revenue which we have noted.

In the Provinces each Province pays its own expenses outside of what may be allotted to the Provinces for public improvements by the general government. These allotments are included in the statement above made. Likewise, each municipality raises its own local funds by taxation, just as we do in the States, so that the declaration that the Philippines are costing us a large amount of money each year seems to be utterly without foundation, excepting that there is some additional expense attached to the keeping of an army in the Philippine Islands by the United States. Estimates have been furnished which indicate that this expense does not exceed $3,000,000.

As to the second division of this proposition, I find that possibilities of business are almost unlimited. When we took over the islands at the close of our War with Spain, the total trade with the United States and these islands was less than $268,000 per annum. In the year 1912 total amount of trade between the United States and the Philippine Islands was about $25,000,000. Up to the time agitation became very marked for the independence, American capital was investing quite extensively in business. Numerous firms were engaging in timber projects. Gold mines were being developed, sugar plantations were being developed, one of the large projects being on the island of Mindoro. Copper mines were being developed north of the city of Baguio. Improved methods were aiding in the production of cotton, coconuts, tobacco, and so forth. Enough tropical fruits could be produced on the Philippine Islands to more than supply the entire United States. There have been discovered and developed to a limited extent 135 outcroppings of coal. There are 40,000,000 acres of timber in the Philippine Islands, and, like the timber in all tropical countries, is very heavy, dense, and very fine in quality, Philippine narra being one of the most beautiful woods grown, and it grows very large. I have seen table tops 7 feet across made from one board. There is enough timber on the islands to pay a hundred times over all that we have ever expended in any way on the islands. The Philippine Islands constitute an area of 122,000 square miles. A large percentage of this area ought to be brought under cultivation. As it is, I think the estimate is about 5 per cent of the lands of the Philippine Islands are actually under cultivation, and that 5 per cent is feeding 8,000,000 people.

The soil is limestone in quality and all of the plains are very fertile, as well as most of the mountain sides. Oranges grow very well, but very little effort has been made to improve the quality of any of their fruits. Their bananas are not as good as we can buy in any town in the United States, solely because little or no effort has been made to cultivate and improve them.

Take a map of the Orient and note the location of the Philippine Islands. They lie at the door of China—Hongkong being but 600 miles from Manila, Saigon being about 900 miles away, Shanghai about 1,100 miles away, Canton a short distance up the river from Hongkong. With the Philippine Islands as our base of operation we are in fine position to command trade in the Orient. Without the Philippine Islands this opportunity is lost. China is a country of four hundred twenty-five or twenty-six million people just coming into the use of products of the Occident, and China is very friendly to the United States because we have been honest with her. They like American goods, and you may buy American manufactured goods far inland now in China. Borneo lies at the door of the Philippines. It is now in a crude state, with only two English settlements of importance, one on the west side and one on the north end. Australia lies directly to the south. If our industries are to continue prosperous they must do so by development of our foreign trade. We can only develop our foreign trade by careful, painstaking work. Having the Philippines as a base, we should be able to develop trade in the Orient very rapidly, and we have done so in the past 15 years.

THEIR SIGNIFICANCE TO THE AMERICAN PEOPLE GENERALLY.

The Philippine Islands came to the United States as a result of our endeavor to free Cuba from oppression. When the Maine was destroyed in Habana Harbor a wave of indignation spread over our country, and it was not possible to avoid a war with Spain. Seeing that war was inevitable, it behooved us to win a victory in that war. We could not afford to lose; our losing that war would have meant the loss of all our national prestige and the continuance of Cuba under a condition that was unbearable. It became a question of how best to proceed and to strike hardest.

One of the things we always undertake to do in fighting an enemy is to strike him in an unexpected and unprepared quarter. It was necessary to destroy the Spanish Fleet in the Orient, and this was the task which came to our fleet commanded by Admiral Dewey, and the result of the battle of Manila Bay is history. With the destruction of the Spanish fleet we practically destroyed Spanish Government in the islands. Spanish Government there, while bad, was better than no government at all. Hence, it became our duty to see that the islands were properly governed. We were obliged to do this to protect what few Americans were there; also, to protect residents of foreign countries with which we were at

peace. Had we not done so and had we left the Philippines to the Filipinos, there would have been a state of chaos, vandalism, and pillage that would have caused intervention on the part of countries whose subjects were in the Philippines. Hence, we did the only thing we could do—we established a stable government for the Filipino. It was not our choice to stay; it was one of necessity. McKinley, recognizing that necessity, asked Mr. Taft to go there and establish a stable government. This was a new field for us. The form of government provided was that of a commission of which Gov. Taft was the president. The commission exercised a dual capacity, that of providing all needed laws for the islands under and by virtue of the authority of the act of Congress, and that of administering those laws as heads of departments. To provide proper administration of civil government many persons were taken from the Army and given positions in the various bureaus. Later many were appointed from the States, who were well qualified for important posts in the Philippine government. A school system was established and hundreds of teachers went from the United States to the islands to teach the Filipino the rudiments of a common-school education. The Filipino child is taught to read and write and speak the English language. When we went to the Philippine Islands only a small percentage, something like 3 per cent, could read and write.

Now, if I remember correctly, the percentage of those who can read and write is 65, and there are 550,000 Filipino children in school being taught under the supervision of American teachers. Many excellent school buildings have been provided by the bureau of public works. Ten thousand miles of good roads have been built; good substantial provincial buildings have been erected in almost every Province in the islands. To carry on this work many engineers and architects from the States were given employment in the Philippines. Likewise, Americans have been employed to quite a large extent in all of the bureaus. While this has greatly benefited the Filipino, and we have made more progress in the Philippines in the past 17 or 18 years than Spain did in her 400 years of control of the islands, yet the benefits accruing have not been alone to the Filipino. It has been an education to every soldier who has gone to the Philippines and made use of his opportunities. It has been a benefit to every American school-teacher who has gone to the Philippines and stayed even the minimum time of two years. It has been a great benefit and a school to our American doctors, our American scientists, our American architects, our American engineers, to all Americans who have gone to the Philippines and made use of the opportunities that presented themselves in their work.

Thousands of Americans have come to a good knowledge of the Orient through their residence in the Philippines. Hundreds of them have made the trip around the world, many of them going through Asia and Europe and both the southern and northern routes. As a people, America has greatly benefited from the broad view that has been given us through so many of our citizens being thus employed.

Were our policy in relation to the Philippines thoroughly settled, and it were known that we were to remain in the islands, the opportunities for business would be the finest in the world. The development of sugar plantations, development of trade with the United States, development of coconut plantations, development of the hemp industry, development of tropical fruits, and possibilities of the timber industry are all very great, and they are scarcely comprehended at all.

The timber is quite largely hardwood, much of which is exceedingly valuable; narra, which is called the Philippine mahogany, being one of the most valuable; camagon, which is a very dense wood with black and brown streaks, ebony, acle, molava, ipil, yacal, and many other fine woods, all of which are very dense and have great tensile strength. These woods that I have named all take a very fine finish and are very useful in furniture, shipbuilding, piling, and so forth.

In the Bukidnon country of the island of Mindanao are vast plains that should be covered by herds of cattle and sheep. The grass here is as fine as can be found in the blue-grass region of Kentucky, yet these great plains are unemployed because of unsatisfactory governmental regulations.

In our endeavor to protect the Filipino in his heritage we have passed many laws that are greatly to his detriment, because they prevent progress. They prevent the development of resources. When we consider that only 5 per cent of the Philippine Islands are actually under cultivation, we must realize at once that something is wrong or they would have developed faster. We must also realize that if the small portion which is in cultivation can support 8,000,000 people what a vast population the islands would support if all the available lands were brought under cultivation.

Owing to the seasons of the year there being wet and dry, the Philippine Islands do much better with irrigation. The broad, deep streams, all headed in the mountains, furnish ample water supply for this purpose, and as an economic proposition the water so supplied ought to serve a double use, the primary use being irrigation; but, connected with that, without loss of water for irrigation purposes, the same water could be used at or near the irrigation dam for producing power with which to run machinery, and so forth. It seems to me that in our own country we are exceedingly wasteful. Take, for instance, some of our large irrigation dams: Why should not the water used in connection with these dams supply power for running large manufacturing plants at a very small cost? There are scores of rivers in the Philippine Islands which could be so used, and the plains through which they pass could be irrigated, and thus we could grow three crops a year instead of one, and at the same time vast manufacturing plants could produce goods for the oriental market on a basis that would enable us to compete with Europe, because of the cheapness of the power necessary to run such plants.

America has become one of the great manufacturing countries of the world. The time must come when our manufacturing industries must be limited, because the markets of the world have been preempted by other countries. Shall we as a country forego the opportunities that present themselves to us in the opportunity we have for development along this line by retention of the Philippines?

All the other countries of the world are reaching out for additional territory, and they are thus preparing for the future, for in this sphere of the influence acquired they build up for themselves a market for their manufactured goods. England has her possessions the world over. Germany, France, Italy, Holland, Belgium, Russia, and other countries that might be named are taking care of the future by securing to themselves colonies which will serve a double purpose—first, that of furnishing a market for the goods manufactured at home; secondly, providing an outlet or place of abode where the congested population of the mother country may go and still preserve their nationality.

We have had such vast expanse of country that our statesmen have given little heed to this question; but with the present ratio of increase in population the question of providing homes and employment for our congested population will become a serious one.

When we but consider the vast number of Germans, Swedes, Irish, Italians, and other nationalities of our own population we realize how rapidly population of the mother countries from which they have come would have congested had it not been that they had been able to find homes in America. The day is not far distant when we will realize the importance of preserving American soil for our children. The Philippine Islands now have a population of about 8,000,000 people subsisting on an area of about 5 per cent of the total area of the islands. It has been estimated 60 per cent of the area of the Philippine Islands is fit for profitable cultivation. At this ratio, what a vast population the islands will sustain!

It is true the islands are in the Tropics, extending from about 4½° north latitude to about 21° north latitude. Continual heat is claimed to be detrimental to the average American; be that as it may, I have seen a great many Americans who have been in the islands for 15 years, and I have seen Europeans who have advised me that they have been there 30 years practically without leaving the islands, and they appear to be in excellent health. However, the mountains give relief from this continuous heat, and at the city of Baggio we attain altitude of more than 5,000 feet, which is sufficient to give a temperate climate the year round, and during the months of December, January, and February it sometimes freezes thin ice. One always has a fire in the evening and blankets are a comfort. The temperature at scarcely any point on the islands becomes as intensely hot as it does in the United States, there always being a good breeze from the sea. The temperature at Manila scarcely ever rises above 91 or 92° and rarely goes below 65. It is this continuous temperature that is detrimental. To counteract this we established a capital at Baggio for what are called the summer months—March, April, and May, and June until the beginning of the wet season. At this capital we become renovated and fit for the remaining nine months of the year on the plains of Manila. It is essentially important that this change be strictly observed.

There is in the breast of all true Americans a desire to remain Americans. With the Philippines a permanent possession of the United States, many Americans would seek them and make them a permanent home and would undoubtedly there engage in business and manufacturing for the oriental trade.

In my judgment, the Tropics in the future will show great development, even greater development than has taken place in the Temperate Zone. There is a growing demand for the products of the Tropics, and as the demand grows the product must be increased to meet this demand.

Modern science is obliterating disease in the Tropics and with the sanitation of the Tropics so that it is safe to reside there comes the desirability of getting away from our long and arduous winters. The Tropics have the further advantage of being able to make progress the entire year round, while here our harvest season is comparatively short. Our growing season is scarcely more than 4 months, while there with irrigation it is 12 months. How much more rapidly things may be done and how much more may be accomplished in a climate where we may engage actively in our pursuits all the year round. What we have accomplished in the Philippines has been the marvel of the world. We have done more for them in the 17 years that we have been there than Spain accomplished in her 400 years. We have done more for the Philippines than England has accomplished in all her years in India. We have done more in the Philippines than France has accomplished in her 60 years of occupancy of Indo-China. We have made the city of Manila a health resort whose climate for five months in the year is the most delightful in the world. If we were to leave the Philippines, all that we have accomplished in the way of sanitary reforms, governmental progress, and public improvements would go into decay and vanish. It is not in the Filipino people to do constructive work. It is not in them to continue a work already accomplished, nor even to preserve it. The Filipino people are better governed now than they ever have been in their history; they have a better government and are nearer self-government now than they ever will be again if they are granted independence. You can not confer independence on a people not capable of preserving that independence. They have little conception of self-government, although they think they have learned it all under our tutorage of the past 15 years. The Filipino people are practically a Malay race and no Malay people is self-governing in the sense of an organized government of a civilized country. It is true that all peoples are to an extent self-governing. Even the wildest tribes of the interior of Africa have a sort of government by tribes as did the Indian, the inhabitants of Borneo, and other uncivilized countries, but that grade of self-government is not the kind that is beneficial to a people or brings progress to a country.

So I must again repeat that, in my judgment, the Filipino people are not fit for self-government. It is true that certain Filipino characters will be cited to us as being of high intelligence. I could name Filipinos who have high intelligence, but they are comparatively so few that it is no more proper to judge the Filipino race from these few persons than it would be to judge the Negro race in America by the deeds of Booker T. Washington and Fred Douglas. If we in America, with all our training and traditions for centuries past, are scarcely capable of self-government in the sense of a popular government by the people, what can we expect from a people who until the advent of America knew nothing of participating in self-government. Surely they are not of such a superior race that they can acquire in 15 or 16 years all that it has taken us of America a thousand years to acquire.

THEIR SIGNIFICANCE IN CONNECTION WITH THE EASTERN QUESTION.

This division of the question has been largely discussed ever since we acquired the Philippines, and our friends of the anti-imperialistic society have held this phase of the question before the American people almost continuously, until even the children at the fireside shudder at the thought of what Japan may do to us if we retain the Philippines. Japan lies along the eastern coast of Asia and is much closer to China than it is to the Philippine Islands. Recently Japan obtained control of Korea and the immediate country surrounding Port Arthur. In the present war she is undertaking to obtain control of additional territory adjoining Korea. Is not this the sane thing for her to do, if she can? Why should she desire the Philippine Islands more than any other of the islands in the far eastern seas? Why should she desire the Philippine Islands more than she should desire Indo-China or Borneo, a continent island with 300,000 square miles, as fertile as the Philippine Islands and more than twice as large? Then there are Celebes, New Guinea, New Zealand, Sumatra, Java, and many other islands and groups of islands in this immediate vicinity that are as desirable as the Philippine Islands. France owns Indo-China, a country more than twice as large as the Philippines; England owns the Straits Settlements, India, a large portion of Borneo, all Australia, New Zealand, and a part of New Guinea.

The Dutch own Sumatra, Java, Celebes, a portion of New Guinea, and many other islands in this Archipelago. Germany and Spain have possessions, all in the vicinity of the Philippine Islands. Do we read of any of these nations considering the proposition of giving up their possessions because of their fear of Japan? No matter how small the country, none have ever even considered such a proposition. At least, no such sentiment has ever been given voice. The proposition of giving over the Philippine Islands because we might some day be compelled to fight Japan is not only foolish, but cowardly. The very fact that we say such things in this country has been a detriment of our prestige in the Orient. We should never give up any possession that we have because of fear of any country. Surely we, with our hundred million people, our ingenuity, our capacity for fighting, and our loyalty to the mother country, ought to be able to cope with the strongest nation in the world, so if we ever do give up the Philippines for any cause, let not that cause be cowardice.

Let us, however, consider the probabilities of Japan entering into a war with the United States over the Philippine Islands. Conceding that she desired possession of these islands we should remember that Japan is very heavily in debt. They have the largest per capita debt and the highest rate of taxation of any civilized country in the world. The burden of taxation in Japan is almost unbearable. Four years ago the then Emperor, who is now dead, was in great fear of assassination and had the palace guarded by soldiers. There had been an attempt to assassinate him just a few days before our visit in June, 1911. There was then, and still is, great unrest in Japan owing to the burden of taxes the people are carrying. Since our visit Japan has entered into this world war and is now undertaking to force China to make concessions that will give her a larger amount of territory nearer home. She had an expensive siege of the fortress held by Germany and is continually increasing her indebtedness.

In the summer of 1913 Japan undertook to borrow a large sum of money running into many millions of dollars. She wholly failed excepting that she was finally able to raise enough money by this method with which to pay her interest. Her interest account runs into millions. I do not know whether Japan has been able to raise revenues sufficient to meet current expenses and interest charges since then or not, but I am quite certain that she has not in any way reduced her indebtedness. Nagasaki is the nearest port of importance to the Philippines, and that is five days' sailing from Manila.

Manila could only be taken after a long siege, as Corregidor, the Gibraltar of the Philippine Islands, lies at the entrance of Manila Bay. To land an army to the north of Manila and to march it down to Manila would be a difficult task, so that the taking of Manila by any hostile country would be a question of considerable time. In the meantime our Navy surely would not be idle. We always have a squadron in the Orient, and that squadron would undoubtedly be prepared and ready for action before hostilities were actually declared. I do not claim to be an expert in military affairs, but it seems to me that it would be a difficult and expensive undertaking on the part of Japan to capture the Philippines and a more difficult undertaking to retain them once captured. Our taxes in this country are nothing compared with the taxes levied in Japan. Our resources are at least a hundred to one. We could raise ten billion dollars in the United States easier than Japan could raise a hundred million. Our unpreparedness is not so great as some of our military friends would have us imagine. We are not prepared as well as we should be, I grant, but we have always met every emergency, and the temper of the American people is such that we would not permit ourselves to be defeated by Japan or any other country on the face of the globe. Hence, should any country take from us the Philippine Islands, it would only be a temporary victory. Japan knows this as well as we. Japan knows better than we her financial condition. They realize that it would be folly for them to engage in a war with the United States, however much they would like to have the Philippine Islands. They also realize that territory adjacent to their possessions in Asia would be much more valuable to them than any detached island or group of islands, so I do not think we need fear war with Japan, nor do I think we need fear the result in case we should engage in war with Japan.

We need a base of operation in the Orient. The Philippine Islands furnish that base. China is certain to develop into a great market for manufactured products. There will be thousands of miles of railroads to build; there will be a demand for modern farm machinery and implements. There are rich deposits of minerals in the mountains of China to be obtained—coal,

iron, steel, copper, lead—some of the richest deposits in the world of these minerals are in China. Then there are the vast fertile plains of China, that are certain to produce valuable exports. There are 425,000,000 people in China to consume manufactured products and to produce exports. We shall want and need as much of this trade as we can obtain, and if we retain possession of the Philippine Islands we have a splendid opportunity to secure a good portion of it. Should we give up the Philippines from any cause, our doing so will be misunderstood by the oriental; in fact, those who are continually crying our inability to cope with Japan have convinced the Japanese public that this is true, and, what is worse, they have convinced most oriental countries that this is true, and our prestige has greatly suffered thereby. It seems to me that our continual crying out from the housetops our frailties and defects is detrimental to our prestige abroad. The effect at home may be what is desired, but the effect in foreign lands is tremendously bad.

From the standpoint of what is best for the Filipino, we should retain possession of the islands for the following reasons:

First. We have secured for them a stable government which is better than they ever had before or ever will have again should we sever our connection with the Philippine Islands.

Second. Under American rule of the Philippine Islands the people have been more prosperous than at any other time in their history.

Third. We are just beginning the development of the Philippine Islands, and should we retain possession of them unquestionably the beneficial result of such development would be very great, not only for the Philippines but for the United States.

Fourth. By retaining possession of the Philippine Islands we keep them out of the clutches of some nation that will not be as unselfish as we have been in working out their salvation.

Fifth. The increase in trade of the Philippines with the United States has been very great. It will be much greater in proportion in the next 25 years if our relations continue as they now are.

Sixth. They furnish a base of operation for trade with China and Japan, which will be greatly beneficial not only to the United States but to the Philippine Islands as well; and, lastly:

The Philippine Islands now are a part of a great nation. Were they given independence, they would become, from a national standpoint, insignificant, with no voice in the affairs of the world and subject to be trampled upon whenever they became necessary to the welfare of any other country.

---

**Address of Mr. John A. Edwards, of Eureka, Kans.**

---

## EXTENSION OF REMARKS
OF
# HON. DUDLEY DOOLITTLE,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 4, 1916.*

Mr. DOOLITTLE. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I present the address of Mr. John A. Edwards, of Eureka, Kans., delivered by him at the forty-fifth annual meeting of the Kansas State Board of Agriculture, January 12–14, 1916. In view of our efforts to secure a comprehensive Federal investigation of the meat packers and their control of live-stock prices and marketing, this address of Mr. Edwards, who is himself a cattleman and much interested in behalf of the investigation, is particularly interesting and illuminating. Anybody who even pretends to know anything about the methods of the packers will immediately recognize that Mr. Edwards states actual facts and conditions that are almost everyday occurrences.

LIVE-STOCK MARKETING PROBLEMS.

"Mr. EDWARDS. This subject of the marketing of farm products is vital and big enough to occupy all the time of an extra session of the Kansas Legislature. I want to compliment your secretary for having put this most important topic on the program. I do not congratulate his judgment, however, in assigning the treatment of it to me. But time is too brief to apologize for either of us.

"When I noticed that he had given me this big, broad subject, I thought of the little boy who set 40 eggs under an old hen, and when he was asked why he gave her so many he said 'he wanted to see the old thing spread herself.' I intend to spread over only one phase of our marketing problems, which is that of our cattle and hogs. *Every one who has marketed cattle and sat on the fence at the stockyards knows that the packing interests control and own the situation*, and apparently pay very often their own prices. When I said sat on the fence, I meant sat on a rail or stood in the slush and peeked through a crack in the fence. Before the packers became the owners of the various stockyards a broad plank was nailed over the top of the fence, on which one could walk or stand so long as he had strength, and then when he sat down this board was wide enough to hold him and let him take his medicine or die in peace. Now, since the packers own all of the equipment pertaining to the cattle business this comfortable plank has been transformed into interest-bearing property.

"*We ship our live stock, as I have stated, to public yards owned by the packers. Every morning in every packing-house city of the land buyers for the packers come to the yards at 8 o'clock and buy or look around until 8. In the fall, when the runs are large, the buying has been delayed until late in the day, which makes weighing continue until evening. That is one of the serious problems of our marketing, and makes a big loss, which is always borne by the countrymen.*

"*If competition existed in our stockyards, weighting and buying would be more speedily executed. There have been instances even this season where good killing cattle were passed without a bid from Monday morning until Wednesday or Thursday evening.* These conditions, however, would not be frequent if our markets were more than one-man markets.

"*All of the buyers on all of the markets for all of the packers every morning bid as though it was a phonograph talking. It is 'steady' or 'higher' or 'lower' with all of them, and at exactly the same hour. The result would be the same if only one packer and one man bid on all of the cattle and hogs and sheep which we offer.*

"One morning this summer I met a belated cow buyer of the packers uptown in Kansas City. I joined him in a mad race for the stockyards. We overtook a Ford jitney and jumped in. As we rode I asked:

"'Dave, what is your cow market going to be to-day?'

"'Search me,' he said; 'I haven't learned yet. All I care to do is to get there soon enough to hold my job.'

"In a few minutes he rode up the alley and bid on our cows. The salesman remarked to him that the bid was lower, and he said, '*Yes; we are all bidding lower, and they are likely to be lower yet.*'

"So we sold them, and then he made what seemed to us the best bid of the day, which was 'Good day.'

"My remarks are not an arraignment of the packers. We need them, and must have some one to buy our live stock, but what we do complain of is that they often *seem not to buy them, but just merely take them. We also note that it is useless to ship on to another market if the price does not suit. Conditions ahead are always made worse for the man who goes on.* There is no court of higher appeal from the bid of the packer. Regardless of how much one may criticize the courts of this country, we must admit that there is a decided preference for their procedure. They often reverse themselves. The packer never does.

"The theory of the big packing houses and big stockyards and the concentration of live-stock shipments is sound, but when all of the ownership and management and all of the buying falls to the hands of a very few, and those few work in unison, the practice is wrong, and the public pays the penalty.

"A year ago, at the beginning of 1915, any person who had the least possible imagination would have thought that this would have been a banner year for the live-stock interests of the country. It ought to have been. Our exports of meat have been the greatest in history. Our imports of live cattle and meat, on the other hand, have been less by half than in 1914. During the past year labor has been employed overtime and at higher wages; business has prospered amazingly; all of the raw materials have advanced, many of them many times. It would seem that with these sky-high prices and favorable conditions that the meat producer would certainly have a fat year, but he has not. It has been a lean one.

"Fat cattle on the markets of this country have averaged lower during 1914 than in 1915; hogs have averaged lower than in 1914—with the result that the bank accounts of the majority of the live-stock producers have averaged lower, while dressed meat has sold readily and at good figures and at a great profit. *This profit, which should have gone into the pocket of the producer, has gone entirely into the treasury of the packer. This great injustice could not be worked against the countrymen if there was competition between the killers of live stock. Competition is the fundamental element of trade, and the element which the packers for years have been trying to eliminate. I believe*

*they have succeeded. Should two of the packers happen to desire the same bunch of cattle, rather than compete they buy and divide the drove.*

"Those who believe in big business combinations have ground to admire this great organization which fixes the price on our products and which owns more gigantic industries than Heinz, who advertises 57 different varieties.

"Our American packer owns a great percentage of the meat and killing business of South America, Mexico, and Australia, and owns or controls the ocean meat-carrying vessels. He owns public stockyards, and has organized banks and loan companies, and loans us the money he has made from us. He owns many of the refrigerator and storage plants and the poultry, egg, and butter concerns and the tannery works of the country. He owns the tankage and manure works of the land and sells these by-products back to us—and with them a number of hog-cholera germs, I believe. In another year or so they will likely include with each shipment of tankage or fertilizer a few bottles of hog serum, a monopoly of which, I presume, they will eventually possess.

"One day at the stockyards at Kansas City I was sitting on the fence to learn who would pay the lowest price for my cattle, when an old farmer, who came from somewhere near Osawatomie, stepped up and stated that he had been buying fertilizer and had been paying about 2 cents per pound to the packers for it, but that now he had decided to buy manure at about $24 per car; that he did not believe there was much difference in the quality; that the chief difference between them existed in the bulk. He asked if I was farming. I said I was. So he advised me to buy fertilizer, and I told him I thought I had better buy brains. I asked him if he had ever handled cattle. He said yes; that he had just sold some discarded milch-cow stuff for canners at $3.80. I figured it up and found out how much money he had received for his cattle, and I said, 'Why in the name of heaven didn't you grind those cows into fertilizer and save the freight?'

"I have attended in the past few years many agricultural meetings intended for the education and good of the agriculturist and have been instructed as to how our wonderful bluestem and yellow corn properly combined would make the beef steer gain 2 pounds where he only had gained 1 pound before, and as I have listened I have wondered what's the use of this extra pound when the Shylocks of the market get the pound. I have been taught how to produce more pork from a given amount of corn, but I have not become duly enthused, for I feel that although I may obtain this added gain, the packer will get the added profit. At the present price of hogs it almost requires the price one receives for a live hog to buy the bacon one dressed hog has made. I believe that the packers made more money this fall overnight on the hogs I sold them than I did in a year, and I began with them before they were littered. Last year and this year hogs came down almost $2 per hundred, which is $4 per head, but bacon and ham did not feel the decline. This would mean that the packers made $4 per head more profit out of my hogs than they were making before the drop in the market.

"During the past two years I have been receiving a great deal of instruction in vaccinating hogs. The agricultural colleges and Government have aided materially in helping us save our hogs from cholera and often offering sympathy afterwards. *I feel that I have lost a greater percentage of my hogs from the packers' combine than I have from the disease.*

"I am convinced that if the State and Government experts would devote as much time to preventing the market losses as they do to the loss from contagion, and would give as much time to the making of a competitive market for our hogs as they do in teaching us how to raise more and fatter hogs, the Kansas farmer would have dollars in the banks where now he has only experience.

"A few years ago I happened to step into a hotel and saw sitting there, with his feet in the window and his hat over his eyes, one of the well-to-do, influential, standpat citizens of that district, one who had believed in caucuses and gag rule and conventions and fewer laws and more liberty. I said:

"'Hello, my old standpat friend. Are you trying to decide between Fairbanks and Weeks?'"

[I might say that Mr. Edwards and I do not belong to the same political party.]

"'I am not mixing that kind of medicine any more,' he said. 'I am trying to take what they have mixed for me. I have just been over settling up with the International Harvester Co. I complained a little about the price of some machinery I have been buying and of the repairs that I am obliged to buy of the International Co. I was told by their representatives that if I did not like their prices that I could go without machinery for a while; that their company was only making about 8 per cent on $250,000,000 capitalization. I was just thinking also that I would be obliged to buy a lot more gasoline to keep my tractor going, and I find that the Standard Oil Co. has raised the price of gasoline 3 or 4 cents a gallon; that the stock of their company was not selling high enough; so they are taking my money, and it is legal.'

"Then the man told me that he was building a house for his son-in-law, and that the local lumber dealers sold at fixed prices, and that the only chance he had to save his bank account from open robbery was to buy from the Chicago House Wrecking Co. *This man also related to me that for a great many years he had been feeding cattle in large numbers for the packers, and he said he had usually been allowed something for his feed and work, but this year they took the whole blamed thing.*

"'I have been sitting here thinking if we fellows could raise the price of something besides Cain,' said he, 'and if I have to vote next fall and there is an anarchist running I will vote that ticket.'

"The analogy between the hog and cattle industry is close, except that the loss on fat cattle is greater and the end of the farmer who feeds his grain to them is quicker. *I have known a great many farms to go when the farmer shipped his cattle. I have never known the packer who bought them to be overcome with disaster.*

"The marketing of all of our stock has not been conducted, fortunately, on these open markets. There are a few bright spots and some which the big combinations neither painted nor created. These spots are the cow and the pure-bred business, and the reason that they are bright is because the public and the law of supply and demand have had an opportunity to work. If it had not been for the evolution of the cow and the calf many of us would to-day be riding in the long caravan the packers have been bearing to the cemetery.

"A few years ago I was in Roswell, N. Mex., buying Panhandle steers, and in the evening I was lonesome because I was good, so I went down to the big gambling house where there was society. There were large tables and much hilarity. I took a seat on an elevated platform and became fascinated watching the players and the dealers. When morning came the most of the players had been thrown out or dropped out and only a few lucky ones remained. I noticed that about all the money that had come into the gambling house with the visitors the night before was put away in the morning in the safes by the dealers. I noticed with every roll of the wheel or cut of the cards the dealer took a percentage, until when daylight arrived and the last few went away the percentage had equaled the whole. Yearly, or oftener, when I go to Kansas City and notice the wealth and the extension of the packers, the absence of some old live-stock man, or find that his farm is gone or that he is working for the packers, or is in the commission business, or out of commission, the scene of the Roswell dealers comes to my mind; *and so long as the packers can shuffle and can deal the cards and take a percentage from our hides and leather and poultry and cattle and hogs, he will eventually own not only the packing houses and yards but the prosperity of our State and the property of her citizens.*

"A few years ago Tom Lawson, through one of the magazines, on the subject of 'Frenzied finance,' described vividly the evils of Wall Street. A few years later he proposed a remedy. He discovered, like physicians, that it is much more difficult to find a cure than to diagnose the disease. We find that same trouble with the live-stock market problems. *We know now that we have the disease, and in a malignant form, and that this packing-house disease will eventually kill us.* No one, so far as I know, has been able to prescribe a cure.

*One of the remedies proposed in my county is Government ownership of packing plants, one plant to be established at every market.* It is not the intention that the Government should destroy the present packers, but only build and compete with them, the same as the parcel post competes with the express companies. The Government employs a large corps of men to help the live-stock interests protect themselves against Texas fever, scab, and foot-and-mouth disease. The Government ought to go further and protect our ownership of our herds when we offer them on the markets. This is as important and more necessary than any other remedy the Government can prescribe. I know that Government ownership is repugnant to many, but at the same time many of the severe losses which we suffer in our marketing are also repugnant. *I would rather be an advocate of this doctrine than to be broke, and I think and I believe there are many who agree with me that Government ownership is preferable to being out of business.*

*I believe that last year the cattle interests lost one hundred times more from the advantage the packers took of the markets than the cattle owner did in the country from the foot-and-mouth disease.*

It is further suggested in my home county of Greenwood that should the Government fail to do more for the live-stock raisers than to see that their herds go to slaughter in good health, that the State of Kansas should come to the rescue, for the prosperity of Kansas and her welfare and the value of her farms and pastures and forage crops are based on the price of her live stock. *Our values will not greatly increase in this State so long as our live-stock prices are dependent upon the questionable generosity and the whims of the packers and the dividends they decide to make.* It is contended by some that Kansas ought to install on Kansas soil a packing plant which may be run and managed on a plan similar to the State twine plant. *This little institution has lowered the price of twine; it has saved a great many thousands of dollars to the farmers of Kansas which otherwise would have gone into the surplus department of the harvester companies. Such a packing house would afford competition and prevent the strife between the cattlemen and the packer and would make our whimsical markets more stable.*

A third proposed remedy, which we have talked of freely in our county, is to the effect that the owners of the sixty-odd millions of cattle in the United States should pay $1 per head into a company as capital to conduct a packing business, and that this amount of money, together with that which would be raised by the sale of stock to consumers, would provide enough millions to give us competition in the markets of the world. *It would also make a company strong enough to secure a few ocean ships, or at least space in them, so that we might enter freely into all phases of the meat and packing business.* It is contended that such a packing plant might not make money for the stockholders, and it is true it might not. But if it failed to make money as a packing plant it would be because it had made live stock sell higher, and should this be the result the live-stock owners of this Nation would have gained the chief object which they have sought. On the other hand, if cattle were not higher and the packing plant lost money, it would be because the meat sold too low; and should this be the case there still could be no objection, *for the reason that the consumers would be the beneficiaries. It is not material in this scheme whether the plant is profitable or not, just so the consumers and the producers who are the stockholders profit by it.*

The greatest hindrance to this last remedy and rescue is, I find, the lack of a Moses. I feel that if there is a Moses in this society, or on the face of the earth, he would find that $100,000 down in Greenwood County would be pledged at once to this project.

*In conclusion, I wish to state that until Government or State or private ownership is installed, and until competition is restored, the State of Kansas will allow its best and its most productive business to pay the dealers of this marketing game annually millions and millions of dollars which should stay in the State of Kansas and go to build up her farms and her industries and her citizenship.*

---

## Naval and Military Expenditures.

### EXTENSION OF REMARKS

OF

### HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, August 5, 1916.*

Mr. BAILEY. Mr. Speaker, we are soon to agree upon pending appropriation bills carrying such stupendous and staggering totals that the human mind fails to grasp their meaning. It is impossible for the ordinary brain to grapple with figures mounting into the hundreds of millions; they can be comprehended only with an effort and after they have been translated into other forms.

Never before in a time of peace has any nation gone into expenditures for military purposes on any such lavish scale as this Congress has adopted. At heart it is to be doubted whether this House or whether the body at the other end of the Capitol is satisfied with the performance which is about to be completed. It exceeds reason as far as it exceeds all precedent. But both House and Senate have yielded to what they have conceived to be the country's demand, yet I seriously question whether the country really favors so monstrous a program as that for which we are providing by appropriations aggregating $700,000,000.

However, these expenditures are justified in the minds of some men on the ground that they are in the interest of peace. The millions we are taking out of the toil and privation of the masses of America are the premium we pay for an insurance policy against war. But are armaments an insurance against war? Were the armaments of Europe an insurance against war? Have armaments in any country or in any era been a guaranty of peace? As I read history, I say that all human experience proves the contrary.

And in this connection, Mr. Speaker, and as a part of my remarks, permit me to incorporate a remarkable address at the recent Lake Mohonk conference by the Rev. Charles E. Jefferson, D. D., LL. D., pastor of the Broadway Tabernacle, New York, under the title, "Do Large Armaments Provoke War?" This address is one of the strongest and most convincing contributions to this discussion of armaments from the peace angle that have come under my notice; and I commend it to the thoughtful men of this House and of the country, to whom it should make a powerful appeal. Dr. Jefferson spoke as follows:

DO LARGE ARMAMENTS PROVOKE WAR?

[Charles E. Jefferson, D. D., LL. D., pastor Broadway Tabernacle, New York City.]

DO LARGE ARMAMENTS AS SUCH PROVOKE WAR?

My answer is they do, and these are my reasons: First, because of their nature. They are in reality enormous masses of explosives. The explosives are of two kinds, chemical and human. Their presence deranges the normal beating of the world's heart. We can never have national health on this planet until swollen armies and navies are abolished. They create a state of mind out of which war, soon or late, must inevitably come. They are fomenters and feeders of fear. Dump down in front of my house a ton of dynamite or gunpowder and I at once become nervous. I can not help it. You may say that they will not hurt me. That does not quiet me a bit. I know there are many bad boys and mischief-making men in the world, and I can not sleep sound with that pile of explosives at my front door. Great armaments are huge heaps of gunpowder and guncotton and dynamite and lyddite and melinite, and when they are piled along all the national frontiers, the nations can not work with quiet pulse nor sleep a sleep that is sound. For 40 years Europe has tossed and moaned in a hideous nightmare. War itself came at last as a relief. Fear begets suspicion. Out of suspicion springs dislike, dislike deepens into hate, hate rushes on to bloodshed. Fear, suspicion, dislike, hate, slaughter, these are steps in the stairway down which nations pass to hell—shoved down by their armaments.

MORE THAN METAL AND CHEMICALS.

But armaments are more than metal and chemicals. Armaments are made largely of flesh and blood. Armies are men, so also are navies. Large armies and navies mean tens of thousands, hundreds of thousands, millions of men. Along, then, with your tons of chemical explosives you have explosive material done up in the bodies of a vast multitude of men. These men must have officers—hundreds, thousands of them—thirty-five thousand to every million men—and out of every hundred of them you can expect one or more Bernhardis—men who believe that war is a biological necessity; that it is the mother of all the virtues; and that every nation must perform those deeds of blood and valor which, above everything else, bring national renown. Bernhardi is not simply a Prussian; he is a Russian, a Frenchman, an Englishman, an American. He lives everywhere. He is in every army. He is a type which persists. He is a product of the barracks. You can not eliminate him. You must always reckon with him. He will talk. He will write. He will organize a war party. The bigger the army, the taller is Bernhardi; the mightier the war party. You may lament it, but you can not change it. If you want an army, you must take Bernhardi. If you insist on a big army, you will have a crowd of Bernhardis. It is cruel injustice to say that all military and naval officers want war. Many of them abhor war with an abhorrence deep and true. But you can not have an army in which there will not be at least one Bernhardi, and in every army in every country to-day there are many Bernhardis. Now Bernhardi is a provocative of war. He always has his eye on the next war. It is inevitable, imminent. He dreams of power—of conquest. He moves heaven and earth to plant his ideas in the public mind. By his propaganda he makes his nation feared. He kindles at last a fire which may burn up the world.

HUGE ARMIES BREED BERNHARDIS.

Huge armies give birth to Bernhardi, also to a twin brother, Krupp. You can not have an army without Krupp. The army is dependent on him. Without him the army can do nothing. Krupp is the munition maker. He manufactures the guns and

the ships and all the explosives. The bigger your army the taller becomes Krupp. If the nation votes millions for armament, Krupp is pleased; if it votes tens of millions, Krupp is delighted; if it votes hundreds of millions, Krupp is hilarious; if it votes billions, Krupp dances for joy. The bigger the military and naval budgets the happier is Krupp and the mightier. He employs more and more men, adds more acres to his plant, amasses more capital, and extends his influence until he looms the chief man in the nation. He becomes at last a demigod, able even to control the national weather. He launches international storms; he covers the heavens with clouds; he sends the lightning, and while the lightning is playing he tightens his clutches on the national treasury; he starves every department of national activity in order to convert national treasure into guns. He has costly machinery; it must be kept running. He has thousands of workmen; they can not be allowed to be idle. Hence improved guns must be introduced every few years, and battleships must go to the junk heap before they have seen service. A great man is Krupp. He is not merely a Prussian; he is a Russian, a Frenchman, a Britisher, an American. He has different names in different lands, but he is everywhere the same man.

He is a patriot, and he always puts money in his purse. You must get acquainted with him if you want to know why great armaments are a menace.

HOW KRUPP WORKS THROUGH THE PRESS.

Krupp works through the journalist. Without the printing press he is undone. Newspapers when owned by men of low type are the most dangerous of all the poisoners of the wells of international good will. Their capacity for mischief can not be measured. In all countries the big newspapers, with few exceptions, are for big armaments. Krupp and the millionaire journalist usually join hands. They are both men of power. It would be unfair to say that the munition maker bribes or hires the editor. He simply uses him.

The editor is indispensable when it comes to creating war panics and stampeding the nation into wilder schemes of preparedness. He crowds his columns with insolent gossip and lying rumors and fills his readers' hearts with dark imaginations and terrifying fears. He excites hatred toward every nation against which he sets his heart. Lord Northcliffe, for instance, owns the Daily Mail, the Daily Mirror, the Daily Graphic, the Daily Express, the Evening News, the Daily Times, and the Weekly Dispatch. This is what Lord Northcliffe said several years ago in an interview in the Paris Matin: "We detest the Germans cordially. I will never allow the least thing to be printed in my journal which might wound France, but I would not let anything be printed which might be agreeable to Germany." There you see the journalist at his worst. Northcliffe is found in every one of the world's capitals. He lives in Washington, New York, Chicago, San Francisco. You can not get rid of him. You can not silence him. You must reckon with him. He has matches, and you jeopardize civilization when you pile up the gunpowder around him. Are large armaments provocative of war? Yes; for the reason that they are explosives and are within the reach of Bernhardi and Krupp and Northcliffe.

ARMAMENTS A CONFESSION OF DISTRUST.

There is a second reason why huge armaments provoke war. They are confessions of distrust, and therefore strain and finally break down international friendship. Without confidence nothing goes on well in this world. Armaments smash confidence to splinters. Nations all arm now in defense. They themselves seek only justice and the things which are right, but their neighbors, alas! are unprincipled rascals, against which they must be on their guard. To arm in defense is therefore an insult to the nation you arm against. A nation multiplying its guns, and all the time protesting its arms solely in defense, is slandering its neighbors. It is saying, "My neighbors are cutthroats and bandits and I must be ready to beat them off with a club." That is what we say to Japan when we strengthen our Pacific defenses, and that is what we say to Germany when we talk about $500,000,000 in five years for new ships to be ready for her when she comes. When once bad feeling is engendered it is easier to fight.

HOW ARMING FOR DEFENSE PROVOKES COUNTERARMING.

Armed peace is a form of war. Armament is in reality an attack on some other nation. That nation meets it with a counterattack. Launch a dreadnaught and there is a counter-dreadnaught, a cruiser and there is a countercruiser, a submarine and there is a countersubmarine. You can not arm for defense without compelling others to arm in defense, and when the defenses have reached a certain point of perfection there will be war. Just now many Americans are trying to draw a line between armament for defense and armament for aggression. There is no such line possible. What is defensive for you will be offensive for your neighbor. Men say: "We arm not for war, but against war," and think they have said something. They have said nothing. You can't change a situation by altering a preposition. It makes no difference at all whether you arm for offense or defense—for war or against war. The effect is precisely the same and the budgets are the same. Great Britain armed for defense only. A navy was necessary, she said, to protect her commerce. Germany built up a vast commerce, and acting on the British philosophy, she said she had to protect it with a fleet. Every German, from Von Buelow down, declared it was only for defense, but no Englishman believed it. Every Englishman declared that the British Navy was solely for defense, but no German believed it. What is the use of fooling ourselves with words? It is not what we say, but what we do, that shapes the character and destiny of the world. England armed for defense, and Germany did the same, and they met at last on the field of blood. They did not want to fight. Every Englishman of note has said that within the last 10 years. Every German in official position has said that Germany desired only the friendship of England. The Kaiser said it, and Marschall von Bieberstein and Prince Lichnowsky and Herr von Jagow, and all the rest of them. You may say they were lying. I can not go with you. I believe they were all honest men, and spoke the truth. The best men in Britain and Germany had no desire to fight. Those two great Empires were driven to war by their guns. The expanding squadrons of battleships on the North Sea simply drove them irresistibly apart, snapping the ties made sacred by the memories of a thousand years.

ARMAMENTS PLAY INTO THE HANDS OF THE MILITARISTS.

In the third place, large armaments precipitate war, because in times of national excitement the control of affairs passes inevitably into the hands of the most aggressive and best-organized body of men in the nation. As a recent writer in the Berliner Tageblatt says: "Even the most gifted and most industrious monarch disappears behind the machine." Now, the Army and Navy are machines. They are organized for swift and vigorous action. The English papers have prided themselves for years on the fact that in case of war the British Navy would get its blow in first, before the other nation had the time even to read in the papers that war had been declared. At the first Hague conference the head of the German delegation, Count Munster, disparaged arbitration, saying: "It would be injurious to Germany. Germany is prepared for war. She can mobilize her army in 10 days. Arbitration simply gives rival powers time to put themselves in readiness." At the same conference Sir John Fisher spoke for England. His argument was this: "The British Navy is prepared. A vast deal depends on prompt action by the Navy. The truce afforded by arbitration proceedings will give other powers time to put themselves into complete readiness." This is the spirit of the Army and Navy always. It is fundamental in military tactics that the blow shall be swift. No time must be wasted on reflection or on discussion. The machine, when ready, must move at once. It is disheartening, therefore, to hear just now so many Americans crying for guns and saying, "We do not want war; we do not intend war," just as though nations get what they want or intend. They get what they prepare for. In a crisis our big Army and Navy, if created, will fall into the hands of the then dominant political party, into the hands of the ruling faction of that party, into the hands of the most energetic group in that faction, into the hands of the most vigorous and ambitious individual in that group. The people will have nothing to say when the crucial hour arrives. Even the alleged rulers will have exceedingly little to say. It is the men who have been trained for war who, when the clock strikes, leap into the saddle and drag the Nation after them. That is what happened in Berlin in the feverish August of 1914. William II is a man of unusual strength, but when the Army chiefs all told him there must be no delay the fateful ultimatum was sent, and the war was on.

ARMIES THE FOE OF ARBITRATION.

Great armies and navies are of necessity the implacable foes of arbitral and judicial methods of settling international disputes. Militarists have scant patience with diplomatists who want to investigate and consider and reason. They do not care to untie knots; they prefer to cut them. In 1908, when Bosnia and Herzegovina were taken by Austria there was no conference for discussion. Germany appeared in shining armor and the case was settled, not by reason but by the army. Later on, at Agadir, Great Britain appeared by the side of France in shining armor. The case was settled not by reason but by the navy.

It was those two settlements which unsettled the world. Big armaments shove reason aside and throw the purple over the shoulders of force. If you point a gun at me I can not reason. I fall back on my primitive instincts. If I am strong, the tiger in me comes to the front, and I try to knock you over or tear you to pieces. If I am weak, the fox in me becomes dominant and I trick you if I can. Guns cut the nerves of arbitration. Diplomatic pressure—which means the pressure of 16-inch guns—is a kind of pressure that squeezes out the life of justice and of liberty and leaves nations irritated and revengeful.

A DEADENING AND BLIGHTING CURSE.

Great armies and great navies are a deadening, blighting, intolerable curse. They are a nuisance and a menace, a plague, and a scourge. The world can not breathe freely until they are eliminated. International diplomacy can not be sound, so long as these excrescences exist. World finances can not be normal until this incubus is thrown off. Our Christian ideals can not be realized so long as Cæsar sits on the throne of the world. The mailed fist is an enemey of Christ. Shining armor is an abomination to God. Hague conferences will make tardy progress until we escape the domination of military-naval experts. Peace palaces are built in vain so long as competitive armaments surround them. The rights of humanity are never safe when propped up by huge engines of war. Great armaments must be gotten rid of. They will be when the people decree it. It is for all who love mankind to proceed to organize the world. Our fathers organized 13 Commonwealths into a Republic. The principle was sound, and the 13 have increased to 48. We must now help to organize the nations into a family to be governed by justice and liberty and good will. It is not for us to adopt the stupid European policy of armed peace, or to train every boy to shoot, which is the old Pequot ideal, or to give a new lease of life to a philosophy that is pagan and rotten; it is for us to bend all our energies at this crisis of history to the working out of a plan whereby the world's armaments shall be melted, and the streams of gold and brain energy now devoted to the multiplication of the instruments of blood shall be consecrated to the creation of those constructive and beneficent agencies and institutions which shall heal the running sores of the world, provide for its multitudinous and clamorous needs, and open the beautiful gates of a thousand years of peace.

## The Federal Child-Labor Law.

### EXTENSION OF REMARKS

OF

### HON. GUY T. HELVERING,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, August 5, 1916.*

Mr. HELVERING. Mr. Speaker, a sound democracy demands the abolishment of a practice which deprives our children of their natural growth, their chances in life, and an education. I dare say the conscience of this entire Nation opposes exploitation of children for cheap labor. I have always been heartily in favor of any legislation that would tend to the betterment and safeguarding of women and children, and I am proud of the opportunity to cast my vote and express my sentiments on the child-labor bill, now up for consideration.

Since national preparedness seems to be the great issue on the minds of the American people to-day, it seems to me that before we can hope for adequate military and naval preparedness we must have sound industrial preparedness. In my opinion, Mr. Speaker, the social and moral preparedness of our youth is a more momentous question than military preparedness. We are responsible for the types of American citizens that are growing up among us, and it therefore behooves us as men having the welfare of our people at heart to legislate liberally and willingly for such laws as will tend to develop the highest types of American citizenship.

Child labor is one of the great moral evils of this country, affecting, as it does, our younger generation, to whom we look in after years for the men and women to conduct the affairs of this Government. I believe, therefore, that we are in duty bound to do our part to have the bill that would strike at the very roots of this evil enacted into law at this session.

We have spent much time and investigation in the consideration of laws for the conservation of our natural resources and in the interest of animal and plant industry, but I regret to state we have not been as active as we should have been in conserving human life. What issue could surpass in importance that of the conservation of human life? A nation's greatest asset is her children—the statesmen, the business men, the professionals of to-morrow are the children of to-day. What legislation could have any nobler purpose than the measure before us—a measure seeking to protect and to safeguard our young girls and boys from the dangers of premature labor in mills, factories, and mines. Did not the Greeks of old boast of a perfect race and high-minded, ideal type of citizen, which was acquired as a result of laws that looked to the health, protection, and education of their children?

Mr. Speaker, the bill under discussion has for its object not only the protection and safeguarding of the child employed in the mill or mine, but it looks to the health, the comfort, and the education of our young boys and girls. The rapid strides of progress made in the industrial world have caused our social and industrial problems to become interstate problems, and the changed conditions make it imperative for us to enact Federal laws to protect and safeguard our thousands of men, women, and children employed in factories, mills, and mines. We can ill afford to sacrifice our precious boys and girls by exploiting their earning powers. I have always advocated child-labor laws for humane reasons. The district which I have the honor of representing and my native State, I am proud to say, will not have need for this legislation, and I am therefore not urging this measure because it would affect my constituency. Kansas, as usual, has taken advanced steps for the protection of its women and children workers, and we have laws on our statute books that are working out most satisfactorily.

But, Mr. Speaker, I am pleading for a bill that will benefit the less fortunate of our sister States where there is a crying need for Federal legislation that can work out adequately and be enforced properly. The inconsistencies existing in the different State child-labor laws and the unsatisfactory method of enforcement make it imperative that we devise a uniform Federal law that can be operated in every State in the Union. We are confronting an interstate situation in the industrial world which can only be remedied through Federal rather than State aid.

The bill introduced in the House by the gentleman from Colorado [Mr. KEATING] seeks to prohibit interstate commerce in certain of the most vicious forms of child labor. In effect this bill would render unlawful the shipment of interstate-commerce commodities that have been produced either wholly or in part by—

First. Children under the age of 16 in mine or quarry products.

Second. Children under 14 years of age in manufactured or milled products.

Third. Children under 16 years of age employed more than eight hours.

Fourth. Children under 16 years of age employed at night.

In reading over the bill, together with the report of the committee, I find it to be clear and explicit, fully informing manufacturer, mine owner, and dealer alike of the full requirements and exact standards to observe. It authorizes the Department of Labor, acting in cooperation with State officials, to aid in the enforcement of this law. Authority is granted to the Attorney General, the Secretary of Commerce, and the Secretary of Labor, a board of three, to establish uniform rules and regulations for the rigid enforcement of the law. Accredited agents of the Department of Labor will be authorized to make the necessary inspections to see that the provisions of the law are enforced.

Nineteen States, I am pleased to note, including some of the leading manufacturing States of our Union, have already enacted an eight-hour law for children under 16 years of age through State legislation, just as this House did a few years ago when it enacted an eight-hour law for employees in the District of Columbia. While we have a number of child-labor laws on the statute books of our several States, yet they are, on the whole, ineffectual because different States have different laws and methods of enforcing them; but a Federal child-labor law will do away with all discrepancies of State laws, inasmuch as its regulations and rules will be uniform in the 48 States. A law on a statute book is of no value and may even be a detriment unless some effectual method of enforcing it has been adopted. We have still several States that have so far failed to adopt the four minimum standards I have just mentioned, and conditions in those States are deplorable enough to warrant a Federal child-labor law. Wherever a child is wronged a nation and a nation's industry is wronged.

In considering the child-labor question we are dealing with a helpless class of our population, whose "neglect defeats the very success of democracy itself." The first State laws pertaining to child labor were not enacted from a humanitarian

standpoint; on the contrary, they were enacted for the purpose of securing better efficiency in manufacturing and mining. Child labor is everywhere practically inefficient. Any thinking charitable man will concede that the place of a boy or girl between the ages of 9 and 16 is in the school and not in the mill or mine. How can we hope to rear a vigorous, enlightened, sturdy type of citizen if we deprive our children, during the adolescent period of their lives, of a chance to normally grow, play, and attend school? Ask any parent, teacher, or social worker and they will tell you that some States permit boys and girls of the tender ages of 9 and 12 years to work as long as 11 hours in their mills, and they have not even factory inspection. Any physician will vouch for the great danger in allowing young girls and boys to work long hours at monotonous work. Dr. Woods Hutchinson, of the American Academy of Medicine, says:

> The nation that works its children has no right to call itself civilized, and is about as rapacious and intelligent as the farmer who grinds his seed corn.

I do not wish to criticize the child-labor laws of the several States, but I do contend every State has a different method of enforcing its laws and applying them, and some of our States have never even sought to provide for factory inspection, and therefore I believe it to be of vital importance that we enact a Federal law that will be uniform and that can be effectively enforced in every State. Are the 2,000,000 children now employed in our mills and factories not worth safeguarding? The census report of 1910 shows that nearly 2,000,000 children under the age of 16 are employed in mechanical, manufacturing, milling, and mining pursuits, 5 per cent of all the laborers of the United States. Nearly 50 per cent of the boys and girls are under 14 years of age. More than a million girls and boys are working more than eight hours a day. There can not be any bad results emanating from the passage of this bill, which is solely humanitarian and remedial in its nature. The States that are already safeguarding their children will not need this law, but it will benefit the States that have been backward in passing child-labor legislation—in that it will bring about better conditions among such children and will give them a longer period in which they can attend school. In other words, Mr. Speaker, the Keating bill will give the less fortunate children of our land a better chance to thrive, to enjoy their childhood, to attend school, and thus aid in molding their future careers.

I am astonished to find that we have men here in Congress who have the heart to oppose a bill that tends to the conservation of human life. And I was much surprised to find opposition coming from men whom I believed stood for all that was humanitarian and uplifting, men who personally are considerate of others around them, protesting against the measure under the pretense that it might be "unconstitutional."

The only opposition that can possibly be made to this legislation is the fact that the mill owner and the manufacturer are profiting by the employment of child labor. Mills can almost be run on the labor of children, which is cheaper and in turn fills their coffers of wealth more rapidly. When men have no good argument they usually resort to the "Constitution."

I admit, Mr. Speaker, we have no exact precedent on our statute books, but the committee has given careful attention to this phase of the bill and have reached the conclusion that it is constitutional. The Supreme Court has upheld the acts providing against the sale of lotteries and also the Mann White-Slave Act. In neither case was there any purpose of protecting commerce itself, but the two acts I have just mentioned were held to be constitutional by the Supreme Court because the power to regulate interstate commerce included the power to regulate it in the interest of public welfare, public health, and public morals. We need therefore have no fear as to the constitutionality of the legislation now before us, as these cases prove the principle that Congress can exercise its power over interstate commerce in such a way as to see that interstate commerce is regulated in the interest of public safety.

Let me ask the gentlemen who would hinder the passage of this urgent legislation, Would they approve of long hours of labor for their loved ones in crowded factories or mills? Would they be willing to send their young children to the mills and workshops rather than to send them to school? Would they deny little children their birthright? Would they wish to deprive children of the sunshine or a chance to grow? I have yet to hear the opponents openly attack this bill on its merits. Their only excuse is the question of its constitutionality. I for one would not wish it said of me that I ever supported legislation that was unconstitutional, but I will always fight for any measure that is humanitarian in its scope. I would not call men high-minded American citizens who would criticize a Member of Congress for supporting a measure for the conservation of children simply because the practice of employing children in mills and factories swells the gain of a few manufacturers who pay starvation wages, and, not satisfied with earning big dividends at the expense of grown men and women, they must drag childhood into their factories to satisfy their extravagance and desire for power and wealth. Men of that caliber have no heart for the protection and welfare of humanity.

The social conscience of this land has been awakened to the evils of child labor, and people everywhere are opposed to the exploitation of children for profit. The bill which we have before us is one of the most remedial and constructive measures that any Congress could enact. It is our duty to legislate to abolish premature labor of children and to provide opportunities for the normal development and education of every child in the United States.

In conclusion, Mr. Speaker, permit me to state that conservation can reach no higher plane than in the conservation of human life. In supporting this measure we show the world that we are conscious of the needs of reforms in the industrial world and are ready to meet such reform by effective, humane legislation. This House has been convinced that a national evil of great extent is known to exist in our industrial world; that Federal relief is the only method to remedy it. A practical bill has been submitted to us, and we have now the privilege of enacting into law a measure that will commend itself to every thinking man and woman.

## Army Reorganization Act.

---

### EXTENSION OF REMARKS

OF

### HON. RICHARD OLNEY, 2D,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 8, 1916.*

Mr. OLNEY. Mr. Speaker, under leave granted to me I extend herewith article by David J. Maloney, Esq., of Boston, Mass., on the present status of the active corps and the National Guard. Mr. Maloney has for many years been a member of the First Corps Cadets, M. V. M., and is well qualified on this subject:

THE ARMY REORGANIZATION BILL—THE PRESENT STATUS OF THE ACTIVE CORPS AND NATIONAL GUARD.

[By David J. Maloney.]

The unusual conditions of the country in reference to preparedness and the seeming confusion in the minds of our citizens as to the effect of recent legislation upon the status of the active corps and National Guard prompts the writer to outline the important provisions of the new act with the hope that his effort may be of interest to the readers of the Quarterly.

Committees of both the House and Senate spent many weeks of arduous and exacting labor in formulating what seemed to be a complete reorganization of the military department of the Government and early in the year there was introduced in the House of Representatives the Hay bill and in the Senate the Chamberlain bill, taking their names from the chairmen of the Committees on Military Affairs.

Each bill was adopted in its respective branch and in so many ways were they different and there being no possibility of either the House or Senate yielding in its position, a committee of conferees of both branches was appointed to bring in a compromise measure, which resulted in the passage of the Army reorganization bill, approved by the President June 3. The great difference between the two bills, as affecting the National Guard, was that the Senate bill provided for a Continental Army and the House bill the federalization of the National Guard.

Hon. RICHARD OLNEY, 2D, representing the Fourteenth Massachusetts district, an estimable gentleman, was a member of the Committee on Military Affairs of the House. The original Hay bill had a provision preserving the ancient rights and privileges of the active corps and other organizations which had a continuous existence prior to the act of 1792, with a further provision that these organizations should be subject to all laws relating to militia but should not be a part of the National Guard or entitled to any of the privileges of the new act. If passed in that form it meant the existence of the active corps, for if it was barred from the National Guard it could no longer exist as an active military organization.

When convinced of the seriousness of the situation as affecting the corps, Congressman OLNEY made the protection of its active existence, the preservation of its ancient rights and privileges, and its membership in the National Guard—with the resulting privileges under the new act—his personal effort; and section 63 of the reorganization bill, preserving to the corps its ancient rights and privileges, was the successful result of his conscientious and persistent service, and to him the corps is greatly indebted.

The section mentioned, when it reached the Senate, was amended by adding a qualifying clause which in no way affected the active corps as an organization, and as finally enacted was as follows:

"Any corps of Artillery, Cavalry, or Infantry, existing in any of the States on the passage of the act of May 8, 1792, which by the laws, customs, or usages of said States has been in continuous existence since the passage of said act, under its provisions and under

the provisions of section 232 and sections 1625 to 1660, both inclusive, of title 16 of the Revised Statutes of 1873, and the act of January 21, 1903, relating to the militia, shall be allowed to retain its ancient privileges, subject, nevertheless, to all duties required by law of militia: *Provided*, That said organizations may be a part of the National Guard and entitled to all the privileges of this act, and shall conform in all respects to the organization, discipline, and training of the National Guard in time of war: *Provided further*, That for purposes of training and when on active duty in the service of the United States they may be assigned to higher units, as the President may direct, and shall be subject to the orders of officers under whom they shall be serving."

The concluding clause providing that these organizations may be assigned to higher units and shall be subject to the orders of officers under whom they are serving was to enable the department to make use of the corps when necessity required, as this could not be done, if as formerly, the corps received orders only from the Commander in Chief and could be attached only to a division.

One of the principal provisions of the new act provides that the number of the National Guard shall be 200 for each congressional and senatorial district, with an increase of 50 per cent each year until a maximum of 800 is reached, thus making the quota of National Guard for Massachusetts a maximum of 14,400, practically twice the number now credited to this State. The act also provides for pay for enlisted men and officers on the basis of one-fourth of that of the Regular Army, the maximum officers' pay to be $500, but no officer of a higher rank than a major to receive pay.

It also provides for 48 drills a year, payment depending upon the number of drills attended, with no provision for pay for less than 24, and also provides for a tour of duty in camp each year of 15 days.

Under section 69 the period of enlistment in the National Guard shall be for six years, the first three years of which shall be in an active organization and the remaining three years in the National Guard Reserve. The qualifications for enlistment are the same as prescribed for enlistment in the Regular Army, with a provision that National Guardsmen shall still have the privilege of continuing in active service during the whole of the enlistment period if they so desire, and also the privilege of reenlistment.

One of the most important provisions is section 70, which defines the oath to be taken by the enlisted men. Heretofore in enlisting in the service in the National Guard a soldier subscribed to an oath to support the Constitution of the United States, the constitution of Massachusetts, and to obey the orders of the commander in chief, the governor of the Commonwealth. The new oath is as follows:

"I do hereby acknowledge to have voluntarily enlisted this — day of ———, 19—, as a soldier in the National Guard of the United States and of the State of ——— for the period of three years in service and three years in the reserve, under the conditions prescribed by law, unless sooner discharged by proper authority. And I do solemnly swear that I will bear true faith and allegiance to the United States of America and to the State of ———, and that I will serve them honestly and faithfully against all their enemies whomsoever, and that I will obey the orders of the President of the United States and of the governor of the State of ———, and of the officers appointed over me according to law and the rules and articles of war."

The act finally passed both branches on May 20 and was immediately sent to the President for his signature and was actually signed and went into effect on the 3d day of June. But in the meantime trouble was brewing in Mexico, and the crisis, in the opinion of the department, was reached on June 18, when the President sent a call to the governor of each State for the mobilization of the National Guard, defining the actual units to participate. It was the purpose of the department to equip and train the men in mobilization camps, but necessity required that they be immediately sent to the border, and within a few days the National Guard, as it was ready, was sent to perform police duty in those States adjoining Mexico.

At first there was some doubt as to when the act went into effect, and it became important to know whether the troops were called into service under the new act or under the act of 1903, the Dick bill, so called. Another important question was whether or not the Dick bill was repealed.

The War Department, in reply to a question as to under what authority the troops were at the border, stated that they were there under sections 57 and 101 of the new bill and sections 4 and 5 of the Dick bill. Sections 4 and 5 of the Dick bill are as follows:

"SEC. 4. That whenever the United States is invaded or in danger of invasion from any foreign nation, or of rebellion against the authority of the Government of the United States, or the President is unable with the regular forces at his command to execute the laws of the Union, it shall be lawful for the President to call forth such number of the militia of the State or of the States or Territories or of the District of Columbia as he may deem necessary to repel such invasion, suppress such rebellion, or to enable him to execute such laws, and to issue his orders for that purpose through the governor of the respective State or Territory or through the commanding general of the militia of the District of Columbia, from which State, Territory, or District such troops may be called, to such officers of the militia as he may think proper.

"SEC. 5. That whenever the President calls forth the Organized Militia of any State, Territory, or of the District of Columbia to be employed in the service of the United States he may specify in his call the period for which such service is required, and the militia so called shall continue to serve during the term so specified, either within or without the territory of the United States, unless sooner relieved by order of the President: *Provided*, That no commissioned officer or enlisted man of the Organized Militia shall be held to service beyond the term of his existing commission or enlistment: *Provided further*, That when the military needs of the Federal Government arising from the necessity to execute the laws of the Union, suppress insurrection, or repel invasion can not be met by the regular forces, the Organized Militia shall be called into the service of the United States in advance of any volunteer force which it may be determined to raise."

"SEC. 57. Composition of the militia: The militia of the United States shall consist of all able-bodied male citizens of the United States and all other able-bodied males who have or shall have declared their intention to become citizens of the United States, who shall be more than 18 years of age and, except as hereinafter provided, not more than 45 years of age; and said militia shall be divided into three classes, the National Guard, the Naval Militia, and the Unorganized Militia."

"SEC. 101. National Guard—when subject to laws governing Regular Army: The National Guard, when called as such into the service of the United States, shall, from the time they are required by the terms of the call to respond thereto, be subject to the laws and regulations governing the Regular Army, so far as such laws and regulations are applicable to officers and enlisted men whose permanent retention in the military service, either on the active list or on the retired list, is not contemplated by existing law."

The department decided that the Dick bill was not repealed, except as to where its sections were inconsistent with those of the new act. It is clear, however, that sections 4 and 5, as quoted, of the Dick bill, relating to the call of the militia into the service of the United States, survive, for on the subject matter of these sections the new act makes no provision whatever.

There is a provision in the new act, however—section 61—as follows:

"SEC. 61. Maintenance of other troops by the States: No State shall maintain troops in time of peace other than as authorized in accordance with the organization prescribed under this act: *Provided*, That nothing contained in this act shall be construed as limiting the rights of the States and Territories in the use of the National Guard within their respective borders in time of peace: *Provided further*, That nothing contained in this act shall prevent the organization and maintenance of State police or constabulary."

And the question arises, Are the enlisted militia of the Dick bill troops in the sense of section 61? The War Department urges that it seems to be arguable from judicial precedent that the Organized Militia are not to be classified as "troops" within the meaning of this section, and in issuing the call of June 18 it acted under that view; but if we assume that they are to be classified as "troops," then there is grave doubt as to the constitutionality of section 61, for, in the words of the department, "Is it competent for Congress to forbid the States to keep militia at their own expense? For there is no doubt that it is the effect of the new national-defense act to discontinue, from July 1, 1916, all financial provision for the Organized Militia as such." It is likewise to be considered that if it be held that the militia are troops within the meaning of section 61, then there has been no Organized Militia since June 3, 1916, when the President approved the act.

So many questions arise in reference to the new legislation that there was little wonder that difficulties and obstacles confronted the enlisted man. The three years' active service and three in the reserve seemed an insurmountable obstacle to many men; and, while there was no hesitancy about assuming a new contract for the emergency or for any continued war, they feared the three years' enlistment in the reserve period. All were anxious for active service. Another obstacle was the fact that regulations had not been promulgated by the department giving rulings on the meaning of these sections affecting the enlisted man, but leaving him with a confused mind in regard to just what his status was when he was asked to assume an obligation that probably meant much sacrifice of business and personal comfort; and at that very time his mind ought to be free of such responsibilities.

The new oath of the National Guardsman requires an enlistment for six years. It seemed to those who had considered the matter from the viewpoint of the Massachusetts militiaman that this was an added hardship imposed upon men who had been for a long period in the service. It has been the custom in Massachusetts to encourage continued service in the National Guard for a period of nine years, thereby securing a long-service medal, which carries with it exemption from jury duty. The obligation under the new act to enlist for three years' active and three years in the reserve works a hardship on men of such long service.

Assuming that a man of ordinary age enlisted in the Massachusetts militia, his first enlistment for three years and the reenlistment for one year at a time to make up nine years' continuous service; he is a man approaching 35 or 40 years, and is on the last year of his nine-year period, with six months of it unexpired. In taking the new oath he obligates himself for three years active and three years in the reserve, with a credit of six months on his present enlistment contract, which would give him a service of almost 15 years.

The young man, however, who is on his first enlistment of 3 years, of which 2 years and 10 months have expired, is at an age when he has less responsibilities and should be ready and willing for a considerable service, yet if he takes the new oath he gets a credit of 2 years and 10 months on his 3 years' active service and his obligation practically means 2 months in active and 3 years in the reserve. It would seem equitable that the man who had been in the service of the State for 9 years, with but a small portion of it unexpired, should be able to take the new oath with a credit for previous service on both his active and reserve periods under the new contract.

This phase of the question was taken up with the War Department for the purpose of readjustment, and in reply to a communication it was stated that the framers of the new law did not take into consideration the requirement of State laws prior to June 3, 1916, regulating the contract of enlistment, and that the execution of the laws of the State of Massachusetts, whose laws radically differ from the laws of other States, causes this inequality. The department doubts what form any corrective or remedial legislation should take.

The thought that prior service rather than length of service in current enlistment should have determined the amount of active service required by the new law did not seem to impress the department, as it stated that in the Regular Army prior service did not shorten any new enlistment contract entered into by the soldier, and that the legislative mind was not accustomed to thinking along such lines. The department further stated that it was not compulsory for the organized militiaman under the Dick bill to qualify and become a National Guardsman under the new national defense act, so that anyone adversely affected by the provisions of law relating to enlistment could have escaped all resulting embarrassment and hardship by declining to become a new National Guardsman.

That, however, does not offer much compensation to the militiaman who has served nine years and ought to be allowed to take the new oath and serve the balance of his present enlistment without creating an obligation that has existed and will continue to exist for practically a third of his life above the age required for entrance into the militia. The Department would not, however, be quoted that it was of the opinion that a man embarrassed by long service and the new contract was at liberty to obey or not to obey the call of the President, either as an organized militiaman or a National Guardsman, and that his obligation to respond to the call of the President must not be confused with an alleged obligation to transform himself from Organized Militiaman into National Guardsman by taking the new oath and subscribing to the new enlistment contract for three years in active and three years in the reserve, with a credit for the unexpired portion of his present enlistment contract.

Another important question arises as to what becomes of the members of the militia who fail to take the new oath. It has been determined by the department that they are still members of the Organized

Militia; and, acting upon that ruling, they have been called for service under the sections of the Dick bill, and if they refuse to take the old form of muster oath will be subject to arrest and court-martial. This, of course, affects only those organizations that were subject to the call of the President, and, it would seem, has no effect on the active corps.

As to just what the future status of the members of the Organized Militia who did not subscribe to the new oath will be is a serious question for the future, as it would seem impossible that an organization should have one part of its membership federalized National Guard and another part Organized Militia, rendering a service each under a different enlistment contract; but it is assumed that such difficulties will be cared for perhaps more decisively by action in the courts to determine whether or not Organized Militia exists after the act of June 3, 1916, and whether section 61 of the new act, providing that no troops should be maintained in time of peace by the States except the National Guard, is constitutional in the event that it is decided that the Organized Militia are "troops."

Then the question is going to be raised if the Organized Militia of the States are not troops as contemplated by our military system—what are they? Unfortunately the decision of this subject, with so many apparent contradictions and the confusion which seems to prevail as to just what the meaning of the new military act is, and when allied with the Dick bill still more confusing, finally resolves itself in a series of questions which never decide, and I assure you the writer has not approached this subject as "a doubter who asks questions but answers none," but one who desires to lay before the readers of the Quarterly some of the thoughts suggested by men in the service. The Army appropriation bill has a section instructing the Judge Advocate General to codify and make necessary changes in the military act, and with reasons therefor to report to the next Congress, so many, if not all, inconsistent laws may be harmonized.

The active corps participated in the mobilization at first voluntarily, going into the field to be at the highest point of efficiency if the call came taking the organization into the active service of the United States. The voluntary tour was interrupted by a call from The Adjutant General assigning the corps to guard the camp at South Framingham, to assist in the distribution of supplies, and to train the recruits. The men of the active corps were disturbed, as were all militiamen, by the terms of the new act, especially the enlistment contract. There was never a question of active service, and every man in the corps, if he were called upon to subscribe to an oath for any emergency, would have met the issue fairly and squarely.

The doubt as to under what law the forces were serving and the many questions which no one seemed to answer with any conclusiveness, caused the men to become serious minded, and some of them acted most wisely in not subscribing to the new oath. Whether or not individual men took the oath is not the question for a great percentage of the active corps subscribed to the new contract of enlistment, and the organization is now enrolled in the federalized National Guard.

The situation resulting from the call of the President of June 18 was a healthful one. It was a test. One can never tell when he may be asked to fulfill his pledge of devotion and loyalty to any cause, and one never knows, nor should he know, when the test may come. No one ever questioned the loyalty of the militiamen to the State and the Nation, and amid the confusion as to the meaning of the new Army reorganization bill, its purposes, its effect upon the States and individuals, there could be but one consistent policy to follow, and that the basic principle of all success in military affairs—obedience. Obedience is loyalty, it is patriotism, and when the Nation calls, no matter under what law or confusion of laws, whether right or wrong—

"Ours is not to reason why,
Ours is but to do or die."

## Conservation of the Appalachian Forests.

### EXTENSION OF REMARKS
OF
### HON. JAMES J. BRITT,
OF NORTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 4, 1916.*

Mr. BRITT. Mr. Speaker, on the 2d day of May last I urged this House, with all the force at my command, to add to the Agricultural bill an item of $3,000,000 for the extension of national-forest purchases, under the Weeks Act, in the White Mountains of New England, and the southern Appalachian ranges. I did not succeed in my undertaking. But the Senate has very wisely added this necessary provision, and it is here for consideration on the pending conference report.

Mr. Speaker, the reasons which I then offered for the allowance of this sum have since been strengthened manyfold. Within the last month many sections of the southern Appalachian regions have been visited by appallingly destructive floods, leaving ruin and death in their wake. Western North Carolina, and particularly that part of it embraced in my district, is the scene of the heaviest loss and the greatest destruction. Here thousands of acres of crops have been destroyed, lands have been ruined, buildings have been swept away, roads and bridges are gone, and more than a score of people have lost their lives. And it is here where the major part of this proposed appropriation for forest conservation would be expended.

Of course no act of this Congress can stay the fall of the rains or change the laws of nature, but this appropriation will put into the hands of the Federal Government the control of the use of the lands and forests about the headwaters of our impetuous mountain streams, and earth, grass, shrub, and tree, nature's kindly reservoirs, will be preserved, and destruction by the overflow of mad streams and raging torrents will be prevented.

Mr. Speaker, I shall not detain the House. I do not deem it necessary. Surely it is apparent to all that this amendment should pass. I know of no other way in which $3,000,000 could be so profitably spent. I trust I may have the high satisfaction of knowing that not a single vote is cast against it.

## Indiana.

### EXTENSION OF REMARKS
OF
### HON. MARTIN A. MORRISON,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 8, 1916.*

Mr. MORRISON. Mr. Speaker, it is often said by those who do not reside in Indiana that there is more politics in Indiana per capita and to the square mile than in any other State of the Union. That is probably true. Many who make this statement mean by it that there is more partisan zeal and political personal ill will and antagonism in Indiana than is to be found elsewhere. I am not at all convinced of that. In Indiana political affiliations and activities rarely affect in any degree the social relations or personal friendships of men. All persons are at all times interested in politics in its broad and proper sense. The campaign of education, from the standpoint of intelligent and efficient good citizenship, never ends. It is perennial. The campaign for partisan or personal political advantage begins late in the summers of campaign years and ends with election day. It is strictly biennial.

The pending campaign furnishes an illustration of this happy situation. Indiana furnishes the candidates for Vice President on the tickets of both of the great political parties. one the Vice President and the other a former Vice President. Both reside in the same city. They are, and have long been, warm personal friends. Their campaigns will be without a trace of the personal element which sometimes enters into political contests. It is certain now that whatever may be the result of the election the successful candidate for Vice President will bear with him into his high office the friendship, esteem, and good will of his unsuccessful rival.

While Indiana's public men are loyal to their respective party organizations, they may be counted upon to be in complete accord and vote as a unit on questions which involve fundamental principles of government, the honor and integrity of our treaties and other public covenants and obligations, or the maintenance of American ideals of national and international rights, relations, and duties.

When the statute granting to vessels engaged in our coastwise trade exemption from the payment of Panama Canal tolls passed the House both great parties were represented in its membership from Indiana, but they all voted as a unit against the bill. In that respect no other State of considerable size has a like record.

When the bill to repeal the tolls exemption was pending the discussion by public men of Indiana was cast on a high patriotic, nonpartisan plane. Former Senator and former Vice President Fairbanks, a gentleman of the old school and a public servant of whom we are all justly proud, had complete personal and official knowledge of all the facts involved in the controversy as to the propriety of the repeal of the tolls-exemption law. He discussed the situation frankly at home and abroad, helping to give to the people of Indiana that perfect knowledge of the case which made public sentiment for repeal undivided and insistent. He strongly urged immediate repeal upon the high ground of the maintenance of our national integrity.

Some days ago President Wilson delivered a public address, in which he intimated that some, at least, of the most enthusiastic advocates of Mexican conquest were, consciously or unconsciously, influenced by motives personal and sinister. Assuming that the people of Indiana, each of whom is reputed to be a politician, would be easily moved to bitter partisan controversy as to the propriety of the President's intimations, the official trouble makers of the campaign committee began to appeal to loyal Republicans in fierce denunciation of the President's address. The appeal has fallen upon deaf ears. It has

brought no favorable response. If the trouble makers admit that they are surprised, they plead guilty to inexcusable ignorance of the general public interest in and knowledge of public questions, to be found in Indiana all the time on all public questions by all the people.

The Republicans of Indiana do not resent the mild intimations contained in President Wilson's address. Indeed, they have heard much stronger statements from perfectly regular Republican sources, and are prepared to criticize the President for the mildness, rather than for alleged impropriety, of his statements.

On the evening of Thursday, August 15, 1913, the Indiana Republican Editorial Association was given a reception at the home of former Senator and former Vice President Charles Warren Fairbanks. During the evening Mr. Fairbanks delivered an address in which he told the editors much of the inside history of the war with Spain, from which he drew sound reasons to support his earnest plea against intervention in Mexico by the United States.

A portion of his address relating to the War with Spain and our duty in relation to Mexico was published in the Indianapolis News, in its issue of August 15, 1913. The story was as follows:

MEXICAN SITUATION.

Regarding the Mexican situation, Mr. Fairbanks said, in part:

"We have no need to fear any alien power, for we shall not willingly provoke any of our international neighbors to the point where war will become necessary. It is a safe assumption that there will be no war unless we provoke it. As our country grows in numbers and material strength it becomes increasingly important that we should beware that we do not allow ourselves to become needlessly engaged in conflicts with our neighbors. A great nation will not pick quarrels with others, particularly with those who are weak compared with its tremendous strength.

"The nation which imagines that other peoples are lying awake nights to offer it indignity, the nation which is in a continual ferment over little things, is wasting its energies and dissipating its opportunities. The greatest menace to international peace are the jingoes—the most undesirable members of the community. They take no account of the terrible consequences of war, and avail themselves of the slightest pretext to involve their country in a serious engagement with others, and, as a rule, if war comes, they leave the hard fighting to be done by some one else."

INCIDENT CITED.

Illustrating this point, Mr. Fairbanks related an amusing incident when a man living in southern Indiana wrote to Mr. Fairbanks prior to the Spanish-American war strongly criticising President McKinley for not beginning war at once. Mr. Fairbanks replied by offering to get the man an appointment on the first battleship which would be engaged in the war if it should come, but the man who was eager for somebody else to begin the war was not willing to go to the front himself.

Mr. Fairbanks continued:

"It is perfectly obvious that *much of the agitation which led to the War with Spain* and ultimately imposed on us the responsibility of governing 10,000,000 of people, *and which caused the Government to spend hundreds of millions of dollars, was of the most selfish and sinister character.* Men who wanted to fatten on Government contracts, or who were eager for military distinction, or who wanted Cuba annexed because of the chance to exploit her railroads, sugar and tobacco plantations, and other sources of wealth, were eager for war; they felt that out of it would come the annexation of Cuba to the United States, and as American territory the value of its resources would be largely increased.

"PART OF YELLOW PRESS.

*"The yellow press played its selfish and nefarious part; it was moved by no considerations of either patriotism or national honor.*

"After stable government was established in Cuba and the island surrendered to its people, internal disturbance led to the retaking of the island under our reserved power. I have no doubt whatever that the internal dissensions were provoked by speculators, by the owners of public utilities, and of great sugar and tobacco plantations, in the hope that the United States would make an end of the matter and take the island under its permanent control, in which event the value of all the property in the hands of speculators would be greatly enhanced; and it is quite probable that we have not seen the last of an effort made by those who would exploit the island for selfish purposes to bring about a situation which would lead the United States to resume and retain permanent possession of it.

"INFLUENCES IN MEXICO.

*"I have no doubt that the disturbances in Mexico during the last few years have been due in a greater or less degree to an effort on the part of ambitious, cunning men to force intervention and possibly annexation to the United States.* The exploiters of public utilities and of the mineral and agricultural resources of our neighbor have undoubtedly thought that they would gain much if they could force intervention by the United States. *There are soldiers of fortune in Mexico who would undoubtedly welcome such a contingency.*

"Sensationalists are adding to the confusion of the situation and making more difficult the solution of the problem. Intervention in Mexico is, of course, not a matter to be considered lightly; for intervention means war, and war means the destruction of human lives and the expenditure of hundreds of millions of dollars. *It means, furthermore, the responsibility of the Government of 20,000,000 of people for an indefinite period. We are now engaged in governing 10,000,000 of aliens as the result of the Spanish-American War—a war which could very probably have been averted if we could have exercised a little more patience, patriotism, and self-restraint.*

SUPREME CRIMINAL FOLLY.

"If our speculators in Mexico suffer pecuniary loss as the result of recurring revolutions, that is a matter for future consideration, when stable government and peace are fully established in that country. It is not warrant for shedding the blood of Americans. *To sacrifice the life of one soldier for all of the dollars investors or speculators have ventured in Mexico would be the supremest criminal folly.* Without a deliberate affront on the part of the Mexican Government whether it exists de jure or de facto, is no good ground on which we would be justified in sending our armies beyond the Rio Grande.

"How much of the troubles in Mexico is caused by sinister influences, both internal and external, no one can, of course, tell; but that such influences exist there can be no reasonable doubt. It is perfectly obvious with the transfer of the responsibility of Mexican Government to our shoulders—and that is what intervention means—the value of every dollar invested in Mexican enterprises would be increased many fold. The contingency of intervention under all the circumstances would be a calamity which every American concerned in the best interests of his own country might regard with grave concern. *We have enough questions, both at home and in our insular possessions, to tax our serious attention without adding to their number graver ones in Mexico.*

TAFT AND WILSON.

"President Taft dealt admirably with the Mexican situation under serious provocation, and I believe that Ambassador Wilson carried himself with poise and good judgment. It seems to me that the Mexican situation is one that need by no manner of means cause serious alarm. The duty of the United States is plain. President Wilson is dealing with it as best he can. We may not entirely agree that his course is better than that of his distinguished predecessor, nevertheless we should endeavor to uphold his hands.

"There should be no difference of opinion as to that. By doing so we shall make his task a comparatively easy one.

"It is not an hour for either little politics or sensational journalism. The clamor of the jingoes should not be allowed to drown the voice of rational deliberate statesmanship. *It is a pretty safe rule when we come to deal with grave international problems to put our faith in the President of the United States and follow where he may lead.* He speaks for the country when we come to deal with international affairs. The President of the United States is a safer guide than sensationalists and the soldiers of fortune, who come to the surface whenever international controversies arise."

I shall indicate for the RECORD certain italics to call attention to the particular statements to which I have referred.

The Indianapolis News is one of he most ably edited and strongest of American newspapers. I am not always in accord with its policy, but it must be conceded that its editorials are always ably written in clear, concise, and correct English. The News is powerful in the making of public sentiment in the Middle West, and its editorials are usually expressive of the mind of the people of that territory.

In its issue of August 16, 1913, the leading editorial of the News was a strong approval of the address of Mr. Fairbanks, to which I have just referred. The editorial was as follows:

MR. FAIRBANKS ON FOREIGN AFFAIRS.

In his speech before the Indiana Republican Editorial Association Mr. Fairbanks strongly opposed intervention in Mexico, and urged all good citizens to stand by the President in his patriotic efforts to bring about a peaceful settlement of the problems. But the most interesting part of his very able address was his discussion of the general subject of our foreign relations, and of the duty of the people with reference to them. There are, as he said, always men who want war. Peace is always menaced by the jingoes, whom the speaker characterized as "the most undesirable members of the community." "They take no account," he went on to say, "of the terrible consequences of war, and avail themselves of the slightest pretext to involve their country in a serious engagement with others, and, as a rule, if war comes, they leave the hard fighting to be done by some one else."

Mr. Fairbanks practically admits that the McKinley administration was almost coerced by an excited public opinion into declaring war against Spain. His opinion on that subject is entitled to great weight, as he was at that time one of the leading Members of the Senate. He said:

"It is perfectly obvious that much of the agitation that led to the War with Spain and ultimately imposed on us the responsibility of governing 10,000,000 of people, and which caused the Government to spend hundreds of millions of dollars, was of the most selfish and sinister character. Men who wanted to fatten on Government contracts, or who were eager for military distinction, or who wanted Cuba annexed because of the chance to exploit her railroads, sugar and tobacco plantations and other sources of wealth, were eager for war; they felt that out of it would come the annexation of Cuba to the United States, and as American territory the value of its resources would be largely increased. The yellow press played its selfish and nefarious part; it was moved by no consideration of either patriotism or national honor."

The speaker also said that he had no doubt that trouble was stirred up in Cuba after the first Government in the island had been established "by speculators, by the owners of public utilities and of great sugar and tobacco plantations" who desired annexation as a means of enhancing the value of their property. Nor does he think that we have seen the last effort of those "who would exploit the island for selfish purposes to bring about a situation which would lead the United States to resume and retain permanent control."

The same sort of campaign is now in progress to force intervention in Mexico. The men who are making it know that intervention would mean war, the slaughter of many men, and the expenditure of hundreds of millions of dollars, and it would involve, as Mr. Fairbanks said, the government of 20,000,000 people for an indefinite period, and possibly annexation. As it is now, we are governing 10,000,000 aliens as the result of the Spanish War, which the speaker thought "could very probably have been averted if we could have exercised a little more patience, patriotism, and self-restraint." How much better off we should have been to-day if it had been averted!

Fortunately, our people have profited by their experience. There is to-day practically no demand for war with Mexico. We think that public opinion is accurately reflected in these words of Mr. Fairbanks:

"If our speculators in Mexico suffer pecuniary loss as a result of recurring revolutions, that is a matter for future consideration, when stable government and peace are fully established in that country. It is not warrant for shedding the blood of Americans. To sacrifice the life of one soldier for all of the dollars investors or speculators have ventured in Mexico would be the supremest criminal folly. * * * The contingency of intervention under all the circumstances would be a calamity which every American concerned in the best interests of his

own country might regard with grave concern. We have enough questions, both at home and in our insular possessions, to tax our serious attention without adding to their number graver ones in Mexico."

All of which is admirable. We commend the speech of Mr. Fairbanks to those few Republican Senators who have been somewhat disposed to antagonize the administration program.

The speech of Mr. Fairbanks and the editorial of the Indianapolis News are typical of the innumerable educational forces continually at work among the people of Indiana. The general public information on public questions resulting from this perennial campaign of education can not be nullified or substantially modified by ultrapartisan activities carried on during the stress and strain of political campaigns.

The statement I have made will explain why it is useless to seek to induce the members of any political party in Indiana to look with favor upon an attempt to force the country into a false attitude toward a grave international question for the sake of a mere partisan advantage. It is too late in our history for that.

---

## Wilson's Policies Menace to Nation.

### EXTENSION OF REMARKS

OF

# HON. JOSEPH W. FORDNEY,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 8, 1916.*

Mr. FORDNEY. Mr. Speaker, I wish to have printed in the RECORD a letter written by Mr. Louis E. Rowley, of Lansing, Mich. Four years ago Mr. Rowley was an ardent Wilson supporter. He now proposes to vote for Charles E. Hughes, and in this statement he gives his reasons therefor.

Mr. Rowley's letter, as printed in the Detroit Free Press of August 7, is as follows:

WILSON'S POLICIES MENACE TO NATION IN MIGHTY CRISES—SO DECLARES LOUIS E. ROWLEY IN TELLING WHY HE HAS TURNED AGAINST MAN HE SUPPORTED ARDENTLY—ATTITUDE TOWARD MEXICO BROUGHT REIGN OF ANARCHY—VACILLATING AND UNNEUTRAL STANDS TOWARD GERMANY AND ENGLAND CAUSED DANGEROUS TANGLE.

[By Louis E. Rowley.]

It was said of Lamartine, the brilliant French writer and political rhetorician, that his career as the virtual head of the short-lived provisional government in 1848 had proved that the government of a great country can not be carried on permanently by making speeches from a balcony.

The unpractical but well-meaning and highly gifted hero of the democratic reaction in France was supposed to have furnished the most classic example of the failure of specious phrases to do the work of government, but I am regretfully obliged to say that it has remained for the present Democratic President of the United States, in one of the most critical periods of the world's history, to outdo him in this kind of achievement.

I was one of those who ardently supported Woodrow Wilson in both the preconvention and electoral campaigns of 1912, because I regarded him as the most philosophical, the most eloquent, and the most clear-visioned Democratic leader of his day.

I had formed my opinion of his character and public capacities from reading his occasional deliverances, both as a distinguished American scholar and as a thoughtful and luminous commentator on political affairs, and I was led to believe that he would be as wise and courageous in action as he had been in speculation.

But I have learned to my sorrow that a man may be a philosopher in his maxims and yet a palterer in his practice; a statesman in his concepts and yet a fatuous opportunist in his actual handling of public affairs.

I have also learned that even a Democratic label is not an absolute guaranty of clear and undeviating Democratic conduct, and that even the skin of a mellifluous Jeffersonian may conceal an irresponsible autocrat.

I supported Woodrow Wilson in 1912 in the full conviction that he would make a great and worthy Democratic successor of Grover Cleveland, who combined a high idealism with a powerful practical judgment.

"SAVING COMMON SENSE" OF CLEVELAND ABSENT.

I am opposing Woodrow Wilson in this campaign in the equally firm conviction that he has neither the intellectual conscientiousness nor the "saving common sense" of the man whose administration shed such luster on the Democratic name.

I supported Woodrow Wilson in 1912 because he stood for "open and disentangled processes of government," for "pitiless publicity," and for the restoration of the "authority of our legislative bodies," which he declared was necessary to the "recovery of their self-possession and self-respect," and in order that "the people may again depend, and depend with confidence, upon their legislators, and not lean as if for rescue upon their Executive."

I am opposing Woodrow Wilson in this campaign because as President he has done more to discourage "open and disentangled processes of government," to stifle publicity, to belittle legislative bodies, and to teach the people to "lean as if for rescue upon their Executive" than any American President since Andrew Jackson, whose arbitrary conduct—to quote from that distinguished work, Woodrow Wilson's History of the American People—"broke the course of all settled policy, forced every question to square itself with the President's standards, altered the elements of parties"—because, in a word, by his secretiveness, his academic arrogance, and his studied contempt for Congress he has willfully and persistently belied his own oft-repeated and fascinatingly phrased pronouncements on these matters of supreme Democratic concern.

I supported Woodrow Wilson in 1912 because I believed that he would sincerely strive to be a useful and single-minded President of the United States, and would glory in promoting the best interests of his country at whatever sacrifice of his academic predilections.

I am opposing Woodrow Wilson in this campaign because he prides himself on being the "President of humanity" and persistently acts on the theory that his duties are defined, not by the laws of the United States but by the general moral law—according to St. Woodrow.

PLEDGES OF PLATFORM FLOUTED AND REPUDIATED.

I supported Woodrow Wilson in 1912 because I firmly believed that he could be counted on to carry out with a measurable degree of faithfulness the pledges contained in the Democratic platform of that year—pledges which he himself vauntingly declared "say what they mean and mean what they say."

I am opposing Woodrow Wilson in this campaign because he has repeatedly and defiantly flouted and repudiated some of the most important of these pledges, thus paltering with both his party and the country in a double sense, breathing the word of promise to the ear and breaking it to the hope.

I have briefly set forth in the foregoing some of the principal reasons why four years ago I gave my voice and vote for Woodrow Wilson, but I have stated only a few of the reasons which have impelled me to take my stand against him in the present campaign. I have reserved the more important of them for a more extended synopsis and discussion.

Among the really vital declarations of the Baltimore platform was one favoring "the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal." A Democratic Congress already had passed a law exempting American ships from these tolls, and a Republican President (Taft) had signed it. Both the law and the platform indorsement of it were specifically and unreservedly commended by candidate Woodrow Wilson. It will be recalled that while the canal tolls exemption bill was pending in Congress it was widely and earnestly discussed in the public press and monthly reviews, and that all the international aspects and implications of it were thoroughly considered by Congress before passing it. The author of the bill was the Hon. FRANK E. DOREMUS, one of the ablest and most influential Democratic Members of the House. It received a large Republican vote in both branches of Congress, but it was widely acclaimed as an especially meritorious Democratic legislative achievement.

BRINGS ABOUT REPEAL OF TOLLS-EXEMPTION LAW.

However, it was destined not long to be thus acclaimed. Within a few months after his accession to the Presidency, Woodrow Wilson went before the assembled Houses of Congress, and, with dexter finger upraised and brow of heavy portent, made this cryptic announcement:

"I shall not know how to deal with matters of veen greater delicacy and nearer consequence if you do not grant it—the repeal of this self-same Panama tolls-exemption law—to me in ungrudging measure."

And he spake further words of wisdom, thus:

"We ought to reverse our action without raising the question whether we were right or wrong."

Acting in the same esoteric spirit, and with a submissiveness born of fearsome respect for the presidential aura, the Democratic majority hastened to carry out their instructions in exactly the manner they had been told to do by repealing the law "without raising the question whether we were right or wrong."

And who cared a rap "whether we were right or wrong?" Wasn't it enough to know that an infallibly prescient President had commanded them to repeal the law? What are party pledges anyway compared with "matters of even greater delicacy and nearer consequence" that arise to vex and perplex the presidential mind—especially when the interests of our "English cousins" happen to be involved in them?

But let no one think that this was the first time a subservient Congress had jumped through the hoops at the bidding of a pledge-scoring President. It had done so a short time before in the case of the sugar tariff. Most people will recall that both as a candidate for the Democratic presidential nomination and later for the suffrages of the people, Woodrow Wilson had distinctly pledged himself not to favor any tariff legislation that would "injure or destroy legitimate industry." So anxious was he to have the country understand that neither he nor the Democratic Party was committed to a radical tariff-smashing policy that he made the straight-out declaration that "there is no Democrat of thoughtfulness that I have met who contemplates a program of free trade."

---

But notwithstanding these voluntary and very explicit assurances, he had no sooner assumed the Presidency than he announced that he would take the boldest step toward the realization of the purely academic idea of free trade that had ever been attempted by any first-class modern Government (for even "free-trade" England imposes a revenue duty on sugar) by wholly removing the tariff on sugar which had been maintained since the days of Thomas Jefferson and which had been defended by Grover Cleveland as "the most logical and equitable" customs tax ever levied by the Government.

Such was the "program of free trade" which Woodrow Wilson made the ne plus ultra feature of his initial legislative policy, despite his vehement preelection declaration that "no Democrat of thoughtfulness" ever contemplated it or would stand for it. However, he forced a Democratic Congress to stand for it two years, and then it repealed it because neither the finances of the Government nor the economic welfare of the country would stand for it any longer. But in the meantime a large public revenue had been lost and a legitimate agricultural industry jeopardized and only saved from practical annihilation by the "world smash" in Europe, which suddenly sent sugar prices booming.

DENOUNCER OF CAUCUS, HE INVOKES THE CLOSURE.

It is to be remarked that neither in the Panama tolls exemption matter nor in his free-sugar coup did the President deign to enlighten anyone as to the real reasons which had induced him to insist on such a startling volte face. He was not frank, he was not consistent, and he was hardly intelligible. Although he had been a vigorous denouncer of the "secret caucus," under whose workings legislators had become "mere automata," he now resorted to the most offensive use of the old tyrannical caucus system to force his pledge-smashing measures through Congress. Even the hateful and undemocratic closure was invoked by him to silence the congressional dissentients to his legislative plans. He assumed an attitude of undisguised impatience and even intolerance toward those who opposed him, and demanded the adoption of his recommendations without debate and without question. He seemed to think that all the functions and all the policies of the Democratic Party were

comprehended, controlled, and included in himself, and that it was rank sacrilege to impugn either his wisdom or his acts. As for the Democrats in Congress—

Theirs not to make reply,
Theirs not to reason why,
Theirs but to do—and sigh!

Some of them, of course, swore, but the most of them "took their medicine" as innocuously as possible. Before the authority and prestige of the omnificent White House evangel of the new freedom they were powerless, not to say obsequious.

There is still another and more signal instance of the President's apostacy to his platform obligations. There was one particular plank in the Baltimore platform that was so thoroughly American, so clear, so straight, so inspiringly patriotic that if it had been the only issue in the election all the States in the Union would have been Democratic. Let me quote it here in full:

"The constitutional rights of American citizens should protect them on our borders and go with them throughout the world, and every American citizen residing or having property in any country is entitled to and must be given the full protection of the United States Government, both for himself and his property."

How well this promise has been kept let the shameful and gruesome history of the last three years of abandonment of American citizens and their property and of our national obligations under the Monroe doctrine in Mexico tell.

GEOGRAPHICAL LINES IN PROTECTING CITIZENS.

I know it will be contended that the President has attempted in his own furtive, spasmodic, and irresponsible way to enforce this pledge as against the central powers of Europe; but why shouldn't it mean the same thing in Mexico as to American citizens and their property as it does upon the deck of an armed British merchantman flying the flag of St. George?

Who can imagine a Washington or a Jackson or a Cleveland enacting such a rôle of executive impotence as Woodrow Wilson has enacted in respect of those American rights in Mexico which the above-quoted splendid plank in the Democratic platform was so evidently intended to vindicate and defend?

"A man who violates a party pledge is a criminal, worse than the man who embezzles money." And when that pledge relates to the most vital "constitutional rights of American citizens," how much greater is the criminality of him who has registered a solemn oath to see that it is implicitly kept?

I hope I shall be pardoned if I ask William Jennings Bryan, the renowned Democratic oracle who pronounced the condemnation on the violator of party pledges which I have quoted in the preceding paragraph, to answer this question. Maybe he can do so if he will divert his ratliant gaze from that anusecond-term plank in the Baltimore platform long enough to take an impartial survey of the other pledge-breaking achievements of the Wilson administration which call so loudly for patriotic reprobation.

I shall touch very briefly upon the other examples of evasion and violation of platform declarations which have been so frequently furnished by the administration. The Baltimore convention reaffirmed the time-honored party pledge to "honestly and rigidly enforce" the civil-service law, but the President has not only violated the spirit of it by making more purely "personal"—not to say questionable—appointments than any of his immediate predecessors, but he has given his executive approval to acts creating great departmental bureaus and expressly exempting them from civil-service regulations. This was a distinctly retrograde step. There was also a plank in the national platform denouncing "the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses," and demanding "a return to that simplicity and economy which befits a Democratic government"—but which, alas, has not been practiced by it even under the guidance of the most exalted exemplar of Jeffersonianism that has ever woozled the people with language and promises.

FROM PEACE IDEALISM TO PREPAREDNESS SWIFT STEP.

There has been the same exhibition of vacillation and back pedaling by the President in many matters concerning which he had previously expressed the most positive views. His penchant for dismissing an ugly fact with a golden-cadenced phrase has probably never been more vividly illustrated than in that passage in his message to Congress of December 14, 1914, in which he discussed the question of preparedness—he called it "militarism" then—and in which he declared that to inaugurate such a policy "would mean merely that we had lost our self-possession; that we had been thrown off our balance by a war with which we have nothing to do, whose causes do not touch us, whose very existence affords us opportunities of friendship and disinterested service which should make us ashamed of any thought of hostility or fearful preparation for trouble."

Within three months from the day he made this beautiful and affecting idealistic utterance the President was "swinging around the circle" warning his countrymen that the most urgent duty of the hour was to inaugurate a policy of "militarism," advocating the building of a navy "incomparably the strongest in the world," and raising a veritable continental din with his "fearful preparation for trouble."

What a cinematographic picture we have here of the President in professorizing and performing. Beautiful words; inspiring words, but how utterly irreconcilable with what he actually did.

It is apparent that the trouble is not with the President's work. It lies elsewhere. His words are good, but his word is not good.

This may sound like pretty harsh criticism, but note how even in his handling of the tremendously momentous international questions which have arisen since the war broke out he has justly merited it.

During the first few months of the war President Wilson maintained an unexceptionable American attitude toward all the belligerent nations. He enjoined absolute neutrality on his countrymen and he practiced it himself. But when the desperate necessities of Germany and England led them to make reprisals against each other that were wantonly violative of international law and of our maritime rights, the President lost his self-possession and turned some epistolary flip-flaps that finally involved the American Government in an appalling mess of diplomatic contradiction and unneutrality.

LACK OF FIRM STAND BRINGS AN UGLY TANGLE.

The task which he faced was not a Sisyphean one. It required no extraordinary powers of statesmanship. Only common sense and courage were essential to the surmounting of it. The infractions of international law were notorious. So plain was our duty in the premises that on Feberuary 29, 1916, the administration sent an "identic note" to the British and German foreign offices. It set forth certain rules of conduct that both sides should observe in common and certain others that Germany should observe on her part, with still others that Britain should observe. "The American position was fair and reasonable," declares Dr. Albert Shaw, the distinguished editor of the Review of Reviews, one of our foremost English-American monthlies. "We asked the one belligerent to agree on condition that the other should do the same. Germany replied courteously within 10 days and accepted our proposals. England waited 23 days and declined the proposals."

It is certain that if we had taken a firm stand at that time there would have been no serious international complications. "England was wrong," says Dr. Shaw (and in this opinion he is supported by the leading diplomatists of all the neutral countries), "and we were in a position to set her right by a firm word that meant 'business' without controversy, but without delay. It was our Hamlet-like lack of promptitude and firmness at that moment of rare opportunity that has been a contributory cause of all the unfortunate incidents of Germany's ill-conceived form of reprisal through the long and painful period that has ensued."

This just arraignment of the administration has not been answered for the simple reason that no satisfactory answer can be made to it. When President Wilson undertook to hold only one of the warring European powers to an accountability for the violation of our international rights he deliberately entered upon a course of unneutrality that has cost us the respect of the world. The culpability of England was as clear in fact if not in degree as that of Germany. She had deliberately, grossly, and defiantly transgressed neutral rights, and she is just as deliberately, grossly, and defiantly transgressing them to-day. "In premeditated disregard of neutral rights," says the New York World, the most powerful Democratic newspaper in the country and a strong supporter of the entente, "England is as guilty as Germany." Even the New York Sun, another pronounced champion of the allies, has significantly declared that "it is a poor rule that works only in the case of Germany."

ATTITUDE TOWARD WARRING POWERS MOST INCONSISTENT.

The merest tyro in international ethics knows that the rule of inflexible neutrality, of friendly vigilance for the protection of American rights, of an even attitude toward the contending powers goes to pieces when it is unequally applied. Nobody complains of President Wilson's firm stand with regard to Germany; but when he turns his back upon England's lawbreaking while bringing us to the threshold of war with her great rival in the name of the freedom of the seas, we can not but deplore the flagrant inconsistency of his conduct.

Another irritating instance of the administration's tendency first to wabble and then to ignominiously reverse itself even where the highest "moral considerations" are concerned, was furnished in the matter of making loans to the allies. It will be recalled that when England and France first asked us to help finance their war operations, Secretary Bryan announced that "it is inconsistent with the spirit of neutrality for a neutral nation to make loans to belligerent nations, for money is the worst of contrabands—it commands all other things—and American bankers were notified that the Government would look with marked disfavor on the placing of such loans in the United States.

The justice and reasonableness of Secretary Bryan's stand were not seriously questioned by even the most ardent American sympathizers with the allies. It was almost universally admitted to be the only consistent and honorable position that a great neutral nation could take. There was, of course, no legal inhibition on the making of such loans, but on moral grounds the supplying of vast sums of money to the allies was indefensible. To do so would virtually make us an ally of the allies. Accordingly, in officially discountenancing these loans, the administration was acting in the spirit of a true, if exalted, neutrality.

But unfortunately it did not long exemplify this sort of neutrality. In the midst of the marvelous industrial activity which had followed the placing here by the allies of unlimited orders for munitions and other war supplies, the President forgot all about his mission to "blaze a new way" for the world in the observance of neutrality, and thinking only of the tremendous material gains which were imparting such a thrilling significance to the Democratic slogan of "Peace and prosperity," he gave his consent to the American underwriting of the half-billion Anglo-French loan—the largest foreign loan ever negotiated in the history of the world.

The real purpose and effect of this loan were perfectly described by the London Spectator when, with characteristic British bluntness, it said that "two belligerent countries are borrowing from a neutral to finance their operations of war."

THIRD OF ENGLAND'S OUTPUT FOR WAR SPENT IN UNITED STATES.

There is no escape from that crude fact. And when the banking "credits" established here by the several allied Governments are added to the half-billion public loan, even the most prejudiced sympathizer with the allies can begin to sense the appalling unneutrality of the American position. Altogether, I suppose we have directly contributed a billion dollars to the war funds of Germany's enemies. Indirectly we have contributed two billions more, as it is officially announced that the total war supplies purchased in this country by the entente powers amount to three billions—almost a third of England's total war expenditures up to date.

Is there anyone bold enough to gainsay Bryan's declaration, which created such "a profound sensation throughout the world," that "it is inconsistent with the spirit of neutrality for a neutral nation to make loans to belligerent nations, for money is the worst of contrabands—it commands all other things"?

And if there is none to gainsay it, how can the administration's approval of the Anglo-French loan be defended by any fair-minded American, especially when, by a special ruling of the Treasury Department, the national banks were permitted to purchase the Anglo-French bonds in unlimited amounts, notwithstanding the law restricts the amount that can be loaned to a private American citizen or an American corporation to 10 per cent of a bank's capital and surplus?

I challenge any straight-thinking American to justify this official stultification of our vaunted professions of neutrality. Morally and legally we were guilty of the most flagitious transgression of the code of international morality. No matter where our individual sympathies may be in this war, we can not shut our eyes to the awful travesty of the administration's efforts to "serve mankind" by placing all the vast banking capital under its control at the disposal of the allies.

Passing over the administration's chameleonic shifting in the armed-merchantman controversy (at one stage of which it announced that it was "seriously considering" accepting the German contention and applying it for Germany's benefit, only a little later on to reject that contention and to threaten to break off diplomatic relations with

Germany because it insisted on the justice of Secretary Lansing's view that "a merchant vessel carrying an armament of any sort * * * should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent government"), I wish to invite attention for a moment to the glaring contradiction in which the administration has involved itself by its recent announcement—made through Counsellor Polk, of the State Department—that it would not permit any American citizen to take passage on the merchant submarine *Deutschland* in order to avoid any possible controversy with Great Britain in the event af the sinking of that vessel by a British warship.

How completely this negatives the Wilsonian position, which was so arrogantly assumed last winter, that the congressional supporters of the McLemore resolution, warning Americans not to travel on British armed merchantmen, were pursuing a highly unneutral and harmful course that threatened to seriously embarrass the administration's efforts to "serve mankind."

Was there ever a more flagrant example of governmental tergiversation presented for the afflictive contemplation of American citizens? Was there ever a more humiliating incident in the history of Democratic management of our foreign affairs—a history that is resplendent with the diplomatic achievements of some of the most virile and uncompromising asserters of Americanism the Republic has known?

ADMINISTRATION BLUNDERS IN MEXICAN SITUATION.

Let us now turn from this record of Cervantean (or shall I call it Machiavellic?) diplomacy to review the equally futile but more obstinately exemplified academic dalliance with dangerous matters that has characterized the administration's Mexican policy.

It has been said that President Wilson inherited the Mexican problem from his Republican predecessor. President Taft left him no problem—only a plain official duty. Victoriano Huerta had succeeded to the dictatorship only eight days before Taft retired from office, and in that brief time there was no adequate opportunity to establish official relations with him. And, anyway, Taft was unwilling to do anything which might embarrass his successor, especially in an international determination that was certain to seriously affect the official relations of the two countries. He accordingly left the incoming administration entirely free to determine what those relations should be.

But Mr. Taft himself had the clearest comprehension of the rightful American attitude. Speaking over a year ago on the Mexican question, he said:

"We made a serious mistake at the outset, not in failing to recognize Huerta but in actually departing from the attitude of true neutrality to work against him."

In this simple sentence Mr. Taft exposed the crux of the President's blundering. It was not his withholding recognition from the Huerta government, but his deliberate attempt to overthrow that government, that made him particeps criminis in the Mexican debacle.

As President of the United States Mr. Wilson had only to deal with the actualities of the Mexican situation, but he proceeded to act as though he had been commissioned as the moral governor of the Western Hemisphere. This conception of his mission became an obsession with him and has maintained a solitary despotism in his mind.

Whatever repugnance one may feel to the methods by which Huerta rose to rulership in Mexico, one should not lose sight of the fact that it was a time in that country like the French Revolution when politics became the art of guillotining your neighbors before they guillotined you.

Moreover, the methods Huerta employed to place himself at the head of the government were only the usual methods of changing an Executive in Mexico. It is equally clear that as President he had received that support which the Mexicans have shown, throughout their whole history, they are prepared to give to an autocrat rather than to a constitutional ruler.

Even the stanchest defenders of the President's Mexican policy frankly admit that Huerta had received this support. William Bayard Hale, who was the first of the "confidential agents" whom the President dispatched to Mexico to "work against" Huerta, has stated in the World's Work that "our recognition of him would have made his success easy and certain." A similar opinion is expressed also by L. Ames Brown, who contributed a leading article to the June number of the Atlantic Monthly extenuating the President's course in Mexico. Both of these eminent Wilson apologists candidly declare in effect that the only justification for the President's interference in Mexico was his holy desire to "serve mankind" by crushing a personally and morally obnoxious dictatorship. To achieve that "benevolent" end he was willing to see the last vestige of centralized authority in that country destroyed and the people turned over to the tender mercies of the jackal banditti elements that had marshaled under the banner of "constitutionalism," which he himself had helped to raise in Mexico.

Thus was accomplished the greatest tragedy that has ever been committed in the name of American diplomacy. It was more than a tragedy, it was a crime—a crime against both the sovereignty of the Mexican nation and against the "humanity" which it was so fatuously designed to serve.

WILSON'S POLICY GREATEST DRAWBACK TO MEXICANS.

I make bold to say that if Huerta had been the most infamous dictator that has ever figured in Mexican history he could not have accomplished a hundredth part as much havoc in that country as has been wrought by the incredibly weak, quixotic, indeterminate, yet vindictively pursued policy of President Wilson. It has produced nothing but confusion and anarchy in Mexico. It has made it impossible for the Mexicans themselves to set up a stable government, and a stable government is that country's greatest need.

"For forms of government let fools contest,
That which is best administered is best."

President Wilson has not only contended for a form of government totally unsuited to the genius and needs of the Mexican people, but in the pursuit of his fantastic ends he has furnished indubitable proof of the administration's utter lack of "preparedness" to fulfill either our boastfully assumed obligations under the Monroe doctrine or our imposing promises to act as a beneficent providence in behalf of Mexico.

Chimerical as was the President's belief that he was "serving" Mexico by driving out Huerta, it was the quintessence of practical wisdom compared to his childlike faith in the capacity of the Mexican people to govern themselves, and in the "constitutionalism" that was to be the means (in the hands of his allies, Carranza and Villa) of achieving that end. He took no account of the vitally important fact that the life of a nation is greater than any constitution, and that a new system of government can not be ordered like a new suit of clothes.

It is not a question of constitutionalism in Mexico at all. It is an Indian question. We had an Indian question in this country once, and everybody knows how we settled it. Is it not permissible to hope that it will not be settled the same way in Mexico?

It is estimated by the best authorities that in 90 per cent of the Mexican population Indian blood predominates, and that considerably over 50 per cent of the population is of pure Indian blood. The bare statement of this fact shows how visionary is the high-flown talk about "serving Mexico" by setting up there an Anglo-Saxon form of constitutional government under which the people would hold "full, fair, and free" elections, and thus at once bring peace and civilized order and responsibility to the country.

There are only two kinds of government that will ever succeed in maintaining any semblance of authority in Mexico. One is a dictatorship and the other is a protectorate; and both must be strong in the outward show of force, but essentially paternalistic in their workings. Diaz and Huerta gave their country the first kind; only the United States can give it the latter.

It is doubtful whether Carranza can give Mexico any real government at all, but inasmuch as he has been recognized as the de facto first chief, he should have a chance to show whether he can make himself a de jure one. However, the Washington Government is exhibiting the same incertitude in treating with him that it has exhibited in nearly all its other major international transactions.

RECOGNITION OF CARRANZA FOLLOWED BY INSULTS.

Although it was the first to recognize Carranza, it has been the first to invade the sovereignty of his government. It sent a large armed force into Mexico over his emphatic protests, and it afterwards added insult to injury by charging him in an official note with "encouraging and aiding" the marauding gangs which it was trying to suppress—a charge which, if true, should warrant it in incontinently pitching him out of office and taking the Government into its own hands.

Later, when Carranza ironically retorted by referring to the American punitive expedition as "interned in Chihuahua," and reiterated his demand for its immediate withdrawal, Secretary Lansing wrote him another "sharp note" of rebuke and warning in which it was plainly intimated that the United States would never—no, never—take its soldiers out of Mexico as long as Villa and his murderous bands remained unpunished—an intimation, however, which was no sooner officially given than the President hurried over to New York and reneged on it.

Of course, Carranza was technically right. The American Army had no business to be "interned" in Mexico. It went into Mexico to get Villa, and it had not got him. Indeed, it had virtually abandoned the attempt to get him. In these circumstances there was no other honorable alternative except to withdraw our Army to the American side. Its continued presence on Mexican soil only served to inflame the susceptibilities of the Mexican people. No nation with a spark of self-respect would stand for the indefinite quartering of foreign troops on its territory.

Thus was contributed another of the ghastly paradoxes which have marked the evolution of the administration's Mexican policy—a policy certain only in its weakness and indeterminations, and which attained the climacteric of pharisaic pretenses when the President declared the other day that he had constantly to remind himself that he is not the servant of those who wish to enhance the value of their Mexican holdings.

This was another of his grandiose utterances which so irresistibly recall Burke's remark about "the delusive plausibilities of moral politicians." It also exposes the obsession which has perverted the view of many Americans concerning the Mexican situation. It is my deliberate opinion—which is based upon several years' experience in Mexico—that far more Americans have been exploited in that country than have ever succeeded in exploiting it, unless the investing of hundreds of millions in the mines, railroads, cotton mills, power plants, and oil lands of Mexico can be called exploiting it. It is certain that Mexico owes an incalculable debt—far greater than can be expressed in the most imposing array of figures—to the American capital and enterprise which were such a powerful factor in raising her a few years ago to a first place among the second-class nations of the world. If that capital and that enterprise do not deserve and imperatively call for a greater measure of protection from the Washington Government than is represented by the "steady (?) pressure of moral force" against the rapacious banditry which masquerades under the name of "Constitutionalism," then the boasted "Americanism" which is being exemplified at Washington is itself the greatest exploiter of a people the world has ever seen. And the worst of it is, it is our own people who are being exploited—for purely "humanitarian" purposes, of course!

QUESTION OF PROTECTION OF AMERICAN LIFE AND RIGHTS.

It is a palpable reflection on adult intelligence to say that it is a question of the enhancement of values in Mexico. It is an infinitely bigger question. It is a question of defense, of the protection of American life and legal rights under Mexican and international law. The statesmanship that takes any other view of it is a misnomer and a fraud. It is gratifying to note that Secretary Lansing does not indorse the President's stand. In his note of June 20 rejecting the Carranza request for the withdrawal of the American troops he used these truthful and weighty words:

"For three years the Mexican Republic has been torn with civil strife, the lives of Americans and other aliens have been sacrificed, vast properties developed by American capital and enterprise have been destroyed or rendered nonprofitable," etc.

These are the weighty things which the Secretary of State recited to justify the retention of our Army in Mexico. There is not a word in his note about the mythical "sinister" American interests in Mexico—about the bugaboo of enhancing the value of Mexican values. He was talking in a serious strain. He was under the necessity of stating facts, of making out an American case that would stand the test of the searching scrutiny of the chancelleries of the world. Moreover, he was laying the ground for an appeal to American patriotism, if war should come, and he knew that the professional twaddle about the "American adventurers" in Mexico would never do. That demagogic device served very well while President Wilson was trying to create the popular impression that he was preventing us from being made the victim of a plot to enhance by war the value of the holding of "predatory" American interests in Mexico. But when the country was actually facing the possibility of war as a result of the breakdown of the administration's puerile and pedantic policy of "serving mankind," instead of the interests of the American Nation, it was necessary to tell the truth and to admit that for three years the "lives of Americans" had been wantonly sacrificed in Mexico without eliciting anything more than an occasional mildly deprecatory "note" from the Washington Government, which almost invariably reserved the sharpest rebukes for those arch trouble makers, the "American adventurers" who had been presumptuous enough to act on the theory that the American eagle is not a hen bird.

It was inevitable that, with the perplexities and futilities that were bound to inhere in the policy of watching and waiting (only to "butt in" at the wrong time!) our relations with Mexico should rapidly progress from worse to worse—and the worst was attained when the President sent the punitive expedition into Mexico to catch the elusive Villa. It signalized the complete collapse of the vaunted policy that was to restore order and "the rule of the people" in the stricken Republic. But no one really believed that he would go very far in playing the part of a "strong elder brother" to Mexico—not even when he was threatening Carranza in his biggest bow-wow strain and mobilizing all the available State militia to make a formidable military demonstration along the Rio Grande. Nearly everybody was convinced that the man who had dispatched the American Fleet to attack and capture the seaport of Vera Cruz on the pretext of obtaining a salute to our "insulted" flag, and then had suddenly and ignominiously recalled the fleet after presenting the keys of the city to that inveterate American hater, Carranza, without receiving or stipulating for the long overdue salute to our flag, could not be depended upon to pursue any aggressive policy to a definitive conclusion.

PALES BEFORE CONDITIONS RHETORIC CAN NOT ALTER.

Thus was again illustrated the fateful propensity of Mr. Wilson to be forever starting something which he either can not or will not finish. He frequently talks in a very brave and even highly provocative fashion, but just as he gets the whole country worked up to follow him, he stops and sounds the note of retreat. This is the inevitable consequence of his pedantic dependence upon "the teeming wonder of his words" to achieve his ends. When he goes up against conditions which no spell of rhetoric can conjure away he loses all his driving power and relapses into a state of complete Executive desuetude.

It is difficult to speak in terms of restraint of the "benevolent" conduct of President Wilson toward the Mexicans. He has unsettled their Government and then denounced their lack of order. He has incited civil war and then used the excesses which it has produced to justify his abortive interventions. He has thus marked a nation to be cut off from the world; he has thus covenanted for Mexico's destruction. For when we go into Mexico—as we will surely have to do some day to restore the peace which we have made it impossible for the Mexican people themselves to recover—we shall go in there to stay, and Mexico will cease to exist. Its Government and its independence will be destroyed, and the country itself will become American territory. That will be the final grim and unwelcome result of Mr. Wilson's quixotic efforts to "serve Mexico" and to vindicate "the inviolability of the sovereignty of small States."

It is not necessary to impugn the President's intentions to emphasize the failure of his amazing Mexican misadventure. We are bound to say that Mr. Wilson's character presents one of the most puzzling paradoxes in American history; the peculiarities of a mind in which great powers are formed in company with great weaknesses. He is at once the most self-willed idealist and the most vacillating executant that has ever filled the presidential office. Inflexible as granite where his scholastic crochets are concerned, he is as weak as heliotrope in applying principles and enforcing administrative policies. A peculiarly repellant combination of doctrinaire and dictator when he has an academic theory to impose on Congress or an individual (like the "usurper" Huerta) to punish and pursue, he is the incarnation of indecision and feebleness when he faces the responsibility of effectuating concrete statesmanlike designs.

It is these antitheses in his character which account for the most of his successes and failures, for his remarkable ascendancy over Congress and his party, and for his equally remarkable impotence in accomplishing great administrative and diplomatic tasks. They explain at once why he has domineered over everybody and everything at Washington, and procrastinated with everybody and muddled everything in his foreign dealings.

INSTINCTS OF PRACTICAL STATESMAN ARE ABSENT.

So far as his relations with Congress are concerned, the President is the acid impersonation of aloofness. He has not counseled with it; he has only dictated to it. He has no capacity for teamwork unless he is driving the team. He lacks the practical statesman's instinct and guidance concerning men as well as concerning public measures. It may seem a strange thing to say, but there is hardly a Democratic Member of either House who fully trusts the President or is fully trusted by him.

"Those he commands move only in command,
Nothing in love."

Apparently his idea of the Democratic majority in Congress is that it should study and conform to his own cranial convolutions—that it is a mere dot above the presidential "i," something that follows of course and need not be seriously considered. Naturally the Democratic congressional leaders deeply resent this presidential attitude, but they could probably put up with it with far more grace than they do if they had any real confidence in the statesmanlike judgment and consistency of Mr. Wilson. But they have learned from bitter experience that he does not hesitate to put them in a false and humiliating position—as was shown in the Panama tolls exemption case and later in the controversy over the McLemore resolution—provided he can only win an ephemeral triumph for himself or for one of the sumptuous Princetonian proposals.

The Democratic leaders know how uncertain and undemocratic he is—how vague and vaporish are his convictions, and how purely academic is his political philosophy. They know how inaccessible he is to appeals made to him from honest motives and with naught but the most friendly feelings. But they know also how skillful he is in the use of his single but unrivalled talent of literary bamboozlement—of indulging in large dithyrambic affirmation and lofty moral reflections which the multitude applaud without analyzing. Like the President himself, the Democratic leaders have come to believe that these grand ear-tickling utterances can be depended upon, like the beneficent wind in the fairy tale, to blow everything into the right place—if not in an economic or governmental sense, then at least in a partisan sense, which is what some of them are chiefly concerned about.

But it is certain that the great majority of thoughtful and patriotic Americans will demand something more than the command of an attractive literary style as the chief qualification of their President. They know that something more than this is necessary for effectiveness in statecraft. They want some assurance as to where their President is going to stand. They know that while Mr. Wilson has an enormous capacity for rousing great public expectations, he has little, if any, capacity for realizing them; that while he assumes to exemplify the highest public rectitude, he does not hesitate to discard one conviction after another, as if they were so many worn-out gloves, if political exigencies happen to require their sacrifice; that while he has boasted of keeping us out of war, he has persistently pursued a course that has made for war by either running away from duty or perversely miscomprehending it; that while he has urged neutrality upon everybody else, he has been a most lax practitioner of it himself; that while he has warned the people not to get "nervous and excited" about preparedness, because "the question has not changed its aspect even if the times are not normal," he has worked himself up into a perfect furor of excitement lest Congress and the country shall not back him up in a big armament building program; that while he has protested his unalterable opposition to armed intervention in Mexico, he has done more intervening in that country than any President since Polk; that while he has talked bravely and finely about his "lullaby policy" that is to "serve mankind," he has really had no policy at all, but drifts, drifts.

COUNTRY PASSING THROUGH TREMENDOUS CRISIS.

Speaking as a Democrat, I would not give my vote to indorse such a record as the present administration has made if Thomas Jefferson had indorsed it a thousand times. I say it sadly, but in many respects Woodrow Wilson has been the most undemocratic President the country has ever had—undemocratic alike in his temper and in his conception of the functions of his office. If a Republican President had done the arbitrary, inconsistent, and incredibly maladroit things which Woodrow Wilson has done from the very outset of his presidential career, the Democratic leaders and press would long ago have united in a deafening demand for his summary impeachment as an intolerable dictator. They are only prevented from doing so now by the fact that over his head flies the Democratic flag, which in the stress of a presidential contest they prefer to the flag of their country.

But I can not take such a narrow, partisan view of my responsibility as an American voter. We are passing through one of the most tremendous crises in world history. Tempest weather is still threatening. Even the signing of a peace concordat in Europe may increase rather than diminish our national difficulties by precipitating a revolutionary tumult that will rival the war in its world-convulsing consequences. In any event the end of the war will bring momentous economic and international changes. If there was ever a time when the United States needed wise, strong, and steadfast statesmanly guidance, it is in these destiny-fraught days.

Fortunately in the midst of our national anxieties and bewilderment one rock of assurance rears its head. It is the figure of that courageous, masterful, and forthright American statesman, Charles Evans Hughes. "He is a tried and proved certainty," is the tribute which was paid to him by the Democratic New York World over eight years ago. No one has ever accused him of rhapsodizing or trimming in the presence of grave public perils. No one has ever questioned his intellectual conscientiousness. He owes all of his national prominence to the independence, the directness, and the unhasting thoroughness of his political action. Never in all his public career a bidder for popularity, he has nevertheless been taken up by the people and advanced to the highest official position. By consequence his career is one of the great examples, one of the great inspirations, of our country. All of which goes to prove that he has the quality of a representative mind—the mind of a real leader to whom the people instinctively turn in a time of national need.

I shall therefore vote for Charles Evans Hughes with the same patriotic confidence that I voted for Grover Cleveland. Although a Republican, there is no suggestion of the lock step in his partisanship. He strides out for himself. And this is a mighty significant fact to keep in mind to-day when American political parties differ chiefly in the accident of personnel. If they differ in theory, it is in the matter of emphasis rather than of belief. Woodrow Wilson is a Democrat in name, but he has the instinct of a tyrannical dogmatist. Hughes is nominally a Republican, but he is the incarnation of the Democratic characteristics of sincerity, equality, frankness, and square dealing. Moreover, he is the one American statesman who has shown that he can refer to principles on all occasions without losing his hold on practice and keep a firm grip of elevated public ideals without forgetting the art of adapting them to actual conditions.

Just before he assumed the Presidency, in 1913, Woodrow Wilson said that "the rarest thing in public life is courage"—an impressive saying which he proceeded to exemplify in his ingratiatingly grandiloquent way by announcing that "the people of this country are going to be served by conscience and not by expediency."

But a rarer thing in public life is the man who has not only courage and conscience but also common sense, and how fortunate is the country that after March 4 next will be served by a man possessing all three.

## Salaries of Veterinary and Lay Inspectors.

### EXTENSION OF REMARKS
OF
### HON. CHARLES O. LOBECK,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 9, 1916.*

Mr. LOBECK. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on House bill 16060, introduced by me on May 27, 1916, providing for the classification of the salaries of veterinary inspectors and lay inspectors—grades 1 and 2—employed in the Bureau of Animal Industry of the Department of Agriculture.

The bill is as follows:

A bill (H. R. 16060) providing for the classification of salaries of veterinary inspectors and lay inspectors (grades 1 and 2) employed in the Bureau of Animal Industry, Department of Agriculture.

*Be it enacted, etc.*, That from and after July 1, 1916, the Secretary of Agriculture shall classify the salaries of veterinary inspectors and lay inspectors (grades 1 and 2) as hereinafter provided.

SEC. 2. That the entrance salary of all veterinary inspectors within the classified service and actually employed as such in the Bureau of Animal Industry of the Department of Agriculture shall be $1,400 per annum; those of said veterinary inspectors who on and after the date of July 1, 1916, may be receiving a salary less than $2,400 per annum shall thereafter from said date receive an annual increase of $100 until their minimum salaries shall amount to $2,400 per annum; all other promotions or increases in salaries shall be made at the discretion of the Secretary of Agriculture.

SEC. 3. That the entrance salary of all lay inspectors (grade 2) within the classified service and actually employed as such in the Bureau of Animal Industry of the Department of Agriculture shall be $1,000 per annum; those of said lay inspectors (grade 2) who on and after the date of July 1, 1916, may be receiving a salary less than $1,800 per annum shall thereafter from said date receive an annual increase of $100 until their minimum salaries shall amount to $1,800 per annum; all other promotions or increases in salaries shall be made at the discretion of the Secretary of Agriculture.

SEC. 4. That the entrance salary of all lay inspectors (grade 1) within the classified service and actually employed as such in the Bureau of Animal Industry of the Department of Agriculture shall be $840 per annum; those of said lay inspectors (grade 1) who on and after the date of July 1, 1916, may be receiving a salary less than $1,600 per annum shall thereafter from said date receive an annual increase of $100 until their salaries shall amount to $1,540 per annum, and after an additional year's satisfactory service their minimum salaries shall be increased to $1,600 per annum; all other promotions or increases in salaries shall be made at the discretion of the Secretary of Agriculture.

SEC. 5. That no promotion shall be made except upon evidence satisfactory to the Secretary of Agriculture of the efficiency and faithfulness of the employee during the preceding year.

SEC. 6. That there shall be appropriated annually in the Agricultural appropriation bill such additional sums to the $3,000,000 annual appropriation, provided for in the act approved June 30, 1906, found in the Thirty-fourth Federal Statutes, page 674, as may be necessary to carry into effect the provisions of this act.

SEC. 7. That all acts and parts of acts inconsistent with this act be, and the same are hereby, repealed: *Provided, however*, That nothing in this act shall be construed to repeal any part of the meat-inspection law contained in the act of June 30, 1906 (34 Stat. L., p. 674), entitled "An act making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1907," and in the act of March 4, 1907 (34 Stat. L., p. 1260), entitled "An act making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1908."

In the Sixty-third Congress I had the honor to introduce a similar bill, known as H. R. 9292, on which extensive hearings were held on April 21 and 22, 1914, before the Committee on Agriculture, to which it had been referred for consideration, but no report was made by the committee to the House during the Sixty-third Congress. In this, the Sixty-fourth Congress, I again introduced this measure, which was numbered H. R. 5792, and on which extensive and interesting hearings were held March 28 and 29, 1916, before the Committee on Agriculture, and after full consideration by the committee, accepting some suggestions made by the members of the committee, I reintroduced the bill, which is known as H. R. 16060, on May 27, 1916. This bill was favorably reported to the House on June 8, 1916 (see committee report 810). The bill is now on the Union Calendar, and I hope may receive consideration at this the first session of the Sixty-fourth Congress.

Mr. Speaker, in behalf of this measure I have this to say:

It proposes to classify the salaries of those employees in the Bureau of Animal Industry of the Department of Agriculture who perform the important work of inspecting and examining the products of all of the big meat-packing houses throughout the country, as well as examining and inspecting the live animals coming into the stockyards connected with these great packing plants. A number of these men are also assigned to stamping out the foot-and-mouth disease epidemic which spring up from time to time, exterminating cattle ticks quarantine work, inspection of serum plants, and other duties in connection with the enforcement of the meat-inspection law and the pure-food law and quarantine regulations.

These employees a e designated as veterinary inspectors, lay inspectors, grades 1 and 2. There were on June 1, 1916, 1,250 veterinarians, 800 lay inspectors, grade 1, and 1,100 lay inspectors, grade 2, in the Government service who come under the provisions of this bill. There are about 200 of these men located in my district and stationed at the great packing plants of Omaha. I have had occasion to observe the far-reaching importance of their work and its effect upon supplying the consuming public with pure and more wholesome meat products and the safeguarding of the general public under the meat-inspection law and the pure-food law.

During my visits to the large packing plants of Kansas City and Chicago I have had occasion to observe similar work being done by these men. They are also stationed in every city in the country where meat products are produced for shipment in interstate commerce. Therefore I know from first-hand knowledge the technical nature of the work they do and the conditions under which they labor. You will find them on the killing floors, in the steam rooms, in the refrigerating rooms, in the outside pens in all kinds of weather, and at the cars where the products are being shipped to the consumer. It is risky work on the floors of these packing houses, and they are subjected to all degrees of changing temperature in going from one department to another. The degree of heat and cold varies greatly during their day's service. In time, of course, they become skilled and experienced in their work. Before entering the service they must qualify from a practical standpoint. The vast percentage of them have been employed in actual packing-house work before taking up their duties with the Government. In the case of veterinarians a technical and scientific three-year course—which recently has been increased to four years—in a veterinary college is required before they can take the civil-service examination. The lay inspectors must pass through a civil-service examination also. It naturally follows that with this training and equipment they have a certain degree of skill to start with, and the longer they are in the service the more valuable they become. Realizing the importance of keeping such qualified, trained, and experienced veterinarians and inspectors in the Government service, as there has been frequent resignations, due to better opportunities offered them by private concerns, I introduced a bill in the last Congress and reintroduced it at the opening of the present session providing for the classification of these employees under a similar arrangement to that now existing in the Post Office Department. Hearings were held before the Agricultural Committee of the House during the last Congress and again during the present session. Several of these employees appeared before the committee and described the nature of their work and why they desire this bill approved.

Numerous Members of the House described the work carried on by these men in their respective districts and presented numerous resolutions and indorsements of it from State officials, municipal governments, improvement clubs, health associations, veterinary societies, and hundreds of personal testimonials to the effect that this legislation is for the public good and general welfare and recommended the keeping of trained, efficient employees in the Government service.

Each year the promotions in the Bureau have been left to the discretion of the Secretary of Agriculture. We appropriate a flat sum to take care of the promotions and extension of work. The extension of work has been so great that little is left to take care of promotions promised these employees when they took the civil-service examination to enter the service. If this bill becomes a law, it will cost but little more annually to put this classification bill into effect and under it Congress will know, the people will know, and these deserving employees will know where the salary money is to go and to whom. The bill amply provides for a rigid efficiency, and no promotions will be made except on merit and satisfactory service. The public is demanding of the Government better food inspection and more wholesome food products. Let us give them efficient men to do the work by properly caring for our present competent, efficient, and experienced force in the Bureau of Animal Industry of the Department of Agriculture.

I desire to state my personal appreciation to the many Members of Congress who appeared before the committee and to all who have come to me and assured me of their interest in support of the bill. The committee report, No. 810, reads as follows:

[H. Rept. No. 810, 64th Cong., 1st sess.]

CLASSIFICATION OF SALARIES OF VETERINARY INSPECTORS AND LAY INSPECTORS.

Mr. DOOLITTLE, from the Committee on Agriculture, submitted the following report to accompany H. R. 16060:

The Committee on Agriculture, to whom was referred the bill (H. R. 16060) providing for the classification of salaries of veterinary inspectors and lay inspectors (grades 1 and 2) employed in the Bureau of Animal Industry, Department of Agriculture, having considered the same, report thereon with a recommendation that it do pass.

Certain facts in support of this legislation were submitted in the printed hearings held on H. R. 9292, before the House Committee on Agriculture during the Sixty-third Congress (Apr. 20 and 21, 1914), and in the printed hearings held on H. R. 5792 before the House Committee on Agriculture on March 28 and 29, 1916.

The chief purpose of the bill is to standardize the salaries of veterinary inspectors and lay inspectors (grades 1 and 2) by providing a uniform compensation and a definite schedule of promotions.

Some unrest and discontent exists among the employees in this branch of the service due to the fact that certain salary schedules were announced by the United States Civil Service Commission that have not been put into effect.

SALARY SCHEDULES ANNOUNCED FOR VETERINARY INSPECTORS AND INSPECTOR'S ASSISTANTS (NOW DESIGNATED LAY INSPECTORS, GRADE 1).

The Civil Service Commission and the Department of Agriculture announced to all who proposed to enter into this newly created branch of the service as veterinary inspectors with the entrance salary of $1,400, that promotion to $1,600 would be made after two years' satisfactory service, with promotion to $1,800 after satisfactory service for two years at $1,600 per annum. The above schedule was announced by the United States Civil Service Commission in several publications.

The first announcement of the salary schedule for inspector's assistants (now included in the group of employees designated as lay inspectors, grade 1) was contained in the notice issued by the Civil

Service Commission for examination to be held on September 5, 1907 (Notice Form No. 1248), which stated the entrance salary as $840 per annum, promotion to $1,000 per annum to be made after three years' satisfactory service at $840, promotion to $1,200 to be made after three years' satisfactory service at $1,000.

The committee recognizes that the announcements of the Civil Service Commission are not binding on Congress, and these announcements are cited here only for the purpose of setting forth the circumstances.

The following public announcements regarding this matter were made by Dr. A. D. Melvin, Chief of the United States Bureau of Animal Industry:

—

[Service Announcements, No. 26, June 15, 1909, p. 50.]

PROMOTIONS DELAYED FOR LACK OF FUNDS.

"On account of a considerable increase in the cost of inspection, due to the constantly increasing number of establishments under Federal inspection without a corresponding increase in the funds appropriated for carrying on the work, the bureau now finds it impossible to adhere to the schedule of promotions which have in the past been announced in connection with the positions of veterinary inspector, stock examiner, and inspector's assistant. As a result a number of employees have unfortunately failed to receive the promotions which they expected and which the bureau fully intended to make as planned. Nevertheless the bureau wishes to assure all faithful employees that their work is appreciated and that their cases will be considered just as rapidly as possible.

"In view of this notice inquiries on this subject from bureau employees are being filed without reply."

—

[Service Announcement No. 32, Dec. 15, 1909, p. 102.]

LACK OF FUNDS PREVENTS PROMOTION.

"Referring to the notice in service announcement for June, 1909, to the effect that the consideration of promotions must be delayed at least until January 1, 1910, and to the notice in service announcements for November with reference to the necessity for retrenchments in meat-inspection expenditures, the expenditures so far made from the appropriations for the current fiscal year have nearly exhausted the funds allotted for the various kinds of work for the portion of the year which has thus far elapsed, and the possibility of making promotions in the near future is very doubtful. The chief of the bureau greatly regrets this condition, but there appears to be no relief possible until more funds are available for the bureau's work."

—

[Service Announcement No. 77, Sept. 15, 1913, p. 84.]

PROMOTIONS OF EMPLOYEES.

In view of numerous communications received relative to veterinary inspectors and inspector's assistants not being advanced in salary as soon or as often as was expected, the following information is given for the benefit of all concerned:

"Early in the year 1907 a plan was outlined whereby veterinary inspectors should enter the bureau service at $1,400 per annum and be advanced to $1,600 after two years' satisfactory service, and to $1,800 after two years' additional satisfactory service at $1,600; also that inspector's assistants should enter the service at $840 per annum and be advanced to $1,000 after three years' satisfactory service, and to $1,200 after three years' additional satisfactory service at $1,000, and after passing an examination. In a number of announcements for examinations the Civil Service Commission outlined this plan. These announcements were made in good faith, and at the time it was fully expected that the plan would be followed. However, on account of necessary expenditures in the extension of the service, it has not been possible to promote employees as proposed, and after this became evident the Civil Service Commission omitted any reference to such promotions.

"Promotions of employees on account of length of service and efficiency will continue to be made, but as the possible number depends entirely on the funds available the bureau is unable to adhere to any fixed plan as to the length of service for promotions."

—

[Service Announcement No. 50, Apr. 13, 1912, p. 35.]

EMPLOYEES AVAILABLE FOR TRANSFER.

"It is found that the expenses incurred by the bureau for salaries paid from the various appropriations are running close to the limit of the funds allotted for the use of the bureau, and it will be necessary immediately to make a considerable curtailment in these items of expense. New appointments or promotions will therefore be out of the question except in extreme emergencies; and vacancies must be filled, just as far as possible, by transfer within the bureau. With this end in view, each inspector in charge is directed to forward to the Washington office immediately the names and designations of all employees who can be spared for transfer in case of urgent need, indicating the preference of each as to assignment. The employees proposed for transfer must, of course, make no definite plans for transfer until so instructed specifically, but they must understand that when the needs of the service demand their transfer they must comply with the instructions if they desire to continue in the service. Each employee named, however, may be assured that he will not be transferred against his wishes if this can be avoided without impairment to the service."

—

[Service announcement No. 31, Nov. 15, 1909, p. 87.]

RETRENCHMENT IN MEAT-INSPECTION EXPENDITURES NECESSARY.

"On account of the large increase in the number of establishments under Government inspection since the enactment of the present meat-inspection law, the bureau finds that unless current expenditures are considerably curtailed the available appropriation will not be sufficient for this year's work. Each inspector in charge of meat inspection will therefore carefully consider the matter of assignments at his station, and, if possible, arrange for a reduction in his present force, and inform the Washington office of the names of employees available for transfer."

The report of Dr. A. D. Melvin, Chief of Bureau of Animal Industry, bearing date of November 19, 1912, contains the following:

"The number of employees in the service of the bureau at the beginning of the fiscal year (July 1, 1911) was 3,284. During the year there were 638 resignations and terminations, including 28 dismissals for cause. The accessions by appointment, reinstatement, and transfer numbered 665. The force on July 1, 1912, numbered 3,311, of whom 2,410 were engaged in the work of meat inspection.

"Owing to the rapid increase of the work of the bureau, the funds from which promotions are ordinarily made are consumed in providing for this extension of the work. It is only natural that employees entering the service under the impression that they are to receive promotion after satisfactory service should become dissatisfied and disgruntled at not being advanced in salary after a reasonable time.

"In order to attract and hold capable men, as well as to reward efficient service, I consider it desirable that some definite schedule of promotions should be arranged for the different classes of employees, and that funds should be provided by Congress according to these schedules, so that those who are giving their best efforts to the service may expect and realize promotions within a reasonable time."

Since the establishment of the Bureau of Animal Industry in 1884 there has been such an expansion in the activities of that bureau, with a corresponding increase in the number of employees, that it seems no longer practicable to deal with those employees as individuals, since the greater part of the work of said employees is routine in character. The department finds it necessary to deal with this large body of men as a group in the enforcement of rules and regulations, and it would seem proper that Congress should provide that they be dealt with as a group in the matter of compensation.

No veterinary inspectors or lay inspectors are employed in any bureau or division of the United States Department of Agriculture other than the Bureau of Animal Industry.

The number of employees in the Bureau of Animal Industry on June 1, 1916, to be affected by this bill, were as follows:

| | |
|---|---|
| Veterinary inspectors | 1,250 |
| Lay inspectors (grade 2) | 1,100 |
| Lay inspectors (grade 1) | 800 |
| Total | 3,150 |

Among the projects to which the employees provided for in this bill may be assigned for duty are the following: Meat inspection; tuberculin testing of cattle; control and eradication of hog cholera; eradication of dourine; interstate inspection of cattle and horses; eradication of glanders, sheep scab, cattle scab, horse mange, and Texas-fever ticks; handling of southern cattle outside of quarantine area; execution and administration of the 28-hour law; eradication of foot-and-mouth disease; inspection relative to existence of contagious diseases; supervision of import and export animals (quarantine of import animals and tuberculin testing of export animals); scientific investigations of animal diseases; control of importations and manufacture of viruses and serums, toxins, and other analogous products.

These employees are exposed to many dangerous communicable diseases in the discharge of their duty, as they must manipulate much diseased tissue. They work frequently in water and blood, wearing boots and overalls, and must often inhale vapors and steam, and are exposed to sudden changes of temperature which are injurious to their health. In many cases they find it necessary to pass from a freezer where the temperature ranges around zero and go immediately to the lard refinery where the temperature ranges from 90° to 110° F. These sudden changes are made without time to make any changes in clothing.

Veterinary inspectors and lay inspectors are engaged in a work attended with peculiar hazards, as evidenced by the fact that accident insurance companies charge them an extra insurance rate.

The veterinarians of the Bureau of Animal Industry are engaged in work of a scientific and technical nature, requiring expert training.

The lay inspectors are engaged in technical work requiring practical experience and good, sound judgment.

All of these employees are performing a work that is valuable to the Federal Government, as they are safeguarding the meat food supply of the Nation, and the economic value of their work in conserving the live-stock industry is indisputable.

The lives of these bureau employees are in many cases nomadic.

The nature of the work in the Bureau of Animal Industry is such that the department often finds it necessary to transfer the employees to different sections of the country on short notice, which in many cases results in their having to neglect their homes and families for long periods of time. Especially is this true in the event of an epidemic among live stock.

The exigencies of the service, necessitating transfers from one section of the country to another, are such as to make uncertain how long the employee thus transferred will be kept on the new assignment.

Males only are admitted to examinations for the positions of veterinary inspectors and lay inspectors in the United States Bureau of Animal Industry.

A brief summary of the sections of the bill may be of value to the House.

Section 1 prescribes the short title of the act.

Section 2 specifies the salary schedule for veterinary inspectors, as follows: Entrance salary, $1,400 per annum; promotions of $100 per annum until a salary of $2,400 is attained.

The Civil Service Manual for the spring of 1916 contained the following statements:

"The applicant must show that he has graduated from a veterinary college of recognized standing or that he is a senior student in such an institution and expects to graduate within six months from the date of the examination."

The Civil Service Commission announced the age limits at from 21 to 41 years.

Beginning in the year 1917, the United States Civil Service Commission will require that all applicants for the position of veterinary inspector must be graduates of a school with a course of four years leading to a degree in veterinary medicine. In view of this fact it is evident that the Bureau of Animal Industry will find it difficult to attract capable veterinarians to the service in the absence of an equitable salary schedule being established.

The new Army bill gives to the Army veterinarians rank and commission up to major, with pay and allowances of such office. The maximum pay of a major is $4,000 per annum, hence the Army veterinarian will be advanced to $4,000 per annum with quarters, fuel, and light free. It would appear that the salary provided for in this bill for bureau veterinarians is reasonable, especially so since the veterinarians provided for in this bill do not have quarters, fuel, and light furnished free.

Section 3 provides a salary schedule for lay inspectors, grade 2, as follows: Entrance salary, $1,000 per annum; promotions of $100 per annum until a salary of $1,800 is attained.

Those who entered this grade through examinations for the position of meat inspector held from March 6, 1908, to March 3, 1913, were required to have not less than five years' experience in curing, packing, or canning meats, and by reason of their experience in canning rooms, dry-salt or sweet-pickle cellars, sausage, lard, oleo, butterine, or beef-extract departments were competent to inspect meat and meat food products as to their soundness, healthfulness, and fitness for food. Grade 2 includes meat inspectors, stock examiners, field stock examiners, and vessel inspectors.

Section 4 specifies the salary schedule for lay inspectors, grade 1, as follows: Entrance salary, $840 per annum; promotions of $100 per annum until a salary of $1,540 per annum is attained. Promotion to $1,600 after an additional year's satisfactory service.

"The duties of this position are to assist both veterinary inspectors and lay inspectors, grade 2, at slaughterhouses and packing establishments in connection with their duties as inspectors of meat and meat food products. Appointments in grade 2 positions (formerly meat inspector) will be made by promotion from grade 1.

"At least three years' experience in handling live meat-producing animals is a prerequisite for consideration for this position * * *. Experience in handling meat alone will not be considered sufficient.

"Applicants must have reached their twentieth but not their thirty-fifth birthday on the date of the examination."

Section 5 provides that the promotions shall be made upon records of efficiency and faithfulness.

The legislative appropriation act of 1913 provided for the establishment of a Division of Efficiency in the Civil Service Commission. The division is required to work out a system of efficiency ratings for the classified service in the several executive departments and independent establishments, to determine the needs of the service with respect to personnel, etc. The division has worked out a system of efficiency ratings which has been adopted by the Post Office Department and could, no doubt, outline efficiency schemes applicable to the United States Bureau of Animal Industry.

Section 6 provides that in addition to the permanent annual appropriation of $3,000,000 there shall be appropriated annually sufficient sums to carry this bill into effect

It is estimated that the additional appropriation for the first year would be $309,420.

It is impossible to secure an accurate estimate as to what it would cost for the second, third, and fourth years, because it can not be estimated reasonably how many men would be in the service or remain in the service to receive these promotions or how many new men coming into the service would be entitled to the increase. It is believed that the additional appropriation annually would be approximately $300,000. These figures are based on the number of employees in the service June 1, 1916, to be affected by the bill.

Section 7 provides for repealing acts inconsistent with the bill.

The Postmaster General in his annual report of 1906 (p. 118) directed the attention of Congress to the matter of classifying the salaries of employees of the Postal Department.

In his annual report of 1907 (p. 106) he reports the success of the classification as follows:

In accordance with the earnest recommendation of the department Congress enacted at its last session a new salary law, providing adequate compensation for clerks and letter carriers at post offices of the first and second classes. This law has accomplished much toward raising the efficiency of post offices to a higher standard and has placed the compensation of postal employees on a substantial and satisfactory foundation, making it possible for the department to retain efficient clerks and carriers and to induce other high-grade men to seek employment in the service. Postmasters and special agents of the department state that the new legislation is not only bringing better men into the service, but has caused marked improvement in the quality of the work done by employees previously appointed. The higher compensation and greater opportunity for advancement offered have checked the alarming increase in the rate of resignations from the service, while the number of applicants for appointment has so increased that little difficulty is anticipated in filling future vacancies.

The passage of the reclassification act has undoubtedly infused into the great army of post-office employees a new spirit of enthusiasm for the service and of loyalty to the department, the effect of which can not be overestimated.

It is only safe to predict that a law classifying the salaries of the employees of the Bureau of Animal Industry would accomplish results similar to the above.

I respectfully submit herewith a list of the indorsements, in order to show that the demand for this legislation is constantly increasing:

INDORSEMENTS OF H. R. 16060 RECEIVED SINCE HEARINGS WERE HELD ON H. R. 5792 BEFORE HOUSE COMMITTEE ON AGRICULTURE, MARCH 28, 29, 1916.

1. Traders' Live Stock Exchange, Union Stock Yards, Chicago: Letter dated April 4, 1916; signed by W. L. Darlington, president, and G. R. Hebert, secretary.
2. Mary E. McDowell, University Settlement, 4630 Gross Avenue, Chicago, Ill.: Letter dated April 7, 1916.

---

## Preparedness and Neutrality.

### EXTENSION OF REMARKS

OF

### HON. HENRY T. HELGESEN,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 2, 1916.*

Mr. HELGESEN. Mr. Speaker, on the second day of the present session of Congress President Wilson delivered his annual message to the Congress, the message for which not only all Americans but the whole civilized world had waited with intense interest—even anxiety. In the opening sentences of his message, President Wilson spoke briefly of the European war, and said:

> We have stood apart, studiously neutral. It was our manifest duty to do so.

Mr. Speaker, let us observe, coolly and impartially, how our "manifest duty of studious neutrality" has been performed.

Since the grim specter of war cast its black and appalling shadow over the Continent of Europe—a shadow which lengthens with increasing menace daily—thousands of factories have been erected in the United States for the manufacture of arms and other munitions of war for export. Throughout this country powder and acid manufacturing plants have sprung up like mushrooms. Screw factories, pipe works, cutlery plants, and other concerns for the manufacture of useful commodities for peaceful nations, have been converted into factories for the production of munitions of war for Russia, France, and England.

In the early days of his administration, in a message on the Mexican situation, President Wilson said:

> I shall follow the best practice of nations in the matter of neutrality, by forbidding the exportation of arms and munitions of war of any kind from the United States to any part of the Republic of Mexico—a policy suggested by several interesting precedents and certainly dictated by many manifest considerations of practical expedience.

Why did Mr. Wilson take this high moral ground at that time in our relations with Mexico, and why does he now follow a directly opposite course in connection with the European war? Were the people of Mexico more worthy of consideration, more deserving of the application of humanitarian principles than our friends across the sea? If President Wilson had faithfully adhered to the same principles in our relation to the European war which he outlined in his message on the Mexican situation as it existed at that time, if he had prohibited the exportation of arms and munitions of war of any kind from the United States to any belligerent European country, the European war would perforce long since have ended, for lack of war supplies, and President Wilson could rightfully have been honored as the greatest humanitarian the world has ever known. But no; because our steel companies, our powder manufacturers, and our makers of death-dealing instruments are reaping a fabulous harvest of wealth from this iniquitous traffic in human lives, President Wilson finds it impolitic and inconvenient to apply the same definition of neutrality in the case of Europe that he outlined for Mexico. We are told by President Wilson and his ardent supporters that the inhibition of this foreign traffic in arms and munitions of war would be "unneutral." If "unneutral" in Europe, why was such inhibition in Mexico "the best practice of nations in the matter of neutrality, a policy suggested by several interesting precedents, and certainly dictated by many manifest considerations of practical expedience"?

We are also told by the administration that no obligation rests upon this Government in the performance of its neutrality, to prevent trade in contraband, and thus equalize the difference due to the relative strength of the belligerents. The misleading statement is made that the markets of this country are open upon equal terms to all the world, to every nation, belligerent or neutral. But, when similar conditions on an infinitely smaller scale existed in Mexico as now prevail in Europe, President Wilson advanced the theory that because Carranza had no ports, while Huerta had them, and was therefore able to import munitions of war, it was our duty as a nation to place Carranza and Huerta on an equality, if we would preserve the spirit of true neutrality as compared with mere paper neutrality.

This theory apparently bore the stamp of fair-mindedness, but though it sounded well, it, too, developed into a mere paper theory, for while President Wilson sent our ships to blockade Huerta's ports, at the same time he permitted shipments of ammunition to be made to Carranza, instead of following the plan outlined in his message and forbidding the exportation of arms and munitions of war, of any kind, from the United States to any part of the Republic of Mexico. In the case of Mexico, President Wilson directly reversed his clearly outlined policy, and the presence of our American troops on the border and in Mexico to-day is a vivid object lesson of the result of President Wilson's whiffling, vacillating method of handling the Mexican situation.

A practice permitted by the administration, which, in my opinion, can not be too strongly condemned, is the policy of permitting American citizens to travel on belligerent vessels carrying munitions of war destined to a belligerent country. When, as the result of such policy, harm overtakes these American citizens, immediate and strenuous protest is made to the nation responsible for the damage to or destruction of the vessel of its recognized enemy on which an American citizen has taken advantage of his technical right to travel. President Wilson upholds the theory that a neutral American citizen has the right, under international law, to travel to a belligerent country, on a belligerent vessel, even though that vessel carries munitions of war. That such a policy is not generally adopted by other nations is shown by Sweden's attitude in the present European war, the Government of that neutral country having recently notified Swedish subjects that the Swedish Government will not be responsible for the safety of persons taking passage on a ship of any of the belligerent nations.

Sweden has surrendered none of her rights as a neutral country by such a proclamation; on the contrary, she has followed the only sane course open to a neutral nation.

In direct contrast to this action by the Swedish Government, we are told that international law gives an American citizen the right to travel on ammunition-loaded belligerent ships, and that this Government will protect him in such action. Granted, for the sake of argument only, and notwithstanding the fact that time-honored precedent is against such a theory, is not this a deplorably narrow concept of the "right" of a true American citizen? Is the man who insists on his technical, selfish "right" to travel whenever, wherever, and however he pleases, and who demands that his country protect him in the exercise of this technical, selfish right typical of true American citizenship? No! a thousand times, no! Rather is he a puny-minded egotist, who prefers to risk the embroilment of a Nation of 100,000,000 people in a bloody and futile war rather than temporarily forego one jot or tittle of his petty little personal right to the freedom of the seas, the use of belligerent ships, and a sojourn in the countries at war with each other.

The Encyclopædia Britannica, eleventh edition (1911), defines neutrality as—

> that branch of international law in which the practice of self-restraint takes the place of the direct sanctions of domestic law most effectively.

Believing that those of our citizens who recklessly choose these perilous times for European travel should exercise the "practice of self-restraint," I, together with many other Members of this legislative body, voted in favor of warning Americans from traveling on ammunition-loaded belligerent ships, for which vote we have been mercilessly criticized and censured by those persons who prefer to uphold the administration, whether right or wrong, and we have likewise received the warmest commendation from the great body of American citizens who do not wish to see this country uselessly and needlessly drawn into a war which we have no logical or reasonable cause to enter.

We do not have to go back of the present administration to remember when the citizens of the United States were warned by the President to refrain from travel in Mexico; and our citizens in that country were advised to withdraw from there, notwithstanding that many could do so only at heavy financial and personal loss. When recently 18 peaceable United States citizens, on their way to their ordinary employment in Mexico, nominally under the protection of the Mexican Government which President Wilson has insisted on recognizing, when these 18 citizens were dragged from the train, subjected to indescribable torture, and finally murdered in cold blood by Mexican bandits our calm and collected President, who was watchfully waiting the course of events, said only that "Those Americans were specifically warned not to go into Mexico."

Why is President Wilson less ready to warn Americans to keep away from other belligerent countries and avoid travel on belligerent ships of other nations than he is to "specifically warn" them not to go into Mexico? Why do we "waive our rights" in keeping clear of one war zone any more than in avoiding another? As citizens of the United States we have a right to use the sidewalks of this city, and none can gainsay that right. Nevertheless, in the event of a street riot, a fire, or even a circus parade, we do not consider that we forego our personal rights and privileges when we refrain, by request of the police or other civil authority, from entering and using the restricted territory.

A patriotic American citizen manifests a truly patriotic, humane, and broad-minded concept of personal liberty when he refuses to exercise his technical right to expose himself to unwarranted danger and his country to the useless risk of engulfment in the turgid maelstrom of warfare which is to-day depleting Europe of the flower of her citizenry.

Our American laws prohibit persons from traveling on ammunition loaded vessels. If President Wilson had insisted on the enforcement of these laws, a great amount of scholastic rhetoric of a highly polished character could have been diverted to other channels and not expended in notes to foreign nations.

While President Wilson is energetically defending the right of the allies to protect their shipments of war supplies by carrying American passengers on vessels thus loaded, how is our right to the freedom of the seas maintained, so far as our commerce to neutral countries is concerned? With a war extending over the greater European countries, with those countries requiring all of their own products for home consumption, our exports, especially of agricultural products, should show an enormous increase, particularly to neutral countries. If the inhibition of traffic in war supplies is "unneutral," surely our export trade in other commercial products must be allowed to continue unhampered. Is such the situation to-day? I quote from one of the diplomatic "notes" sent from our State Department to England last October:

> Vessels whose cargoes and papers have been of such a character as to require but brief time for examination have been held in British ports, according to this Government's information, for prolonged periods, in some instances more than a month, and then released without the institution of prize-court proceedings.
>
> Vessels carrying oil from the United States to long-established markets in Scandinavian countries have repeatedly been detained, without being sent to the prize court for adjudication.
>
> Vessels have been held until they have reconsigned their cargoes to a consignee in a neutral country designated by the British Government.
>
> Detentions have been made without evidence amounting to probable cause. The steamer *Annam*, which was detained at Kirkwall, carried a cargo of food products from the United States to Swedish ports. She was detained owing to a suspicion, as the British Government stated, that a part of its cargo was destined for Germany.
>
> The steamer *Dronning Olga* was detained at Kirkwall, and her cargo, which consisted of cotton and food products, was placed in the prize court, on the ground, as the department was informed by the British Government, that it was "believed" that it was ultimately destined for Germany.
>
> Goods have been seized by the British Government on the ground, as this Government has been informed, that the country to which they were shipped had not prohibited their export.
>
> The British authorities have repeatedly seized articles classified as contraband, articles classified as conditional contraband, as well as non-contraband goods shipped to Scandinavian countries, to the Netherlands, and to Italy (then neutral), although the reexportation of such commodities from these countries had been forbidden.

During the Boer War the British Government held the position that foodstuffs with a hostile destination can be considered contraband of war only if they are supplies for the enemy's forces. It is not sufficient that they are capable of being so used; it must be shown that this was in fact their destination at the time of the seizure.

In 1904 when Russia, then a belligerent, seized a cargo of flour consigned to private dealers in Japan—her opposing belligerent—the position of the United States and Great Britain relative thereto was so clear and conclusive that it leaves Great Britain no possible defense for her present course. At that time Lord Lansdowne declared that—

> The test appeared to be whether there are circumstances relating to any particular cargo to show that it was destined for military or naval use.

Great Britain adopted a different attitude when she herself was a neutral country than she maintains to-day, when the

British Government effaces international law and procedure and issues a decree that "orders in council" are supreme.

Hon. John Hay, Secretary of State under Theodore Roosevelt at the time of the Russo-Japanese War, declared that Russia's action in seizing a cargo of foodstuffs bound to her opposing belligerent was in effect a declaration of war against commerce of every description between the people of a neutral and those of a belligerent State. What, then, can we say of the action of Great Britain in seizing cargoes of foodstuffs shipped from neutral countries to neutral countries on the mere possibility or suspicion or fear that any part of those cargoes will eventually reach the homes of her enemies? Is not such action on the part of Great Britain a practical declaration of war against our commerce? Shall we submit tamely to such high-handed procedure, or shall we insist that Great Britain and her allies recognize our rights as a neutral country to ship our products to other neutral countries without interference or detention by England or France? We ought to remonstrate as swiftly and as surely with Great Britain and her allies in their unwarrantable and unprecedented interference with our peaceful commerce as we should do were the offending nations on the side of the Teutonic allies.

In regard to shipments of commercial products from this country other than food supplies and munitions of war I shall mention one in particular, namely, cotton. Again allow me to refer to the position maintained by the British Government during the Russo-Japanese War, when Russia attempted to classify cotton as unconditional contraband. At that time England's protest was based on the argument that the amount of cotton that might be used for explosives was infinitely small as compared with the quantity designed for peaceful purposes, and the treatment of cargoes of the latter description as unconditional contraband would subject this branch of innocent commerce to unwarrantable interference. In this position Great Britain was upheld 10 years later by the Solicitor of the State Department of the United States, the Hon. Cone Johnson, who in October, 1914, declared that—

There is no impediment to the shipment of cotton to any country, not excepting the belligerents.

Cotton is noncontraband for the manifest reason that in its raw state it can not be used for the purposes of war. In order to be available for use by armies and navies it has to undergo a long process of manufacture. It is ranked as noncontraband in the London convention.

There is no legal impediment to a shipload of cotton going direct to Hamburg consigned to German spinners, and personally I hope to see the exportation of cotton to the countries at war increase.

For many months after the above hope was expressed by the Solicitor of the State Department our exports of cotton did not increase; on the contrary, owing to the unwarranted and unprecedented interference with our innocent commerce by Great Britain and her allies, our southern warehouses were long filled with cotton which should have been entering our long-established markets in neutral countries, but which was deterred therefrom by the indefensible interference with our peaceful commerce by Great Britain and her allies. Owing to the limited number of merchant vessels to-day sailing under our own flag we are, unfortunately, dependent on the vessels of foreign nations for the transportation of the bulk of our foreign commerce, but this dependence is no reason why we should allow the belligerent necessities, so called, of Great Britain and her allies, or of Germany and her allies, to place an embargo on the products of our farms, our mines, our ranches, and our factories, which products are destined to supply the needs and commerce of neutral foreign nations. Yet this is what Great Britain has done, regardless of the milk-and-water protests that from time to time have reached her through our State Department. It is the duty of Congress to free our peaceful, neutral commerce from this unwarranted tyranny of Great Britain and her allies.

A further violation of the spirit of true neutrality in favor of paper neutrality, was exemplified in the change of attitude on the part of the administration in regard to loans to belligerents. In the early days of the European war, President Wilson announced that the Government would regard the making of loans by American citizens to the Governments of nations engaged in war as inconsistent with the spirit of neutrality, and a number of mellifluent reasons were given for this policy. In the Democratic platform which was published in 1914, and was used by the Democratic Party after the inception of the European war, we find the following:

NO LOANS TO BELLIGERENTS.

The announcement made by this Government that it regards the making of loans by American citizens to the Governments of nations engaged in war as inconsistent with the spirit of neutrality has created a profound impression throughout the world. It is the first time that a great nation has taken this stand on the subject of war loans. The matter has been discussed at The Hague and at peace conferences, but it encountered so much opposition that nothing tangible has resulted. The President, therefore, blazes a new way when, without conference with other nations and without support from conventions, he commits this Nation to this policy.

It is inconsistent with the spirit of neutrality for a neutral nation to make loans to belligerent nations, for money is the worst of contrabands—it commands all other things. A very forcible illustration has been used in support of this proposition, namely, that as a neutral government does all in its power to discourage its citizens from enlisting in the armies of other countries, it should discourage those who, by loaning money, would do more than they could do by enlisting. The Government withdraws the protection of citizenship from those who do enlist under other flags—why should it give protection to money when it enters into foreign military service? There is only one answer.

But there are other reasons. The European war is imposing a burden upon all the neutral nations as well as upon those engaged in the conflict. If the United States were to loan money to the belligerent nations, it would be less able to assist the neutrals, and it has already received notice from neutral nations that desire loans. We are under special obligation to render such service as we can to South and Central America; it would be difficult to do this if all of our surplus money was flowing into the war chests of Europe.

Then, too, our own country might be embarassed by loans to the belligerents. Already a material reduction has been made in the Government's income from import duties owing to the partial suspension of commerce. If the war is prolonged it may become necessary for the Government to issue bonds, and foreign loans might so affect the local market as to compel a higher rate of interest.

There are still other reasons, but these are enough to show that the President's course was abundantly justified—enough to show, also, that in this case, as in nearly every other case, a stand taken upon moral grounds is supported by considerations of a material character.

The foregoing were the principles and pledges contained in the Democratic platform upon which the Democratic Party stood before the American people in the last election, but in a few short months we find President Wilson forsaking the new way which he himself had blazed and the policy which he so proudly declared "without conference with other nations and without support from conventions," for, at the expiration of those few short months, a loan of $500,000,000 to the English-French allies was successfully negotiated, preceding which negotiation long and private conferences were held between administration officials and J. Pierpont Morgan, jr., that king of American finance, through whom the transaction was conducted.

The climax of President Wilson's inconsistency is reached when we compare his "Plea for neutrality," made in 1914, with his message to Congress in December, 1915. In his "Appeal for neutrality" the President said:

Every man who really loves America will act and speak in the true spirit of neutrality, which is the spirit of impartiality and fairness and friendliness to all concerned. * * * The United States must be neutral in fact as well as in name. We must be impartial in thought as well as in action; must put a curb upon our sentiments as well as upon every action that might be construed as a preference of one party in the struggle before another. Shall we not resolve to put upon ourselves the restraints which will bring to our people the happiness and the great and lasting influence for peace we covet for them?

A year after these words were uttered we witnessed the most extraordinary spectacle this country has ever beheld, the President of this Nation, in his message to the Congress of the United States, inculcating and encouraging the germs of race hatred toward those of our number who are of foreign extraction. It matters not, Mr. Speaker, whether the President in his message just mentioned referred to men of English, French, or German ancestry; I contend that such utterance by the President of this Nation was unwise, undignified, and un-American, and carefully calculated to arouse a spirit of antagonism and race hatred toward those of our citizenry who, in a moment of would-be facetiousness, have been dubbed "hyphenated Americans."

Our Democratic friends are fond of lauding the far-sighted statesmanship and steadfastness of President Wilson, but when pinned down to specific facts and asked to name the important public issues on which Mr. Wilson has not reversed himself since the election of 1912, they find that the proverbial search for a needle in a haystack is easy by comparison. This reversal of opinion is especially noticeable in the text of President Wilson's recent message, the subject to which all other topics are mere auxiliaries, namely, "Preparedness"; that is, the preparedness of the United States for war—offensive or defensive—with a foreign nation or nations.

No one seems able to satisfactorily account for President Wilson's sudden change of base, from the promulgation of practically a pacificist's disarmament theory to a peremptory demand for an overwhelming Navy and an equally powerful standing Army. If a Member on the Republican side of this Congress should state frankly his opinion as to what had caused this remarkable change of heart, he would probably be accused of the assignment of motives to the President that would be a credit neither to Mr. Wilson's statesmanship nor his sincerity. The President's conversion from a pacific to a militaristic and navalistic standpoint is too sudden and too radical to result from careful study and thorough conviction. In some quarters he is even accused of looking for a new and popular issue on which to successfully conduct the coming presidential

campaign. It is rumored that he thoughtfully changed his policy on the eve of this campaign, because some of his potential political opponents are expected to press for "preparedness." Be that as it may, he makes a strong appeal in his message for assistance to develop his "preparedness" program, and has recently taken the stump in favor of that program.

In an apparent endeavor to account for the seeming inconsistency of his position, President Wilson, in a recent speech, said:

> There is so much to understand that we have not the data to comprehend that I for one would not dare, so far as my advice is concerned, to leave the Government without the adequate means of inquiry.
>
> I can not tell you what the international relations of this country will be to-morrow, and I use the word literally. And I would not dare keep silent and let the country suppose that to-morrow was certain to be as bright as to-day.

President Wilson has also declared that he is daily and hourly in receipt of "notes," giving him information that no other man in the country is in a position to obtain.

What is this knowledge which Mr. Wilson has that no other man has, the possession of which incites him with a desire to "warn" the people of this country of impending danger? What is this grave danger? If this Nation is facing a crisis, and President Wilson is the only man aware of it, why does he not make the facts in his possession known to Congress, because Congress is a responsible body. We are not children to be frightened into action or nonaction by a vague threat of some hypothetical "bogey man that will catch us if we don't watch out"! President Wilson can not declare war without action by Congress; he can not provide for any emergency without the help of Congress; therefore I should like to know why Mr. Wilson expects us to act blindly on his advice without knowing whether this wonderful "information" in his possession is fact or fiction. As a lawmaking body, Congress is entitled to information before taking action. What is the danger which confronts the country?

Mr. Speaker, although President Wilson has shifted his position with the unexpected agility of an acrobat, I am personally of the opinion that the Congress should not allow itself to be floated away on any tidal wave of popular or presidential enthusiasm for "preparedness."

I do believe that our Navy should be brought to its utmost efficiency. The old saying that a chain is no stronger than its weakest link is as true of navies as it is of chains—and our present Navy has some weak links that almost destroy its efficiency, or at least seriously impair it, even for defensive purposes alone. President Wilson, however, does not advocate the strengthening of these weak links. We have only a few submarine boats that can be truthfully deemed efficient vessels of that character. Some of our present submarines refuse to do anything but float, while some of those that dive decline to come to the surface, not to mention an occasional explosion on account of defective batteries. We therefore need more submarines.

We have practically no mines with which to defend our harbors and coast lines. These should be provided. We have an insufficient number of transports, colliers, or supply ships for the fleet, and without them the fleet would be tremendously handicapped, if not altogether powerless. Therefore, these also should be provided. Our number of airships is small, and in these days of modern warfare we should have an air fleet sufficiently large to train and equip an experienced corps of aviators to care for the needs of both the Army and Navy in case of war.

The completion of those additions to our Navy which are now in process of construction and those contracted for should be hastened, so that in the event of our placing a contract for a modern, efficient vessel, that same vessel will not be a back number before it is finished. Since the Democratic Party has been in control of this House Congress has authorized the construction of 39 submarines, 2 transport and supply ships, 17 destroyers, and 9 dreadnaughts—a fairly good-sized navy of new vessels—not one of which is completed and some of which have not been commenced. Instead of "speeding up" Congress to carry out his elaborate "preparedness program," President Wilson would do better to "speed up" the construction and completion of these vessels for which we have already contracted.

The inconsistency of the "preparedness" alarmists is forcibly illustrated by the present condition of the battleship *North Dakota*, named for the State which I have the honor to represent in part. This great battleship, one of the finest superdreadnaughts in our Navy, whose crew held the record of the entire Navy for marksmanship, and in discipline and efficiency was second to none, now lies helplessly out of commission in the backwaters of the League Island Navy Yard, at Philadelphia, her crew scattered to the four winds of heaven, and barely a sufficient number of men aboard of her to prevent her being carried away piecemeal for junk.

The *North Dakota* was the victim of an experiment in the installation of turbine engines. She was one the first ships on which these turbines were installed, and with a nominal speed of 21 knots an hour; with the new turbines she was able to make only a speed of 16 knots an hour. To replace these defective turbines, and thereby place again in commission one of the finest battleships in the whole American Navy, would cost about $700,000; and yet, while our President and his henchmen are straining their vocal chords with their cries for "preparedness," this magnificent vessel lies helpless and useless in the League Island Navy Yard, a shameful example of the penny wise and pound foolish policy of this administration. If the danger of war with any other nation is as imminent as our alarmists would have us believe, why is no demand made by naval experts for the few hundred thousand dollars necessary to place the *North Dakota* in commission? The fact that no radical steps have been taken to place our present Navy on its highest plane of efficiency is one of the best indications possible that the administration and the naval experts do not fear this potential danger as much as they pretend, otherwise no special urging would be necessary to place one of the best ships in the Navy in commission.

We ought also to bring our present Army up to its full strength and create a reserve army sufficiently large, so that if, in an emergency, we find it necessary to expand our forces we can draw on that reserve army for all the men needed for emergency purposes. In regard to our Army, we have failed to profit by the experience of the other nations of the world. Our type of regular standing army is that which other countries have abandoned.

A comparison of the Hay Army reorganization bill with the Senate bill shows that the Hay bill provides for a maximum Regular Army of 207,000 men, with an enlistment of two years with the colors and five years in the reserves.

The Senate bill provides for a maximum Regular Army of 250,000 men, with an enlistment of three years with the colors and four years in the reserves.

No nation in all of the world's history, in time of trouble, has ever been saved by its standing army, but has always had to rely upon its trained reserves. Therefore, in comparing the Hay or House bill with the Senate bill, the one that furnishes the country with the largest number of soldiers and trained reserves is the one that gives the country the greatest protection.

Assuming that the Army is enlisted up to the maximum provided for by each of these bills, under the Hay bill we should have 207,000 men and under the Senate bill we should have 250,000 men. Under the Senate bill we should therefore have at the first enlistment an army larger by 43,000 men than under the Hay bill.

But at the expiration of the second year the 207,000 serving Hay bill, would again go into the reserves, and the Regular Army at the beginning of the third year would be replenished by 207,000 new recruits. We should then have a Regular Army of 207,000 men and 207,000 reserves, making a total of 414,000, as compared with 250,000 under the Senate bill.

At the end of the fourth year the Regular Army, under the Hay bill, would again go into the reserves, and the Regular Army at the beginning of the fifth year would again be replenished by 207,000 new recruits, making the total in the Regular Army and in the reserves 621,000. By that time, under the Senate bill, 250,000 soldiers would have been placed in the reserves and another Regular Army of 250,000 enlisted, making a total of 500,000 in the Regular Army and in the reserves as compared with 621,000 under the Hay bill.

At the end of the sixth year, under the Hay bill, another 207,000 soldiers would be placed in the reserves, and the Regular Army, at the beginning of the seventh year, again replenished by 207,000 recruits, making a total in the Regular Army and in the reserves of 828,000, while at the same time, under the Senate bill, 250,000 would have gone into the reserves and the same number of recruits would have taken their place in the Regular Army, making a total in the Army and in the reserves of 750,000 under the Senate bill as compared with 828,000 under the Hay bill.

At the beginning of the seventh year the Hay bill will therefore have created 78,000 more soldiers and reserves than the Senate bill.

But that is not the only advantage that the country would have under the Hay bill as compared with the Senate bill. Government statistics prove that the cost of the Army has averaged $1,000 per soldier per year. As the Senate bill provides for 43,000 more soldiers per year in the Regular Army than does the Hay bill these would cost, at the rate of $1,000 per soldier per year, $43,000,000 per year more than the Army provided for by the Hay bill. In six years, which is the period

in which we have shown that the Hay bill would provide 78,000 more soldiers and reserves than would the Senate bill, the cost under the Senate bill would be $258,000,000 greater than under the Hay bill, although the Hay bill would have produced 78,000 more soldiers and reserves than the Senate bill.

This comparison is graphically shown by placing the numbers of increase under the respective bills in parallel columns:

| | Under Hay bill. | Under Senate bill. |
|---|---|---|
| First enlistment | 207,000 | 250,000 |
| Beginning of third year | 414,000 | 250,000 |
| Beginning of fifth year | 621,000 | 500,000 |
| Beginning of seventh year | 828,000 | 750,000 |
| Cost for 6 years | $1,242,000,000 | $1,500,000,000 |

The greatest objection to both of these bills is the length of service with the colors, principally because it has been demonstrated that it is practically impossible to fill up the ranks of the Army on a plan of three years with the colors and four years with the reserves. This was clearly demonstrated last spring, when President Wilson asked for an addition of 20,000 soldiers to the Regular Army, and Congress granted his request with only one dissenting vote; yet after several months of very active efforts on the part of the recruiting department of the Army they have not yet succeeded in getting the 20,000 men.

It is quite evident that recruits would be obtained much easier under the Hay bill, providing for two years' service with the colors, than has been the case under a plan of three years with the colors; but if the Hay bill had provided for a one-year term of service with the colors, it is conceded by Army officers that there would be practically no difficulty in keeping the Army up to its maximum limit all the time.

This being true, the Hay bill would, at the beginning of the seventh year, place in the Army and in the reserves a force of 1,449,000 men, as against only 750,000 men in the Army and reserves under the Senate bill, with its provision for three years' service with the colors. The Hay bill would thus have produced 699,000 more soldiers and reserves than the Senate bill, at a saving of $258,000,000 in cost.

A comparison of these figures is also graphically shown in parallel columns:

| | Under Hay bill (if enlisted only 1 year with colors). | Under Senate bill (if enlisted 3 years with colors.) |
|---|---|---|
| First enlistment | 207,000 | 250,000 |
| Beginning of second year | 414,000 | 250,000 |
| Beginning of third year | 621,000 | 250,000 |
| Beginning of fourth year | 828,000 | 500,000 |
| Beginning of fifth year | 1,035,000 | 500,000 |
| Beginning of sixth year | 1,242,000 | 500,000 |
| Beginning of seventh year | 1,449,000 | 750,000 |
| Cost for 6 years | $1,242,000,000 | $1,500,000,000 |

Those who have so viciously criticized the Hay bill and its supporters have done so because they have been ignorant of the facts, for we have to assume that they desire actual, practical results for the defense of the Nation, and we must also assume that they would not object to getting such results at the least possible cost. In both of these respects, the Hay bill, as has been shown was far preferable to the Senate bill.

Sooner or later the country will come to its senses and demand that its soldiers be given only one year in the Regular Army and then placed in the reserves for a reasonable number of years, for the best Army experts, both here and in Europe, admit that the man who can not be made into a good, practical soldier in a year will never become one. One year in the Regular Army would be a splendid experience for any young man, and if our Army was composed of the average young men of the country most parents would be glad to have their boys given a year of such training. As it is now, under our long enlistment, the Government has to depend on the slums of the cities and the derelicts of society generally to get its soldiers for the Regular Army, which plan is fundamentally wrong.

But, Mr. Speaker, while I strongly advocate a condition of efficient preparedness, this does not necessarily nor advisedly mean the immediate expenditure of the fabulous sums of money that are so glibly mentioned by the promulgators of militarism and the apostles of navalism as the first step toward attaining and maintaining such a condition. The needs I have enumerated are those of any efficient army and navy, and mean only a reasonable care for our national defense and prestige. President Wilson and those of his supporters who advocate an exorbitant appropriation for our Navy claim that it is entirely for defense. The President has carefully assured the American people that his preparedness program does not mean preparedness for aggression or offense. Early in the current year President Wilson made a brief speech-making tour through the Middle West. On January 27, 1916, in speaking to the Railway Business Association, in New York City, President Wilson said:

> The circumstances of the world to-day are not what they were yesterday or ever were in any of our yesterdays. And it is not certain what they will be to-morrow. I can not tell you what the international relations of this country will be to-morrow, and I use the word literally; and I would not dare keep silent and let the country suppose that to-morrow was certain to be as bright as to-day.

In Cleveland, Ohio, on January 29, 1916, he said:

> I do not know what a single day may bring forth. * * * I know that we are daily treading amidst the most intricate dangers, and that no man in the United States knows what a single week or a single day or a single hour may bring forth.

Again, on February 1, 1916, President Wilson told the people of Des Moines, Iowa:

> My fellow citizens, you may be called upon any day to stand behind me to maintain the honor of the United States.

The next day, in Kansas City, Mo., he said:

> My natural duty is in Washington, not here. I have a certain scruple of conscience in being away from Washington for many days at a time, because it is one of the interesting circumstances of the moment that there is hardly a day which does not in some degree alter the aspect of affairs.

And in the same address he made the statement that—

> Speaking with all solemnity I assure you that there is not a day to be lost; not because of any new or specially critical matter, but because I can not tell 24 hours at a time whether there is going to be trouble or not. * * * This month should not go by without something decisive done by the people of the United States by way of preparation of the arms of self-vindication and defense.

If President Wilson had honestly believed these statements which he made to the people in the large cities of the Middle West, what would he have done? He would have hurried back to Washington and he would have gone before Congress and asked for an immediate appropriation with which to put the forces which we have into the best possible condition; and if, under the circumstances which he professed to believe existed, he had asked for such an appropriation there would not have been one vote against it in Congress. But although President Wilson sounded the tocsin of alarm in this manner to the American people, when he returned to Washington he took no such steps, nor has he yet taken them, thus showing plainly that either he did not believe what he said or else he is utterly incompetent to take care of the interests of the country in the emergency which he claimed to believe confronted us.

Without question, however, President Wilson voiced his real object when in his St. Louis address on February 3, 1916, he made the statement that—

> The American Navy ought, *in my judgment*, to be incomparably the greatest navy in the world.

Mr. Speaker, I do not believe that the American people want "incomparably the greatest navy in the world," and if they understood that such a navy was the object of the present "preparedness" agitation the American people would repudiate such a plan. If we should prepare to build the greatest navy in the world, we should first be obliged to bankrupt England. England has twice as large a navy to-day as we have and can build faster than we can build. If we should immediately start to build ships as fast as we are able to do, England would do the same, and "the sky would be the limit" until one country or the other was bankrupted.

It is therefore useless, because impossible, for us to expect to bring our Navy to an actual, numerical equality with the British Navy in the next decade. Such an attempted procedure is not only inadvisable but is unnecessary in order to enable us to successfully defend ourselves, even in the unlooked-for event of war with England. Official proof of this assertion is abundant and easily presented. In his recent stumping tour President Wilson has made the assertion that he has learned much about the present situation by listening to the lies that have been told him. Without, I trust, undue presumption, I venture to assert that a more satisfactory method of learning the exact status of any subject is by listening to the truth. I shall therefore quote from the official Hearings before the Committee on Naval Affairs of the House of Representatives on Estimates Submitted by the Secretary of the Navy. This book contains the expert testimony of two men, one of whom, Admiral Fletcher, is one of the highest ranking officers in the Navy to-day, and the other, Admiral Badger, until his recent retirement, held the position to which Admiral Fletcher was advanced. These two men were perhaps better fitted than any other two men in the country to give expert opinions on the condition of our Navy's efficiency. It must be remembered also that both

Admiral Fletcher and Admiral Badger were in favor of a larger navy, therefore any admission from them that our Navy is sufficiently large and efficient is doubly valuable.

The expression, "battleship strength" in this testimony, refers in the case of each nation to the number of battleships built, building, and authorized at the time of these hearings, in December, 1914, or more than one year ago. Our American battleship strength at that time, as brought out at the hearing by Congressman Witherspoon, was 40—easily remembered, 40—American battleships.

When asked by Congressman Butler, a member of the Naval Committee, his opinion of our relative naval strength as compared with that of other nations of the world, Admiral Fletcher said:

I have not personally gone into that, but I have estimates that place us about third at the present time.

Admiral Fletcher was of the opinion, then, that both England and Germany were ahead of us in naval strength. But when held to actual figures and comparative "battleship strength," he was forced to admit that only one nation—Great Britain—is our superior or even our equal. This fact was brought out by Congressman Witherspoon, also a member of the Naval Committee, in the following manner:

Mr. WITHERSPOON. Now, according to the Navy Yearbook, Germany has battleships built, building, and authorized, 39. Would you say that if she could send all of those ships against us, we would not be able to resist them?

Admiral FLETCHER. I should say that we ought to, if we have the greater force.

Mr. WITHERSPOON. Certainly, we ought; and we could?

Admiral FLETCHER. Yes, sir; the greater force should win.

Mr. WITHERSPOON. Now, take France. This Navy Yearbook says that France has a grand total of battleships, built, building, and authorized, of 29—11 less than we have. Would you not say that if she sent all hers against us that we would be able successfully to resist them?

Admiral FLETCHER. Yes; our force available being the greater.

Mr. WITHERSPOON. That is the way I look at it. Here is Japan, which, according to the Navy Yearbook, has only 19 battleships, or 21 less than we have got. If Japan should send all of her 19 against us, do you not think we would be able successfully to resist them?

Admiral FLETCHER. Yes; I should say, if all our force were free to meet them at the time.

Mr. WITHERSPOON. Now, here is Russia, that the Navy Yearbook says has a grand total of battleships, built, building, and authorized, of 15. If she should send all of them against us, would you not say that we could successfully resist them?

Admiral FLETCHER. Yes, sir.

Mr. WITHERSPOON. Here is Italy, that has a grand total, according to the Navy Yearbook, of 17 battleships. We could successfully resist them, whether she sent all of them or a part of them, could we not?

Admiral FLETCHER. Yes; I think so.

Mr. WITHERSPOON. Now, Austria-Hungary, according to the Navy Yearbook, has a grand total of battleships, built, building, and authorized, of 10. We could successfully resist them, could we not?

Admiral FLETCHER. I think so.

Mr. WITHERSPOON. Then, what nation is there that we are not prepared successfully to resist? I have gone through the big ones. Tell me which one?

Admiral FLETCHER. I should say that England has a navy so much more powerful than that of any other nation in the world that she could easily keep control of the seas.

Mr. WITHERSPOON. Then there is no other nation except England that, in your judgment, we could not successfully defend ourselves against?

Admiral FLETCHER. I think that is correct; yes.

Therefore, instead of being third in the naval strength of the world we are, according to this naval expert, second only to England, and that on the supposition that England should have her full naval force available to send against us. But it was further developed by Congressman Witherspoon that it is the opinion of high naval experts that in case of a war between the United States and England, on account of England's relations with other European nations, she could not afford to send more than half of her ships against us; therefore, notwithstanding our smaller battleship force, we should still be able to successfully compete with her.

Under Congressman Witherspoon's examination, Admiral Fletcher also admitted—rather unwillingly—that our largest ships are the most powerful in the world. Mr. Witherspoon again referred to the Navy Yearbook for figures:

Mr. WITHERSPOON. In this Navy Yearbook, which gives a list of the English battleships, I find that the last five dreadnaughts that England built or is building each has a tonnage of 26,000.

Admiral FLETCHER. Yes, sir.

Mr. WITHERSPOON. And we have two ships, the *Pennsylvania* and the *No. 39*, which have a tonnage of 31,400, and then we have authorized three more that are to have a tonnage, as I understand, of 32,000 tons. In other words, the tonnage of the *Pennsylvania* and *No. 39* is 5,400 tons greater than that of the last five English dreadnaughts that are building, and the last three dreadnaughts that we are building have a tonnage of 6,000 tons greater than the last five English ships. Do you tell me that these English ships are equal to ours?

Admiral FLETCHER. No; I did not say that.

Mr. WITHERSPOON. Do you not regard them as inferior to ours?

Admiral FLETCHER. Yes; as near as we can estimate.

Mr. WITHERSPOON. I do, too. And the armament of these five ships is eight 15-inch guns, while the armament of the five American ships I have referred to is twelve 14-inch guns. Which is the more powerful armament—eight 15-inch guns or twelve 14-inch guns?

Admiral FLETCHER. I think the twelve 14-inch guns more powerful.

Therefore, as I said before, notwithstanding Great Britain's superior battleship strength, it is unreasonable to assume that we shall ever be called on to combat her full naval strength, for the reason that she could never afford to send her complete forces against us, and with larger and more powerful battleships, equipped with more powerful armament, with our present Navy brought to its highest state of efficiency, we could successfully defend ourselves against the fraction of Great Britain's Navy which she would be free to send against us in the unlooked-for event of war with that nation.

As I have previously stated, this testimony of Admiral Fletcher was given in December, 1914, when he unwillingly admitted that our Navy was second only to England's. A little over a year later, in March, 1916, Admiral Fletcher was again called on to testify before the Committee on Naval Affairs, at which time we find that he again has our Navy ranking fourth among the navies of the nations, placing England, Germany, and France ahead of us in naval strength. Admiral Fletcher gave this as his opinion in his opening remarks to the Committee on Naval Affairs, and later in replies to questions made the same statement—that is:

Mr. ROBERTS. Admiral, you said in your opening statement to the committee you thought our Navy would be third or fourth, and I wanted to ask you if you were willing to give us the benefit of your judgment as to the relative strength of our Navy, whether it is third or fourth.

Admiral FLETCHER. In my judgment, as near as I can estimate, it is some place between third and fourth. We do not know just where it can be placed, since the commencement of the war.

Mr. ROBERTS. Then you would place England and Germany ahead of us without question, and possibly also France?

Admiral FLETCHER. Possibly France.

Mr. ROBERTS. Where would you place Japan in the relative strength of the navies?

Admiral FLETCHER. I would place Japan after France.

The CHAIRMAN. You mean ahead of the United States?

Admiral FLETCHER. Japan would be fifth.

Mr. ROBERTS. That is, you would place the United States Navy after France, making us fourth?

Admiral FLETCHER. Yes, possibly; although the fact is we have not enough information so that we can get an exact comparison.

Notwithstanding Admiral Fletcher's unwilling admission, in December, 1914, that only one country—Great Britain—was ahead of the United States in naval strength, and his statement in March, 1916, that the United States was fourth in naval strength, Congressman CALLAWAY brought out the interesting statement that our Navy *is better developed to-day than it was a year ago.* This admission, however, was obtained only by judicious questioning:

Mr. CALLAWAY. Would you not say that our Navy, throughout all its departments, is in a much better condition to-day than it was a year ago?

Admiral FLETCHER. It depends on what you mean by better condition. If you refer simply to the condition of the material, their upkeep and repairs, it is no better to-day than it was a year ago.

Mr. CALLAWAY. You say that we have developed mine laying, submarines, and aircraft because of the development in the foreign war; and in those particulars we are much better developed to-day than a year ago, are we not?

Admiral FLETCHER. We are better developed to-day than a year ago, but we are not developed to such an extent that we can have aircraft and submarines actively operating with the fleet; they are not yet sufficiently developed for that purpose.

Mr. CALLAWAY. I am not asking you that question. I am asking you the comparative question as to our relative strength to-day throughout our Navy as a whole and a year ago.

Admiral FLETCHER. *You are quite right. We are stronger to-day than we were a year ago,* and if that is what you referred to by asking the question if the general condition is better, then I will answer yes.

These hearings from which I have thus quoted at length, therefore, developed two important facts—i. e., a year ago we were *second only to Great Britain in naval strength,* and that *we are stronger to-day throughout our Navy as a whole than we were a year ago.*

Moreover, Great Britain claims that in the recent engagement between Germany's navy and her own, and in minor encounters, Germany has lost seven capital ships and about 40 auxiliary cruisers. Whether or not Germany's loss is as great as reported by Great Britain, the fact remains that Germany's naval decrease during the last year has been greater than her naval increase, or in other words, she has been losing vessels faster than she is able to build them. Great Britain also admits some naval losses. Such being the case, we are indisputably further ahead of Germany and a closer second to Great Britain in naval strength to-day than we were a year ago.

Why, then, should we spend hundreds of millions of dollars annually, in excess of our already large expenditures, for a "preparedness program," which, after these enormous expenditures have been made, will not place us on a nominal equality

with the only naval power to which we are at present theoretically inferior? During the three years just past we have spent over 20 per cent more on our Navy than Germany, the nation more nearly our equal in naval strength than any other, has spent on hers. Throughout the decade immediately preceding the opening of the European war, our annual expenditure on our Navy was from $20,000,000 to $30,000,000 more than any other nation, except Great Britain, was expending on its navy. And now the proposed five-year preparedness program of Mr. Wilson calls for an increase in our naval appropriation over forty times as large as the increase in Germany's naval appropriation for the five years preceding the European war; and $200,000,000 more than the combined increase of the naval appropriations of all the nations in the world for the same five years. This increase of $600,000,000 or over, in addition to our already large naval appropriations, is demanded by President Wilson during the next five years, in order to prepare ourselves—for what? To defend ourselves against attack? A little over a year ago, in his message to Congress, President Wilson said:

What is it that it is suggested we should be prepared to do? To defend ourselves against attack? We have always found means to do that, and shall find them whenever it is necessary.

And, at that time, after proceeding to outline a policy almost extreme in its moderateness, President Wilson continued:

More than this carries with it a reversal of the whole history and character of our polity. More than this, permit me to say, would mean merely that we had lost our self-possession; that we had been thrown off our balance by a war with which we have nothing to do, whose very existence affords us opportunities of friendship and disinterested service which should make us ashamed of any thought of hostility or fearful preparation for trouble.

Are we to understand that our esteemed President and the Secretary of the Navy have lost their self-possession and have been thrown off their balance in one short year? At that time it was our duty, according to President Wilson, to be ashamed of any fearful preparation for trouble. Why is such "fearful preparation" more praiseworthy to-day?

Why did the Navy General Board prepare the report changing the program which had been followed since 1903? Was it because of any sudden emergency? Was it because of any immediate or apparent impending danger? Let us see what Admiral Badger said on this point in the hearings from which I have already quoted.

Admiral Badger said:

The July program was only for one year, and the order by which that program was drawn up was stated as follows:

"In July last the General Board was called upon to express its opinion to the department as to what the Navy must be in the future in order to stand upon an equality with the most efficient and practically serviceable, and to submit a program formulated in the most definite terms."

The July program was drawn up on that order, based on the use of all the building facilities that could be obtained. The recommendation was not approved; and Admiral Badger says, on page 1967 of the hearings, that—

The board was instructed to get up a five-year program, to cost for new construction $500,000,000, or about a hundred million dollars a year; and the October recommendation was made in view of that instruction and to comply with it.

Mr. CALLAWAY. This five-year program did not have in contemplation any emergency, did it, Admiral?

Admiral BADGER. No, sir. *That program was made according to order.*

The wishes of the Navy General Board are plain and unmistakable. They desire all the naval construction that can be handled by the building facilities of the Nation. Note the testimony of that distinguished naval officer and president of the War College, Admiral Knight:

Admiral KNIGHT. First, what do we want and when do we want it? We want a Navy *equal to the largest maintained by any nation in the world, and we want it now.*

We can go on from year to year, each year taking advantage of the best that we know at that time. Build all we can this year with what we know now. Build all we can next year with what we know next year.

Mr. KELLY. Do you think the plan for building for five years a certain number, such as the General Board worked out at the request of the department, is a better arrangement than the second-place plan which we have held to for so long?

Admiral KNIGHT. I think the plan which the General Board had in mind—of building every ship that it is possible to build this year and every ship that it is possible to build next year, and to keep on building as fast as possible—is the most rational plan.

Again, when questioned by Senator OLIVER, Admiral Knight testified:

Mr. OLIVER. Just as briefly as you can, will you tell me just how many capital ships you calculate we should build by 1925?

Admiral KNIGHT. In my mind it has been impossible to arrive at a definite figure, because the results of this war may very seriously modify the standard toward which we are working.

Mr. OLIVER. I understand that general statement.

Admiral KNIGHT. I mean, for instance, now, the largest navy in the world is that of Great Britain.

Mr. OLIVER. Yes.

Admiral KNIGHT. It is quite possible that a good many of her ships may be destroyed before the war is over. If she should be victorious in the war, in spite of losing a good many of her ships, she would still remain with the largest navy in the world—the largest, although it would be much smaller than it is now.

Mr. OLIVER. What I would like to have you do is to state what is the standard you have in mind that we have to build to. Perhaps that might be modified later, lessened by what you have stated; but what have you in mind, conceding perhaps there will not be any great amount of vessels destroyed whose places will not be taken by others; what had you in mind as the standard to which you would be aiming?

Admiral KNIGHT. *A navy equal to that which Great Britain had at the beginning of the war.*

Mr. OLIVER. How many capital ships do you calculate you will have to build in order to have a navy of that strength? I will ask you how many additional capital ships you will have to build?

Admiral KNIGHT. Approximately 20 dreadnaughts.

Mr. OLIVER. How many battle cruisers?

Admiral KNIGHT. In addition to the 9 I am recommending for this year's program, I would say 6, making 15 in all.

Mr. OLIVER. Thirty-five capital ships.

Admiral KNIGHT. When I said what Great Britain had at the beginning of the war I meant built and building.

Mr. OLIVER. How many scouts would you say?

Admiral KNIGHT. We have none now. I would say 24.

Mr. OLIVER. How many submarines additional to the 75 that we now have?

Admiral KNIGHT. Seventy-five more.

Mr. OLIVER. Seventy-five more. How many torpedo boats?

Admiral KNIGHT. We have now 75 boats. I would say 75 more.

What would be the result of this policy if it was carried out? Have we any reason to think that it would differ from the result of the same policy when followed by England and Germany? Let me again quote from the hearings:

Mr. CALLAWAY. Admiral Fiske states in the North American Review that military and naval men have seen for years that England and Germany, competing in naval strength and for commerce, would have to go to war some day in self-defense. Do you agree with that statement?

Admiral FLETCHER. *Yes, sir.* That has been regarded by many experts as the inevitable outcome of conflicting interests and the expansion of Germany upon the sea.

Mr. CALLAWAY. And as soon as they began to build against each other that became apparent to military and naval men, did it not?

Admiral FLETCHER. Yes, sir.

Mr. CALLAWAY. If they entertain the same general view that you entertain with reference to it, would it be possible for us to ever equal their navy with the start they have?

Admiral BADGER. I think that the financing burden of greater expansion would hamper them, and that if we adopted such a policy we certainly have the money in this country to carry it out. When we come near equality there might be some racing.

When Congressman CALLAWAY examined Admiral Knight on this subject he elicited the following reply:

Mr. CALLAWAY. Admiral, you stated a while ago that we would have to have 20 battleships, 15 battle cruisers, and accompanying craft in the way of scouts, torpedo boats, and submarines to make our fleet equal to what England's is now; that we would have to have those in addition to what we now have. Did you take into consideration in that what England might add in the meantime, or would we have to carry on a separate building program equal to England's building program?

Admiral KNIGHT. I expressed the opinion that in order to be on a par with England in 1925 it would be necessary for us to build between now and that time the number of ships which you have named, and I do not believe that it will be necessary for us to build more than that by 1925 in order to find ourselves on a level with England at the expiration of that time.

Simmered down, the expressions of opinion which I have quoted mean that the result of such a policy as is advocated by our high-preparedness experts would lead this country into bankruptcy or war, or both. Granted for the sake of argument, that, as Admiral Badger said, we have money in this country sufficient to carry out such a policy, thus eliminating the factor of bankruptcy. That leaves the other horn of the dilemma—war.

But why would the mere fact that, as a matter of national pride, we desired to have "incomparably the largest navy in the world" necessarily lead a peaceful Nation like the United States into war? Simply because Great Britain would never permit the United States to equal, much less surpass, herself in naval strength. Long before such a condition could be attained, and before either country was bankrupted, Great Britain would find some pretext for a conflict with any nation which threatened her vaunted supremacy of the seas. Great Britain's national existence depends on her maintenance of the position which she has proudly held for centuries as mistress of the seas. Without this control Great Britain would fall an easy prey to any powerful nation which might cast covetous eyes and reach acquisitive hands toward her possessions. Therefore notwithstanding our unlimited national resources, which, other things being equal, would stand the drain necessary for us to become the possessors of "incomparably the largest navy in the world," Great Britain is too jealous of her control of the seas and of her national life to permit us to usurp the position which she has held so long, and if war was the only means of preventing such usurpation—we should have war.

Who would be the gainers in a conflict between Great Britain and ourselves? Who would benefit by a condition of affairs in this country such as exists in Europe to-day? None but the great interests who to-day are commercializing the loss of life and property among our sister nations in Europe. Shall we, for the sake of gratifying President Wilson's inordinate vanity in the contemplative possession of "incomparably the greatest Navy in the world," and for the further object of placing more money in the already overflowing coffers of the great interests concerned, follow a policy which must inevitably lead to national bankruptcy or war—perhaps both? I for one shall oppose to the utmost limit such a policy.

Mr. Speaker, I shall also assuredly oppose the adoption of any preparedness measure by this Congress which will irrevocably bind not only this Congress but many more to come, to the expenditure of millions of dollars annually in addition to our already large annual appropriations for the Army and Navy. Why should we act on the assumption that the Sixty-fourth Congress is the only patriotic Congress that will ever honor this Nation?

Both the time and money necessary to place our present Navy on a high plane of efficiency are comparatively small. Our manufacturers have large and profitable contracts to supply the belligerent nations of Europe with military and naval equipment, for use in the European war. It should not be difficult, therefore, to provide this same equipment for home consumption if necessary.

Furthermore, it is impossible for us to foresee to-day the form of armament that will be most highly approved 10 years hence, and battleships authorized to-day after the most approved models 10 years from now may be out of date before they are completed.

Therefore the 10-year program for which we are asked to appropriate funds is impracticable and improvident. We need only consider the present status of the *Oregon*, the *Indiana*, the *Iowa*, and the *Massachusetts*, which during the Spanish-American War were the pride of the American Navy, to see how quickly a battleship becomes antiquated, and in the eyes of our naval experts fit only for the junk pile. Therefore I am in favor of a steady development and improvement of our military and naval forces, not of a spasmodic and hysterical outpouring of the Nation's wealth at the demand of sensational alarmists. These alarmists would be less numerous and less sensational if the Government should arrange to build its own ships and submarines and manufacture its own arms, ammunition, and other war equipment.

I know of no speedier or more efficacious method of reducing to quiescent sanity the shrieking advocates of militarism and navalism (the majority of whom, it may be noted, are found in manufacturing districts) than by the inhibition of the system of awarding huge Government contracts to private individuals or concerns. Perhaps in no other department of our Government is so great an opportunity afforded private concerns to obtain an enormous amount of graft money as is afforded when our naval vessels are built by private concerns. For instance, a contract is awarded with the proviso that the ship must be completed within a given time, fixed by the contractors as the shortest reasonable time in which the contract can be completed. To the sum paid the contractors for the work a 20 per cent bonus is offered for the completion of the ship earlier than the time limit fixed by them. What can be easier than for the contractors to fix a time limit six months, or more or less, as the case may be, longer than they know will be required to complete the work, and then, by using only such time as is actually necessary, to complete the ship six months earlier than was agreed upon, thereby receiving their 20 per cent bonus, in addition to the large sum paid for the actual work. If a battleship, for example, was to cost $20,000,000 and a 20 per cent bonus paid for her completion six months earlier than the contract time, the contractors would have the very tidy little sum of $4,000,000 in addition to their legitimate profit. If the same contract was placed with the Government, this "bonus" expense would be eliminated, and a practical and economical method of paying the regular contract price could be inaugurated if the money for that purpose was raised by a graduated income and inheritance tax.

It is a popular fallacy that it costs more and takes longer to build a battleship at a Government navy yard than it does at a private shipyard. This impression has been kept alive for many years by persistent and interested misrepresentation, and the quicker this erroneous idea is overcome the greater will be the advantage which will accrue to the Treasury of our Government and the pockets of our taxpayers.

Those goods which only the Government can use should be manufactured by the Government in Government-owned plants. This would insure a reserve of supplies for the Government to draw upon whenever necessary, and the cost to the Government would be less than when the same goods are made by private contract. In the report of the Secretary of the Navy for 1914, Secretary Daniels stated that the Government can manufacture any of its equipment for less than it can buy the same articles from private interests. That being the case, the manufacture by the Government of our necessary military and naval improvements would perceptibly decrease the amount of the appropriations needed for those improvements, since, when contracts are awarded to private manufacturers, those manufacturers must make a reasonable profit, and that profit—and a possible bonus—would thus be saved to the Government.

I consider it the duty of this present Congress to expend those amounts necessary to place our Navy on the highest plane of thorough efficiency, this basis to be currently maintained, not only by this Congress, but by the good judgment and patriotism of future Congresses; and I am confident that our faith in that good judgment and patriotism will be abundantly justified.

President Wilson asks, "How can Americans differ about the safety of America?"

True Americans do not differ about the safety of America, although we may honestly differ as to the most effectual method to preserve that safety.

President Wilson asserts that America has been reluctant to match her wits with the rest of the world; that we have preferred to be "provincial."

Mr. Speaker, it is not a preference for provincialism, neither is it a tendency toward a policy of national parsimony, which leads us to consider long and well before we embark on a policy which involves the expenditure of additional hundreds of millions of dollars on extraordinary preparations for warfare on a mammoth scale. All implements of war require human energy for their operation. The human factor in war must always be considered. Huge battleships and stealthy submarines, swiftly darting aeroplanes, and death-dealing machine guns are alike useless without their complement of human operators. In our mad rush to expend inconceivable sums for the mechanics of war, what consideration do we give to the problem of the development of that factor of superlative importance, the human operator?

Our Army officers deplore the annual increase in the number of physically inferior men who apply for enlistment in the Army. As I have already said, our Army is at present recruited from the slums and human derelicts of our cities, and our official reports show that 80 per cent of the applicants for enlistment in the Army and 50 per cent of the applicants for naval enlistment are rejected on account of physical, mental, and moral undesirability. As one immediate result of this physical inferiority of a certain portion of our population, statistics show that the production of feeble-minded children has more than doubled in the United States in the last decade. The number of these unfortunates who reach maturity are unfit to fight in the Army or Navy; furthermore, they are physically and mentally unable to add their pro rata share to the economic productiveness of the Nation. I have neither the time nor the desire to discuss the eugenic problem, but I will say that the first requisite of a successful Army and an efficient Navy is well-nourished men of physical, mental, and moral normality. A few of the millions which our high-preparedness advocates propose to expend in war machinery will stand the country in better stead in the event of war if expended in time of peace to build up a nation of healthy, sturdy, contented men and women. Such men and women, however, can never be evolved from overworked, underfed, poorly housed laborers. In this respect we can learn a lesson from the German nation, which has long enforced a more equal distribution of the physical necessities of life, and in whose land child poverty is practically unknown.

Mr. Speaker, our best preparedness and our utmost efficiency do not lie in the expenditure alone of large sums of money for the maintenance of our Army and Navy. The best preparedness of a nation rests with its people, in their patriotism and their unity of purpose. I am aware that it is unpopular to use Germany as an example of such unity, but at the risk of unpopularity I shall mention a few points in which any civilized nation could well follow Germany's example.

Notwithstanding the cry of "militarism" that goes out against Germany, it is not her militarism that makes her the formidable opponent she is to-day against those nations that have hitherto been considered invincible on land or sea. Rather is it the whole-hearted patriotism of her men, women, and children, their unquenchable love for their "Fatherland," their unity of purpose against a common foe that, whether Germany is eventually

defeated or victorious, has won for her the grudging wonder and admiration of the whole civilized world.

Shortly after the creation of the Prussian Empire Prince Bismarck delivered a speech in the German Reichstag, in which he said that no nation can become great and no great nation can long remain great that does not do two things: First, so legislate as to make the agricultural element of the population prosperous and contented; second, to so legislate that all the people of the nation may have three square meals a day and be properly clothed and housed. These are fundamental principles and have formed the foundation upon which every great and prosperous nation has rested. The great nations of the world that have passed out of existence have perished because they failed to live up to these fundamental principles.

The primary aim of the German Government is the protection of its citizens, and by protecting its citizens it protects the nation. In Germany pauperism is unknown; three meals a day, sufficient clothes, and shelter are within the reach of the humblest citizen; the haunting fear of a penniless old age which dogs the faltering steps of far too many of our own elderly citizens loses its paralyzing grip in a country where an old-age pension is granted to every person whose years have lengthened beyond the period of active labor. No taint of so-called "charity" attaches to this pension; it is the rightful meed of every German citizen.

In Germany the railroads are Government owned; railroad rates are established by the Government, and are therefore regulated not with a view to the payment of enormous dividends to immense corporations but in the interest of the producer and the ultimate consumer. The home products of the country are guarded and conserved for the common good. It is considered unpatriotic to purchase anything outside of Germany that is produced within her borders, and her tariff laws are systematically regulated to encourage home consumption of home products. Even now, when the country is engulfed in war, Germany is preparing for the peace which may be far in the future or, on the other hand, may come with cataclysmic suddenness. The hundreds of factories throughout the country which have been equipped to meet the exigencies of war have paid for themselves by their war output, and when the war is ended will be subsequently devoted to the demands and needs of the nation's normal commerce. Every manufacturing plant impressed into war service is free to continue its regular business to a limited extent. As no immediate demand exists for its legitimate output, its specialty is stored against the future day when the export market shall again be open to German products. If Germany in time of peace prepared for war, no less in time of war does she prepare for peace. Germany is not a nation that considers only the exigencies of the moment.

In all of her national work Germany's inciting motive, the prime object of her Government, is not the enrichment of the few at the expense of the many, not the advantage of huge enterprises able and willing to pay enormous sums for profitable concessions, but the betterment of the social, moral, and civic conditions of her people. The glowing fires of patriotism and a national sentiment of the brotherhood of man weld the people of the German nation into an indissoluble unit.

A similar unity of purpose, a like concept of the true brotherhood of man, should exist, not only in name but in spirit, between the people of all nations on the Western Hemisphere.

In his speech in New York City on January 27 President Wilson said:

> Nobody seriously supposes that the United States needs fear an invasion of its own territory.

Four days later, in Chicago, Mr. Wilson said:

> We are not now thinking of invasion of the territory of the United States. We are not asking ourselves shall we be prepared only to defend our own homes and our own shores. Is that all we stand for? To keep the door shut securely against our enemies? What about the great trusteeship set up for liberty of national government in the whole Western Hemisphere? We stand pledged to see that both the continents of America are left free to be used by their people as those people choose to use them under a system of national popular sovereignty as absolutely unchallenged as our own.

In these well-chosen words President Wilson seeks to support his contention that it is vitally necessary to immediately increase to an enormous extent our national outlay for defense and offense, and to have "incomparably the greatest Navy in the world."

But, Mr. Speaker, such arguments are mere platitudes and specious sophistry. It is unnecessary to greatly increase our armament in order to fulfill our national pledge to maintain intact and unmolested the individual freedom of the nations of the Western Hemisphere. If each American nation—whether of North America or South America, it matters not—does its individual share to merit the assistance and protection which our much-discussed Monroe doctrine assures, the populace of the Western Hemisphere will be so united in an earnest effort to promote the common good that the Americas will be impregnable and peace of the Western Hemisphere will be permanently assured. No outside power can seriously menace our peace and prosperity if we unite on the basic principle of America for Americans, and liberalize our own interpretation of "American" to embrace all those who swear true fealty to our Government, whether "hyphenated" or native born.

We must have protection; we must have preparedness; and until the millennium arrives we must have an efficient Army and an equally efficient Navy to insure this preparation and protection. Nevertheless our strongest defense, our greatest protection, our most efficient preparedness, lies not in our force of arms but in the hearts of our people.

## The Revenue Bill.

### EXTENSION OF REMARKS
OF
### HON. GEORGE R. SMITH,
OF MINNESOTA.

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 8, 1916,*

On the bill (H. R. 16763) to increase the revenue, and for other purposes.

Mr. SMITH of Minnesota. Mr. Speaker, the imposition of an inheritance tax in the manner and form of that imposed in H. R. 16763 is unwise, unnecessary, and unjust to the small property owners. An inheritance tax is one of the fairest methods of raising revenue, and no one familiar with the subject of taxation would in this hour of progress proclaim against it.

It is not a new legislative invention for raising public funds, but, on the contrary, has been in vogue since very early times. Gibbons, the historian, claims that Emperor Augustus originated this method of taxation to support the Roman Army. It was introduced into Great Britain in 1780 by Lord North, and has been resorted to by nearly all of the European countries. In 1826 Pennsylvania adopted it, since which date 41 other States of the Union have made it a part of their tax system. From the standpoint of those who agree with the French tax commissioner, that "the science of taxation consists in plucking the most feathers with the least squawking," it is perfect.

The ability or faculty to pay has come to be the test in determining the justness of this tax, as has been well stated by the Supreme Court of Minnesota in State against Bazille, Ninety-seventh Minnesota, page 11. Seligman, in his excellent work on taxation, has this to say in reference to the ability to pay test:

> That it is not only the basis of taxation but the goal toward which society is steadily working. It lies instinctively and unconsciously at the bottom of all our endeavors at reform.

Notwithstanding we are in full accord with this method of raising revenue, we recognize a very serious objection to it when it is resorted to to fill the coffers of the Federal Treasury at the expense of the small property owner, as does the present bill. When the Federal Government attempts to impose new and additional taxes upon the people it should take into consideration the tax burdens that its citizens are already carrying in the support of their municipalities, counties, and States.

Under our dual system of government State and local taxes greatly exceed in amount Federal taxes, and this condition will prevail so long as the States continue to perform their part of the contract of union, which was to do everything possible for the enlightenment, comfort, and happiness of the people within their borders not expressly delegated to and undertaken by the Federal Government. Realizing their obligations to their citizens, the States have vied with each other in establishing and maintaining excellent public-school systems, extending to rich and poor alike on terms of absolute equality the opportunity to get an education; in building asylums, reformatories, and prisons for the unfortunates; in establishing and maintaining free hospitals for the sick and infirm; and in a thousand other ways helping the people in their battle against the vicissitudes of nature. The things that affect us in our everyday life can be better performed by the States and municipalities, because they are nearer to the public. Through their personal touch and intimate knowledge, local officials can better discharge their duties and obligations to the people than the Federal officials, who are far removed from the home life of the average citizen and who are more chiefly concerned with formulating and initiating our foreign and domestic policies. Until recently the officers of the Federal Government gave but little of their time to our foreign policies.

But since the Spanish-American War the isolation of the United States is past, and with its passing a colossal responsibility has been imposed upon the General Government which at times monopolizes its attention to the exclusion of everything else. Therefore, instead of surrendering to the Federal Government matters of local concern, as has become the custom of late, we should resist every effort which, if successful, will deprive the State of exercising power and control over matters inherently local. Those functions of government that are local in their character belong to the States and should be jealously guarded. For the last 127 years we have adhered to this basic principle, and in the light of the success that has come to us, it would be an act of folly to abandon it. Instead of decreasing the activities of the State they should be materially increased, and as they are increased there will be a corresponding increase of local taxes. In 1913, under existing conditions, the American people paid in taxes for all governmental purposes—Federal, State, and local—the following sums:

| | |
|---|---|
| General Government | $664,000,000 |
| State | 307,000,000 |
| County | 310,000,000 |
| Municipalities | 850,000,000 |
| Total | 2,103,000,000 |

It will be seen from the foregoing that the head of the average American family is compelled to pay $75.50 per year for the support of his State and municipality, and $32.30 for the Federal Government, making in all a tax of $110 per family. Heretofore the bulk of this tax has been derived from a direct tax on property, duties on imposts, and excise duties, such as that imposed on tobacco and liquors. While an inheritance tax is by no means a new method of taxation, it has been but little resorted to, probably for the reason that when the majority of the State constitutions were framed the only form of taxation provided for was that on property, import duties, and excises. The authors of these documents were more concerned about "the rule of equality of taxation" than they were over a new source of revenue, as the old sources were then but slightly tapped.

Taxes were not burdensome as now. In our modern city the mechanic, artisan, and man of small means could afford to own his own home. Alas! That time is rapidly passing and the enactment of this measure will materially hasten it, as an examination of our tax laws will demonstrate. It is claimed by the proponents of this bill, the Democratic Party, that it is designed to make those who can best afford it pay this tax. If this is what it did, then the only objection that could be urged against it is that it is unnecessary. While I am satisfied that under anything like an economic and business administration of our public affairs this tax would be unnecessary, I am not going to attack it on that ground, but on the ground that it takes from the States their only indirect source of revenue, which they must retain if they expect to remain a community of home owners.

By the Constitution of the United States the great source of revenue to be found in duties on imports was reserved to the General Government alone, and it was the policy of the founders of the Government to use the duties on imposts as the normal source of the national revenue. The field of direct taxation, except for the excise on liquors and tobacco, was left to the States, and it was tacitly understood that this field was not to be invaded by the General Government except in times of stress. As the activities of the State and municipal governments broadened and increased additional revenues had to be secured, and 42 of the 48 States have passed inheritance-tax laws to meet this ever-increasing demand for funds with which to not only carry on the ordinary functions of government but to perfect and extend the public-school system, to provide more liberally for dependents, and in other ways to bring home to the people more of the blessings of a wise and munificent Government.

Every dollar raised in this way relieves the small property owner of a part of his tax burden and tends to keep the tax at a point where he could meet it and save his home. In Great Britain a large share of the normal taxes is derived from inheritances. The effect of this bill will be to deprive the States from ever-increasing inheritance tax rates, and thus limiting this source of revenue to its present amount. The excuse offered for such a performance is that the States never have derived a very large revenue from this tax. Neither did the Federal Government derive any tax at all from incomes until very recently.

If the Federal Government forecloses the States opportunity to increase its revenue from inheritances because it has not as yet worked this field to the limit, can not the State follow the same line of argument with equal justification and demand that the Government limit or abandon its tax on incomes because it failed to do so for a long time. If State, county, and municipality taxes amount to nearly three times Federal taxes, as I have clearly shown, should the only special source from which the State derives a part of its revenue be appropriated by the Federal Government when the latter has at its command a number of sources from which it can derive revenue without interfering with the State tax system?

And this is not all. The administrative features of this bill will tend to delay, embarrass, and burden the administration of estates, as will be seen by an examination of section 108, the provisions of which are exceedingly harsh and unwise in that they compel the collector of internal revenue to force a sale of the property of the estate within 14 months after decedent's death. This undoubtedly would result in considerable loss to the State. It is often a question of judgment when a piece of property will bring most. On such questions the judgment of the representatives of the estate is worth far more than that of the average collector of revenues, who is apt to know but little or nothing about local conditions or the value of the property. True, the court may decide there is reasonable cause for delay, but this is after suit is brought and expenses incurred. Neither the collector nor the representative of the estate has power under this bill to determine when a reasonable cause for delay exists. That is left to the court. Section 108 can be stricken from the act without in any way impairing the chances of the Federal Government getting the tax due it in the orderly administration of the estate under State laws. There is no necessity for such drastic legislation as this, for under State laws the court has power to order the property sold to pay any charge against the estate and to remove a representative should he fail to obey such an order of the court. The collector has access to the State court the same as any other party interested in the administration of the estate. Then why compel the collector to interfere with the administration of an estate when such interference is bound to work a hardship on the estate and an interference with and a supersedence of State laws and courts. Under ths bill the collector must bring suit in the Federal court. He is not permitted to apply for relief to the court in which the estate is being administered, but must seek relief in a Federal court. I trust that at least section 108 will be amended so as to make it possible for the collector to intervene in the State court having jurisdiction of the estate.

## Political Campaign Claims.

### EXTENSION OF REMARKS
OF
### HON. ANDREW J. VOLSTEAD,
OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, August 5, 1916.*

Mr. VOLSTEAD. Mr. Speaker, political campaigns usually abound in extravagant claims, and it is not surprising that many of the statements made in this campaign do not entirely square with the facts. These claims are only a part of the usual campaign rhetoric and do not determine the issues between the parties. The issues must be determined by the character of the legislation enacted by Congress and the manner in which the country has been administered.

The legislation for which the Democrats claim especial credit may be divided into banking laws, laws against trusts and monopolies, and tariff and other revenue laws. Great claims are made for the so-called Federal reserve act, under which the country is divided into 12 districts, with one Federal reserve bank in each district. These banks are authorized to hold the reserve money of other banks, and are given the exclusive power to issue new bank-note currency. The National Monetary Commission, created by a Republican Congress, secured the information and outlined the general features of this legislation. Its passage was not made a partisan question; a majority of the Republicans supported it. I opposed it, not on partisan grounds, but because I did not consider it either fair or safe. Only a few days ago a meeting was held in this city to protest against it as unfair to the smaller banks and to the communities in which they do business. Under this act the country banks bear a large burden that inures to the almost exclusive benefit of the large city banks. The country banks do not have the class of notes and bills required under the law to secure currency or other relief from these Federal reserve banks, and because they are required to keep their reserves in these Federal banks, to the capital stock of which they must

also contribute, they are greatly handicapped in securing relief from other banks.

The act is extolled as placing the money of the country beyond the control of National and State banks. The exact opposite is true. The act provides for the gradual retirement of the national-bank notes, now a very important part of our currency. As these notes disappear Federal reserve notes must be issued in their place, or a money stringency will result. The Federal reserve banks are owned and controlled by the National and associated State banks. They own the capital stock and elect six out of the nine directors who appoint the officers and manage the Federal reserve banks. All six may be stockholders of banks, and three may be bank officers of State or National banks. If the National or State banks shall deem it for their interest to curtail the amount of currency, they may, through these directors and officers of the Federal reserve banks, refuse to issue a sufficient amount of reserve notes. No provision is made for any relief should such a policy be adopted. The Federal Reserve Board, under whose supervision these 12 reserve banks are to operate, has no power to compel the issue. Then, again, should it be found profitable to issue a surplus, the danger is very great that the country might be plunged into a panic the like of which we have never known. No large commercial country has banking laws that threaten such disaster. Germany, France, and England guard with great care against the expansion and contraction of their currency. This act permits currency to fluctuate with the greed of business or the exigencies of politics. No law restrains the issue.

But it has been said, and said on very high authority, that the Federal reserve act saved this country from a panic when the European war broke out. I do not understand how anyone can justify such a claim. The act did not go into operation until months after the war broke out. Not one of these Federal reserve banks had then been opened for business. The act that gave relief was the Vreeland emergency currency act. Under that act several hundred million dollars in emergency notes were issued. Democrats may not like to give credit to that act, as it was passed against the almost unanimous opposition of their party in Congress.

It will be time enough to commend the Federal reserve act when it has proved its worth. It has already been amended, and several bills are pending to have it still further amended. One of these amendments would give still greater power to the large city banks, as it permits such banks to have branch banks within certain territory.

An act has been passed to aid farmers in securing first-mortgage loans on their lands. The Republican platform of the last presidential election demanded such legislation. This act was passed with the almost unanimous support of the Republicans. I gave it my support in the hope that some day it will be amended and made workable. Those who are sponsors for this legislation anticipate that money may be secured under the system it creates at interest rates ranging from 5 to 6 per cent per annum. That is the rate now in the more prosperous communities on the class of loans authorized. Unless the farmers can profit by borrowing under this plan, they are not going to make themselves individually liable for each other's failure to pay, as this act provides that they must, and I doubt that banks are going to agree to accept one-half of 1 per cent per annum for making loans, collecting the interest, and guaranteeing the payment of the loans. At any rate, those who anticipate immediate relief under this act are likely to be sorely disappointed, though I believe that it eventually will prove a valuable law.

The legislation against trusts and monopolies is contained in two acts—the Federal Trade Commission act and the Clayton Act.

The Federal Trade Commission is given the power formerly exercised by the Bureau of Corporations, and in addition is permitted to examine into and make orders against unfair methods of competition in trade. No penalties are provided against such unfair methods nor against a violation of any such order. The order can only be enforced by bringing a suit for an injunction. There is nothing in the act that requires our courts to punish any act not punishable under prior existing law.

The Clayton Act reenacts, in less drastic form, prohibitions against some three or four of the more frequent abuses of which trusts have been guilty. These provisions are to be enforced by the Federal Trade Commission, the same as the provision against unfair methods of competition. Here again the investigation and order of the commission must be followed by a suit for an injunction. No penalty is provided for the acts complained of nor for a violation of the order made by the commission. The act does contain two sections with criminal penalties, but these do not protect the public against the extortions of trusts, but corporations against the dishonesty of their officers and agents. Added to this, and but remotely related to the subject, are provisions in regard to labor, agricultural and horticultural societies, and in regard to the power of courts to issue injunctions. Those who stood sponsors for these provisions claimed that they only codified and reenacted existing law, as such law had been administered by our best courts, except that they give a jury trial in certain cases of indirect contempts; whether they do give a jury trial or not is a disputed question. Speaking of the much-lauded declaration contained in this act to the effect "that labor of a human being is not a commodity or article of commerce," Mr. WEBB, the Democratic chairman of the Judiciary Committee, who had charge of this legislation, said:

> Of course that is a mere legislative declaration or postulate. I don't think it does any harm and I don't know that it does any good.

It seems to me that he might very properly have applied that language to all these labor provisions.

I shall not attempt to further analyze the Clayton Act, but allow Senator REED, of Missouri, that brilliant lawyer and Democrat, to express my views. I clip at random from his speech the following, which he addressed to his Democratic associates in the Senate:

> When the Clayton bill was first written it was a raging lion with a mouth full of teeth. It has degenerated into a tabby cat with soft gums, a plaintive mew, and an anemic appearance. It is a sort of legislative apology to the trusts, delivered hat in hand, and accompanied by an assurance that no discourtesy is intended.
>
> The doctrine of extermination has given place to the policy of diplomatic negotiations to be conducted by various boards, with the express understanding that whatever the result, no law violator is to be hurt, no trust magnate is to be sent to jail, no rude sheriff or marshal is to lay his callused fingers on the perfumed collar of a captain of industry.
>
> Ah, this is a great antitrust Congress. Compared with the Congress that put upon the statute books the Sherman Act, we appear as would a lot of wet nurses in comparison with soldiers on the field of battle arms in hand. If we had the original Sherman Act before us this Congress, the trust busters of the present day and generation, would shy like the country horse of 15 years ago did at the sight of an automobile. Well, old Sherman and the Republicans of that day did pass that law. Their little fingers were bigger than our loins. Theirs was the spirit of the eagle, ours that of the barnyard fowl.
>
> It (the Clayton Act) is a sort of a Hague propaganda, promulgated under the white flag to the soothing melody of peace on earth, good will toward the trusts.

This is the act passed in fulfillment of the platform promise to exterminate all trusts and monopolies. It has been on the statute book about two years, and according to the last available report from the Trade Commission, which body has charge of the enforcement of the act, not a single order has been made to enforce any of its provisions. Instead of putting trust magnates in jail and destroying special privileges, as was loudly promised, all prosecutions of predatory wealth have apparently been abandoned, though trusts are as greedy and as large as ever.

During the Democratic administration a number of acts have been passed to raise money. Democrats appear to be anxious to have the country believe that they are the only ones who have had the courage to impose an inheritance and an income tax. They appear to forget that the Republicans passed the income-tax amendment to the Constitution, which made such a tax possible; that the Republicans enacted the corporation tax from which most of the income tax is now received, and that during the Spanish-American War they collected an inheritance tax. It is true that the Republicans repealed the inheritance tax after the war ended. That was done because nearly every State had an inheritance tax, and to retain it would have necessitated larger real and personal property taxes in the States. The only merit the Democrats can claim is that they have largely increased the burden. If that is a merit they are entitled to it. The Underwood tariff law is in line with Democratic principles. The ordinary farm products are nearly all on the free list. It carries into effect and extends the principles of the Canadian reciprocity treaty as to many articles. That treaty the Democrats agreed to put in force by an almost unanimous vote of their party, while a majority of the Republicans in both the House and Senate opposed it. Under the operation of this law agricultural products in the year just prior to the war were, despite a shortage in crops, the lowest in many years. Not only did the law directly affect prices by the importation of foreign products, but also by depriving our people of the wages that purchase such products. Under the low rates imposed on foreign manufactured articles many of our factories had to suspend, labor was idle, and general distress prevailed throughout the East. There were hundreds of thousands of idle people in our large cities; the total number has been estimated at not less than 3,000,000. New York alone had some 300,000. The effect of this law can not be judged by

conditions during the war while our competitors are bending every energy and compelling every industry to aid in the struggle. This war must end some day; then the great industrial contest will again be renewed. The millions of men now in the trenches will again enter the factories or work in the fields, the forests, or the mines. The wonderful industrial organization of Germany that has astonished the world by its power and resources will enter the field for the conquest of foreign markets. The other nations will likewise turn the energy and determination now wasted in war in the direction of peaceful conquests. All will need money to rebuild, and must get it by producing and selling some article of commerce. So long as the price of labor in foreign countries is less than half of what it is here there is only one way to keep our people employed, and that is by requiring the foreigner who sends his goods here for sale to pay to our Government as a tax the difference between the cost of producing that article abroad and producing it here. Such a policy is not only just, it is necessary. But tariff laws should not discriminate, as the Underwood law does, against the American farmer. Not only does the American factory, but also the American farmers, pay twice as much for labor as do their foreign competitors.

In the last presidential campaign the extermination of the trusts, economy in public expenditures, and reduction in the high cost of living were especially insisted upon by the Democrats. I need say nothing more on the subject of trusts. Instead of lessening governmental expenditures, the Democrats—before the war broke out and before any unusual expenses had been incurred—increased the ordinary expenditures by about $150,000,000 per annum in excess of the highest amount ever expended by the Republicans. Much of this was, perhaps, due to inexperience in the conduct of business, but other sums went for fat jobs. They have appointed more than 30,000 persons, most of them without civil-service examinations; these were new jobs and entailed an added expense of more than $40,000,000 annually. Despite the stagnation in business that followed the Democratic administration up to the beginning of the European war, there was no appreciable reduction in the cost of living. This industrial depression saw hundreds of thousands of idle freight cars. As a result the railroads, to save themselves from bankruptcy, applied to the Interstate Commerce Commission for leave to make a general increase in their freight rates. They continued to beg for this increase, month after month, until it was finally granted. The railroads are still enjoying these higher freight rates, which it was then said would bring some $75,000,000 in added revenue. And we are now paying not only this sum as a part of our present cost of living, but additional sums due to the increase in business. It is a significant fact that the Democratic platform of the last presidential election laid especial stress on these demands and that the Democratic platform recently adopted omits all mention of trusts, says nothing about the high cost of living, and makes no claim of any reduction in the expenses of the Government. The amount of money spent this year by this Congress will be almost double that spent by any Republican Congress.

Aside from the legislation that I have referred to, nearly all measures that have been passed are mere amendments to prior laws on the same subject. I voted for the so-called good-roads bill. That bill simply appropriates some money to aid States in the building of roads. The so-called corrupt-practices act adds some rather unimportant provisions to the Republican law which forbade corporations to contribute to political campaigns and required publicity of all campaign expenses. I voted against the so-called shipping bill. It proposes to spend $50,000,000 for a purpose that I believe to be worse than useless. It requires the Government to buy ships now and sell them five years after the present war ends. Ships can not be bought now without paying two or three times more than they are worth; this excess price must be lost when they are sold. The purchases will add nothing to our shipping facilities, as every available bottom is now in the service. The number of ships to be bought is so small that the purchase can not materially affect the business; still the fact that the Government threatens to enter it will naturally tend to discourage private enterprise. The ships purchased are to engage chiefly, if not exclusively, in the South American trade.

In considering the Democratic administration attention is necessarily directed to the Mexican and other foreign affairs, as these have, almost to the exclusion of all other matters, occupied its attention and the attention of the country. While criticism of our Government is less agreeable than commendation, neither courtesy nor false pride can justify a person in failing to call attention to a course that has brought upon our people disaster and humiliation. Less than two weeks before President Wilson took his office, on March 4, 1913, Mr. Huerta assumed control of Mexico as its President.

President Wilson refused to recognize Huerta as President of Mexico, though Germany, Great Britain, France, Russia, Spain, and Japan did so. It is said that he refused because he believed that, directly or indirectly, Huerta was responsible for the death of his predecessor. Such a reason assumed that he had a right to pass upon the moral fitness for the position of President of a sister Republic. Huerta was then in control of the Mexican Government, and if our people then in Mexico were to be protected we must seek that protection, the same as the European Governments did, by recognizing the only Government then in existence. But the President did not only not recognize Huerta, he sent him a note demanding that he promptly arrange for an election for President, and that in that election he should not be a candidate for the office. He thus demanded that Huerta give up his office as President and dictated to the Mexican people what they must do, a thing that no self-respecting nation could or would submit to. Should some foreign country make such a demand upon us, what do you think would happen? The Mexican people naturally resented this unauthorized interference on our part, and Huerta refused to be eliminated. This interference, in a country so prone to revolution, naturally encouraged Carranza and Villa, in the northern part of Mexico, to raise the standard of revolt against Huerta. This controversy between Huerta and this Government dragged on month after month. In the spring of 1914, while it was still pending, some American seamen in a small boat landed to secure supplies at Tampico, at a point forbidden by the port regulations, and were promptly arrested by a petit officer, who detained them on the street for a few moments while he secured information of a superior officer as to his authority to make the arrest. This officer promptly released them and apologized for the indignity. Huerta also apologized, but our administration demanded that in addition to the apology the Mexicans must salute the American flag. This they refused to do, and the President then demanded of Congress the passage of a resolution giving him authority to use the armed forces of this Government against Huerta. I voted against this demand as unjustified. Had he asked that right for the protection of our citizens, who were being murdered in Mexico, I should have considered it my duty to vote for it; but I was not willing to go to war to settle what are the proper courtesies in a case like that. It has been said that this was not a declaration of war. That is a quibble. This was as much a declaration of war as the one passed when we went to war with Spain. There is no substantial difference in the effective language of the two resolutions; both authorize the President to use our naval and military forces against a foreign power. Without waiting for the passage of this resolution Vera Cruz was seized by our Navy after a battle in which a score of our marines were killed and about a hundred Mexicans. A large number were also wounded on both sides. The pretense for this haste was that a German ship was about to enter Vera Cruz with a shipload of ammunition, and to prevent this the attack was made before the resolution could be passed. That the demand for the salute was a mere pretense has since been admitted. The object was to force Huerta to resign his position as President. The shipload of ammunition was allowed to land a week after this attack at Puerto Mexico, and from there reached Huerta. Some months later we withdrew from Vera Cruz without having compelled the salute, but as the result of a threat made by Carranza that if we did not withdraw he would attack us.

Holding the city of Vera Cruz, the chief port of entry for foreign goods, we deprived Huerta of a large share of the revenues upon which his Government depended for support. We collected that money and we have still got it. We have no right to that money unless this was war. Our attitude made it impossible for Huerta to secure money or credit, and this eventually forced him to eliminate himself. Can anyone wonder that the proud and sensitive Spanish population, that make up the ruling classes in Mexico, hate us for thus interfering? During this struggle against Huerta our Government was encouraging the revolt of Carranza and Villa as the saviors of Mexico. When Huerta, their common enemy, disappeared, they fell out, and they have since been fighting each other. In this fight our Government has not been neutral. At first Villa, the brutal assassin, was favored, but his fortunes failing, Carranza was at last recognized as the head of the Mexican Government. In the contest between Carranza and Villa our Government aided Carranza when his forces were surrounded by Villa at Agua Prieta, by allowing Carranza to send troops over American soil on our railroads to relieve the Carranza forces and defeat Villa; and this was done, though our Government was distinctly notified that the Villa forces would revenge them-

selves upon Americans should this privilege be granted Carranza. Villa carried out the threat. The raid on Columbus followed, where a large number of our people were murdered. That raid precipitated our second invasion of Mexico. In that invasion, which we entered upon ostensibly for the purpose of persuing and punishing Villa, Carranza denied us the use of the Mexican railroads. Though wholly unprepared for the task, our little army penetrated some 300 miles into the country apparently with the purpose of establishing stations from which the country could be policed. Carranza promptly refused to allow us to do this and ordered our Army out of Mexico. We refused, and a fight followed at Carrizal in which our whole force at that point was either killed, taken prisoners, or dispersed. Since then we have been gradually getting out of Mexico. And all our available regular and militia forces are now near the Mexican border trying to patrol it against the Mexicans.

Our course in Mexico has brought its natural results, results that might reasonably have been anticipated. The Mexican people resent bitterly our constant meddling in their affairs. If we had only sought to protect our own people, a thing we had a right to do, we should have had their respect, and the support of the better element of Mexico. Instead of trying to protect our people, they have been told to get out of Mexico, which meant to many absolute financial ruin. When our own people have called attention to the murders and outrages perpetrated upon our citizens in Mexico, the administration has tried to minimize, if not justify, those outrages by calling our citizens robbers and despoilers of Mexico. This is indeed humiliating. The owners of mines, railroads, and like properties that are charged with despoiling the country are not the ones who have been murdered; they are not in Mexico, but safe beyond its border. Those who have been killed or outraged are their employees or the owners of small properties. A government that will not defend its citizens but seeks to divert attention from its neglect by unjustifiable attacks upon their character is a disgrace to any country. I do not believe that we ought to have intervened in Mexico. It has been clear throughout this controversy that all those who have exercised authority in Mexico have been anxious to retain the good will of this Government. By treating all with absolute fairness there is reason to believe that our people would have been quite safe. If we had intervened at all, it should have been only for the protection of our rights and not to mix in the quarrels going on there. The difference between such a course and that pursued by our Government was strikingly illustrated by an incident at Tampico. At the time our attack was made at Vera Cruz the lives of our people at Tampico were threatened, but our fleet did not dare to go to their rescue for fear that the infuriated Mexican people would murder them as soon as the fleet appeared. The German gunboat *Dresden*, then in the harbor, came to the relief of our people. Without any request from our Government the captain of that ship promptly notified the authorities that if any attack was made upon the Americans, he would shell the town and raze it to the ground. He did not stir animosity by interfering with Mexican rights. He insisted with firmness on neutral rights and there was no difficulty.

The repeal of the provision allowing our coastwise ships to pass through the Panama Canal free of tolls is another humiliating episode in the history of this administration. The President though pledged to the maintenance of free tolls both by his own declarations and that of his party platform, appeared before Congress and appealed to it for the repeal of the law under which ships were allowed to pass the canal without payment of charges, and gave as his reason that unless the repeal was granted he would "not know how to deal with matters of even greater delicacy and nearer consequence." This was taken to mean and can only mean that he asked Congress to pass this repeal at the dictation of some foreign power.

For many years prior to the beginning of the European war it was quite generally believed in this country that nations could not be induced to engage in such a war. The fact that it did start was a threat against all the world, and nations not in the struggle mobilized their armies and prepared to defend their neutrality. It soon developed that our military preparations, as compared with those employed in the European war, were wholly inadequate to protect us against such danger as might threaten at any time. Many men in public speeches and journals called attention to this fact and urged upon the President and Congress to take steps to put the country in a position to defend itself. Four months after the war broke out President Wilson, in his message to Congress, sneeringly answered these appeals by characterizing those who made them as "excited and nervous." A year later, with no material change in the situation, he appeared before Congress and asked for very large increases, both in the Army and Navy, and strenuously urged the danger that made necessary this increase. Had the President at the beginning of the war asked and obtained, as he might, this increase in our defenses, we should not have been humiliated as we have been in our dealings with foreign nations. When the law of force rules the world moral suasion can have but scant hearing. This is a land of untold wealth and, as against the military machines of Europe, practically defenseless. A leader that does not rise to the actual situation until more than a year after the threatened danger had become apparent to thinking people in all sections of the country is not a safe leader; is not the kind of leader this country demands in a crisis like this.

Great credit is claimed for the President on the plea that he has kept us out of war. He has certainly not kept us out of the difficulty with Mexico. More than a thousand of our people have been murdered there and unnumbered others have been brutally outraged, while their property, amounting to millions, has been destroyed. We have lost more lives in Mexico than we lost in the Spanish-American War. Our boys are not in Cuba or the Philippines, but they are in and on the border of Mexico, in a climate as trying, where they are constantly exposed to the dangers of guerilla warfare. Our attack on Vera Cruz cost us many millions in money, and it is estimated that it will be necessary to issue a hundred and twenty-five million dollars in bonds to finance our present border warfare.

It is true that we are not at war with Europe, but is there any reason why we should enter such a war? No European nation wants war with us at this time. If countries like Holland, Switzerland, and the Scandinavian countries can keep out of the war, situated, as they are, almost in the midst of the struggle, why should not we, who are separated from the warring nations by an ocean 3,000 miles wide? No one wonders why the South and Central American countries are keeping out of this war. Can it be that the President is entitled to any special credit for not doing the most foolish, the most criminal thing he possibly could do? While it is true that the President can do things that may endanger our peace, he has no right to force the country into war. The Constitution provides that Congress and not the President has the power to declare war. As long as there is no sentiment in this country in favor of war with Europe there is no danger that Congress will consent to force one. The situation is very different from that which existed before the Spanish-American War. Then the Democrats in Congress did everything they could to force war. No end of taunts were hurled by them against President McKinley and the Republicans for not rescuing the Cubans from the cruel Spanish concentration camps in Cuba and for not avenging those who died when the *Maine* was sunk. Notwithstanding that the Democrats were voicing a public sentiment that was quite general, many months elapsed after the *Maine* was sunk before war was declared, and it was then declared with great reluctance. Is there any reason why Congress should act less hastily in taking a very much graver step. The Republicans have not interfered with the President in his management of the Mexican or European situation. The party has been strictly neutral. The only criticism that I have heard has been against those Republicans who joined with some of the Democrats in voting to warn our citizens not to take passage in the armed ships then being sunk at sea. To contrast themselves with those who sought to avoid this entirely unnecessary danger to our peace, these critics have praised themselves as Americans par excellence and with self-righteous scorn denounced as un-American the 142 who voted to warn. The 142 need not apologize to those who claim as their chief asset in this campaign that the President has kept us out of war. Aside from many matters that might be mentioned, they approve the President's course in ordering our citizens out of Mexico, a place where they had a right to be under treaty stipulations with that country, while they complain of those who were willing to advise our citizens not to go on ships that were being sunk, a place where the administration had expressed grave doubt that we had any rights at all.

The Democrats constantly appeal to the Republicans for support upon the ground that good men should be elected regardless of party. Such a plea impliedly promises that good men in office should not be removed because of party. But do the Democrats carry out this policy? No; decidedly no. Fiercely determined to find places for their Democratic friends, good men, splendid men, have been removed to make places for inexperienced and incompetent men. This is the most intensely partisan administration within the memory of anyone. To avoid politics interfering with public business it has been the policy in the past to divide the appointments upon the great administrative boards as nearly equal between the parties as

possible. There are seven members upon the Federal Reserve Board. Few believed that the President in making up such a board would serve party purposes, but he appointed none but Democrats. Five were appointed on the Trade Commission; not one of them was a Republican. This policy is in line with the President's attitude in his Indianapolis speech, where he voiced his contempt, if not his hatred of the Republicans. This is very different from the policy pursued by Presidents Taft and Roosevelt. They appointed a number of Democrats. This administration is not only intensely partisan but it is also sectional. Legislation in Congress is prepared in the committees, and the committees practically determine not only the form but whether the legislation shall pass. The chairmen of these committees largely control the business to be considered. They usually have charge of the legislation in passing it through the House, and as members of the conference committees that settle disputes between the two Houses. Their influence is very great. In the House there is not an important chairmanship that does not come from the South except one; the same is practically true in the Senate. This gives to one section of the country a dominating influence in legislation.

The Republicans are not asking for office from the Democrats, but they expect that the man they elected by their votes shall treat them courteously and not express both in word and action his hatred of them. The great progressive North, with its vast agricultural and industrial interests, are not always going to allow the control of legislation to be parceled out in the sectional fashion that it is to-day.

The Democrats, to divert attention from these facts, are busy pointing to what they are pleased to call good times. They are careful, however, not to call attention to the depression in business that prevailed up to the beginning of the European war, the normal and usual effect of Democratic policies. The Republican Party does not have to point to a prosperity born of war with its awful carnage in an appeal for votes. Its policies extend to all the hand of opportunity and make for prosperity in peace as well as war. Within it beats the patriotic heart of America, a heart intensely jealous of the Nation's honor and tenderly solicitous of its safety and success.

**What Has the Administration Done?**

---

## EXTENSION OF REMARKS

OF

# HON. WILLIAM KETTNER,

OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 11, 1916.*

Mr. KETTNER. Mr. Speaker, a short time ago I had the pleasure of a visit with one of the leading business men of southern California, and a conversation took place between us regarding the administration. I was somewhat surprised to learn from such a well-read man how little he knew of what has actually transpired and the work that has been done. Therefore, while I take very little of the time of the House and I might add very little space in the CONGRESSIONAL RECORD, as a business man I am convinced that it is my duty to present a synopsis of my conversation with my friend:

"DICK. Well, Billy, being in New York, I could not resist the temptation of stopping at Washington, not only to see you but also to find out what is going on in Washington, and particularly the things that are of especial interest to the eleventh district of California. While I am a Republican, I have supported you strongly in the last two elections, and I should like to know what this administration has done and just how you have fared in the general line-up.

"KETTNER. My dear Dick, do you wish to know as a Republican, as a friend, or as a business man really interested?

"DICK. Well, I believe I wish to know as a business man. What has the administration done, anyway?

"KETTNER. Your proposition is big and covers a great deal of ground, but I shall try to answer it as frankly as you have asked the question. I presume the first question, as the papers are full of it, is the President's foreign policy.

"DICK. Pardon me, Billy, but if I am any judge, preparedness is the main issue at the present time.

PREPAREDNESS.

"KETTNER. So you think preparedness is the main issue? Very well, we will look up the records and see what has actually been done, taking first the fortifications bill, which has already become a law. Last year this bill carried $6,060,216 in cash and a contract authorization of $300,000. The fortification act of the present session carries $25,747,550 in cash and $13,800,000 in contract authorization, making a total of $39,547,550.

"The peace strength of the Army has for a number of years been at 100,000, although the department has never been able to recruit the Army to that figure. On May 20, 1916, the House increased the peace strength of the Army to 175,000 and the staff to 17,000, making a peace strength of 192,000. The same bill provided for a war strength of 216,000, and a National Guard strength of 467,000; making the first line of defense in case of trouble 683,000. The vote on the conference report in the House is shown on page 8406 of the RECORD, May 20, 1916, only 25 Members voting against it.

"The Army appropriations bill of last year carried $101,974,195. The conference report for this year carries $267,596,530, an increase of $165,622,335. I think that you will admit that this is some preparedness.

"The Naval appropriations bill for the fiscal year ending June 30, 1916, carried $149,661,864, and provided for two battleships. This year the bill as it has passed the Senate carries approximately $316,000,000 and provides for four battleships and four battle cruisers. This also provides for 30 submarines, 12 of which are to be built on the Pacific coast.

"For a number of years Congress has been appropriating something over $1,000,000,000 a year. This year it is appropriating practically a billion and a half, which is caused by the large appropriations made in the interests of preparedness. For instance, the fortifications bill carries practically $33,000,000 more than formerly; the Army bill will carry about $165,000,000 more than usual; while the Navy bill will carry about $167,000,000 more than last year. There have been other extraordinary expenses, such as caring for the eradication of the citrus canker and controlling the foot-and-mouth disease.

"DICK. That seems to be doing fairly well. Now, to return to the foreign policy.

FOREIGN POLICY.

"KETTNER. I know that a great many people think the President writes too many notes. As the London Punch said: 'He is all write.' But, really, now, isn't there a reason in every one of his notes? Haven't they served in reality and fairness to raise the standard of respect among the thinking peoples for American ideals and the American mission? Haven't they served to impress Americans, at least, with the fact that among civilized nations, recognizing the brotherhood of man, force and might are to be made use of only as a last resort? My dear Dick, you will admit that he has kept us out of war. Put yourself in his place—would you have gone to war? See the mothers and sisters at Camp Radio, the recruiting place for the District National Guard, crying as if their hearts would break because of the mobilization of the handful of men in our Mexican trouble.

"Two million of the men in Europe lie in their graves as a result of the war that is still in progress. Woodrow Wilson conceived that America's destiny is to lead the world, not to drive it, and the only true leadership is a moral and intellectual one. And when all is said and done, speaking courteously but insistently for the American people, he has stood for their real and substantial rights and yet has kept us out of war. Put that down to his everlasting credit—with no sacrifice of any of our prestige he has kept us out of war.

"DICK. I hear a criticism occasionally that President Wilson is vacillating.

"KETTNER. Yes; and in Congress among men who know him best the statement is sometimes made that he is also too uncompromising. To my mind, neither is true. He insists at all times and in the face of all opposition on those things he regards as essentials; when he is shown to have been in error, he is big enough and human enough to admit the fact and govern himself accordingly.

FEDERAL RESERVE ACT.

"DICK. Well, some of your banking friends and mine complain of the Federal reserve act.

"KETTNER. My dear Dick, I think that has been in the past. The Federal reserve act is now recognized as one of the leading pieces of legislation passed in 50 years. Were it otherwise, the Republican convention held in Chicago recently would have criticized it. The best proof of this is that, with two-thirds of the world at war, we did not have a money panic. You may take it from me—it is the greatest piece of constructive legislation that has ever been put upon the statute books in the history of the country. The vote on the conference report is shown on page 1477 of the RECORD for December 22, 1913—245

Democrats and 53 Republicans for the bill, and 58 Republicans and 2 Democrats against it.

PAN AMERICAN FINANCIAL CONGRESS.

"Now, then, the Pan American Financial Congress.

"DICK. No, Billy, you need not go into that. We all admit that was a brilliant idea.

"KETTNER. Yes, Dick, that will go down in history. The rewriting of the Monroe doctrine in terms of neighborliness and mutual interest with the South American Republics. It secured for us their good will, wiped out their distrust, and opened their markets to our manufacturers and other business men.

FEDEARL TRADE COMMISSION.

"Now, I should like to ask you a question. As a business man, what do you think of the Federal Trade Commission?

"DICK. Well, I think that is a fairly good measure. I am told that it will relieve legitimate business from the stringency of the Sherman Act and open the door for the business man of smaller capital.

"KETTNER. Well, I am glad that you understand what a good many business men do not—the real principle of the foundation of the Federal Trade Commission.

BUREAU OF FOREIGN AND DOMESTIC COMMERCE.

"Now, have you studied the functions of the Bureau of Foreign and Domestic Commerce?

"DICK. I must confess that I know little of that except by the name.

"KETTNER. Well, briefly, the Bureau of Foreign and Domestic Commerce was developed under this administration and is an output of the Department of Commerce. Its purpose is to ascertain where and how business is to be gotten for the merchants and manufacturers of this country from every country in the world. Through commercial attachés, consuls, and special commercial agents in other countries and branch offices in some 14 or 15 of the principal business centers of our own country, information is brought to the very doors of the merchants and manufacturers where they can have ready access to all the information which the department possesses. In other words, this bureau not only tells the merchants and manufacturers where the business is and how to get it but seeks them out and tries to put the information within easy reach.

DEPARTMENT OF LABOR.

"KETTNER. Beginning January 8, 1915, the Department of Labor inaugurated a system by which information concerning employment could be given to those in need of it. Eighteen zone centers were established through the Division of Information, making use of the officials of the Bureau of Immigration. Wherever an immigrant station existed, it was designated as a labor distribution headquarters. There are now 61 subbranches throughout the United States. How much this meant to the laboring classes is shown when they took care of the thousands that were thrown out of employment by the Salem, Mass., fire. Through this department 58,000 men were given employment in 1915. For the fiscal year ending June 30, 1916, 75,195 people were directed to places where profitable employment awaited them. You understand that these are side issues of these two departments, and my reason for calling attention to them is that they are along the right lines and should be commended.

"DICK. It would seem as if it is a great work that both of these departments are doing.

CHILD LABOR.

"KETTNER. As a business man, are you not interested in other legislation?

"DICK. Why the smile? To what do you refer?

"KETTNER. Well, humanitarian legislation. For instance, the child-labor bill.

"DICK. Yes; I certainly am interested in that, for one's own children extends one's interest to all the children of the country. By the way, how did you vote on that question?

"KETTNER. I not only voted for it but I worked for it; and I hope to have the pleasure of presenting you to Mr. EDWARD KEATING, of Colorado, who fathered the bill. This passed the House February 2, 1916, by a vote of 337 to 46; 169 Democrats and 168 Republicans voting yes, and 44 Democrats and 2 Republicans voting no. (RECORD, p. 2035.)

WORKMEN'S COMPENSATION.

"KETTNER. Another important humanitarian matter is the workmen's compensation bill.

"DICK. Yes; that has been a law in California for some time.

"KETTNER. This bill passed the House July 12, 1916, by a vote of 285 to 2—145 Democrats and 140 Republicans voting for the bill and 1 Democrat and 1 Republican voting against the bill. (RECORD, p. 10916.)

WOMAN SUFFRAGE.

"DICK. By the way, what about the suffrage question—what action has been taken, if any?

"KETTNER. The suffrage question has not come up for action in the House this session. All western members of both parties have voted continuously for this measure. You will find my vote recorded in favor of suffrage in the RECORD, January 12, 1915, on page 1483. While I think of it, as you may wish to verify some of my statements, I send the RECORD to nearly every library in my district and to very many of the high schools. A Congressman receives only 58 copies, and you can readily see there are not enough to go around.

MEXICAN POLICY.

"DICK. Let's go back to the President's Mexican policy.

"KETTNER. All right. Don't you approve of his sending Gen. Pershing for the bandit Villa?

"DICK. Yes.

"KETTNER. Do you approve of his demanding that the Mexican administration immediately turn over to us the prisoners they captured when Capt. Boyd and his command were dealt with so treacherously at Carrizal?

"DICK. Yes; but he has been so long in doing anything.

"KETTNER. Well, what would you have done? Would you take it upon yourself or would you ask me or anyone else to try to force a conflict that would mean thousands of lives and many hundreds of thousands of dollars? Now, Dick, we have no God-given nor even earth-given privilege to conquer and rule over Mexico. It is absolutely opposed to American tradition, destiny, and ideals for us to assert a suzerainty over any nation except in virtue of strictest necessity. If Mexico can work out her own internal problems, she is entitled to do so, just as we have worked out many of ours without supervision or interference.

"True, and 'pity 't is 't is true,' a considerable number of Americans have lost their lives because of a lack of government in Mexico; but should we add thousands of American lives in an attempt to intervene? In other words, the unfortunate and extremely regrettable slaying of a few Americans in Mexico by bandits and outlaws of that country ought not in itself to impel us to bring about the sacrifice of untold numbers of other American citizens except, as I said a moment ago, in the face of strictest necessity. No species of effort we might now indulge in could result in anything but punishment and indemnity; but these must be accomplished, so far as possible, in terms of justice and not of conquest.

"DICK. But why dwell on justice? There is no justice in Mexico.

"KETTNER. My dear fellow, our position in the world and our duty to the world does not depend upon the presence or absence of justice in Mexico. Our concern is whether or not we shall stand by the claims and dictates of justice. Intervention can not bring back the lives that have been lost, and surely we do not want to buy Mexican properties with good American blood.

"DICK. No; but suppose we watch and wait to no avail; suppose Mexico demonstrates that she can not set up a stable government; suppose if one is set up she refuses to make reparation for wrongs committed and properties taken; what then?

"KETTNER. Then there will have been brought into existence that 'strictest necessity' of which I have spoken. Mr. Wilson's whole course shows that he will make the appeal to the compelling power of might if it is necessary, but the very essence of his 'watchful waiting' policy is that he shall have such assurance of that necessity as to find favor with his conscience and his God.

TARIFF COMMISSION.

"DICK. Well, Billy, there is one question that I am afraid you will not be able to answer so satisfactorily. It is the old question of the tariff. Let me have your view—as a business man, not as a partisan.

"KETTNER. In the first place, Dick, I never have been a partisan. I have given my people a business administration, and will continue to do so as long as they keep me here. Regarding the tariff, I think you will be somewhat surprised when I explain to you the real facts, as they are found in the records of Congress. The great Payne-Aldrich bill, of which we hear so much in California, was not voted for by the really progressive statesmen of the Republican Party in the House as it came from the Senate; and, my dear Dick, the Republican platform of 1912 carried these words: 'Some of the existing import duties are too high and should be reduced,' and later, 'this information can best be obtained by an expert commission.' Answer this: How much would they have reduced the products of the Pacific coast? For surely you will not contend that they would have reduced the products in the East and not on the

West coast. The platform adopted in Chicago in 1916 winds up as follows: 'We favor the creation of a tariff commission with complete power to gather and compile information for the use of Congress in all matters relating to the tariff.'

"I shall now recite a few facts not generally known. The CONGRESSIONAL RECORD, on page 4755, July 31, 1909, Sixty-first Congress, first session, will show you that such men as Hon. JAMES R. MANN, of Illinois, now leader of the Republicans in the House; Hon. IRVINE L. LENROOT, of Wisconsin; Hon. FRANK P. WOODS, of Iowa, chairman of the Republican Congressional Committee; Hon. MILES POINDEXTER, now Senator of the United States from Washington; Hon. ALSA J. GRONNA, now United States Senator from North Dakota; and numerous others, voted against the Payne-Aldrich bill on its final passage. Then, again, Dick, you might turn to page 962 of the CONGRESSIONAL RECORD for May 2, 1913, where Mr. Willis, now Republican governor of Ohio, then a Member of Congress, did everything in his power to put raisins on the free list, and would have succeeded had it not been for the Democratic leader of the House at that time, Hon. OSCAR UNDERWOOD.

"In this connection, also, it might not be out of place to let you know that Hon. J. I. NOLAN, of California, Republican and Progressive, and Hon. WILLIAM KENT, a California independent, voted for the Underwood bill.

"But, Dick, the tariff should no longer be made a political issue. We have just passed a bill creating a tariff commission—mark you, a nonpartisan tariff commission—by a vote of 240 to 140—39 Republicans and 1 independent voting for the bill. This is indorsed by the chambers of commerce of the United States. Think of it, Dick, the business men of the United States are indorsing this bill. Let me call your attention to the resolution of the Los Angeles Chamber of Commerce indorsing this bill, as follows:

"Whereas the Los Angeles Chamber of Commerce has heretofore taken action favoring the creation, by proper legislation, of a permanent tariff commission; and

"Whereas there is now pending in Congress a bill 'To create a United States tariff commission and define its powers and duties, and for other purposes,' which said bill (H. R. 13767) was introduced by and is known as the Rainey bill; and

"Whereas the Chamber of Commerce of the United States has examined and analyzed said bill and found it to comply with the referendum (No. 2) of said body, in which said referendum this organization voted in the affirmative; and

"Whereas said national chamber has indorsed said Rainey bill and now asks its members to use their influence in securing the adoption thereof by Congress: Now, therefore, be it

"*Resolved by the Los Angeles Chamber of Commerce*, That we indorse said bill and respectfully request our Senators and Representatives in Congress to vote for and use all honorable means to secure the passage of the same.

"*Resolved*, That a certified copy of these resolutions be forwarded to each of our Senators and Representatives in Congress.

"I hereby certify that the above is a true and correct copy of resolutions adopted by the board of directors of the Los Angeles Chamber of Commerce at the regular meeting held Wednesday, May 3, 1916.

"JOHN S. MITCHELL, *President*.

"Attest:

"FRANK WIGGINS, *Secretary*.

"Some time ago I presented to the House a letter from the Chamber of Commerce of the United States of America, which set forth the terms of the bill and gave the result of the referendum vote of the various chambers of commerce of the United States, which showed 715 votes in favor of a commission to 9 opposed (p. 2484, CONGRESSIONAL RECORD, 64th Cong., 1st sess.).

"A recent letter from Mr. Elliott H. Goodwin, secretary of the National Chamber of Commerce, states, 'After the Rainey bill had been introduced and perfected our committee * * * met in Washington and examined the Rainey bill, concluding that the bill substantially agreed with the principles decided upon by the organizations in the membership of the national chamber in the referendum.'

"This commission will be established, the vote in the House July 10, 1916, being 200 Democrats and 39 Republicans for it and 139 Republicans against it (p. 10768, CONGRESSIONAL RECORD). All parties agree, Dick, that the country has progressed too far to be torn to pieces every few years by changing the tariff. Under this tariff board our citrus growers, who unquestionably are entitled to protection (by way of a tariff) will receive that protection as a matter of right and not simply as a matter of grace nor because they consent to support a tariff on some other article of commerce not entitled to equal protection. Under this commission, Dick, the justice of the demand and not the politics involved will appeal to the people and to Congress.

"DICK. By George, you have really convinced me that you are about right. Personally I agree with you that the tariff ought not to continue to be made a political issue. It is an administrative question, in my opinion, pure and simple. In the emergency which is arising out of this war and which is upsetting and which will continue to upset the economic conditions it is indeed wise to have a nonpartisan board of experts to study the situation as it develops and to promptly and accurately advise the President and the Congress concerning the facts involved for the purpose of molding advisable legislation.

INCOME TAX.

"KETTNER. Another measure is the income tax. Surely you do not object to the wealthy paying their just proportion of taxes?

"DICK. No; I am perfectly in accord with that measure. It is a tax upon accumulated wealth and the incomes from invested capital, and removes to that extent the tax upon consumption and upon toil.

"KETTNER. You will notice that the new law repeals the stamp tax, which was found to be unsatisfactory.

FARM LOANS.

"KETTNER. Then there is the farm-loan bill. All parties have been speaking about this for some time, but I must remind you, Dick, that this Congress has passed the bill. While it may not be perfect—like the first little automobile—it will be perfected and become a magnificent machine. I believe it will do more for the farmers of our country than any law that has yet been passed. If you will remember the first money providing for rural post delivery was $50,000, in 1897, and the papers of the United States made a great deal of fun about putting the post office on wheels. The Congress has in this session approved practically $53,000,000 for this service. The sentiment in favor of a rural-credits bill is shown by the vote in the House (p. 9037, temporary RECORD, May 15, 1916), 186 Democrats and 108 Republicans voting 'yes' and 10 Republicans voting 'no.'

THE SHIPPING BILL.

"DICK. I see the House has passed the shipping bill.

"KETTNER. Well, what do you say about that?

"DICK. Frankly, I do not know.

"KETTNER. Well, I will tell you what I think of it in a very few words. In 1858 the American registered over-sea tonnage was 2,499,742, or 17 per cent of the world's tonnage, and the American flag floated in every port. The world's tonnage in 1910 amounted to approximately 45,000,000 tons, and to-day less than 3 per cent of this tonnage is carried under the American flag. We are making an effort to reinstate ourselves in a satisfactory position in transporting the world's commerce, and at the same time provide the necessary auxiliary ships in case of trouble with any foreign nation. The bill in this connection passed the House May 20, 1916, by a vote of 211 to 161—194 Democrats voted 'yes,' 16 Republicans voted 'yes,' 161 Republicans voted 'no.'

"DICK. Well, Billy, under your method of reasoning, what will be the issue in the present campaign?

"KETTNER. Frankly, I must confess that I can not see any real persuasive issue that can be raised against the record of this administration. Of course, there must be some sort of an issue, but the people of my district are up-to-date, progressive, accustomed to caring for themselves, and they know what is going on, without having to be told.

"DICK. Now, Billy, tell me something about yourself. What have you done for the people in general and for the eleventh district of California in particular? In other words, what can I tell them about your work here that directly interests them—for instance, Imperial Valley, where the pioneering problems are still so difficult to work out?

"KETTNER. Do you mean during the four-year term, or for this session?

"DICK. No; I mean this session. The people have already demonstrated that they were satisfied with your work during your first term.

"KETTNER. Well, I have been fortunate enough to take a prominent part in securing the establishment of a land office in the Imperial Valley. This will mean a saving of thousands of dollars to the bona fide residents of the valley, whose troubles in the adjustments of surveys and other matters you know so well. I probably spend more time on the problems directly relating to the Imperial Valley than any other one section in my district, and, while all of my efforts have not yet met with success, the conditions there are becoming better known, and the proper solutions will be reached very shortly, I am sure.

"DICK. What about San Bernardino County?

"KETTNER. San Bernardino County has a reclamation problem still unsolved. On January 26, 1916, I introduced a bill (H. R. 10125) which I believed would provide a way to relieve the people of Victor Valley. A little later, Mr. SMITH of Idaho introduced H. R. 12365, which was broader and, in my opinion, better than my own bill. Mr. SMITH being a member of the committee, we worked together, and this bill has now become a law. Under this law I hope that it will be possible in the near future to turn the millions of gallons of water now stored in

the San Bernardino Mountains into the great valleys which so greatly need this water for their development.

"The Public Buildings Committee has granted in its report $70,000 for the public building at San Bernardino which is so badly needed, and $30,000 for a site at Redlands.

"DICK. And Orange County?

"KETTNER. For three years I have carried on a continuous fight, and finally won out by having inserted in the rivers and harbors bill a clause recognizing Newport Harbor, in Orange County.

"DICK. Why, Billy, has Orange County a harbor?

"KETTNER. My dear Dick, the records will show you, if you will take the time to read them, that at one time there were as many as 500 vessels a year landing at Newport Harbor, loaded both ways, and the people naturally want to rebuild and reestablish this place. (These reports are H. Doc. No. 215, 50th Cong., 1st sess., Mar. 12, 1888; H. Doc. No. 82, 60th Cong., 1st sess., Dec. 4, 1907; H. Doc. No. 42, 63d Cong., 1st sess., Apr. 30, 1913).

"I am proud to say now that they have recognition. The harbor lines will be established and a breakwater built, for which I understand they have the money, and Congress has demonstrated in the past that it is ready to help those who help themselves

"DICK. Well, you see how little I really know of your district, although I told a man in New York yesterday that I considered myself well posted on southern California. There is still Riverside County?

"KETTNER. Riverside County has one of the finest nonresident Indian schools in the United States, and I think Mr. Conser, the superintendent, will tell you that it has been enlarged every year during my term in office. If it has not been well taken care of, or if there has been any complaint, I have heard nothing of it. In other words, instead of being restricted to 550 pupils, the present bill provides for 700 pupils.

"Incidentally, the exceptional floods in southern California this year have done great damage to the Indian reservations, washing out irrigation systems and roads, and these all have required attention. Besides these, you know the condition of the desert roads, and an appropriation of $10,000 for the roads of the Fort Yuma Reservation, the largest reservation in the district, has been granted.

"DICK. Mono and Inyo Counties?

"KETTNER. These counties seem to have no large problems—some water problems, some land difficulties, and great power difficulties, which I am just now calling to the attention of the departments. There is one thing of interest to all westerners, and especially to Inyo and Mono Counties, in this: That in the good-roads bill, which means so much to all rural communities and which has become a law, there is an added item which provides that a million dollars a year for 10 years shall be expended for roads in the forest reserves. (House vote, Jan. 25, 1916: 163 Democrats and 128 Republicans for the bill; 13 Democrats and 68 Republicans against the bill.)

"DICK. Well, what about San Diego County?

"KETTNER. For several years the departments have been recognizing more and more the strategic importance of San Diego, and it has been my privilege to assist in having these advantages utilized.

"Here is a letter which shows improvements provided for in the fortifications bill at Fort Rosecrans: $166,481.90 for a fire-control system and $127,000 for eight large searchlights. The naval appropriation bill carries $250,000 toward the establishment of a marine advance base on what is known as the Dutch Flats.

"And the rivers and harbors bill carries an item for dredging at the foot of D Street, which will open up the approach to the municipal pier, where the city has spent $1,400,000. The dredged material taken from this place will be dumped on the Dutch Flats, adding from 500 to 600 acres to the land to be acquired for the marine base. This would tend to refute the charge of continued extravagance in Government projects.

"The Army appropriation bill carries $300,000 toward making permanent the aviation school which has been in operation on North Island for some time.

"DICK. This seems to account for about 24 hours of the day. Is there anything else?

"KETTNER. Well, smaller matters too numerous to mention. The Government publishes very many valuable documents, and the difficulty is in getting these publications into the hands of the people for whom they are intended. We have taken pride in seeing that the physicians receive what is available and particularly suited to them; that the teachers receive every help possible in the way of maps, bulletins specially adapted to their use, etc.; that the attorneys are kept posted on matters of legislation so far as possible.

"I have the entire California-Mexico border, with its immigration and smuggling troubles, that are department matters, but continuously require the attention of the Representative. There are the fishing industries, the shipping matters, the land adjustments, the pension matters for the old friends who have come to southern California to live comfortably and out of doors in their declining years.

"DICK. By the way, what has been done for the old soldier?

"KETTNER. Look at this file, devoted entirely to pension matters in the Bureau of Pensions; these are eight special bills that I have been able to have passed; but this Congress has passed two general bills that mean more than all of these. One provides for certain soldiers in Indian wars that had not heretofore been provided for; and one, known as the widows' pension bill, advances the limit of the time of marriage to the soldier and increases the widow's pension in certain cases.

"The House has also passed a bill providing pensions for widows of Spanish-American War veterans, which will doubtless pass the Senate.

"And now, Dick, when you go home, you may impress upon the banker friends that you had in mind when speaking of the Federal reserve act the fact that on August 1, 1916, the gold coin in the United States was $2,500,229,564, which is greater than the gold coin and bullion held by the Bank of France, the Russian State Bank, and the German Reichsbank, and is five-sixths as large as the amount held in the Bank of England, Bank of France, Russian State Bank, Bank of Italy, German Reichsbank, Bank of Netherlands, Norges Bank of Norway, Riksbank of Sweden, Bank of Spain, and the Swiss National Banks. The amount in circulation—that is, the amount not held in the central bank of issue—in the European countries is indeterminable; but making the most liberal allowance it is safe to say that the amount of gold coin and bullion in the United States is greater than the total amount in England, France, and Germany.

"And I want to impress upon you that the report of the Secretary of the Treasury for the fiscal year ending June 30, 1916, showed a balance in the Treasury of $174,965,231, the largest since 1908, with a surplus of $78,737,000 for 1916."

## Civil Service Board Keeps Records Secret.

## EXTENSION OF REMARKS

OF

## HON. FREDERICK H. GILLETT,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 11, 1916.*

Mr. GILLETT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a statement issued by the officers of the National Civil Service Reform League, consisting largely of correspondence with officers of the league and the Civil Service Commission.

The statement is as follows:

CIVIL SERVICE BOARD KEEPS RECORDS SECRET—PRESIDENT WILSON SUSTAINS MCILHENNY COMMISSION IN ITS REFUSAL TO OPEN OFFICIAL REGISTERS TO THE NATIONAL CIVIL SERVICE REFORM LEAGUE—PUBLICITY "MIGHT BE EMBARRASSING TO THE ADMINISTRATION."

The National Civil Service Reform League made public to-day some recent correspondence between the league, the Federal Civil Service Commission, and President Wilson in regard to the examination of fourth-class postmasters under an executive order of May 7, 1913. The commission has refused to allow the league access to the formal records of the results of this examination, which involved nearly 50,000 postmasters.

So far the President has sustained the commission's ruling. The league declares that this is the first time in its existence that information as to the public administrative work of the Federal commission has been denied to it, except during a short period in the year 1899. The league charges that in refusing its request the present commission has inaugurated a policy of secrecy full of foreboding for the proper administration of the civil-service law.

Complaints have come to the league during the past three years that the practical effect of the executive order of May 7, 1913, requiring fourth-class postmasters to submit to competitive examination, was in many instances to secure the appointment of Democratic postmasters in place of the former incumbents, most of whom were Republicans. Other complaints have reached the league that Postmaster General Burleson, in putting into effect his policy of motorization of the Rural Free Delivery Service, turned out the old rural carriers and filled the vacancies in large part with Democrats who took new examinations.

In order to investigate these complaints and to determine whether the civil-service law was being impartialy administered, the league has been endeavoring for the past two years to obtain the facts with regard to the conduct and results of the examinations in question.

A conference between the commission and members of the league's counsel was held in Washington on March 31, 1916. At that conference, acording to the league, John L. McIlhenny, president of the commission, told Richard H. Dana, president of the league, that if access were given to these records it might lead to such criticism of the ad-

ministration as would seriously embarrass it. Commissioner McIlhenny consequently persisted in his refusal to grant the league's request.

President Wilson refused to accept the league's version of Mr. McIlhenny's statement and stood by the commission. He wrote Mr. Dana, saying that he had referred the league's correspondence to the commission, "with the suggestion that in their annual report for the year 1916 the commission disclose the method employed by them and by the Post Office Department in administering the Executive order referred to, together with the results obtained thereby." The league did not take kindly to this suggestion, as it sought names and facts as well as "methods" and "results." Moreover, the commission's next annual report is not likely to be published until after election day.

ASKS WILSON TO RECONSIDER.

The league has now written a letter to the President asking him to reconsider the whole matter and reverse the commission's ruling.

The fourth-class postmasters were "covered in" under the Roosevelt and Taft administrations; that is, the men who then occupied the offices were, by Executive order and without examination, enrolled in the competitive class of the civil service. Just two months after he took office, President Wilson issued a new Executive order, the effect of which was to throw the great bulk of the fourth-class postmasterships open to competitive examination, in which newcomers stood on an equal footing with the former incumbents. From the beginning the National Civil Service Reform League viewed this procedure with suspicion, because under the regulations of the commission the Postmaster General might appoint to a given office any one of the three candidates standing highest on the eligible list resulting from such examination. This gave the Postmaster General a chance to consult with Members of Congress and on their recommendation to replace a politically objectionable incumbent, even though he passed the examination with the highest rating, by either of the other two men at the head of the list.

As early as September 10, 1913, the secretary of the league made formal request by letter, without satisfactory result, for permission to examine some of the commission's records with regard to the fourth-class postmasterships. On April 13, 1914, the league renewed its request, this time making application to examine the records of the office for the purpose of obtaining the following specific information: The number of candidates who took part in the examinations, the names of the successful candidates, with their ratings, the names of the candidates appointed from the list, and whether the previous incumbents of the offices entered the examinations. The commission denied the league's request on the ground that such action was necessary "in the interest of the public business, owing to the congestion of the work of the office."

The conference of March 31, 1916, having failed to accomplish its object, the secretary of the league, on April 19, reiterated its request for permission to examine the eligible registers, and asked the commission to establish a general rule granting public inspection of the records of the commission under proper supervision. No reply was received to this letter and the request was repeated on May 24. A week later the league took the matter up with President Wilson himself. Through his secretary, the President asked the league to furnish him with further information.

POLICY OF SECRECY DENOUNCED.

Accordingly, on July 3, the league complied with the President's request by sending him a memorandum in regard to its controversy with the Federal Civil Service Commission. In a letter accompanying the memorandum, President Dana said:

"The commission has not only refused to grant us access to the records under proper supervision but has also failed to establish a general rule. We, therefore, respectfully ask you to issue an Executive order which will put an end to the policy of secrecy.

"We desire to state with all frankness that the league believes that the present policy of secrecy is a denial of a right which belongs to the individual or an association of individuals in a democracy, to know what their officials are doing and how they are doing it.

"At various times since the Executive order of May 7, 1913, in relation to fourth-class postmasters, many complaints and charges have been made to the officers of the league, alleging that its practical effect has been to secure the appointment of postmasters belonging to the political party now dominant and recommended by Members of Congress or other prominent politicians belonging to that party in preference to applicants or incumbents better qualified to discharge the duties of the office but connected with another political party. Within the past six months similar complaints and charges have been received with respect to the appointment of motor rural carriers on certain routes.

"In accordance with its unvarying custom during the 35 years of its existence, the league having first ascertained, by a preliminary inquiry, that these charges are not frivolous, has referred them for investigation and report to a competent committee. The report of this committee may be given to the public later in the present year if this course shall be deemed appropriate by the governing body of the league. It is obvious that access to the registers above mentioned is desirable to enable the league to make the publication in question—if it shall be made—with the benefit of the best information obtainable."

PRESIDENT WILSON'S REPLY.

To this letter and memorandum the President made reply on July 19 in the following communication, addressed to the president of the National Civil Service Reform League:

"MY DEAR MR. DANA: I acknowledge the receipt of your communication of the 3d instant, transmitting copy of a memorandum relating to the request of your league to obtain access to the records of the Federal Civil Service Commission with regard to fourth-class postmasters, and requesting that I issue an order directing the Civil Service Commission to permit a committee from your organization to examine the records of the commission relative to the certification and appointment of postmasters of the fourth-class under the Executive order of May 7, 1913.

"In reply I would advise that the correspondence which you have furnished me is being referred to the Civil Service Commission with the suggestion that in their annual report for the fiscal year 1916 the commission disclose the method employed by them and by the Post Office Department in administering the Executive order referred to, together with the results obtained thereby. The chairman of the Civil Service Commission advises me that the allegation made on page 5 of the memorandum, dated June 17, 1916, conveys the wrong impression and that his refusal to grant your league access to the civil-service record was not based on any fear that the records would lead to criticism of the administration. He states that there is not the slightest apprehension that any proper criticism can be made of the manner in which the Executive order has been administered and that his refusal to permit general access to the files and the holding of such records as confidential, investigating on their merits all cases of alleged improper action brought to the attention of the commission, is based upon good administrative practice as is explained in a letter of the commission to you under date of May 27, 1916, the transmission of which has been delayed.

"Sincerely, yours, WOODROW WILSON."

Two days after the arrival of the President's letter there was received in the offices of the league the commission's letter, the transmission of which the President said had been "delayed." This letter was in answer to the league's letter of April 19, was dated May 27, and was received on July 22.

"'The long-established and consistent practice of the commission in regarding its records as privileged had the express sanction of Presidents Roosevelt and Taft,' said the commission in its letter. 'The commission regards the practice as wise and necessary to good administration, and it feels that the practice should not be changed.'

"The records of the commission as well as of the executive departments are ordinarily open to either House of Congress, and if it is believed that the commission is hiding things which should be disclosed, it is competent for either House of Congress to make demand for the records, and the commission would then determine its action.

"If it is important that the charges made to the league should be thoroughly investigated, it is believed that they should be referred to the body constituted by law to make such investigation. An investigation by an outside body may be ex parte, partisan, mischievous, imperfect, and calculated grossly to mislead the public, and attack and embarrass an administration, as experience has shown. The commission, on the other hand, has the legal machinery and experience needed to conduct such an investigation, and its work may be reviewed by the President and a committee of Congress."

DANA REPLIES TO PRESIDENT WILSON.

Finally, on August 1, Mr. Dana wrote to President Wilson acknowledging the receipt of his letter and reviewing at length the findings of the commission as given in its communication of May 27. In his letter Mr. Dana said:

"May we call your attention to the fact that such eligible lists are constantly made public in all parts of the country by State and city civil service commissions? During the entire existence of the National Civil Service Reform League prior to your administration information as to the public administrative work of the Federal commission has never been refused to us, except during a short period in the year 1899.

"The reasons given by the commission for this concealment are contradictory and inconsistent. In its letter to the league of April 24, 1914, it says: 'This action is necessary in the interests of public business *owing to the congestion of the work in the office.*' Yet after we had waited nearly two years, when it might properly be assumed that this congestion had been overcome, we were told by Mr. McIlhenny, the president of the commission, at our Washington conference on March 31, 1916, that if access were given to these records *it might lead to such criticism of the administration as would seriously embarrass it.* Finally, in its letter received July 22, the commission amplifies this ground for its action by stating that an investigation by an outside body may 'mislead the public and *attack and embarrass an administration.*' This, therefore, appears as the vital reason for the refusal.

"It is idle to say, as the commission does in its letter, that it is 'of the utmost importance that the league and the public should have confidence in the honest and intelligent administration of the civil-service law, and that confidence should not be withheld upon imaginary grounds.' Grave complaints have been made and detailed specifications given that fourth-class postmasterships and positions in the motor rural delivery service have been made the patronage of Congressmen, in violation of the civil-service law, by the action of the Postmaster General in directing that eligible lists should be referred to such Congressmen with requests for their recommendations, and when we ask for an inspection of lists of eligibles by which such complaints can be established or refuted the commission refuses to allow us to see them, lest an inspection should 'embarrass an administration.' The inference from such conduct is not 'imaginary.' The general principles of law, founded upon universal experience, declare that the suppression of evidence furnishes the inevitable inference of indefensible conduct on the part of those by whom that evidence is suppressed.

"While earnestly protesting that an inspection of these lists would afford no proof of any violation of the civil-service law, the commission reminds us that the league has no special privilege; that it is merely a part of the general public; and that if a disclosure of the records of the commission is desired the way to obtain that is to apply to Congress to investigate. This is a specious suggestion, which would deceive no one but the commission. Is it likely that Congress can find time for such an investigation until after March, 1917? If it could find time, is it likely that a Democratic Congress would investigate the acts of a branch of the Democratic administration; that dispensers of patronage would inquire closely into the record of its dispensation?

In conclusion Mr. Dana says:

"We therefore earnestly request you to reexamine this matter. If you find that the reasons suggested by the commission for its action are, as we believe, unsound, and that you have adopted them without full consideration, that the general interest not merely under your administration but under all administrations is best served by full publicity, we shall expect that you will issue a general order in accordance with the suggestion in our former letter to you."

---

SECRECY V. PUBLICITY—TWO VIEWS OF POLICY RELATING TO PUBLIC RECORDS.

[NOTE: This letter was received at the office of the league on July 22, 1916.]

UNITED STATES CIVIL SERVICE COMMISSION,
*Washington, D. C., May 27, 1916.*

MESSRS. RICHARD HENRY DANA, *President*,
and GEORGE T. KEYES, *Secretary*,
*National Civil Service Reform League, 79 Wall Street, New York City.*

GENTLEMEN: Your letter of April 19 requesting permission to examine the eligible registers for the position of motor rural carrier and fourth-class postmaster established since May, 1913, and in this connection asking that the commission establish a general rule granting public inspection of its records under proper supervision is acknowledged.

The long-established and consistent practice of the commission in regarding its records as privileged had the express sanction of Presidents Roosevelt and Taft. The commission regards the practice as wise and necessary to good administration and it feels that the practice should not be changed.

The civil-service act, section 2, requires that the commission shall make an annual report to the President for transmission to Congress showing its own action, and these reports are intended to meet the rights of individuals and associations in knowing what the commission is doing and how it is doing it. It is entirely impracticable, however, that individuals or associations should be permitted to search at will the files of the national commission. No opinion by any court or law officer or writer on government or legislative action, so far as the commission is aware, maintains any such right on the part of individuals or associations in a democracy. On the contrary, it is the uniform practice in the National Government, and maintained by the highest judicial authority, that official records belong to that class of communications which, out of considerations of public policy, are regarded as privileged, and their production can not be compelled without express authority of law.

The records of the commission are filled with confidential letters and reports from the departments. If the departments apprehended that documents of this character might become public, they would not trust the commission in the future with similar records, and the work of the Government would be embarrassed. Persons would stop giving testimony to the commission if it were known that their testimony would soon become public property. Only the most perfunctory information would be given in any form. As long as the records of the departments are privileged, the records of the commission must also be privileged. The relations of the commission with all the departments are so intimate and intertwined that the same rule must apply. It is of the highest importance that the departments and the public should feel implicit assurance that statements and records intrusted to the commission in confidence will be kept inviolate.

The work of the commission is very complicated and it requires highly expert knowledge of the system in many if not in most cases to draw correct conclusions from the records. The inferences drawn from certain records may be erroneous if considered apart from other records. It is therefore imperative that the commission should prescribe the conditions regarding the use of its records. This authority throughout the executive service is unlimited in the head of the office "so long as not inconsistent with law." The commission can not grant a privilege to the league in this regard which it would deny to any citizen. The discussion, however, is academic, and the attitude of the commission is so completely supported by the uniform decisions and practice of the executive departments that it seems unnecessary to pursue the question further. Its actions as to its own administrative matters are at all times within the purview of every citizen under reasonable limitations of which the commission must be the judge.

The commission has at all times sought to give the fullest publicity to its work and to the operation of the law. Suspicions have thus been allayed, misrepresentations answered, and abuses exposed. With full explanations and candor, greater confidence has been inspired in the honesty of the system. It is therefore with regret and concern that the commission observes in your letter that you regard it as having a "present policy of secrecy." Nothing can be further from the commission's intention, and it earnestly hopes that upon consideration you will agree with it that such an expression is not justified. The present policy of the commission in this regard has been its policy throughout its history.

Of course it is to be deeply regretted if the league and the public "will imagine evils which do not exist." This consideration, however, must be balanced with the duty of the commission of deciding at what stage of a proceeding the records may be disclosed. It is of the utmost importance that the league and the public should have confidence in the honest and intelligent administration of the civil-service law, and that confidence should not be withheld upon imaginary grounds. The commission is charged with large and important responsibilities, and charges should not be made against it upon "imaginary grounds." To entertain such suspicions would be a reflection not only upon the commission but upon the many educated and intelligent employees of all shades of political opinions having knowledge of its records. If the commission were reckless enough to have things which it desired to conceal, these employees and officials throughout the departments would know of it. The records of the commission, as well as of the executive departments, are ordinarily open to either House of Congress, and if it is believed that the commission is hiding things which should be disclosed it is competent for either House of Congress to make demand for the records, and the commission would then determine its action. This is the orderly and constituted procedure in a democracy having representative institutions where the people may act through their legal representatives. While voters are empowered by law to elect members of the legislature at stated intervals, they have no power of political action beyond this.

If it is important that the charges made to the league should be thoroughly investigated, it is believed that they should be referred to the body constituted by law to make such investigation. You state, however, that the administration should welcome an independent inquiry by the league. But the league is a body not known to the law, without power to compel testimony, the production of papers, or to punish for perjury. It is not responsible to any constituted authority. Citizens have a right to an investigation if one is needed, through the lawful and responsible agencies of government. The league may not be differentiated in this regard from other bodies of citizens. An investigation by an outside body may be ex parte, partisan, mischievous, imperfect, and calculated grossly to mislead the public, and attack and embarrass an administration, as experience has shown. The commission, on the other hand, has the legal machinery and experience needed to conduct such an investigation, and its work may be reviewed by the President and a committee of Congress. These are the checks in the framework of government upon maladministration, and it is the duty of citizens to seek the betterment of governmental conditions through the processes and under the legal machinery thus provided.

In conclusion, the commission would state that it believes that the influence of the league in the advancement of the cause of efficient public service is incalculable, and for that reason it has always been most favorably inclined toward requests from it for information from the records; but it deems it unwise to establish a general rule granting public inspection, and is therefore obliged to deny your request. It earnestly requests that you send it the "many complaints and charges" which you state have been made to the officers of the league, "alleging that the practical effect of the Executive order of May 7, 1913, has been to secure the appointment of postmasters belonging to the political party now dominant and recommended by Members of Congress or other prominent politicians belonging to that party, in preference to applicants or incumbents better qualified to discharge the duties of the office, but connected with another political party," and also the "similar complaints and charges" which you state "have been received with respect to the appointment of motor rural carriers on certain routes."

The commission will be pleased to give consideration to these complaints and to take such action thereon as the facts and the authority of the commission under the law and rules may require. Of course you will appreciate that in any event it would undoubtedly be necessary that the Government should make investigation through its own agencies, since it could not very well accept and act upon the findings of a body without official responsibility.

By direction of the commission.

Very respectfully,

JOHN A. MCILHENNY, *President.*
CHAS. M. GALLOWAY,
H. W. CRAVEN.

---

AUGUST 1, 1916.

The PRESIDENT,
*The White House, Washington, D. C.*

DEAR MR. PRESIDENT: We are directed by the council of the National Civil Service Reform League to acknowledge the receipt of your letter of July 19, in which you advise us of the transmission of a letter of the Federal Civil Service Commission in answer to our communication of April 19.

The transmission of the commission's letter, as you say, "has been delayed"; in fact, though dated May 27, 1916, the letter did not arrive until July 22. The commission can hardly be congratulated upon its promptness in the dispatch of public business when a letter remains unanswered for more than three months, when a subsequent request for an answer is made in vain, and when an answer is finally sent only after the commission's delay has been brought to your personal attention.

You refer us to the letter of the commission for reasons for its refusal to grant our request. The reasons which it assigns appear to us to be wholly insufficient. They are in part irrelevant, in part self-contradictory, in part disingenuous, and in part such as lead to a conclusion diametrically opposed to the action of the commission. They suggest the inference that the commission finds itself in an embarrassing position. We invite you to reconsider them, in the very confident hope that you will find cause to revise the action of the commission.

As appears from the opening paragraph of the commission's letter, what the league requests and the commission refuses is liberty to inspect the commission's "eligible registers for the position of motor rural carrier and fourth-class postmaster established since May, 1913," the date of the order directing the reexamination of some 36,000 fourth-class postmasters. It is important to bear this in mind, for the propriety of the commission's refusal to permit such an inspection involves no considerations which might justify a refusal of leave to inspect "confidential letters or reports from other departments," or "statements or records intrusted to the commission in confidence," or transcripts of "testimony to the commission," or of leave to "search at will the files of the national commission," with which the commission's letter deals in some detail. It tends merely to confusion to advert to such matters as a ground for the commission's refusal to permit an examination of the records of its own administrative acts.

May we call your attention to the fact that such lists are constantly made public in all parts of the country by State and city civil-service commissions? During the entire existence of the National Civil Service Reform League prior to your administration information as to the public administrative work of the Federal commission has never been refused to us, except during a short period in the year 1899. In regard to this refusal Commissioner John R. Proctor, one of the most distinguished of Civil Service Commissioners, in his dissenting opinion, said:

"I can conceive of nothing which is calculated to do more damage to the work of the commission and its power for good than the refusal to permit access to files in cases in which action has been completed. * * * Instead of being against public policy, the opening of the records is in the interest of public policy. Nothing so much fosters the spoils system as secrecy in the administration of patronage. I consider the action of the commission contrary to the principles of republican government. People have a right to know what their officials are doing, and if the records are closed to their inspection they will imagine evils which do not exist."

It is now more than two years since the league has sought in vain leave to examine these eligible lists. While the commission has refused our request, it has at times professed that it was eager to grant it. In the very letter containing the present refusal the commission says: "Its actions as to its own administrative matters are at all times within the purview of every citizen under reasonable limitations, of which the commission must be the judge. The commission has at all times sought to give the fullest publicity to its work and to the operation of the law. Suspicions have thus been allayed, misrepresentations answered, and abuses exposed. With full explanations and candor, greater confidence has been inspired in the honesty of the system." In another letter now before us, written to a member of this league during the present year, the commission says that its files as to administrative matters were at all times "open to the least scrap of paper to anyone interested either publicly or privately therein." If this is sound, as we think it is, the commission should have complied with our request for an inspection of its eligible lists more than two years ago.

The reasons given by the commission for this concealment are contradictory and inconsistent. In its letter to the league of April 24, 1914, it says: "This action is necessary in the interests of public business *owing to the congestion of the work in the office.*" Yet after we had waited nearly two years, when it might properly be assumed that this congestion had been overcome, we were told by Mr. McIlhenny, the president of the commission, at our Washington conference on March 31, 1916, that if access were given to these records *it might lead to such criticism of the administration as would seriously embarrass it.* Finally, in its letter received July 22 the commission amplifies this ground for its action by stating that an investigation by an outside body may "mislead the public *and attack and embarrass an administration.*" This, therefore, appears as the vital reason for the refusal.

We think you must have overlooked this, for we can not assume that the President of the United States could permit such a reason to be urged for the concealment of official records concerning official acts or that he would willingly appear to adopt the argument that such concealment is necessary to preserve his administration from attack.

It is idle to say, as the commission does in its letter, that it is "of the utmost importance that the league and the public should have confidence in the honest and intelligent administration of the civil-service law, and that confidence should not be withheld upon imaginary grounds." Grave complaints have been made and detailed specifications given that fourth-class postmasterships and positions in the motor rural delivery service have been made the patronage of Congressmen in violation of the civil-service law by the action of the Postmaster General in directing that eligible lists should be referred to such Congressmen with requests for their recommendations, and when we ask for an inspection of lists of eligibles by which such complaints can be established or refuted the commission refuses to allow us to see them lest an inspection should "embarrass an administration." The inference from such conduct is not "imaginary." The general principles of law founded upon universal experience declare that the suppression of evidence furnishes the inevitable inference of indefensible conduct on the part of those by whom that evidence is suppressed.

While earnestly protesting that an inspection of these lists would afford no proof of any violation of the civil-service law, the commission reminds us that the league has no special privileges, that it is merely a part of the general public, and that if a disclosure of the records of the commission is desired the way to obtain that is to apply to Congress to investigate. This is a specious suggestion which would deceive no one but the commission. Is it likely that Congress can find time for such an investigation until after March, 1917? If it could find time, is it likely that a Democratic Congress would investigate the acts of a branch of the Democratic administration—that dispensers of patronage would inquirely closely into the record of its dispensation?

The commission says in its letter that it believes the influence of our league in the advancement of the cause of efficient public service is incalculable, yet it refuses us the means of prosecuting our legitimate inquiries, and when we appeal to you from its decision you tell us that you have suggested to the commission that in its annual report for 1916 it shall disclose the methods employed in administering your Executive order of May 7, 1913. It would be a most incompetent body which could not draw up a report furnishing a plausible explanation for even the gravest abuses, and we feel sure that neither the league nor the public will remain satisfied with a plan which allows any department or branch of the service to be the only interpreter of its own conduct and denies to the world all access to the evidence by which the truth of its interpretation can be established or refuted.

We therefore earnestly request you to reexamine this matter. If you find that the reasons suggested by the commission for its action are, as we believe, unsound and that you have adopted them without full consideration, that the general interest not merely under your administration but under all administrations is best served by full publicity, we shall expect that you will issue a general order in accordance with the suggestion in our former letter to you.

Respectfully, yours,

RICHARD HENRY DANA, *President.*
GEORGE T. KEYES, *Secretary.*

## Federal Aid to Road Building.

### EXTENSION OF REMARKS
OF
### HON. GUY T. HELVERING,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 11, 1916.*

Mr. HELVERING. Mr. Speaker, more than three-quarters of a century have elapsed since our Government discontinued making appropriations for the construction of public highways, and except for the comparatively small mileage of State roads just completed in recent years, public-road improvement in this country has made but little progress since the time of the Civil War. And strange as it may be, the backwardness in legislating for good roads has been all the more marked by contrast by the enormous development of transportation and traffic. From the Office of Public Roads I learn that there are approximately 2,300,000 miles of public roads in all of the States, but only 6 per cent of this mileage can be classed as good roads. Europe, in this respect, far outranks the United States, for since time immemorial have her nations maintained the finest highways in the world.

The lack of good roads in this country, however, has not been due to lack of funds, for we have expended more than one and a half billion dollars in money and labor for the building of roads in the past 10 years, but, I regret to state, with poor and extremely unsatisfactory results. Lack of efficient supervision, failure to cooperate, the inequitable distribution of the burden of the tax for such roads, personal and political influence have all caused the existing deplorable conditions of our highways.

I am gratified, Mr. Speaker, to have been able to participate in the consideration of this important legislation, and rejoice with other Members of this House in the thought that we have finally devised a measure that is ideal and practicable in its provisions and one that is bound to result in great good to every man, woman, and child in the United States. By enacting this legislation we have again fulfilled one of the party pledges of the Democratic platform and have convinced the people that we are only seeking to serve their best interests.

The good-roads bill, as devised by the gentleman from Missouri, is, in every particular, feasible and practical; it provides that for every dollar which a State receives, that State must contribute a dollar from its own funds. Such money is to be expended upon whatever roads may be mutually agreed upon by the State highway commission and the Secretary of Agriculture. This bill will necessitate the establishment of a State road commission or the appointment of a road commissioner, and every State will have to keep up the road built by Federal and State money or suffer the penalty of losing future appropriations for road construction.

The greatest advantage, in my opinion, of the measure before us is that it provides for a series of graduated appropriations which will permit of the conservative and efficient development of an organization to the working out of a suitable policy. The public are assured of the full and free use of Federal-aid roads, because provision has been made that no tolls shall be charged.

From the latest statistics obtainable we learn that our 12,000,000 farmers in the United States, after the enactment of this law, will save approximately $5,000,000 a year on their cotton crops, ten millions a year on wheat crops, and twelve and a half millions on the corn crop. We further note that under existing transportation facilities our farmers pay as much to transport a bushel of potatoes an average distance to their markets as it does to transport a similar bushel of potatoes from Dublin, Ireland, to New York City by ocean transport. The cost to the American wheat grower to move his grain an average distance to railroad stations or elevators is as much as the cost of transportation of a bushel of wheat from New York to Liverpool. A large portion of this enormous cost to the American farmer is due to bad roads over which he must haul his grain. According to information received from the Office of Public Roads, the cost of wagon transportation on the excellent Government highways of Germany, France, and England is only 10 cents per ton per mile, which is less than half the cost in the United States, and thus the European farmer has a great advantage over the American producer in this respect.

One of the greatest drawbacks now confronting our rural population is the fact that they must market their crops while the roads are in fair condition regardless of what market prices may be or what the demand for the product may be. In many sections of our country the farmer is unable to rush his grain or his produce to market when prices are high or when the products are seasonable. Under existing conditions he must haul his products when he is usually needed in the field. With the establishment of adequate roads he will be in position to come to market when the weather is inclement and when he can not work in the fields, thus saving a great deal of time.

But, Mr. Speaker, I am not urging the necessity of good roads for the benefit of our farmers alone, or for the handling of traffic, but I advocate good roads because it is essential to the development and progress of our great country, particularly the great interior, and because it is essential to the furtherance of our physical, moral, and social welfare.

We have, it is estimated, nearly 50,000,000 people living in rural sections and more than 42,000,000 of our population living in crowded cities. We have more than 1,000,000,000 acres of uncultivated, unused land waiting to be settled and developed. Is it therefore not of vital importance that we make these vast tracts of unused lands accessible and communicable to the thousands of people crowded in our cities who are anxious to take up farming in some form or other? The "back-to-the-farm" movement would be greatly stimulated.

Closely related to public-highway maintenance is our rural-school system. The percentage of attendance is far lower where pupils attend schools located on bad roads. In sections where the highways are neglected we find no interest in community circles or social intercourse among neighbors. Thus, our whole system of rural education may be transformed through the medium of good roads. Mr. Speaker, I believe every dollar that we expend for the use of better highways will yield a good return to the Government, the State, and the community, not only in dollars and cents, but in the happiness, contentment, and enlightenment of that portion of population so benefited. The prosperity of our Nation depends upon our rural population, who own $16,614,647,491, or one-third of the total real estate values of the United States. This portion of our population pay more in county, State and Federal taxes, in proportion, than any other class of American citizens. They are the wealth producers of the land. Give them good roads, and we will double the wealth produced upon our farm lands.

I shall not take the time to discuss fully the advantages gained in the Rural Delivery Service of our country by the establishment of good highways. We appropriate $53,000,000 for the maintenance of our rural service and employ nearly

44,000 rural carriers who travel upward of 1,100,000 miles of road per day, and of this mileage only 6 per cent can be called good roads; the remaining 94 per cent are traversed at great expense of time and energy, due wholly to bad conditions of public highways. To the rural service we have added the Parcel Post System. During the year 1915 we have handled more than 113,000,000 parcels on rural and city routes. Under the able direction of our present Postmaster General, our postal facilities have been greatly improved, but we can never hope to have a thoroughly efficient rural post service until our roads are bettered. But I dare say that in a short time we will have adequate post roads established in every section of the country, and every farmer in the land will be receiving his daily paper, his market report, and his parcel post.

Mr. Speaker, this bill provides for a wise scheme of road improvement which will yield innumerable returns to not only the Federal Government in the way of efficient service and decreased expenses in the Rural Delivery Service, but will be commensurate with our plans for better transportation and from a military standpoint it will be invaluable, for our Military Establishment of to-day demands rapid transportation for men, ammunition, and supplies. A system of railways is not sufficient for all lines of transportation. This must be supplemented by good highways.

The Nation and State that increases and improves its public highways, improves the quality of its citizenship, increases the wealth of the farm and the factory, and adds to its military assets.

On account of the interest which this bill has created among the business men and farmers of this country, I shall extend my remarks by including a copy of the bill.

[Public—No. 156—64th Congress.]

An act (H. R. 7617) to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes.

*Be it enacted, etc.*, That the Secretary of Agriculture is authorized to cooperate with the States, through their respective State highway departments, in the construction of rural post roads; but no money apportioned under this act to any State shall be expended therein until its legislature shall have assented to the provisions of this act, except that, until the final adjournment of the first regular session of the legislature held after the passage of this act, the assent of the governor of the State shall be sufficient. The Secretary of Agriculture and the State highway department of each State shall agree upon the roads to be constructed therein and the character and method of construction: *Provided*, That all roads constructed under the provisions of this act shall be free from tolls of all kinds.

SEC. 2. That for the purpose of this act the term "rural post road" shall be construed to mean any public road over which the United States mails now are or may hereafter be transported, excluding every street and road in a place having a population, as shown by the latest available Federal census, of 2,500 or more, except that portion of any such street or road along which the houses average more than 200 feet apart; the term "State highway department" shall be construed to include any department of another name, or commission, or official or officials, of a State empowered, under its laws, to exercise the functions ordinarily exercised by a State highway department; the term "construction" shall be construed to include reconstruction and improvement of roads; "properly maintained" as used herein shall be construed to mean the making of needed repairs and the preservation of a reasonably smooth surface considering the type of the road; but shall not be held to include extraordinary repairs, nor reconstruction; necessary bridges and culverts shall be deemed parts of the respective roads covered by the provisions of this act.

SEC. 3. That for the purpose of carrying out the provisions of this act there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, for the fiscal year ending June 30, 1917, the sum of $5,000,000; for the fiscal year ending June 30, 1918, the sum of $10,000,000; for the fiscal year ending June 30, 1919, the sum of $15,000,000; for the fiscal year ending June 30, 1920, the sum of $20,000,000; and for the fiscal year ending June 30, 1921, the sum of $25,000,000. So much of the appropriation apportioned to any State for any fiscal year as remains unexpended at the close thereof shall be available for expenditure in that State until the close of the succeeding fiscal year, except that amounts apportioned for any fiscal year to any State which has not a State highway department shall be available for expenditure in that State until the close of the third fiscal year succeeding the close of the fiscal year for which such apportionment was made. Any amount apportioned under the provisions of this act unexpended at the end of the period during which it is available for expenditure under the terms of this section shall be reapportioned, within 60 days thereafter, to all the States in the same manner and on the same basis, and certified to the Secretary of the Treasury and to the State highway departments and to the governors of States having no State highway departments in the same way as if it were being apportioned under this act for the first time: *Provided*, That in States where the constitution prohibits the State from engaging in any work of internal improvements, then the amount of the appropriation under this act apportioned to any such State shall be turned over to the highway department of the State or to the governor of said State to be expended under the provisions of this act and under the rules and regulations of the Department of Agriculture, when any number of counties in any such State shall appropriate or provide the proportion or share needed to be raised in order to entitled such State to its part of the appropriation apportioned under this act.

SEC. 4. That so much, not to exceed 3 per cent, of the appropriation for any fiscal year made by or under this act as the Secretary of Agriculture may estimate to be necessary for administering the provisions of this act shall be deducted for that purpose, available until expended. Within 60 days after the close of each fiscal year the Secretary of Agriculture shall determine what part, if any, of the sums theretofore deducted for administering the provisions of this act will not be needed for that purpose and apportion such part, if any, for the fiscal year then current in the same manner and on the same basis, and certify it to the Secretary of the Treasury and to the State highway departments, and to the governors of States having no State highway departments, in the same way as other amounts authorized by this act to be apportioned among all the States for such current fiscal year. The Secretary of Agriculture, after making the deduction authorized by this section, shall apportion the remainder of the appropriation for each fiscal year among the several States in the following manner: One-third in the ratio which the area of each State bears to the total area of all the States; one-third in the ratio which the population of each State bears to the total population of all the States, as shown by the latest available Federal census; one-third in the ratio which the mileage of rural delivery routes and star routes in each State bears to the total mileage of rural delivery routes and star routes in all the States, at the close of the next preceding fiscal year, as shown by the certificate of the Postmaster General, which he is directed to make and furnish annually to the Secretary of Agriculture.

SEC. 5. That within 60 days after the approval of this act the Secretary of Agriculture shall certify to the Secretary of the Treasury and to each State highway department and to the governor of each State having no State highway department the sum which he has estimated to be deducted for administering the provisions of this act and the sum which he has apportioned to each State for the fiscal year ending June 30, 1917, and on or before January 20 next preceding the commencement of each succeeding fiscal year shall make like certification for such fiscal year.

SEC. 6. That any State desiring to avail itself of the benefits of this act shall, by its State highway department, submit to the Secretary of Agriculture project statements setting forth proposed construction of any rural post road or roads therein. If the Secretary of Agriculture approve a project, the State highway department shall furnish to him such surveys, plans, specifications, and estimates therefor as he may require: *Provided, however*, That the Secretary of Agriculture shall approve only such projects as may be substantial in character and the expenditure of funds hereby authorized shall be applied only to such improvements. Items included for engineering, inspection, and unforeseen contingencies shall not exceed 10 per cent of the total estimated cost of the work. If the Secretary of Agriculture approve the plans, specifications, and estimates, he shall notify the State highway department, and immediately certify the fact to the Secretary of the Treasury. The Secretary of the Treasury shall thereupon set aside the share of the United States payable under this act on account of such project, which shall not exceed 50 per cent of the total estimated cost thereof. No payment of any money apportioned under this act shall be made on any project until such statement of the project, and the plans, specifications, and estimates therefor, shall have been submitted to and approved by the Secretary of Agriculture.

When the Secretary of Agriculture shall find that any project so approved by him has been constructed in compliance with said plans and specifications he shall cause to be paid to the proper authority of said State the amount set aside for said project: *Provided*, That the Secretary of Agriculture may, in his discretion, from time to time, make payments on said construction as the same progresses, but these payments, including previous payments, if any, shall not be more than the United States' pro rata part of the value of the labor and material which have been actually put into said construction in conformity to said plans and specifications; nor shall any such payment be in excess of $10,000 per mile, exclusive of the cost of bridges of more than 20 feet clear span. The construction work and labor in each State shall be done in accordance with its laws, and under the direct supervision of the State highway department, subject to the inspection and approval of the Secretary of Agriculture and in accordance with the rules and regulations made pursuant to this act.

The Secretary of Agriculture and the State highway department of each State may jointly determine at what times, and in what amounts, payments, as work progresses, shall be made under this act. Such payments shall be made by the Secretary of the Treasury, on warrants drawn by the Secretary of Agriculture, to such official or officials or depository as may be designated by the State highway department and authorized under the laws of the State to receive public funds of the State or county.

SEC. 7. To maintain the roads constructed under the provisions of this act shall be the duty of the States, or their civil subdivisions, according to the laws of the several States. If at any time the Secretary of Agriculture shall find that any road in any State constructed under the provisions of this act is not being properly maintained he shall give notice of such fact to the highway department of such State, and if within four months from the receipt of said notice said road has not been put in a proper condition of maintenance then the Secretary of Agriculture shall thereafter refuse to approve any project for road construction in said State, or the civil subdivision thereof, as the fact may be, whose duty it is to maintain said road, until it has been put in a condition of proper maintenance.

SEC. 8. That there is hereby appropriated and made available until expended, out of any moneys in the National Treasury not otherwise appropriated, the sum of $1,000,000 for the fiscal year ending June 30, 1917, and each fiscal year thereafter, up to and including the fiscal year ending June 30, 1926, in all $10,000,000, to be available until expended under the supervision of the Secretary of Agriculture, upon request from the proper officers of the State, Territory, or county for the survey, construction, and maintenance of roads and trails within or only partly within the national forests, when necessary for the use and development of resources upon which communities within and adjacent to the national forests are dependent: *Provided*, That the State, Territory, or county shall enter into a cooperative agreement with the Secretary of Agriculture for the survey, construction, and maintenance of such roads or trails upon a basis equitable to both the State, Territory, or county, and the United States: *And provided also*, That the aggregate expenditures in any State, Territory, or county shall not exceed 10 per cent of the value, as determined by the Secretary of Agriculture, of the timber and forage resources which are or will be available for income upon the national forest lands within the respective county or counties wherein the roads or trails will be constructed; and the Secretary of Agriculture shall make annual report to Congress of the amounts expended hereunder.

That immediately upon the execution of any cooperative agreement hereunder the Secretary of Agriculture shall notify the Secretary of the Treasury of the amount to be expended by the United States within or adjacent to any national forest thereunder, and beginning with the next fiscal year and each fiscal year thereafter the Secretary of the Treasury shall apply from any and all revenues from such forest

10 per cent thereof to reimburse the United States for expenditures made under such agreement until the whole amount advanced under such agreement shall have been returned from the receipts from such national forest.

SEC. 9. That out of the appropriations made by or under this act, the Secretary of Agriculture is authorized to employ such assistants, clerks, and other persons in the city of Washington and elsewhere, to be taken from the eligible lists of the Civil Service Commission, to rent buildings outside of the city of Washington, to purchase such supplies, material, equipment, office fixtures, and apparatus, and to incur such travel and other expense as he may deem necessary for carrying out the purposes of this act.

SEC. 10. That the Secretary of Agriculture is authorized to make rules and regulations for carrying out the provisions of this act.

SEC. 11. That this act shall be in force from the date of its passage.

Approved July 11, 1916.

## For the relief of S. Spencer Carr.

### EXTENSION OF REMARKS

OF

### HON. HENRY A. COOPER,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 11, 1916.*

Mr. COOPER of Wisconsin. Mr. Speaker, I introduced the bill for the relief of S. Spencer Carr, and desire to have made a permanent, public record of the facts in this very deserving case as these are set forth in the following excerpts from the report of the Committee on Military Affairs:

RACINE, WIS., *November 9, 1903.*

Hon. H. A. COOPER, M. C.,
*Washington, D. C.*

DEAR SIR: As per your suggestion that I write you about the 9th instant, I hereby take advantage of the privilege of doing so, and I hope that my letter will not prove tedious to you as it will necessarily have to be quite long.

I was sworn into service September 18, 1861, in the Eighth Regiment Illinois Volunteer Cavalry for the term of three years, and served as an enlisted man until July 10, 1862, when I was commissioned second lieutenant. Just after the seven days' battle of the Chickahoming Swamps, Ga., under Gen. George B. McClellan.

I served as second lieutenant one year and was promoted to first lieutenant July 1, 1863; both of my promotions were given me in the field, one just after the hard-fought campaign in front of Richmond, and the other just before the Battle of Gettysburg. I served with my regiment continuously from the date of my muster in, September 18, until about March 1, 1864, when I was detailed as acting inspector general, Cavalry depot, at Grisboro Point, Va. I was relieved of duty as inspector general April 5, 1864, and appointed assistant regimental quartermaster of my regiment, in which capacity I served until about August 1, 1864. I was relieved from this duty and appointed assistant provost marshal at Camp Stoneman with the understanding I would have time to make out my reports as quartermaster and make my final settlement with the Government preparatory to being mustered out at expiration of term of service (I was mustered for the unexpired term of three years both as second and first lieutenant), September 18, 1864, which was now close at hand. Here is where my troubles began. About the first week in September I was ordered to join my regiment, which was then stationed about 28 miles from Washington on the upper Potomac. This order came from John M. Walt, major in command of the regiment at that time (while I had permission of Col. William Gamble, who was colonel of my regiment, but was then in command of Camp Stoneman, to remain and finish my quartermaster reports, which must be done before I could be mustered out of service).

I was working hard to get through and at the time believed it could make no difference if I finished and reported afterwards to the regiment, which, of course, I would have to do in order to get my discharge. A few days after this I was arrested in Washington by order of the provost marshal and sent to the old Carrol place, which was then used for the purpose of holding officers who were under arrest and awaiting court-martial. No charges were ever preferred against me, and I never received any notice of any having been made, and after many endeavors to learn under what kind of offense I was held in arrest, I was at last notified from Gen. C. C. Augin's headquarters that I was dismissed from the service and was at liberty to go where I chose. This notice was given me some time in November, some weeks after my term of service had legally expired; furthermore, I had not even the privilege to make any defense in my own behalf, or so much as a statement. I have always believed that if charges had been preferred against me and I given an opportunity to make a defense, I would then and there have been honorably discharged from service, having earned such discharge by having legally earned it by full service for which I enlisted.

You may think it strange that I did not make any effort in all this time, but at that time I was young and inexperienced and also very much embarrassed by the position I found myself in. I felt very bitter at the way I had been treated after having more than three of the best years of my life served my country through her darkest hours, and to the best of my ability; I had been turned down in disgrace, as I could have then proved without any just cause. I said then that I would never ask justice or favor, but would go on to the end without a word, but late years I have so yearned to have my war record made good that it has rarely been out of my mind, and I do now pray that you may be able to have it so amended as that I may be placed on the roll of honorably discharged soldiers and I may leave this as my right and due to my children.

I am, very truly, your obedient servant,

S. SPENCER CARR.

—

RACINE, WIS., *June 3, 1916.*

This is to certify that I was a member of Company B, Eighth Regiment Illinois Volunteer Cavalry, and personally acquainted with Samuel Spencer Carr, of Racine, Wis., having served in the same company; that he was mustered into service on the 18th day of September, 1861, as a private soldier, at St. Charles, Ill., and was promoted to rank of second lieutenant July 10, 1862, and to rank of first lieutenant July 30, 1863, and was discharged October 5, 1864, having served full three years.

HIRAM S. DEWITT, *Hampshire, Ill.*

Subscribed and sworn to before me this 9th day of June, 1916.

[SEAL.] CHARLES S. BACKUS, *Notary Public.*

—

COMMITTEE ON FOREIGN AFFAIRS,
HOUSE OF REPRESENTATIVES,
*Washington, D. C., May 22, 1916.*

Hon. HENRY E. HULL, M. C.,
*House of Representatives.*

DEAR MR. HULL: I have been informed by Mr. FIELDS, chairman of your subcommittee on desertions, that my bill (H. R. 10697) for the relief of S. Spencer Carr has been referred to you for personal consideration and report.

May I be permitted to say a word concerning the beneficiary of this bill and the merits of his case.

Mr. Carr is a highly respected citizen of my home city, Racine, Wis. I have known him personally for more than 20 years. He has until recent years been a hard-working employee of the J. I. Case Threshing Machine Co., and the main support of a large family. He is now nearing 80 years of age and without competency to insure him necessary comforts during the few remaining years of his life.

Please note that, according to the records of the War Department, Carr was mustered into the service to serve three years, and that he had served more than three years at the time of his dismissal. He considered himself virtually out of the service, and delayed availing himself of a discharge until he should fix up his accounts as quartermaster. During this period he was arrested, and, without trial or court-martial, dismissed from the Army. He alleges that his arrest was not justified and that, had he been given opportunity, he could have so proved. But the order for dismissal having been issued by the War Department, there was no recourse under the law, and the soldier since then has been bearing the ignominy of a charge of desertion against his military record of more than three years. I am sure that you will see the merit of this case, and sincerely hope that you will see your way clear favorably to report the bill back to your committee, so that this soldier may not be compelled to leave behind him a stain on his military record.

With personal regards,

Very sincerely, yours, HENRY ALLEN COOPER.

## Kansas City as a Postal Center.

### EXTENSION OF REMARKS

OF

### HON. WILLIAM P. BORLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 11, 1916.*

Mr. BORLAND. Mr. Speaker, Kansas City has won another fight by the inclusion of an item in the public buildings bill for the purchase of a site for a terminal post office at Kansas City. Our showing convinced the committee that it was necessary to have a new building immediately adjacent to the splendid new Union Station at Kansas City to be used exclusively for postal business, leaving the old building for an uptown post office, for the courts, and Federal offices. All collections and distribution of mail throughout the city will be made from the new terminal post office, and a great deal of unnecessary handling and delay will be saved.

When Secretary McAdoo and Assistant Secretary Newton were in Kansas City last fall they made a personal investigation into the situation and decided that Kansas City was typical of a new condition which must prevail in the postal business. The growth of the parcels post and the distribution of the railway mail will make necessary the location of post-office buildings in great postal centers immediately adjacent to the railway station. These will be strictly business buildings of the highest possible utility. They will be the most modern type of structures, filled with labor-saving devices and facilities for the rapid handling of mail.

The action of the committee in authorizing the purchase of the site is the first step toward the erection of such a building. The site is to cost $1,000,000, and is to be followed by the erection of a building to cost $2,000,000. The present Federal building is to be enlarged and remodeled to accommodate an uptown post office and the courts and Federal offices.

The history of this legislation shows how rapidly Kansas City has advanced. In 1911 I introduced a bill for the enlargement of the old post office at Ninth and Grand, asking for an appropriation of a quarter of a million dollars. In 1912 I increased this amount to $500,000, and succeeded in having the bill passed. It was supposed at that time that the old building could be enlarged sufficiently to meet the increased demands of Kansas City and the increased demand for office room for Federal activities. In that bill I had provision made for absorbing the cost of the changes made necessary by the grading of

McGee Street, thereby relieving the city treasury of the charge of about $10,000. When the Government architects looked over the situation, however, they concluded that the old building could not be enlarged to answer demands of the future upon Kansas City as a postal center, and they advocated that the appropriation be used only to the extent necessary to remodel the old building for Federal offices.

About $300,000 of the $500,000 authorized for the old building will be used for remodeling that structure for its temporary use as a post office and for its permanent use as court and Federal office building. The Federal officials, however, who looked into the matter at my request, took the broad view of the situation that we must build for the future of Kansas City as a postal center. They decided to try at Kansas City the experiment of having an exclusive postal building. Kansas City, therefore, will be one of the first cities in the country to have an exclusive postal building adjacent to its railway station and an uptown post office with Federal offices attached.

The population of Kansas City, Mo., to-day is 300,000; that of Kansas City, Kans., is 100,000. While Kansas City, Kans., has a separate post office, yet much of its mail passes through Kansas City, Mo., on account of the movement of the trains or because letters are addressed to "Kansas City" without naming the State. Kansas City does the postal business of a very large extent of country. In postal matters as in banking, our business is much larger than our population would indicate, and it is sometimes difficult for eastern people to understand how we do so much more business than eastern cities of the same or larger population.

The present post office and Federal building was occupied in May, 1900, 16 years ago.

| | |
|---|---|
| The site cost | $451,578.33 |
| Original cost of building | 900,050.47 |
| Extensions | 400,077.32 |
| Total | 1,751,706.12 |

At that time the postal receipts at Kansas City were $670,256. In 1916 the postal receipts at Kansas City were $3,393,543.97. This shows a growth of 500 per cent in postal business in 16 years. This record is astonishing, but it is based on official figures.

In other activities of the Federal Government, Kansas City is also a center. It is the seat of an internal-revenue district which employs 65 deputies and collected for the fiscal year ending June 30, 1916, $2,774,845.03. The following Government agencies are quartered in the present Federal building: The post-office inspectors; the customs office; the customs assay office; the special customs agent; the Immigration Service; the special pension examiners; the supervising superintendent of public buildings; the mechanical inspector of the Treasury Department; the Navy recruiting station; the United States courts, with the clerk, attorney, and marshal; the Bureau of Investigation of the Department of Justice; the grain standardization laboratory; the civil-service board; the Secret Service, and the pure-food inspectors.

All of the present building, except what will be used for an uptown branch of the post office, will be needed in the immediate future for Government offices. The court rooms will have to be enlarged, as it is my intention to introduce in Congress very soon a bill for a session of the Circuit Court of Appeals at Kansas City. The Interstate Commerce Commission frequently holds hearings in Kansas City and the Federal Trade Commission will undoubtedly do so. I find that the naturalization examiners, with headquarters now in St. Louis, have applied for quarters in Kansas City, claiming that $2,500 per annum can be saved in time and traveling expenses of their inspectors if their offices were located in this city, which is practically in the center of their district. The Bureau of Rural Organizations has also applied for space.

The Federal reserve bank is located at Kansas City, and while the bank provides its own quarters, yet the bank examiners for this district must also be located there. It is probable that the rural-credit board will establish a regional headquarters in Kansas City.

At the present time there are a number of Government agencies in rented quarters in Kansas City which can not be accommodated in the present building. Uncle Sam pays about $50,000 a year rent, as follows:

| | |
|---|---|
| Depot quartermaster | $750 |
| River and harbor engineers | 2,976 |
| Weather Bureau | 1,440 |
| United States Army | 750 |
| Army recruiting station | 2,124 |
| Interstate Commerce Commission | 3,350 |
| Regional bank examiners | 960 |
| Bureau of Animal Industry | 1,200 |
| Government free-employment bureau | 1,500 |
| Railway Mail Service, at terminal station | 35,230 |
| Total | 50,280 |

Until recently we had also the headquarters of the National Board of Managers of National Soldiers' Homes. The grain inspection and warehouse laws will also require inspectors at Kansas City.

The truth is that the Federal building at Kansas City is not for the use of that city alone, but to supply proper facilities to carry on the activities of the Government and enforce the laws of Congress in all the territory of which Kansas City is the center. Public buildings of this character are positively necessary in the centers of Federal activity in the country, and the present public-buildings bill was drawn with the greatest care to recognize and provide for these plain business demands.

---

### The Mexican Situation.

## EXTENSION OF REMARKS

OF

## HON. GEORGE W. EDMONDS,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 11, 1916.*

Mr. EDMONDS. Mr. Speaker, in reading over House Report No. 885, relative to House resolution No. 257, bearing on the right of a Representative in Congress to hold commission in the National Guard, I am glad to note that the conditions of the Mexican War of 1846 and of to-day were somewhat similar in so far as the patriotism of the Members of Congress who resigned their seats to go to the front to fight is concerned.

In this connection prominent mention should be made of the distinguished record of Gen. Thomas Lyon Hamer, of Ohio, who was a Member of the Twenty-third, Twenty-fourth, and Twenty-fifth Congresses, and while serving as a Member of the House obtained for Ulysses S. Grant his appointment to the United States Military Academy. Gen. Hamer, in his forty-sixth year, volunteered as a private in 1846, and the next day was commissioned by President Polk as brigadier general. He commanded his brigade at the battle of Monterey in the division of Gen. W. O. Butler, and when that officer was wounded, he succeeded to the command of the division. He died in Monterey, Mexico, December 3, 1846, and on March 2, 1847, Congress passed a resolution of sorrow, and as an expression of their deep regret presented his nearest male relative with a sword. His remains were afterwards brought to Georgetown, Ohio, whose citizens erected an imposing monument to his memory.

But on the other hand, conditions existing in Mexico in the early days and to-day are entirely different, when comparing the actions of the administration of Polk and the Wilson administration, the latter, as we all know, being one of vacillation.

Our troubles with Mexico during the past three years are too fresh in the minds of the people to relate, but two very serious blunders should not be passed by unmentioned. One was the sending, during the first part of the present administration, of John Lind, an agent unexperienced in diplomatic affairs, to the City of Mexico for the purpose of forcing the resignation of Huerta, the then de facto President. Lind had hardly begun to play the cards of the great game of diplomacy, in which he was unskilled, when the shrewd and wily officials of the Mexican state department won with hands down.

The other blunder was the lifting of the embargo that had been placed by the administration of William Howard Taft upon the wholesale passing of arms and munitions of war across the Texas boundary into Mexico. The lifting of this embargo by President Wilson had the effect of uniting the two factions of Carranza and Villa for the time being, which was the prime factor in bringing about the present deplorable conditions in Mexico and along the border.

Twenty years ago the Cleveland administration left, as a heritage of the Government to the succeeding administration of McKinley, the solving of the Cuban problem. Unless all signs fail between now and the 7th of November, the present administration will come to an end March 4 next, when history will repeat itself and another Republican administration will be called upon to assume the reins of Government and to commence to solve the great diplomatic and international questions involved in the present Mexican question.

The Cuban question was settled successfully in a comparatively short time. But this is not to be expected in the case of Mexico, which is a country many times larger than Cuba and where the questions to be settled are more numerous and intricate. Had the present incumbent of the White House

started out with a less vacillating policy and intrusted the adjustment of the differences to experienced diplomatic agents the conditions of to-day would be different. While during the past few weeks there has been less disturbance on the border than heretofore, it is simply the calm before the storm, for intervention is bound to come. It will not be an intervention for annexation, but an intervention to assist the Mexicans to place their house in order and help prepare them for a future existence that can be made as happy and prosperous as that of any people on the face of the earth, for no nation has been blessed with so many natural resources as Mexico; the country can be converted into a veritable land of milk and honey.

Who is best fitted to commence such a great undertaking—an Executive who has already demonstrated the terrible consequences of vacillation or one whose record in all walks of life, whether public or private, has been that of firmness, steadfastness, consistency, logic, sincerity, and honesty?

Certain Democratic Senators of late have been endeavoring to force an issue in the coming presidential campaign of a Justice of the United States Supreme Court becoming a candidate for office. Before Charles E. Hughes was practically unanimously chosen as the standard bearer of the Republican Party he did everything to discourage his nomination at Chicago. But because he was nominated, and because he immediately sent in his resignation as an Associate Justice of the Supreme Court, thereby taking the judiciary out of politics, he is being criticized most harshly for leaving the bench to accept the nomination which came to him unsolicited.

There seems to be, also, objection to a person of a judicial temperament becoming President. William Howard Taft was also formerly a judge, and in his judicial temperament he deemed it fit to place an embargo upon the transmission of munitions of war into Mexico. Had this embargo been permitted to stand by President Wilson our troops would probably not be patrolling the border to-day.

I am perfectly willing, Mr. Speaker, to intrust the solution of the Mexican situation during the next four years to the judicial mind and temperament of Charles Evans Hughes.

---

**Child-Labor Law.**

## EXTENSION OF REMARKS

OF

## HON. JOHN G. COOPER,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. COOPER of Ohio. Mr. Speaker, to my mind one of the best and greatest laws that has ever been placed upon our statute books is the child-labor law which has passed both House and Senate during this session of the Sixty-fourth Congress. This law provides for the conservation of our boys and girls, and protects them from those who would commercialize their little bodies and take away from them that great inheritance of education which rightfully belongs to every American child.

Now, Mr. Speaker, my purpose in calling attention to the child-labor law at this time is to try and make it clear to the minds of the voters of our country, and especially organized labor, that it was the votes of Republican Members of the House and Senate that made possible the passage of the measure. Ever since the bill passed the Senate there has been a special effort on the part of the Democratic publicity bureau, Democratic newspapers, and some who claim to be leaders in organized labor movements, but who in reality are Democrats who are trying to deliver the votes of the workingmen for Mr. Wilson and his party, to lay claim for the credit for the passage of the child-labor law.

Now, Mr. Speaker, I am proud of the fact that for 20 years, up to the time that I began my term in Congress on March 4, 1915, I was actively associated with the workers of the country as a locomotive fireman and engineer. At the present time I am a member in good standing of one of the greatest labor organizations of the country, the Brotherhood of Locomotive Engineers, and I challenge the right of Mr. Wilson and his Democratic brethren to claim the credit for the passage of the child-labor law.

I am one of the members of the Committee on Labor, which considered the measure and reported it to the House, recommending its passage. Every Republican member of the Labor Committee voted to report the bill favorably for passage. Can the Democrats who are members of the committee say the same? No. On the contrary, three of the Democratic members of the Labor Committee signed a minority report opposing the measure. But for the action of the Republican members the bill never could have been reported out of committee.

Mr. Speaker, who was it that stood on the floor of the House, and also in the Senate, and fought for hours to defeat the passage of this bill for the protection of little children? Was it the Republican Members? No; it was the great leaders of the Democratic Party from the South, who were listening to the wolfish cries of the southern cotton and silk mill operators, who tried to prevent the passage of this law. On the final passage of the bill in the House, on February 2, 1916, a total of 179 Republicans voted for the measure and only 1 Republican against it. On the Democratic side 136 voted for the bill and 45 against it. This record speaks for itself; and yet, in face of the fact that it was Republican Members of Congress who advocated the passage of this bill on the floor and later backed up their words by their votes, the Democratic publicity bureau and party leaders are trying to take all the credit for the passage of the child-labor law.

If the Democratic Party is so interested as it now claims it is in protecting children, why does it not pass a law prohibiting the importation of foreign child-made products into our country? During the consideration of the revenue measure one of the Republican Members offered an amendment prohibiting the importation of European child-made products into this country. Where did Democratic Members of this House, these champions of the little children, stand on this amendment? Every Member on the Democratic side voted against this amendment. Now they are pleading for the votes of organized labor on the ground that they are opposed to child labor.

Where did the Democratic champions of the working classes stand on the Borland rider to the legislative, executive, and judicial appropriation bill, which would have increased the daily working hours of Government employees and reduced their salaries 10 per cent? Did these champions of labor support the working people during the consideration of the Borland rider? No; 67 members of Mr. Wilson's party who are now trying to appeal to the working classes to support the Democratic Party next November voted to increase the working hours of Government employees and reduce their pay. The record also shows that only one Republican voted in the House for the Borland rider. Yet in the face of these facts the Democratic Party is proclaiming with a loud voice that it is the champion of the laboring people.

But, Mr. Speaker and my Democratic friends, let me predict that you can not fool the workingman voter. They know your record, and they will not be misled by a few so-called labor leaders who are trying to hold positions given them by the administration. If the Democratic Party is the friend of organized labor, why does it not pass the immigration bill, which was advocated by every labor union in the United States?

The Republican Party has always advocated and supported good labor legislation. The Republican Party originated the shorter workday by enacting into law the bill limiting the hours of labor to eight hours a day for all mechanics and laborers employed in the navy yards and other workshops of the Government. It was under a Republican administration that the eight-hour law was amended to include all employees of contractors on public work for the Government.

The Republican Party passed the alien contract labor law preventing the importation of cheap foreign labor into the United States to take the place of American workingmen. The Republican Party is responsible for the convict labor bill, abolishing the contract system of labor for United States convicts. The Republican Party passed the Chinese exclusion act, which protected labor all over the country; also the safety-appliance law compelling railroads to equip cars with automatic couplers and power brakes; the bill known as the ash-pan act, requiring all locomotives to be equipped with self-dumping ash pans, which eliminated the danger of railroad men being killed in getting under engines. The law known as the 16-hour law, which was a great benefit to the railroad employees, and which also made it safer for the public to travel on railroads, was passed by a Republican administration, as was the bill providing for the inspection of locomotive boilers and equipment so as to make it safer and better for railroad employees. The Republican Party is sponsor for the bill creating the Bureau of Mines; also the "phossy jaw" bill for the protection of employees in match factories. Provision was made by Republicans for steel mail cars to protect the lives of mail clerks; and last, but not least, the Republican Party has always stood for the protection of American workingmen from cheap foreign-labor competition through a protective tariff, which I believe is one of the greatest blessings that can come to the American workingman, his family, and his home.

## Capt. John Ericsson, Inventor, Patriot, Benefactor.

EXTENSION OF REMARKS

OF

### HON. ASHTON C. SHALLENBERGER,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 11, 1916.*

Mr. SHALLENBERGER. Mr. Speaker, I have been intensely interested in the remarks of the gentlemen who have addressed the House in eulogy of that distinguished citizen of the United States and representative of the Swedish race in America, Capt. John Ericsson. Seldom, if ever, has a more valuable contribution been bestowed upon a nation by a citizen than that which Ericsson bequeathed when he wrought the seeming miracle of the *Monitor*, the floating fortress of steel, and gave it as a bulwark of defense to the Republic. It was in keeping with the genius and history of a race which for a thousand years had sailed the seven seas of the world as warrior conquerors of the deep, that a man of viking blood should shape and design the ship that should totally change the art of ocean warfare and determine the destiny of the nations that would control the commerce of the world.

The mightiest battleship that floats is useless without the steel turret which shields its guns and makes possible their fire to every point of the compass. The revolving turret of the modern dreadnaught or battle cruiser is the legitimate and direct descendent of the turret of the *Monitor*, which Ericsson first evolved from his master mind. Ericsson was the author of many inventions that were of fundamental and lasting value to mankind. But he was more than that. He was a fitting representative of that strong and virile race from which he sprung, and which, through the millions of sturdy sons and daughters it has sent to our Republic, has contributed one of the most valuable elements to our national life and development. They have been one of the strongest currents in the stream of races that has flown to America and helped to make our Nation what she truly is to-day, a composite of the best that Europe had to bestow upon us.

I was much pleased to hear the story of the earlier history of the compatriots of John Ericsson in America as told by my colleague, Mr. LOBECK. He and I were both born in Illinois near to Bishop Hill, the first Swedish settlement in the West. Later, 35 years ago, as a young man, I located at Stromsburg, one of the earliest settlements of Swedish people in Nebraska, and my present home is in a congressional district that numbers among its best and most prosperous citizens many of the blood of that sturdy, honest, industrious, and enterprising race of people who gave the genius and patriot John Ericsson to America. They yield to no citizens of American in their loyalty to the Republic and their devotion to the principles and ideals of true Americanism. They are great home builders, the very best of farmers if engaged in agriculture, successful in business or professional life, and hold to the highest standards of education and Christian character. When they came to America they came to make it their home; theirs is no divided allegiance. Like Ericsson they came to live and die Americans and for America first and always. If the hour of national danger or peril shall ever come to us again, the American citizens of Swedish blood will be found, like Capt. Ericsson himself and emulating his great example, giving the very best that is in them and to the uttermost for the safety and preservation of America and American ideals, whether in peace or in war. I desire to extend my remarks by adding a portion of the very interesting speech of my colleague, Mr. LOBECK, because of its historical value and for the further reason that he speaks with the authority of one who knows and feels the spirit that has animated the Swedish people since first they came to our shores to find a home for themselves and their generations that have come after them.

In after years, when citizens of Nebraska who are of Swedish blood shall visit the National Capital here at Washington, it will be a source of satisfaction and just pride for them to see here in the Capital a statue to Capt. John Ericsson, a hero of two continents, a fitting recognition of the contribution that the Scandinavian race has made to America.

Mr. LOBECK said in part:

"If there was any man in this country who was intensely American it was Capt. John Ericsson. Throughout the entire country, from East to West, we do not know anything of Swedish-Americans. They are all Americans. [Applause.] Though often called Swedish-Americans, it is nevertheless true the Swedish-born people, adopted citizens of our Nation, love the land which gave them birth. They are an educated people. They read and recite the sagas, the literature, and sing the songs of their forefathers. They read the history of its warrior kings, its poets, and love its splendid music, instrumental and vocal. While this is all dear to them, above all they love their adopted country, and no citizenship of the United States is truer than they to the Stars and Stripes and what the flag stands for. [Applause.] The first settlement of the Swedish-born people in the West was in 1846, in Henry County, Ill., led by Eric Janson, with a company of about 1,000 men, women, and children from the hillsides and the valleys of Sweden. They established the well-known colony of Bishop Hill in as beautiful a portion of Illinois as can be found, and they and their descendants have transformed it into a veritable garden. I was born in the same county, so known because of the energy, industry, and perseverance of the pioneer Swedish citizens of that county.

"When the Civil War came there were no people in this country of foreign birth who responded better in relation to numbers to the call to preserve the Union and for the defense of the flag. [Applause.] Of the men of Swedish birth in Illinois it is said that every fifth man able to carry arms responded to the call of Lincoln and of the Nation.

"When the news came that John Ericsson had constructed the *Monitor* which won the victory over the *Merrimac* and saved the Capital of the Nation, with the same news came that of victories won by the valor of Swedish-born soldiers in the battle fields of the West.

"The Swedish-born people, their sons and daughters, are and have always been true to this Government, whether you find them in the factories in the New England States, or in the shops of the great centers of manufacture, or in the fields of Minnesota, Kansas, Iowa, Nebraska, or Illinois; wherever you may find them from the Atlantic to the Pacific, in shops, factory, farm, mine, forest, or as merchants, bankers, or educators, they are a patriotic people.

"They love to speak of John Ericsson and the brave boys who, during the Civil War, were always found loyal to this country. [Applause.]

"In the schools and colleges of our land they have gained highest distinction, and the sons and daughters of Scandinavia in our schools compare favorably with those of any lineage or ancestry. They came to this country poor, with empty hands, but with an ambition to succeed. Their civilization was of the type that read the Bible. They brought the Bible and hymn book with them. They taught their children to worship God. They gave them the best education they could. They taught them to be true Americans, and to-day their children and grandchildren are filling honored places. [Applause.]

"I am glad to be present and vote for this measure; I wish the committee would have recommended a larger amount, still I am pleased that Congress will show its appreciation to the memory of Capt. John Ericsson."

## Federal Aid for Good Roads Made Possible Under the Democratic Administration.

EXTENSION OF REMARKS

OF

### HON. GUY T. HELVERING,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 11, 1916.*

Mr. HELVERING. Mr. Speaker, the Democratic administration, in the passage of the good roads bill, has added another great achievement to its splendid record of excellent legislation enacted in the interests of the whole people. I desire at this time to point out the essential features of this law so that the main points of it may be easily understood.

The Federal aid road act (Public, No. 156, 64th Cong.) approved by the President, July 11, 1916, appropriates from the Federal Treasury the following amounts to be expended in cooperation with the States in the construction and improvement of rural post roads:

For the fiscal year 1917, $5,000,000; 1918, $10,000,000; 1919, $15,000,000; 1920, $20,000,000; 1921, $25,000,000; total, $75,000,000. As the States are required to make available at least an equal amount or its equivalent in labor and materials, there will be available not less than $150,000,000 for cooperative construction work extending over a period of five years.

This measure for the encouragement of rural road building is fundamentally sound. It should conduce to the establishment of a more effective highway machinery in each State, strongly influence the development of good road building along right lines, stimulate larger production and better marketing, promote a fuller and more attractive rural life, add greatly to the convenience and economic welfare of all our people, and strengthen our national foundations.

The act provides among other things:

1. That the State and the Federal Government shall cooperate in the construction of rural post roads. It seems highly desirable that the two jurisdictions serving the same people shall work together instead of at cross-purposes and that the people shall have the benefit of the joint counsel and direction of the best agencies the two jurisdictions have been able to devise.

2. That each State shall assent to its provisions.

3. That the funds made available shall be used only for the purpose of construction, which is defined as including reconstruction and improvement.

4. That for such purpose each State shall put up at least an equal amount of money or its equivalent in labor and materials.

5. That it shall be the duty of the State or the civil subdivisions thereof, as the law of the State provides, to maintain the roads constructed thereunder.

6. That the money shall be expended in cooperation with the State highway departments of the several States.

7. That the Secretary of Agriculture and the State highway department of each State shall agree upon the roads to be constructed therein and the character and method of construction.

8. That the State highway department of any State desiring the benefits of the act shall submit to the Secretary of Agriculture project statements setting forth proposed construction; that the Secretary of Agriculture may approve or disapprove a project; and that no money shall be paid out of the Federal Treasury under the act on any approved project until the plans, specifications, and estimates therefor shall have been submitted to and approved by the Secretary of Agriculture.

ROADS AND TRAILS IN THE NATIONAL FORESTS.

The Federal aid road act, in addition to appropriating $75,000,000 for the next five years for rural post roads in the States, appropriates $1,000,000 a year for 10 years, or $10,000,000, of Federal funds for the survey, construction, and maintenance of roads and trails within or only partly within the national forests when necessary for the use and development of resources upon which communities in or near the forests are dependent. The act provides that this expenditure shall be reimbursed eventually by the application of 10 per cent of the annual revenues from the forests within or near which the roads and trails are located. This aid to road building in the national-forest areas is highly equitable, because the Federal Government, which is the owner of assets in many communities of the West, to the extent in some instances of 50 per cent or more, should take its proper part in assisting struggling communities to develop themselves. Without this Federal aid these communities, many of which are just beginning their existence, either would have to bear the full cost of roads or do without proper means of communication for the marketing of their supplies and the conduct of their business. Under the present plan, at the time when these communities need help most, the Federal Government advances the money for road building, which is repaid gradually out of the national forest revenues, in which these communities already share.

The necessity for this legislation was set forth clearly by the Secretary of Agriculture in his annual report for 1914, as follows:

> Assistance should be given in the building of roads to bring into productive use the resources of each region. Therefore the suggestion contained in the last annual report is repeated—that upon a showing of public necessity appropriations be made for specific roads and similar improvements, to be charged against the State's future share of receipts from the forests. Such action would promote the local development of agriculture and other resources.
>
> To secure the maximum use of the lands still remaining in Federal ownership further legislation is needed. There must be a constructive program which will promote development and safeguard public interests. The aim should be to make these properties more useful, available to greater numbers, and effectively instrumental in building up industries.

RESULTS EXPECTED FROM ACT.

The $10,000,000 referred to here will be expended over a period of 10 years, making a total contemplated expenditure out of the Federal Treasury for the 5 and 10 year periods of $85,000,000. There will be at the same time an expenditure from State funds of approximately the same amount—perhaps a larger amount—making an aggregate contemplated by the bill of about $170,000,000.

The act furnishes satisfactory safeguards for the efficient expenditure of this money. It will result in a wiser application of large sums which will be expended in the several States in excess of the amounts which it appropriates. It has been estimated that for several years past the Nation has been expending the equivalent of approximately $225,000,000 a year for roads, much of it through inadequate machinery, with consequent waste. Through the improvements of machinery, methods, and processes which this act will effect there will result greatly increased efficiency in handling the additional local funds.

This act is the result of the deliberation not only of the Congress but of the officials of the Department of Agriculture and of the several States. It has the indorsement of the State highway commissioners, and marks a tremendous advance over the proposals heretofore considered.

---

## War Prosperity.

---

### EXTENSION OF REMARKS

OF

### HON. SYDNEY ANDERSON,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 11, 1916.*

Mr. ANDERSON. Mr. Speaker, in a recent speech the gentleman from Oklahoma [Mr. FERRIS] declared that the country "now enjoys a greater era of prosperity than it has ever enjoyed in its history." He proclaimed this era of prosperity as an achievement of the Democratic Party.

That there is in the country a certain specious and temporary prosperity I am not prepared to deny. I assert with the utmost confidence that such prosperity as we now enjoy is specious and temporary, that it is in no way due to anything which the Democratic Party has done, but that, on the contrary, such as it is, it is due to conditions which exist outside the country and over which the Democratic Party exercises no control.

It is a universal rule, tested by the experience of this and other countries, that the increasing or decreasing of the tide of exports is the best and soundest index of the business condition of the country. It is the invariable experience of this country that when business is upon a sound basis, when men are fully employed, when the country is prosperous, the exports increase; and when the country is unprosperous, when business is depressed and labor unemployed, exports decrease. In other words, the volume of exports is the best and most conclusive index of the prosperity of the country.

During the fiscal years 1915 and 1916 the exports of the United States, taken in the aggregate, have very materially increased, indicating a certain quality and degree of prosperity. We have a right, however, to examine the character of these exports, with a view of ascertaining the exact quality of the prosperity which we now enjoy and of determining its sources and its probable future continuance.

Since the 1st of August, 1914, the greatest war in all history has been carried on. Of necessity, the war has not only disturbed and modified business conditions in the countries immediately affected, but has disturbed and modified business conditions the world over. It has served to increase tremendously the demand for certain products of the United States, while cutting off the sources of supply of many articles heretofore furnished by the warring countries. I think I shall be able to demonstrate conclusively that this war alone is responsible for the tremendous increase in exports during the past two years.

For the purpose of making this demonstration I have divided the export business of the country into two great groups, the first including those general classes of exports, the demand for and consumption of which is not directly increased by the war in Europe. In this class I have included agricultural implements, animals, carriages, wagons, cement, coal, cotton cloths, earthen and stone ware, electric machines and appliances, gasoline engines and steam engines, mill, mining, and other machinery, oils and paints, timber, furniture and other manufactures of wood, and articles of general classes the consumption of which is not materially increased by the demands of war. In the aggregate this class includes a total of $745,973,561 in value of the exports in 1913.

In the second class I have included those articles the demand for and consumption of which has been greatly and directly increased by the war abroad. This class includes explosives, fire-

arms, certain fabrications of steel and iron, wearing apparel of wool, automobiles and auto tires, wire nails and spikes, barb wire, leather boots and shoes, harnesses, beef, bacon, ham, butter, cheese, and condensed milk, zinc, cotton knit goods, horses, mules, grains, and so forth, exported in 1913 to the amount of $422,294,233.

In the aggregate the two groups include exports amounting in value to $1,168,267,794, or 53 per cent of the total exports in 1913.

I have excluded from the groups raw cotton, which constituted about 26 per cent of the total exports in 1913, and certain other classes of articles, such as chemicals, which, owing to their intrinsic character or unusual trade conditions, I thought it improper to include in either group.

For the purposes of comparison and in order to determine the increase or decrease in the tide of exportations as to each group, I have ascertained and compiled in a table which I shall print in connection with these remarks the total exports of each group for the years 1913, 1914, 1915, and 1916. At the time these figures were compiled I did not have the detailed exports for the fiscal year 1916 for the months of May and June, and I therefore ascertained the total exports for that year on the basis of the preceding five-sixths of a year.

In order that the comparison and the conclusions to be drawn from it may be perfectly clear, I should state that the figures are for the fiscal years, and while the beginning of these years does not coincide with the beginning of the present administration, it is sufficiently coincident for the purposes of comparison.

The first nine months of the year 1913 the Government was under the control of the Republican Party, and during the last three months of that year under the control of the Democratic Party, but during that time no change had occurred in the fiscal policy of the Government affecting directly, at least, the business of the country.

During the first three months of the fiscal year 1914 the Democratic Party was in control of the Government, but the Payne-Aldrich tariff bill was still in effect. On the 3d day of October, 1914, the Underwood tariff law went into effect, and was in effect during the remaining nine months of that year.

The European war began in August, 1914, and affected the exports of the country during the remainder of the fiscal year 1915 and 1916.

In general terms, the year 1913 may be considered a normal Republican year, 1914 a normal Democratic year, and 1915 and 1916 were normal except as they were affected by the war in Europe.

With this explanation, I now again direct your attention to the two groups of exports which I have already outlined, namely: Group I, including nonwar materials; and Group II, including war materials.

In 1913, a Republican year, the exports of Group I, nonwar materials, amounted to $745,973,561; and Group II, war materials, to $422,294,233.

In 1914, a Democratic year, the exports included in Group I, nonwar materials, had fallen to $647,789,184; and Group II, war materials, to $346,045,051—a falling off in the exports of Group I amounting to $98,184,377, or 13.1 per cent; and in Group II, war materials, $76,248,182, or 18 per cent.

In 1915 the exports of Group I, nonwar materials, continued to fall off until it had been reduced for that year to $473,593,164. In other words, the business depression resultant upon the passage of the Underwood tariff law continued to show its effects in the exports of nonwar materials included in Group I. Now let us see what happened in Group II, war materials. In 1915 the exports of this group had increased until it represented the enormous sum of $1,126,093,109. In other words, while the exports of nonwar materials fell off $272,383,397, or 36.5 per cent, as compared with the normal Republican year 1913, the exports of war materials included in Group II increased $683,799,476, or 154 per cent, as compared with 1913.

Again in 1916, as compared with 1913, the exports of the first group, nonwar materials, had fallen off to $652,669,848, while exports of Group II, war materials, had increased to $1,910,288,672.

To express it yet more clearly, exports of nonwar materials as compared with 1913, a normal year, fell off in 1916 $93,303,713, or 12.5 per cent, while Group II, war materials, increased as compared with 1913, $1,487,944,439, or 352 per cent.

In other words, in those classes of exports unaffected by the war, there was a falling off in 1914, 1915, and 1916, while in Group II, war materials, there was a falling off in 1914 and an increase in 1915 and 1916.

What demonstration could more conclusively prove that the present prosperity of the country, such as it is, is due solely to increased business and to increased employment resulting from the abnormal demand for war materials?

And yet this fact may be made even more apparent by a comparison of the percentage of exports represented during each of these fiscal years by each group. For illustration, in 1913 Group I, nonwar materials, represented 63.9 per cent of the exports of that year, and war materials 36.1 per cent. In the normal Democratic year which followed, 1914, these proportions were scarcely changed, Group I representing 65.1 per cent and Group II 34.9 per cent of the total.

But now, coincident with the beginning of the war in Europe, the character and percentage of these exports change. From 65.1 per cent of the total exports in 1914, Group I, nonwar materials, fell in 1915 to 29.6 per cent, while Group II, war materials, increased in proportion from 34.9 per cent in 1914, a normal Democratic year, to 70.4 per cent of the total exports in 1915.

This change is even more marked in 1916, when Group I represented 25.4 per cent of the total exports, and Group II 74.6 per cent.

An analysis of these changes shows that while in the normal years both of Democratic and Republican rule, nonwar materials represented approximately two-thirds of the exports, in 1915 and 1916, during the war in Europe, nonwar materials represented but one-fourth of the exports, while war materials represented three-fourths.

We may carry the analysis and the comparison yet another step in our demonstration of the character and the quality of our present prosperity, as represented by the exports of the country. In 1913 we had a favorable balance of trade of $615,498,124. In other words, we sold foreign countries $615,498,124 more of goods than they sold us. In 1914, a Democratic year, that balance of trade dropped to $435,758,368. In 1915 the war in Europe had increased the balance of trade to $1,042,008,725, but if from this balance of trade we deduct the excess of exports of war materials in 1915 as compared with 1913, instead of having a balance of trade of $1,042,008,725 in our favor, we have a balance of $358,208,249, which is $257,289,875 less than it was in 1913 under the Republican Party.

And again in 1916, if the excess of exports of war materials as compared with 1913 is deducted from the balance of trade of that year, instead of being $1,947,994,112 it will be found to be $458,999,673, or $156,498,451 less than it was in 1913.

To sum up the whole proposition, if the tremendous increases in exports due solely and wholly to the war are eliminated, the exports of the country during the past three years of Democratic rule have been in every instance less than they were in the preceding Republican year, and the balance of trade favorable to the United States has been correspondingly smaller.

It is only necessary to call attention to the tremendous increases that have taken place in the exports of certain classes of articles included in group 2 and used very extensively by the armies in Europe to demonstrate the fact that these tremendous increases are due to the war alone and the necessity of appropriate legislation to meet the situation that will result when the quantity of these exports again becomes normal.

For example, the exports of aeroplanes and aeroplane parts, motorcycles, automobiles and automobile parts, and automobile tires increased from $3,943,222 in 1913 to $150,066,444 in 1916. The exports of this class of articles in 1913 represented 1.4 per cent of the total exports for that year and in 1916 represented 3.7 per cent of the total exports for that year.

Exports of brass and articles made from brass in 1913 amounted to $6,396,831 and in 1916 to $123,355,188. In 1913 these exports were twenty-six one-hundredths of 1 per cent of the total exports for that year, and in 1916 they were 3 per cent of the total exports for that year.

The exports of horses and mules increased from $4,693,897 in 1913 to $100,931,558 in 1916. In 1913 they were nineteen one-hundredths of 1 per cent of the total exports, and in 1916 they were 2.5 per cent of the total exports.

In 1913 the exports of barley, corn, oats, rice, rye and rye flour, wheat and wheat flour were $199,118,256 and in 1916 they were $428,471,198. In 1913 these articles constituted 8.2 per cent of the exports for that year; in 1916 they constituted 16.6 per cent of the exports for that year.

The exports of leather, boots and shoes, harnesses, and saddlery were $28,414,836 in 1913 and $88,387,158 in 1916. In 1913 they constituted 1 per cent of the total exports, and in 1916 they were 2.2 per cent of the total exports.

Fresh and canned beef, bacon, hams, and shoulders were exported to the amount of $49,048,698 in 1913 and $151,647,318 in 1916. In 1913 they represented 2 per cent of the total exports for that year; in 1916, 3.7 per cent of the total exports for that year.

In 1913 the exports of explosives amounted to $3,850,806; in 1916 they amounted to $399,852,192. In 1913 they represented eleven one-hundredths of 1 per cent of the total exports for that

year; in 1916 they represented 9.9 per cent of the total exports for that year.

The significance of these figures is not alone in the fact that the exports of these materials used by the armies of Europe have so tremendously increased, but lies particularly in the fact that while they have increased they represent a percentage of the total exports from two to one hundred times greater in 1916 than they did in 1913.

A falling off in these exports is inevitable at the end of the war, and an increase of the imports is just as inevitable. Our Democratic friends, however, refuse to see this fact or to make any suitable provision to meet it.

Perhaps, in all charity, we ought to give the Democratic administration credit for one prosperous year out of four. I confess that one prosperous year out of four is a fairly good average for the Democratic Party. As Republicans, however, we should be ashamed of our record if it were no better than that.

Every thinking man who has studied the business of the country during the past three years, as it is evidenced by the export business of the country, concluding, as he must, that such prosperity as now exists is due solely and wholly to the unexampled commercial conditions due to the war, and remembering that this extraordinary demand will soon be cut off, and looking forward to the commercial contest with a regenerated and newly energized Europe, must be appalled at our failure to make adequate preparation for the conditions which will then exist.

The Democratic Party has ever confined its efforts to an attempt to "lock the stable door after the horse has been stolen." Its policy has been one of "sufficient unto the day is the evil thereof," and its efforts have been limited to an abortive attempt to correct these evils. It has no vision, and having no vision makes no provision for the future. It has done practically nothing to meet the conditions which may be upon us ere we are aware. It has made no effort to protect our industries and our agriculture against the flood of European importations which is certain to come as a result of the efforts of the European countries to give employment to millions of men who are now under arms.

It has done nothing to foster and develop our business in Central and South America, and it is a conspicuous fact in this respect that our exports to these countries have not appreciably increased during these two years in which foreign competition has been very materially decreased.

We have spent millions of dollars to prepare the country against an attack by armed force, but nothing has been done to defend the country against the commercial attacks which are certain to come at the conclusion of the war.

## Who Owns Mexico?

## EXTENSION OF REMARKS

OF

## HON. PAT HARRISON,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 11, 1916.*

Mr. HARRISON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an article that appeared in La Follette's Magazine, written by Senator LA FOLLETTE, the title of which is "Who owns Mexico?"

The article is as follows:

WHO OWNS MEXICO?

The plain citizen has no determining voice on the issue of war or peace.

For more than 50 years money has been powerful enough to force war upon any country at any time. The student of world politics will find that practically all modern wars have been dictated by great financial interests.

As long as capital finds its best field for profit in its own country, the peace of that country is reasonably secure. But whenever the financial interests have acquired such a control of the national resources of their own country and such mastery over the industrial and commercial affairs of their own people that they can exact profits at will, such interests seek new fields for their surplus capital.

This excess capital which has been ground out of an exploited country and its people, if retained at home, would reduce interest, and farmers, merchants, and small business enterprises could borrow upon reasonable rates.

But the masters of finance consider little else besides their own profits.

The people of the United States do not want war with Mexico. The Mexican people do not want war with us. And both President Wilson and Carranza have manifestly done everything in their power to avert war.

What is it, then, that menaces the peace of these neighboring countries?

It dates far back of the Columbus raid. That outrage upon the residents of one of our border towns was the logical outcome of conditions for which the Mexican people were in no wise responsible. Worse than that! The Mexican people were really innocent victims of traitors in our midst. For it is charged upon the highest authority that the raid was inspired and arranged for in our own country!

Do you get the full meaning of that statement? Benedict Arnold was not more guilty of treason.

The secret service of this Government has a long arm and a strong arm. The net may yet be drawn on the "higher up." It is fair to assume that President Wilson did not disclose all of the facts in his possession when he declared officially a few days after the raid that—

> There were persons along the border actively engaged in creating friction between the Government of the United States and the de facto government of Mexico for the purpose of bringing about intervention in the interest of certain owners of Mexican properties.

There you have it! The gentlemen who want war with Mexico are the gentlemen who "have Mexican properties."

They are a very powerful lot. They own most of the United States and a good big slice of Mexico. They are our captains of industry, our masters of finance. They own or control our great newspapers. They are for a "strong Mexican policy," a "strong foreign policy," a big Army, a big Navy.

They prate about "patriotism." They clamor for "preparedness." They have tried to plunge the country into a hysteria of fear that we are going to be thrown into war with Germany or England or Japan.

These privileged interests are not taxing the people of the United States for their great Army and Navy scheme to fight Germany, England, or Japan. They have other plans for the present. They have the irons on the American people. They control the prices of labor and the products of labor. They control the cost of every necessary of life. They own the coal, the oil, the timber, the water powers. Their profits are so enormous that they must lower interest rates or else invest in foreign countries. The timber, oil, coal, and mineral wealth of Mexico and of the Central and South American countries are most inviting in every way. The Governments are poor; the labor is cheap as slave labor.

There is just one risk, and that is a large risk. The Governments are most of them weak. Revolutions in many of them are frequent; property rights are insecure.

But a scheme has been worked out by the masters of finance to make foreign investments as good as a Government bond. Just put the Stars and Stripes back of them!

There was a time when the slogan of munition makers was, "Trade follows the flag." That put the commercial interests behind the Navy. But, "New needs, new deeds," that slogan has been completely reversed. The cry now is, "The flag follows the investment."

We will protect our citizens abroad. Assuredly! That is, our bounden duty, if we are to uphold the standing and dignity of our Government among the other nations of the world—strong or weak. But if the protection of "citizens" were our only concern there would be no "border raids," no "mobilization," no "war talk." There would be no occasion for the clouds that darken so many American homes to-day. "Investments," in these plutocratic times, are vastly more important than "citizens."

These American "investors" in Mexico—millionaires—are using every instrument they can control—their money, their newspapers, their magazines, their political influence, all their "dark and devious ways"—to bring about "intervention." Intervention means war. War means blood and killing and bereaved families and unmentionable horrors. And all for what? Profits! Privilege profits!

Privilege exploits us folks here in our own United States. And privilege makes so much money out of us that it creates a huge surplus. Privilege, never satiated, wants this surplus to be at work bringing in still more profits. Weak and undeveloped (and unexploited) countries offer the biggest returns. So privilege buys a foreign "concession." Cheap! The system looks to that bargain. But to maintain the great profits it is ordinarily necessary to resort to "strong-arm" methods. Sometimes people, like the workers in the mining district of Colorado, Michigan, and West Virginia, resist oppression and exploitation. Machine guns become the order of the day. And after all our present "Mexican situation" is only a "Ludlow" on a bigger scale. Privilege is to-day trying to shape public sentiment so that "our boys" shall be made to march down into Mexico and offer up their lives for the purpose of placing the guarantee of the United States Government behind those gold mines and other concessions and to make the profits of privilege secure.

Who owns Mexico? Really owns it?

Let us glance at a few figures. Dollars, they are—millions and millons of them. And they tell the story. What follows shows the wealth of Mexico, according to nationality of ownership. It is taken from the United States Consular Report No. 168 issued July 18, 1912, by Consul Marion Letcher, of Chihauhau. This table was prepared by William H. Seamon, late of Chihauhau, who, according to the statement of this Consular Report, "has had long experience in Mexico as a mining engineer":

NATIONALITY.

| | Amount of Investment. |
|---|---|
| American | $1,057,770,000 |
| English | 321,302,800 |
| French | 143,446,000 |
| Mexican | 793,187,242 |
| Other nations | 118,535,380 |

Hold fast to these figures. Whatever may be urged upon you in these trying times by way of justifying "intervention," keep in mind this big, outstanding fact:

American financiers have more money invested in Mexico then the Mexicans themselves have—$264,582,758 more.

American investments are biggest of all in that unhappy, system-ridden country.

This American money is found in railroad stocks and bonds, mines, national bonds, ranches, smelters, timber lands, factories, oil, rubber, insurance, and other enterprises.

Let us glance at a few more figures from the same authority:

Railway stocks: Mexican money invested, $125,440,000; American money invested, $235,464,000.

Railway bonds: Mexican money invested, $12,275,000; American money invested, $408,926,000.

Mines: Mexican money invested, $7,500,000; American money invested, $223,000,000.

National bonds: Mexican money invested, $21,000,000; American money invested, $52,000,000.

Smelters: Mexican money invested, $7,200,000; American money invested, $26,500,000.

Timber lands: Mexican money invested, $5,000,000; American money invested, $8,100,000.

Factories (miscellaneous): Mexican money invested, $3,270,200; American money invested, $9,600,000.

Oil: Mexican money invested, $650,000; American money invested, $15,000,000.

Rubber: Mexican money invested, $4,500,000; American money invested, $15,000,000.

Insurance: Mexican money invested, $2,000,000; American money invested, $4,000,000.

In the ownership of Mexico we find the real menace to the peace between Mexico and the United States. American capitalists are desperately attempting to have the flag follow their investments.

They who own Mexico are the ones who want war.

Shall these powerful interests be permitted to succeed in their plot?

ROBERT M. LA FOLLETTE.

---

**Speech of Hon. Joseph G. Cannon at Greensboro, N. C., July 29, 1916.**

---

## EXTENSION OF REMARKS

OF

# HON. JAMES J. BRITT,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 11, 1916.*

Mr. BRITT. Mr. Speaker, under the leave granted me to print, I desire to insert a very able speech delivered by the Hon. JOSEPH G. CANNON in the opera house at Greensboro, N. C., on the evening of the 29th of July last, the place of delivery being near the birthplace of the distinguished ex-Speaker of the House.

The speech is as follows:

SPEECH OF HON. JOSEPH G. CANNON.

Mr. CANNON. Mr. Chairman, all my life, if I have attained anything, it has been along the line of keeping step with the boys who stood for correct policies for the great Republic; not falling out with them, but keeping step with them when they were right, and thinking twice before parting with them if I thought they were not right. The result has been that while as a Representative I have disagreed sometimes about minor matters, yet I have been one of the many millions that stood for the economic policies, the patriotic policies, and the financial policies of the American people under the leadership of the Republican Party. [Applause.]

I entered congressional public life in 1873. That was at the beginning of Grant's second administration. I have been there ever since, except when I had two leaves of absence that I did not ask for. [Laughter.] That has been over 40 years. Now, at a ripe old age I am still on terra firma, unshaken in the belief that a majority of the American people are nearly always right. Sometimes we make mistakes. In a government by the people, where all of us are sovereigns, where a majority determines what shall be done, it would be impossible not to make mistakes here and there. But it is all right. When we make mistakes and have suffered in the school of experience, if we have the patriotism and the judgment to suffer until we can reverse the engine, then it is all right. And there never has been a time in the history of the Republic when we could not throw a monkey wrench into the machinery either in the House, Senate, or White House and stop the machine in two years and reverse it in four years. [Applause.] The four years will be up on the 4th day of next March. [Applause and laughter.] We will vote in November. In the meantime we

are not going into revolution. We are not going to assassinate our President. We are not going to repudiate our form of government, but we will grit our teeth and grin and bear it and wait, observing the law, and when November comes we will vote.

I am an optimist. Ever since I reached the age of responsibility I have believed in the fatherhood of God and the brotherhood of man, and have tried to contribute my mite along proper lines.

But you say, "Well, Mr. CANNON, do you mean to say that everybody is equal?" Yes; politically equal. I mean that everybody in the United States of America, whether he be simple-minded, whether he be insane, whether he be a mediocre, or whether he be an exceptional man, every American citizen is entitled under the law and the Constitution to protection of life and liberty and protection in property. [Applause.] I do not mean that every man is equal intellectually or equal in efficiency. In Illinois a man waits until he is 21 years old before he can vote. We might say that he could vote at 18 or at 16. The State fixes the qualifications of the voter, and all the States do not fix them alike, either.

In the State of Pennsylvania you have got to pay a poll tax before you can vote. In the State of Massachusetts you have got to be able to read and write before you can vote, and so in Connecticut. In the State of Indiana you can vote when you are 21 years old, and they are very liberal there, and let a foreigner vote after he has been in the State a year if he has taken out his first papers and declared his intention to become a citizen at the end of five years. The States fix the qualifications of the voter, but under the Constitution of the United States every citizen, every man, every woman, every child, every naturalized citizen, whether he be Irish or English or German, or no matter what his nativity, and every native-born citizen, whether he be black or white, is entitled to liberty and protection under the law. [Applause.] You stand for it, and that is what we stand for in Illinois. You regulate your local affairs as we regulate ours in Illinois. I have lived 80 years. I have lived through two generations. Oh, what marvelous things have happened since the year 1840. Out here at New Garden there were 20 families that loaded their small amount of chattels into wagons and hitched up the horses and passed through this city and started for the Wabash in Indiana. Oh, I recollect very well. I was 4 years old. I am going to tell you a little story. I am not going to talk much politics. I am going to wander along here. When we came to Greensboro a member of our family went into a store, which may have stood right where this opera house stands. I went with her, and she inquired for something that when you rubbed it on a piece of sandpaper there was a light; and she told me afterwards that she paid 25 cents for that box of matches. It was a little tin box, and when they could not borrow fire on that journey of 1,200 miles to the westward there was that little box of matches to fall back on, and she told me that when they got out there on the Wabash there were two matches left. Now you can buy a dozen boxes of safety matches for 5 cents. Well, so much for that.

After that I learned that my father was a Whig. I recollect the log cabins, and where the procession of people would move along and hurrah for Tippecanoe and Tyler, too. You know that boys, when they are quite young, very readily learn the wicked things. I recollect a song they sung as we moved along:

> Maine, Maine, oh, have you heard from Maine?
> How she went, hell bent, for Governor Kent,
> For Tippecanoe and Tyler, too,
> Hurrah, hurrah!

[Laughter.]

Mr. Chairman, that was the year when your Grandfather Morehead was elected governor of North Carolina. He was a Whig and lived in this goodly city. [Applause.] William Henry Harrison was chosen President in that year, 1840. And from 1836 down to 1860, whenever you in the State of North Carolina had to pass upon the proper economic policies for the great Republic, after full discussion, you declared for the policies of the Whig Party. [Applause.] We got into trouble, you know, and there was that great contest that made men change their politics, so that men whose judgment said "In God's chancellery we ought to travel on this road," found that their interest said, "No; we will travel here." You did not have a monopoly of that down South. We divided the responsibility with you up North. The evil days came. Great men like Webster and Calhoun disagreed. Why, Webster from Massachusetts was a free trader after he began public life in the Congress of the United States, and Calhoun, South Carolina's favorite son, was a protectionist. The chief interest of Massachusetts was the sea. The chief interest of South Carolina was servile labor and cotton. In the fullness of time Massachusetts was driven from the sea and took to manufactures. Then Webster became a protectionist, and just at that same time Calhoun became a free trader. They changed positions. It was the material standpoint that changed, and they changed with it. Whatever brings the greatest good to the greatest number controls the politics of the leaders and controls the politics of the followers in this country.

Again, in 1844, the gallant Harry of the West, born in Virginia, owner of slaves in Kentucky, the advocate of "the American system," the great leader for protection, came down here and made a speech at Raleigh. Do you want to know what Clay then said? Here it is in substance:

> Free trade between equals might work, but not between cheap labor and well-paid labor.

That was true then, and it is true now. When he said that, we had 17,000,000 people in the United States. We have 100,000,000 people now. We had a country yet to develop, substantially. We had just at about that time settled the forty-ninth parallel for the northern boundary, and Oregon was ours, but California was not yet ours, because the Mexican War had not been fought, and we had not obtained that great stretch of territory reaching substantially from the Mississippi River across to the Golden Gate. All those things have happened since that time. What Clay said so clearly was true then, and it is true now.

Do you down here in North Carolina know that a Government by the people is not a cheap Government? In the United States the people are sovereigns. The sovereign may be ever so patriotic, but unless he is wise and informed, he is not a safe sovereign. Therefore, as the life of a generation is less than 40 years, all the while the on-coming sovereign must be taught, must be educated. There is education and education. Some is gotten on the farm, some in the factory, some is gotten in the school of experience, some is gotten in the schoolroom, but the on-coming sovereign has got to be educated. It is not a cheap Government. Do you know that the United States of America spent last year for education $600,000,000 in the common schools alone and 18,000,000 children of school age were enrolled? Why do we spend all that money? In order that we may remain competent for self-government. These be great burdens.

I call your attention to that, as one item, to show that the American people can not live on Japanese wages and this country remain a Republic. [Applause.] And you know that we have more comforts and conveniences than any other people on earth. We have more railways and telegraphs and telephones. We have more appliances and conveniences of life on farm and in factory. We can not have these things and we can not bear the burdens that we have to bear on the wages of Great Britain. Their wages average two-thirds of what ours do. You can not live in competition with Germany and France when their wages for production are only one-half of what our wages are. Let me read again what Mr. Clay said:

> Free trade between equals might work, but not between cheap labor and well-paid labor.

I might talk all night, and I do not think I could make that any plainer. You may play upon the prejudices of men. You may deceive a part of them a part of the time, but you can not deceive all of them all of the time. [Applause.] And do you know the proof of the pudding is in the eating of it? To buy in the cheapest market and sell in the dearest market was the old cry of our Democratic friends—a sweet song to the uneducated ear. Why, do you know that since my father moved out of Guilford County into Indiana I have lived to see the population of the United States increase from 17,000,000 of people to over 100,000,000 of people. I have lived to see the tide of immigration go West. I have lived to see that great Northwest country, which was not then admitted to the Union, organized into States. I have lived to see the great struggle, that had to come, that resulted in the abolishment of servile labor. Thank God, it was abolished. Oh, of course, it was precipitated by servile labor or those who controlled it. The Grahams and the Vances and the Mangums and the Moreheads and the Alexanders begged that you would not secede, but a majority thought otherwise; and with Virginia on one side and South Carolina and Tennessee surrounding you, you did secede. And how the sons of the Old North State did fight! You always fight, you know. Generally you are right; but you fight anyway. [Applause.]

Well, it came in the fullness of time. There is not a man or woman within the sound of my voice, I doubt if you can find one in the county of Guilford, I doubt if you can find one in the State of North Carolina, who would not say, "Oh, God, I thank Thee that servile labor does not exist in the United States." On account of the negro? Well, yes; it was good for the negro in the long run that he should no longer be a slave. But let me tell you, there were more white men in North Carolina who did not own negroes, and their freedom from the competition of servile labor was of much more importance than the freedom of the servile labor. [Applause.] If it had not been for

that feeling north of Mason and Dixon's line things might have been different. But, you see, on the north side of the Ohio River there was free labor and sovereign labor, and just on the south side of the Ohio River the same kind of work was performed by slaves. Do you not see, it degraded the white man. Lincoln understood that, and under his leadership that is what gave success. And thank God for it. If I had my way about it, I would about once a year assemble the people at all the churches and thank God that all our people are free, especially the white people. [Applause.]

I did not intend to say all that. I told you I would wander around. I want now to talk to you for a little while about what is to happen in November. Let me say that I did not come to North Carolina to abuse any individual, and as I grow older I do not go anywhere to abuse any individual, especially a person who is in office or who wants to be in office. Abuse does not catch any flies. Great God, every candidate for office in North Carolina might be stricken by the angel of death this minute, everyone in this great audience to whom I am now talking might be stricken by the angel of death, and the balance of the people in North Carolina would be sorry and would give them decent burial, and then, to be practical, they would fill up the ticket and march on in the contest.

Less than 40 years is the life of a generation. How many of us stop to think what has become of the men who 40 years ago were talking to the audiences of that day as I am talking to you to-night! Dead, crossed over, and I have no doubt that God in His providence is doing the best that He can for them, as He will do for us when we cross over. Forty years from now we will have crossed over, and the boy not yet born, the son of the woman now with child, will be carrying on the affairs of this Government. But that is looking a little bit into the future. What may happen to us who will then have crossed over, I do not know and you do not know. Some of us may be wearing asbestos halos and some of us muslin. [Laughter.] But, coming right down to the present, I know a number of you people in Guilford County, some of whom are in public life. I know the Commissioner of Internal Revenue, Mr. Osborn, one of your most respected citizens. There are no flies on that commissioner. He is a very able man. He is in now, and I think is conducting his office very well. Sometimes I wish he had a little more power to influence legislation and administration than he has, but he is doing the best he can. I am glad to call him my friend.

Then, there is your present Representative in Congress, Maj. STEDMAN, a dignified gentleman, a Democrat, it is true, but I have no doubt an honest man. I have no stone to throw at him. And I might go through your whole delegation. There is the chairman of the Judiciary Committee in the House of Representatives, Mr. WEBB, who represents the Mecklenburg district, a very able man. Mr. KITCHIN, the Democratic leader of the House, is my personal friend and I would trust him in many things, but not to represent me in Congress and make a revenue law, for on that question he is to me a heretic.

*Do you elect men to Congress, do you elect men to the Presidency, do you elect men to the State legislature because they are tall or short, because they are handsome or homely, or because it is well enough to give them the salaries? Nay, nay! Under our organized government you send men to legislate for you, because you can not all get together and call the roll and legislate for yourselves. Because you can not do that, you must act through the ballot box. So, understand me, while I have no stones to throw at the personality of individuals, yet upon the question of the proper economic policy, if the best friend I had on earth stood for a different policy from what my judgment and experience tell me to be the correct policy, whether he be great or small, tall or short, whether he needed the salary or not, he could not have my vote to sit in the American Congress or in the State legislature unless he stood for the policies that my experience and judgment tell me are for the best interests of the citizens of this great Republic.* [Applause.]

The wealth of North Carolina has been multiplied by five since 1860 and more than doubled in the last 10 years. The total wealth of the people in North Carolina in 1912 was $1,807,000,000, and this great wealth was not developed by the economic policy supported by the Democratic Senators and Representatives from this State. They have steadily voted for a tariff for revenue only, and declared that a tariff for protection is unconstitutional; but your industries here have been built up by that protective policy, and all the people of the State prospered under that policy while it was maintained by a Republican Congress and administration.

Your cotton manufacturing industry is only about 20 years old, and your furniture industry younger; but North Carolina is the second State in the Union in the value of its cotton manufactures, only Massachusetts excelling; and in furniture, I am informed, you rival Michigan. The product of your factories in North Carolina in 1880 was valued at $20,000,000 and in 1912 at $260,000,000, or thirteen times as great. The product of your farms increased from $52,000,000 in 1880 to $190,000,000 in 1912, and the greatest increase was in your cotton crop, which was valued at $18,000,000 in 1899 and $50,000,000 in 1909, or nearly trebled in 10 years.

Who has furnished a market for your cotton in the last two years? Not England nor even New England. The New Orleans Cotton Exchange reports that the southern cotton mills consumed more than 4,000,000 bales of cotton in the last fiscal year, or an amount approximately the same as do the English cotton mills in an ordinary year. England has been the greatest manufacturer of cotton in the world, *and last year the cotton mills in the South, established and developed under the Republican policy of protection*, consumed as much raw cotton as did the mills of England in time of peace. The southern mills consumed one-third of the cotton crop of this country, and another third was consumed by the mills of New England.

With two-thirds of the crop consumed in this country, the price of cotton was fixed at home by the demands of our own domestic mills. *Under the Democratic free-trade policy there would have been no cotton mills built here to consume one-third of the crop in the last year and make the cotton growers practically independent of the European demand.* Why, you consumed more cotton last year in your southern mills than the whole South produced in 1876 or in any one year prior to that, when cotton was your chief mainstay in the South.

You people of North Carolina and other parts of the South have profited by this policy of protection, and, in my judgment, you are now more dependent upon it than are the industries of my State of Illinois; but in politics you have done little or nothing to support that policy. You have elected to Congress Senators and Representatives who have been compelled by party caucus to vote against your economic interest. Your senior Senator [Mr. SIMMONS] resisted the reduction of the tariff on lumber from $2 to $1 per thousand when the Republican Payne-Aldrich bill was under consideration in 1909, and he made one of the best protective speeches I ever heard on that occasion; but, as chairman of the Finance Committee of the Senate in the Democratic Sixty-third Congress, Senator SIMMONS reported to the Senate and passed a bill which cut off all protection to North Carolina in the lumber industry. In a Republican Congress he stood up and defended the industries of North Carolina with his voice, if not by his vote, but in a Democratic Congress he was compelled by caucus rule to sacrifice the industries of his State because the Democratic Party had declared in the Baltimore platform that protection is unconstitutional.

Senator SIMMONS and his colleague, Senator OVERMAN, and all your Democratic Representatives from North Carolina voted for the Democratic policy, regardless of the needs of the industries in their own State. I have no stones to throw at your Senators and Representatives from the mere personal standpoint, but it must be patent to you that they do not represent many of you on this great economic policy as to what protection shall be given by the tariff to your industries. They are still voting as Calhoun voted before the Civil War, when he believed that the products of servile labor in raising cotton could best be exchanged for manufactured products in England. But you have changed conditions here, and you were able to make the change under the Republican policy of protection.

How many cotton mills were established here under the operations of the Wilson-Gorman tariff law of 1894? I do not know, but I would guess that the increase was not very great. Your development in manufacturing cotton and in other manufacturing was under the Republican Dingley law, enacted in 1897, and the Republican Payne-Aldrich law, which succeeded it in 1909. The Democratic Underwood tariff law, enacted in October, 1913, did not boost your cotton in the first nine months of its operation, because under that law the cotton mills of England and Germany were able to compete with the cotton mills of this country, and importations of cotton goods from England and Germany increased at the rate of a million dollars a month; but since August 1, 1914, all Europe has been engaged in a great war, and that has been your protection. Germany has not been able to send any manufactures to this country, and England has needed her production at home, while Russia has been compelled to buy cotton goods here.

A foreign war is not a very safe defense for the industries of North Carolina to rely upon. All wars must end, and this war, which is costing billions of money, is rapidly exhausting the resources of the contestants. When it ends, and millions of soldiers return to the mills and factories of England, France, Germany, and Austria, with Belgium's factories again engaged

in the production of the commodities of peace, the old competition with the world in the production of cotton goods and other products will resume, and the Underwood schedules will not protect these cotton mills in Greensboro, or give the operatives of these mills any assurance of continuing the present wages, because there will be cheaper labor in the cotton mills across the Atlantic.

If I could take a vote here on the single question of the tariff on cotton goods and lumber products I believe that that vote would be overwhelmingly in support of a tariff for protection. I have no doubt that when the next Republican Congress meets, and the Ways and Means Committee begins the preparation of a protective tariff bill, there will be petitions from every cotton-mill town and every place where furniture is manufactured in North Carolina for an increase in the tariff on your products. Then why should you send such petitions by Representatives who will vote against granting your petitions? North Carolina industries can not always look to New England and the North to sustain a protective policy without helping to maintain it.

The Congress is now Democratic; I believe it will be Republican after the November elections. But we in Illinois and the West have a right to look to North Carolina to help make this change in Congress to change the tariff laws for the benefit of North Carolina and the whole country. If you who believe in protection and realize the need of protection to your industries, continue to vote for Representatives who will vote in Congress against any change in the Underwood law, the Republicans of the North will have a right to say that you do not desire the consideration you will demand.

This is a representative Government, and the way to send your petitions to Congress is by Senators and Representatives who will vote as you petition. In the old days North Carolina believed in instruction to her Senators by the legislature, and some of your Senators were recalled in that way. Your protection is in your own hands, and if you send your petitions for the protection of the cotton mills of Greensboro and your other industries by Mr. Grissom here, then, as your representative, his vote as well as his voice will represent your will.

Why do I say that the Democratic Party will not help you? Because it has for many years declared that a tariff for protection is unconstitutional and robbery. President Wilson called an extra session of Congress within 30 days after his inauguration to revise the tariff, and in his message to that Congress he declared that "the object of tariff duties henceforth must be effective competition with the world," that American manufacturers and wage earners must whet their wits against the wits of the world. You, here in Greensboro, must compete with the cotton manufacturers of Manchester, England, and with those of Germany. *The President might have substituted the word "wages" for "wits," because that is where the competition will fall, and unless you are willing to accept the same wages as the cotton-mill operatives of England and Germany, your competition will fail.*

The Underwood law cut the duties on cotton cloth in half, and made lumber free of all duty. President Wilson, when he signed that bill, made quite a jollification of the ceremony and declared that it gave him great pleasure to sign the bill, as it accomplished something that he had had in mind since he was a boy. So, you see, President Wilson has not changed. He holds to the old Democratic free-trade theory which, had it continued in force here, would never have built these splendid cotton mills, furniture factories, and other industries with $125,000,000 capital, which pay $41,000,000 a year in salaries and wages to those who work in these factories and produced more than $200,000,000 worth of products.

Notwithstanding the war in Europe, the importations last year were the largest in the history of this Government, amounting in value to $2,198,000,000, and two-thirds of these importations came in free of duty. Had the tariff rates of the Payne law remained in force, we should have had $150,000,000 more customs revenue than we had last year. In the three years since the Underwood law was passed, it is estimated that we have lost more than $300,000,000 in customs revenues, or enough to have paid for the proposed preparedness program, without the extra taxation this Congress is expected to assess upon the people. The Democratic Party, under the leadership of President Wilson, has reduced the revenues paid at the customhouses in these three years $300,000,000, and without reducing the cost of living to you people in Greensboro or to the people in Danville, Ill.

The realization of President Wilson's boyhood dream has been costly to the Government without any compensation to the people. They have been taxed instead of protected.

The great war in Europe has taken the place of a protective tariff, and has been substantially your only protection and the cause for your prosperity by cutting off European competition. But you have already been told that if that great struggle in Europe should end to-morrow and the great factories of Europe should begin their production again, with keener necessity and sharper competition than ever before—because they must work and they must find markets to make up for the losses which they have sustained—there would not be another day's work in the cotton mills of Greensboro at your present wages or anything like them; and when that day comes you, like all the other manufacturers of America, must have protection against that overwhelming tide of competition.

That is why I believe that the best industrial preparedness against depressed markets, slack work and wages is a protective tariff, and that is why I say if you want protection to your greatest industry you should elect to Congress your Republican candidate, Mr. Grissom, who is pledged to that policy as is the Republican Party. [Prolonged applause.]

Now, who is the Democratic candidate for the Presidency? Why, you know, the former president of Princeton is a candidate for reelection. He has written a history of the American people, some six volumes; he has preached sermons; he has written essays; he has been a prolific writer. If he wanted to be a successful candidate, now that we have read his histories, it seems to me that he would have done better if he had bought them all up and burned them, because you may take what he wrote and the conclusions which he announced, and they do not tally with what he does. Why, he said that Bryan ought to be knocked into a cocked hat; yet he made him Secretary of State. I think he found out his mistake. At least one of them did, because Bryan and Wilson parted company. Let them quarrel it out between them. [Applause and laughter.]

He indorsed the platform upon which he was nominated, which declared in favor of a single presidential term of four years. There is the platform. He pledged himself to that, not only when he accepted the nomination but he went out of his way to make speech after speech declaring that he indorsed that plank in the platform which said that American shipping, sailing under the American flag, with American cargoes, in the coastwise trade of the United States, should go through your Panama Canal and mine without payment of tolls, and that was a great feather in his cap. Yet what did he do? He led in the repeal of that act, not only by word of mouth, not only by line upon line and precept upon precept, but he exerted that extraordinary power that he has so often exerted since then, to make it "my policy," the policy of the President, and thereby violated his party's platform in that particular. Talk about czars! Great heaven! Why, they did me the honor when I was the humble Speaker of the House of Representatives to say that I was a czar, when a majority of the House any hour of any day under the Constitution could have removed me. They put it in their platform in 1908 that I, poor me, had destroyed the Republic, you know, and they wanted the Republican Party turned out to get rid of that wicked old czar. [Laughter.] There were some places over in Missouri where, when a naughty child would cry, its mother would get the Democratic platform and say, "Be still, or that wicked old Czar Speaker, will git ye if ye don't look out." [Laughter.] I had not much power then. I could not have done anything, except as a majority supported and directed. They could have removed me by a majority vote any day. They tried it on the motion of Representative Burleson, who is now Postmaster General. His colleagues swarmed about him and said, "Oh, my God, withdraw that; withdraw that." I saw what they were up to, and I wanted a test vote on Burleson's motion, and I put the question in a holy minute, "As many as are in favor say 'aye,' those opposed 'no'; the Chair is in doubt." He could not withdraw it after the question was put. Burleson's resolution was defeated by a larger majority than I received when I was elected Speaker. [Applause and laughter.] So there you are. But now they have a real czar in the White House.

Ladies and gentlemen, I wish it were possible that you could be in Washington, and that you could have your ears to telephones connected with the Democratic cloakrooms; and in one day after the President has published in the papers that he is going to have this, that, or the other bill passed, and has sent down to Congress his orders, you could hear more profanity than you ever dreamed of before. Why, the air is blue with profanity; and that order from the White House means to your Representatives from North Carolina, "Come under the rod. There is no fodder for you if you don't." [Laughter.] Now, if this was not so serious we might laugh about it. But where has it brought us?

Pause with me a moment. Ten days before Woodrow Wilson was inaugurated President Madero of Mexico had been assassinated. The great nations of the world recognized Gen. Huerta

as the head of the Mexican Government. It was only 10 days until the end of President Taft's term. I talked with him about it, and he said:

Well, the new administration is coming in, and I am not fully advised. I think I will let the new administration deal with that question.

Huerta was not acknowledged by our Government, but our diplomatic representatives and those of the civilized world were being protected by Huerta. The President sent the Hon. John Lind to Mexico as his agent to say in substance to Huerta: "You damned old usurper, you are an assassin. Get out! I am going to have the people in Mexico elect a constitutional President by a fair vote of the people. You get out, and they may elect anybody except you." In the meantime Huerta was to protect the representatives of the United States. No; the President did not say "damned"; I said that to save time. [Laughter.]

Huerta did not get out. Then the President of the United States went into copartnership with Villa and Carranza and all the other bandits who were opposing Huerta. Then he lifted the embargo that Taft had imposed and let those robbers and bandits get arms and munitions of war from the United States; then he sent the fleet down to Vera Cruz and closed that port to the ships of the world to prevent them from carrying munitions of war to Huerta, who had already been recognized by the other great nations of the world as the responsible head of the Government in Mexico; and still President Wilson insisted that we were not engaged in war with Mexico. Then, with that copartnership between Villa, Carranza, and President Wilson, it took 12 months plus to put that hardy, red-blooded old bandit Huerta out of Mexico. What did they do when he got out? Why, then President Wilson dissolved the partnership and broke it up. Villa wanted to be first; Carranza wanted to be first; Zapata wanted to be first. They could not all be first. And the copartnership was dissolved, and we have had hell, not on the Wabash, but in Mexico and along the border, from that day to this.

From one of the ships in the harbor of Tampico some of the marines went on shore in the performance of duty. They were arrested and held for a short time by the police of that city. Nobody was killed, nobody was hurt. Finally they got back on the ship, and there came the demand that this usurper, Huerta, whom our Government would not acknowledge, should salute our flag. The authorities at Tampico proceeded to apologize at once, and Huerta, who was over in Mexico City, said, "Well, I will do the best I can. I have apologized, but if that will not do, if you, Mr. President of the United States, will salute my flag, I will salute yours." Our Navy took Vera Cruz and held it for months. A lot of our boys got killed. But the American flag has never been saluted. In the Democratic platform is that ringing plank which said in substance that the American citizen wherever he may be upon God's footstool of this earth shall be protected in life and in property against all the world. Read that platform if you do not think it is so. That is good Democratic doctrine. There is no organized government on earth, whether it be a monarchy or whether it be a republic, that is worth three whoops in the place that burns with fire and brimstone that will fail to protect you and me if we are citizens of that country, whether we go to Mexico or to Cuba or to South America, or wherever we may go. And that has been done heretofore. But we had 20,000 or 30,000 Americans who had gone over into Mexico. American capital had builded the Mexican Central Railroad from El Paso down to the City of Mexico. English capital had built a railroad from Vera Cruz up to the City of Mexico. French capital had built a railroad into that country. Great things were being done toward its development. British capital had gone over there and American capital had gone over there and had built cotton factories and mills. They had invested money. They had acquired silver mines and copper mines and gold mines, especially silver and copper. There were over 30,000 of your citizens and my fellow citizens in that country. When the struggle came on over there, when the bandits, Villa and Carranza and Zapata, and a hundred lesser leaders, were attacking the property of our citizens, and they appealed to the United States for protection, that silver-tongued orator, who has so many hundreds of times delivered his lecture, "The prince of peace," that man, after Woodrow Wilson had made him Secretary of State, the head of the great department whose duty it is to protect the citizens of the United States in whatsoever country they may be, that man said to those 30,000 Americans, "You went down there at your own risk. You had no business to go there. You had better get out at your own risk," and a proclamation was issued calling them out. Was that keeping the platform?

Think of the American citizens, think of the women and children, who have been compelled to endure insult and persecution and outrage, killing, marauding, destroying in that country, where 15,000,000 people are living in a state of anarchy. When you go home to-night, my Democratic friends, turn back to the newspapers of three weeks ago and read the letter of Secretary Lansing, sent by authority of our President to Carranza, demanding an immediate answer, and setting forth that long list of outrages and killings. That was after the killing of our soldiers at Carrizal. Carranza's folks did the killing, or else Villa's. I do not make much distinction between them, but it is said that it was Carranza's people who did the killing. "Oh, well," Carranza said, "your United States soldiers had no business to invade Mexico." But they had gone over there, by the direction of Woodrow Wilson, after our soldiers and citizens were killed at Columbus, N. Mex., by Mexican bandits invading the United States. Pershing is still over there, and 100,000 members of the National Guard are now down upon that border of 1,800 miles. They are not fully trained soldiers. They are down there under pay. They are having trouble. They are being trained down there in that hot climate. They went down there supposing they were going to fight for the flag; that they were going to defend American life and American property. They are there on the boundary; and now we are informed by the newspapers, and I have no doubt it is true, that a commission of three or five Americans is to be appointed to meet three or five Mexicans, to be appointed by Carranza, to settle the whole thing. Why, my fellow citizens, if a man had committed murder, had killed your family, had lied to you, had shown that he was an anarchist and bandit, and he should come to you and say, "Look here, I have been doing a lot of killing," would you be likely to say to him, "Won't you be kind enough to appoint five of your friends and I will appoint five of my friends and they can settle the trouble?" Well, suppose they meet and settle. Who will enforce the award?

The other day I made this statement to a good Democratic friend of mine. He shook his head. He could not answer. Said he, "Cannon, I think it is a good enough Morgan to answer until after the election." Some of you older men know what a "good enough Morgan" is. Away back in the earlier days there was a man named Morgan, a member of the order of Masons up in New York, who, they said, had betrayed the secrets of Masonry. He disappeared, and governors were nominated and some of them elected upon that issue—that an American citizen had been assassinated by the members of a secret society. Morgan was never found. No one knew whether he ran away or whether he was killed, but it upset the politics of the country, and I, being older than most of you, can recollect that in campaign after campaign the alleged killing of that man who had revealed the secrets of Masonry was talked about on the stump, and whenever somebody would start a roorback it was "a good enough Morgan until after the election."

Well, the college professor who is now our President is agonizing about gathering up the South American markets, and it is proposed to appropriate $50,000,000 right away to get some Government ships so that we may go to South America, so that the Government may carry your products and mine to those markets. Do you suppose our people are going down there to capture the trade of all those countries when they remember the fate of the thousands of Americans who have gone to Mexico? If there is anything on God's footstool that is more helpless than an American citizen is in Mexico to-day I wish you would tell me what it is. Why, contrast Mexico with Cuba. We made Cuba write into her constitution that if she did not maintain law and order Uncle Sam would do it for her. We have gone over there once and restored law and order, and the Cubans understand that we will go again if necessary. Therefore those people in Cuba who would like to make a revolution there are behaving themselves. Well, the Monroe doctrine applies to Mexico, does it not?

The Monroe doctrine is that no Government of the world shall establish a monarchy on this hemisphere—that is, in North America or South America. They have revolutions every month or two in Haiti and Santo Domingo and Nicaragua. They have had several down in Venezuela; and when England or Germany or any other Government has said, "Why, those people owe our citizens money, and if they do not pay it we will go there and take possession of their customhouses, and, if necessary, will take a part of their territory," what has Uncle Sam said? It is not written in the law, it is not written in any treaty, but Uncle Sam harks back to the Monroe doctrine and says, "Don't you put your footstep there." Well, then, they have replied, "If you will not let us protect our citizens, you protect them." And to-day, by order of President Wilson, the marines are in the island of Haiti and in Santo Domingo and in Nicaragua, armed forces of the United States, and we have taken possession of the customhouses, and we are collecting their revenues, as we collected the revenues at Vera Cruz.

under President Wilson, and those revenues collected at Vera Cruz are now in our Treasury. According to Wilson's notion, he had no more right to collect those revenues there than I have to hold you up in the street. But in those other countries our representatives are collecting their revenues and maintaining law and order. In Haiti they got a coal-black African, one of the revolutionists, and they set him up in business. They protected him with our armed marines, landed from our warships. When they got him in there and guarded him, they acknowledged him as the de facto government, and made a treaty with him. But we have a President who put his hand to the plow in Mexico, and then looked back! How long, O Lord, how long is all this to continue?

Do not let any man say I am abusing the personality of Wilson. I am not. He is my President for the time being. He is entitled to my loyal support while he is President, but when he comes and wants to be President again, I would be false to myself, I would be false to my constituency, I would be false to you unless I told the truth about it. Is it true?

You who have read the papers and kept track of things know that it is true, and if I should stand here all night, I could not tell one-tenth part of what has happened. Well, but was he not a great teacher? Yes; the president of Princeton. Does not he know a good deal? Yes. Let me tell you, the man of affairs who is competent to be the Executive of a great Republic of 100,000,000 people, as a general rule wants to be a broad, all-around man. He needs to have had experience; he needs to have dealt with his fellow citizens face to face. He should not as a general proposition be selected because he has taught a lot of boys and young men, because by doing that he ordinarily becomes one-sided and dictatorial. Great heavens, whether a Democrat or a Republican is elected as Chief Executive, I hope in the future we may be preserved from the necessity of educating him, by the waste of treasure, by the bloodshed of our people, after he becomes President, for that is an expensive education. [Applause.]

In conclusion, oh men of North Carolina, I am proud to speak to you to-night in this county of Guilford, where I was born; in this land of virile people, settled by men of courage; the land that furnished the Stevensons, the McKenzies, the Howards, and all the others who migrated from here to Kentucky and western Tennessee and Indiana and Illinois and Kansas and Iowa and away across the continent; men who are among the foremost of the great citizenry of this country. To-day this Old North State has in the voter the oldest Caucasian American citizenship of any State in the Union. [Applause.] You have had less of immigration. Sometimes I think it might have been better if you had had more, but you have had less. You are Scotch-Irish, you are English. You have been reinforced by some Quakers who escaped from Massachusetts over to Nantucket to save themselves from being hanged, and then came down here. You have been reinforced by a few Germans and Moravians, but you are of the purest type of Caucasian Americanism. If you believe it is best for the hundred million people of this country, then reelect Woodrow Wilson; but God save you from the leadership of demagogues who raise false cries with the intent to revive the issues that grew out of the Civil War, when all those problems have been settled, and when there is good feeling in the Northland, as I believe there is good feeling in the Southland. God save you from the leadership of men who would seek to divert your attention from the discussion of these living, wonderfully important questions, and who would like to stir up the ashes of a generation gone by. When you go to the ballot box, lay your hands upon your hearts, and say God help me to use my judgment to vote not only for my own best interests but for the best interests of the hundred million people of the United States. [Applause.]

## The Rural Route Service.

### SPEECH

OF

### HON. HORACE M. TOWNER,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 18, 1916.*

The House had under consideration the conference report on the bill (H. R. 10484) making appropriations for the service of the Post Office Department and post roads for the fiscal year ending June 30, 1917, and for other purposes.

Mr. TOWNER. Mr. Speaker, the main provisions of the Senate amendment were contained in a bill which I introduced in the House last December.

That bill provided that the rural-mail delivery should be extended to all the rural population of the United States. The Senate amendment contains the same provision.

The bill which I introduced for the first time classified and standardized the Rural Service. It established two classes: (a) Horse-drawn vehicle routes of 24 miles in length; (b) motor-vehicle routes of 50 miles in length. This classification and standardization is adopted in the Senate amendment.

In the House bill it was provided that in the establishment of new routes and the reorganization of existing routes the Postmaster General should approximate such routes to such standards, and that routes should not exceed such standards by more than 20 per cent; that is, that horse-drawn vehicle routes should not be over 28.8 miles in length; and that motor-vehicle routes should not exceed 60 miles. The Senate amendment increases the limit from 20 to 50 per cent; that is, it allows the Postmaster General to establish horse-drawn vehicle routes of 36 miles in length, and motor-vehicle routes 75 miles in length.

I am satisfied that this large measure of discretion is unwise. It has been demonstrated by years of experience that an every-day, all-the-year-around service can not be maintained on earth roads, for which horse-drawn vehicle routes are established, if the length very much exceeds 24 miles. It is also true that such service on hard-surfaced roads, for which the motor service is intended, can not be maintained if the length very much exceeds 50 miles. To allow the Postmaster General at his discretion to increase the length of routes on earth roads to 36 miles is to deprive the patrons where such extension is made of regular service for at least four months of the year. I sincerely regret that the Senate did not adopt my limit of 20 per cent instead of the 50 per cent limit contained in the amendment.

It is true that the Senate amendment directs the Postmaster General to conform to the standards fixed of 24 and 50 miles, and only allows him to increase the standard when necessary to allow more complete service. It is probable the Senate believed the limitations on extensions beyond the standard would be observed in good faith by the Postmaster General. But unless that officer is more willing to follow the direction of Congress in the future than he has been in the past there is great danger that the good intended will not be secured.

In the House bill it was provided that the carriers should be paid $1,200 a year for a standard route of 24 miles and $30 in addition for every mile above said standard. That was not only fair to the carriers, but it was a check on lengthening the routes to the detriment of the service by the Postmaster General. The Senate amendment fixes the salary at $1,200 for a 24-mile route, but it allows no increase in pay to the carrier until the length of the route exceeds 30 miles. That is an unfortunate provision, for it will operate almost as an invitation to an administration willing to sacrifice service to save cost to extend the routes to 30 miles.

It was provided by the House bill introduced by me that no motor routes of 50 miles or over should be established except on hard-surfaced roads. It is apparent and experience has demonstrated the fact that no regular motor service can be maintained on earth roads during the autumn, winter, and spring. The attempt to force such service on such roads has resulted disastrously whenever tried and has deprived the farmers of regular service when the roads were bad. The Senate amendment adopts a different check and allows the establishment of motor-vehicle routes only when a majority of the patrons to be served petition for it. It is probable that this provision is better than mine, for it is not likely the people will petition for a service that can not be regularly maintained.

Other features of the Senate amendment are commendable. The provision that the department can not by order prevent the use of motor vehicles on horse-drawn vehicle routes is necessary in view of the previous action of the department. The provision that in making appointments on new routes preference shall be given dismissed carriers on discontinued routes is also necessary and just. The provision that the carriers whose back pay has already been appropriated for and is in the Treasury, but which has been withheld by an arbitrary and unwarranted order of the department, shall now be paid, is only an act of simple justice to the carriers.

The bill which I presented was approved by practically all those Representatives who represent rural communities. It was supported by many of those who appeared before the committee. It was offered in the House as an amendment to the postal appropriation bill, but was stricken out on a point of order raised by the chairman of the committee. Fortunately, it was possible to include many of the best features of my bill in the amendment introduced in the Senate by Senator HARDWICK, of Georgia, which we are now considering. I am glad that the

conferees have approved it and feel sure that in its main features it has the approval of the House.

HOSTILITY OF THE DEPARTMENT.

It is a lamentable fact, but a fact nevertheless, that the attitude of the Post Office Department of the Government under this administration, regarding the Rural Mail Service, has been and is unfriendly. The Postmaster General has a deep-seated belief that every branch of the Postal Service should be self-supporting. The rural service has never been self-supporting, and as it has been extended from year to year in answer to the imperative demands of the people its cost has increased. This the Postmaster General endeavored to remedy. But every attempt made by him in that direction has been an assault on the efficiency of the service.

The largest item of expense in the rural service is the salary of the carriers. From time to time, as their duties have been extended, their salaries have been increased. This the Postmaster General determined to stop. In order to do this he conceived the plan of letting the service out to the lowest bidder as a substitute for the salary basis. In order to discredit the carriers he charged that under the salary system they became independent, indifferent, and neglectful of their duties.

Immediately when the plan was proposed and the charge made there arose a storm of protest from the farmers all over the land. There had never been a Government service which on the whole had been as satisfactory to the people as that rendered by the carriers to their patrons. The charge that the carriers were inefficient was so utterly unfounded as to be ridiculous. Neither did the auction system meet with any favor. It was understood by everybody but the Postmaster General that in order to maintain effective and satisfactory service a condition of trust relationship must be established between the patron and the carrier, intimate and confidential in its nature. To intrust such service to any scalawag who could manage to secure two mustangs and a cart, and who would have no interest in the service except to draw his pay, would be a calamity, indeed. The people were unanimously opposed to the proposition. Congress made answer by increasing the salaries of the carriers and appropriated the money to pay them on that basis.

Congress had determined the rate of pay for the carriers upon a mileage basis. For a standard route of 24 miles or more it gave the carrier $1,200 per year, and smaller amounts for lesser distances. This did not suit the Postmaster General, and without authority of law and by executive order he established another basis. Upon this basis a carrier was required to carry and distribute a certain number of pieces of mail in order to receive his salary. A schedule of time was also established, and if carriers made their routes in less than the time specified for each length of route they could not receive the salary fixed by law.

Under this system the Postmaster General, by an arbitrary order, was able to withhold from the carriers over $2,000,000 of their salaries, the money for which was in the Treasury.

This flagrant disregard of the expressed purpose of Congress met with such a storm of protest that with great reluctance it was abandoned. A new scheme was then devised. If the salary as fixed by Congress could not be cut down, the same object could be accomplished by lengthening some routes and abolishing others. By this means the department could strike at the carriers on two sides; by abolishing a large number of routes they could dismiss an equal number of carriers. By lengthening the remaining routes they could compel the carriers still in the service to do a greater amount of work for the same money. This was accomplished by their reorganization scheme.

THE REORGANIZATION PLAN.

The main features of the reorganization scheme were: First, lengthening of existing horse-drawn vehicle routes; and, second, consolidating existing horse-drawn vehicle routes into motor-vehicle routes.

Where approximately complete service had been established, as in Iowa and the other Middle Western States, where for the most part earth roads only were available and where the average length of the routes was about 24 miles—in such cases a large number of routes were abolished and the remaining routes were lengthened from 20 to 40 per cent.

The administration plan for the institution of motor service was to combine two horse-drawn vehicle routes into one motor-vehicle route of from 50 to 60 miles in length. Up to the time when the reorganization was undertaken, and as a result of years of experience, the department has established a standard of length for rural routes of 24 miles on earth roads. It had been demonstrated in thousands of cases that an every-day, all-the-year-around service could not be maintained on earth roads which very much exceeded that standard. More than 95 per cent of the roads traversed by the rural carriers were earth roads. The changing seasons, with winters when snowdrifts in the Northern States impede travel, while in the fall and spring rains make the roads muddy and almost impassable, prevent uninterrupted service on longer routes. It has never been claimed before that the standard could be lengthened 25 per cent and satisfactory service maintained.

Regarding the establishment of motor service, it should be apparent that to establish routes 50 to 60 miles in length and to serve 200 to 300 families every day the year round is impracticable over earth roads. Motor vehicles to an extent even greater than horse-drawn vehicles can not be used over muddy roads. On hard-surfaced roads which can be traveled the year round such service is possible. But on earth roads motor service is impossible for a large part of the year.

For these reasons the reorganization scheme put into operation proved a disastrous failure.

The reorganization plan began to be put in operation April 1, 1915. From that date to September 1, 1915, the Fourth Assistant Postmaster General reported that 846 "unnecessary routes" had been discontinued; 928 ordinary routes had been abolished; and 491 motor-vehicle routes established in their stead. Since then these numbers have been largely increased. At that time Mr. Blakslee, the Fourth Assistant, claimed the reorganization was a success and that "the new plan is working well." This claim was utterly unfounded. It was not a success, and the plan, far from "working well," was a complete and humiliating failure.

At that time when the legislation was pending before the committee and in the House Members on both sides were earnest and emphatic in condemning it. Mr. CLARK, a leading Democrat from Florida, said:

I have sent petition after petition to the department, letter after letter, and protest after protest from the people who live in the community, who know the roads * * * and yet in the face of all these protests and petitions the Fourth Assistant Postmaster General, directed, I presume, by the underlings who claim to have made these investigations, simply says that a motor-vehicle service can be maintained there.

Many other Congressmen from different portions of the country voiced the protests of their constituents against the scheme.

In the Senate the protests were not less emphatic. Senator HARDWICK, a distinguished Democrat from Georgia, in supporting his amendment, said:

Mr. President, this is not an effort to cripple a great department of the Government, but, on the contrary, it is an effort to keep a department of the Government from absolutely crippling and ruining a great department of the public service.

Again, in speaking of its political effect, Senator HARDWICK said:

If my State were not as certainly Democratic as it is * * * the conduct of the Post Office Department in that State would have lost it to the Democratic Party, and, as it is, it may cost it many votes, although, thank God, we can stand it and still have plenty to spare. If it were a State in the Middle West, it would be impossible for the Democratic Party to carry it with any such administration of the Post Office Department as we have had there, in respect to this matter of the Rural Mail Service.

Senator HARDWICK was not alone. Other Democratic Senators were even more emphatic. Senator SMITH of Georgia said:

The manner in which they have torn to pieces the rural service in my State and cut it off has been something intolerable.

The North as well as the South joined in protesting. Senator GALLINGER, of New Hampshire, in the debate in the Senate, said:

I want to say that the destruction is universal. I have been deluged with appeals and protests from my own State and from other New England States that the administration of the Rural Delivery Service was absolutely indefensible

The press of the country has been equally severe. The Atlanta Constitution, a leading Democratic paper of the South, speaking editorially of this reorganization, said:

The Constitution denominated it "A Dangerous Experiment," because under present conditions regularity and efficiency are practically impossible.

In Iowa the service has been seriously injured by the changes made. The carriers have not been able in the wintertime for days in succession to make their lengthened routes. Individual reports show that in many cases carriers were last winter on their routes from 10 to 12 hours daily.

One carrier writes:

We go to the office at 6.30, start on the route at 8, get back about 4, and it takes 30 minutes in the office after that.

Another says:

My time put in on January report averages 10 hours 6 minutes per day. Add to this 1 hour for taking care of my horses, which is less than the time really spent, makes 11 hours a day for me.

Another states:

I was carrier on an old route which was 23½ miles long. They changed it to 35 miles. I tried it for about three weeks. I made it part of the time, but when the roads were muddy I could not make it two days in succession. The patrons complained terribly, and I quit. But nobody has done any better than I did.

Still another testifies:

There are seven routes out of ———. In January there were several days none of us made our routes. In February we could not go the routes, and so we made one end one day and the other the next. Sometimes we could not do even that well. Two of our carriers were sick and two resigned.

The testimony of the carriers is amply corroborated by the patrons. I give some extracts from letters received:

Our old route was 26 miles long, and we got our mail tolerably regular. Now our route is 35 miles long and has 166 boxes. In bad weather it can not be done. So when that is the case we get our mail about every other day. Most of us have stopped taking dailies.

—

Eighteen boxes on our route receive their mail only three times a week.

—

The carrier can't get in until after dark, and our letters don't go out until 4 o'clock the next day.

—

Our route is so long, carrier takes one end one day and the other end the next day. That makes an every-other-day service. And they call that "extending the service."

—

Carrier has such a long route he can't stop to take money orders or packages or sell stamps.

—

We are now placed three-quarters of a mile away from the route. We don't know when to expect carrier. Can't get stamps or money orders or send packages. Packages sent to us can't be left out in the rain and snow without being ruined.

—

We live 1½ miles from ———. Our mail used to come from there. We go to church there, send our children to school there, and do our marketing there. Now our mail by rural route comes from the county seat 9 miles away. We do not take it at all, but go to ——— for our mail.

—

I used to get my mail every morning by 10 o'clock. Now I am placed half a mile away from the route, and my mail comes any time from 3 to 6 in the afternoon. I handle cattle and hogs, and used to take two daily papers, for I need to study the markets. Now I do not take any. It is no use.

—

My paper is always one day late now, and sometimes two or three. We did not get any mail at all for four days in one week.

—

After careful computation we find that after the change of rural routes the patrons of our old route will in a year have to travel 10,000 miles farther to get their mail accommodations than they did before the change. That is farther than the carrier has to travel in the whole year making all his deliveries. There are only three patrons on the old route that have better mail service than before the change.

These could be multiplied indefinitely from the mail of nearly every Congressman from a rural district where the reorganization scheme has been put into effect. It shows what a failure in practical operation the plan of the department is.

Under the old system changes were made upon petition of the patrons and inspection. Under Mr. Blakslee's scheme the reorganization was made without the knowledge of the patrons by clerks in Washington who were entirely without knowledge of the conditions affecting the service. In some places routes were plotted to cross impassable streams; to traverse roads that had never been improved and were not traveled; to climb hills and cross swamps that no one attempted. It was hardly possible that a plan thus formulated could be successful. It was wrong in conception and wrong in application.

BLAKSLEE'S DEFENSE.

In defense of the reorganization scheme Mr. Blakslee admits some few farmers have been inconvenienced, but "no one has been entirely cut off from the service." In view of the fact that hundreds of patrons abandoned their route service and went to town for their mail, and that still more were compelled to locate their boxes half a mile or more from their homes, his statement seems hardly justified. He said that by the readjustment, "extravagant waste was eliminated." This, he claims, was accomplished by eliminating "duplications and unnecessary service." "Duplications" did not exist except in individual instances which could have been corrected without a reorganization of the entire system. In fact, in many instances duplications and retracings are greater in his readjusted routes than under the old schedule.

The administration claims that it has established 6,000 new rural routes and extended the service to millions of new patrons. This is a most remarkable claim in view of the facts. In 1913, the last year under the former administration, the number of rural routes as officially reported was 42,805. In December, 1915, as reported by Mr. Blakslee, there were 42,993. In this two years and a half under the present administration they had increased the routes only 188, instead of 6,000.

The normal increase in spite of the unfriendly attitude of the administration had increased the number in 1914 to 43,652. As a result of the reorganization plan this was reduced in less than a year to 42,993. In that time Mr. Blakslee had destroyed 659 rural routes instead of making any increase. Since that time the number of routes abolished has been largely increased. In many of the instances where new routes have been established only triweekly service has been installed. In view of the facts this claim of the extension of the rural service is one of the most remarkable ever made by an official of the Government.

But Mr. Blakslee's chief defense of the reorganization scheme is based on the claim that the carriers are overpaid and do not earn their salaries. In a carefully prepared paper presented to the House committee he said he had gathered data which conveyed "startling information." He said he had tabulated "the actual hours of service rendered by these carriers in the performance of their duty." He asserted that "there are 4,320 carriers in the Rural Delivery Service who are working to-day less than four hours per day." He claimed that in hundreds of cases the carrier was "performing but two hours service per day, according to actual count kept by himself and not by us."

No one ought to have believed these statements of Mr. Blakslee. His statements were not entitled to credit. But evidently some gentlemen were deceived, for we find that the chairman of the House committee, Judge MOON, in defending the administration on the floor of the House, said:

I am aware of the fact that there are 4,320 rural routes in the United States where the carriers are getting $1,200 a year and performing only four hours a day of service, and other routes where they are performing only two hours a day.

This statement was made doubtless in good faith by the chairman of the committee on the authority of the Fourth Assistant. Such a statement, coming from such a source, would carry weight and influence the action of Members. Yet it was utterly unfounded.

An examination of the records, reports, and statements made by Mr. Blakslee himself show that none of the charges made by him against the carriers can be sustained.

He asserted before the committee that he had tabulated the record, "according to actual count kept by himself—the carrier—and not by us," of 4,320 carriers, showing "the actual hours of service rendered by these carriers in the performance of their duty."

This was a misstatement of the facts. Mr. Blakslee did not furnish the committee with a true statement of the reports of the carriers as sent in by them. In each instance he reduced the time reported by them by half an hour, an hour, or an hour and a half in order to make it appear that "the actual hours of service rendered by these carriers in the performance of their duty" were less than they really were.

In one instance given by Mr. Blakslee the time as given in his schedule as compared with the time reported by the carrier for the month of July was as follows:

| | |
|---|---|
| Route 1, 27.80 miles | 3.26 |
| Time actually reported | 4.26 |
| Route 2, 25.60 miles | 3.51 |
| Time actually reported | 4.51 |
| Route 3, 25.53 miles | 3.59 |
| Time actually reported | 4.59 |
| Route 5, 29.03 miles | 3.49 |
| Time actually reported | 4.49 |

It will be seen that the time as reported by the carrier is reduced in the schedule given by Mr. Blakslee in each instance one hour less than reported. The same is true of the other months reported. In other instances ascertained the time as reported had been in like manner reduced one hour. It is practically certain that in none of the schedules printed has the time as reported by the carrier been given, but the time has been reduced by Mr. Blakslee arbitrarily a half hour, an hour, or an hour and a half.

The report made by the carrier and forwarded to the department gives the "Time carrier reported at office"; "Time carrier left office after return from delivery of mail"; and the "Total time on duty in the office and on the route."

It will be seen that the time the carrier is on the route can not be ascertained from the reports made, but must be estimated. This the department has done by deducting the time they estimate the carrier spent in the office in making up his mail before he starts and in making disposition of his collected mail and making his reports after he returns. This the department usually estimates at one hour, and deducts that amount. Perhaps this is a fair estimate.

The difficulty is that this is not explained, and an actual misstatement of the facts is made by the Fourth Assistant. He says his tabulation states, "the actual hours of service rendered by these carriers in the performance of duty." This is not true. It only gives the estimated time the carrier took in making his

route. In his statement Mr. Blakslee says: "I show here that there are 4,320 carriers in the Rural Delivery Service who are working to-day less than four hours per day." This is untrue in two particulars. His statement does not show the hours that the carrier worked. It shows only the time actually spent on the route, and excludes one hour's work every day in the office. Where Mr. Blakslee says the carrier only worked two hours, he actually worked three. When he says the carrier only worked four hours, the official reports in the office of the department show that he worked five hours.

The statement of Mr. Blakslee is untrue and misleading in another particular. He says that 4,320 carriers only work four hours per day, and that the reports show it. The reports are given for four months of the year: January, April, July, and October. The four hours is not an average of all these months, but is only the average for the month of July, as admitted by Mr. Blakslee himself.

In his examination before the committee Mr. Blakslee was asked:

Mr. ROUSE. How long a period of the year was this average made for—1 month, 2 months, or 12 months?
Mr. BLAKSLEE. It was made from their last report in July of this year.
Mr. ROUSE. That is, for three months?
Mr. BLAKSLEE. No; just the one month.
Mr. ROUSE. That is all in the summer time?
Mr. BLAKSLEE. Yes.

Again the gentleman from Michigan [Mr. BEAKES] asked him:

Mr. BEAKES. I take it this statement was prepared from the records of last July, when the roads up there were in good shape.
Mr. BLAKSLEE. Sure.
Mr. BEAKES. In other seasons of the year he could not make it in that time?
Mr. BLAKSLEE. Yes; that is right.

So it appears that Mr. Blakslee's statement of the average time the carriers spend in the performance of their duties applies only to the month of July. It is needless to say that July is the one month of the year when practically all over the United States the roads are hard and dry. If the carrier owned a motor car he used it. If he did not own one he often borrowed or hired one. Under such conditions it is not strange that the carrier should make his route in four hours or even less.

All the foundation, therefore, to be had for the statement made by Mr. Blakslee that the carriers are only working four hours a day is that he has been able to pick out, among all the 430,000 carriers in the United States, about 1 in 10 who has made his route in four hours during the month of July. And in his statement is excluded the time which the carrier is compelled to work in the office before starting out and after returning from his route. No allowance is made for the time required by the carrier in taking care of his team, making preparations for his daily trips, or any other outside necessary work. The whole effort is an attempt to show that carriers are receiving $1,200 a year for doing only two or four hours work daily.

Mr. Blakslee, when before the committee, in order to impress the members with his claim that the carriers were only working a few hours a day and were grossly overpaid, said:

I will take some of the cases in Michigan which are particularly interesting. Here is a carrier at Blissfield, Mich., who operates a 29.54-mile route in 1 hour and 24 minutes.
Mr. LAFEAN. How does he get over the route?
Mr. BLAKSLEE. With a motor vehicle. He enjoys a joy ride every day and get $1,200 a year for doing it.
Mr. LAFEAN. Do you call it a joy ride when he travels over a 29-mile route and delivers the mail?
Mr. BLAKSLEE. I do not call it a fair day's work when covered in two hours.

Here Mr. Blakslee endeavored to deceive the committee in two regards.

First, he tried to create the impression that the Michigan carrier made his route in less than two hours the year around. "He enjoys a joy ride every day and gets $1,200 a year for doing it." As a matter of fact, the schedule afterwards filed with the committee shows that the time quoted was only for the month of July. The report, which Mr. Blakslee himself filed, shows that the time required to serve that route in January was 8 hours; for April, 5.48 hours; for October, 3.45 hours; while for July alone was the time as reported, 1.54.

Not only in that respect did Mr. Blakslee deceive the committee, but he carried the clear implication that less than 2 hours was all the carrier worked. As reported to him, the carrier had worked 9 hours in January, 6.48 hours in April, 2.54 hours in July, and 4.45 hours' work in October. Seldom, if ever before, has a high official of the Government so endeavored to deceive and mislead a committee of Congress.

Again, Mr. Blakslee was asked during that examination:

Mr. FINLEY. In computing the time these men take up, do you compute from the time they leave the post office until they return to the post office?
Mr. BLAKSLEE. That is the schedule as reported by them.
Mr. FINLEY. Do you make any allotment of time for them to separate their mail?
Mr. BLAKSLEE. Not in this statement, as such time depends entirely upon the number of pieces, and I have found on the heaviest routes, on motor routes, when all the facilities are at hand, and they have a routing directory that is up to date, in an hour, and, as a rule, it takes anywhere from 15 to 20 minutes or half an hour.

So we see that in his statement to the committee, Mr. Blakslee says that on ordinary routes, "as a rule, it takes anywhere from 15 to 20 minutes or half an hour" to separate their mail. This, he says, when he is trying to make it appear that such part of the carriers' work is inconsequential.

Yet when he is making up the schedule of time to show how little work the carrier actually does he estimates the time spent in the office at—in some instances as much as an hour and a half—so he can subtract as much as possible from the time actually reported to make up his schedule of the time the carrier was on the route, and then presents that schedule as the time the carrier actually worked.

As a result of this reorganization scheme hundreds of carriers have lost their places. After years of faithful service they have been discharged, although they are within the classified service, and under the provisions of the law can not be discharged except for cause. In one instance four carriers from one office were dismissed. All four were veterans of the Civil War, and very popular with the patrons. No charges were preferred against them, and they offered to submit to any mental or physical examination to determine their fitness, but this was refused. In some instances dismissed carriers have been offered positions in other places. But this involves a change of residence, and is in most cases impracticable.

There were 2,405 carriers separated from the service last year—1,228 resigned, 232 died, and 618 were removed. It is not pretended that those removed were discharged on account of any fault of their own. Of those who resigned many did so because of the lengthened routes and additional work. Resignations are being sent in wherever the reorganization has resulted in materially lengthening the routes because of the difficulty, and in many cases the impossibility, of maintaining regular service.

THE GOOD OF THE SERVICE.

Although the reorganization plan has resulted in great injury to the carriers, that is not the most serious result of such action. It is to the service itself and the millions of farmers throughout the United States who are its patrons that the greatest injury has been done. The department evidently determined to punish the carriers. But in doing so it has harmed the people still more than it has the carriers. It should be evident to anyone that the prime requisite for good service to the people is good carriers. Congress has recognized that fact always. It has increased the carriers' salaries from time to time. But that has been amply justified by the increased duties, the higher cost of living, and the greater expenditures necessary to maintain the service. The department requires the carriers to furnish their own horses and carriages or autos, but it appears not to recognize that this entails a large and continued expense on the carriers. The department seems to think that the carrier who works with a team or auto, which he is required to furnish, should do so on the same scale of wages as a workman who furnishes nothing. This is unreasonable and unjust.

In matters so vitally affecting the most important branch of the Postal Service it is deeply to be regretted that the present administration occupies such a hostile attitude. That such an attitude is not approved by members of the administration party is shown by the fact that there is little sympathy with the acts of the administration among Democrats, either in the House or Senate. Many have opposed the reorganization plan from the first. To such men as the Representative from Florida [Mr. CLARK], in the House, and the Senator from Georgia [Mr. HARDWICK], in the Senate, is largely due the credit for preventing the entire demoralization of the service.

The present amendment is known as the Hardwick amendment, for to Senator HARDWICK, more than to any other one man, is due the credit for securing its adoption. The Senator from Georgia made a brave and able fight for this restriction on the department all along the line. Through the Senate committee, on the floor of the Senate, and finally through the conference, he followed it; and, notwithstanding the strenuous and almost frantic opposition of the department officials, carried it to victory. He is entitled not only to the thanks of his own people, but also to the gratitude of the entire rural popu-

lation of the Nation. For, unless the spirit and intent of this legislation is disregarded and its purpose entirely subverted, the law will prevent the further demoralization of the service.

It is strange that anyone should desire to injure the Rural Delivery Service. It is little that the Government has done or can do for the farmers of the country in any event. This service has been, is now, and will continue to be an inestimable benefit to them. One would think that instead of showing hostility, instead of discrediting the interests of the farmers, the administration ought to help and not hurt, to increase its efforts to benefit rather than to curtail and harass and discourage.

From the time the department was organized the farmers have paid their share of the appropriations to deliver mail to every home and place of business in the cities. The city business man demands from three to seven deliveries daily, and complains if he does not receive them promptly on time every business day. Gradually it dawned on the intelligence of the Nation that the farmer also was a business man; that information of the markets and of current events was as important to him as to the city man, and out of that illumination came the Rural Free Delivery System. It has not only been successful, it has been a veritable boon and blessing. It has helped the farmer and the farmer's wife and family more than anything else they have ever received. It is impossible to estimate its benefits. It has added hundreds of millions to the wealth of the Nation by increased production. It has educated the children, it has brightened the farm home, it has taken away the feeling of isolation and loneliness, and placed the farmer and his family immediately in the citizenship of the world.

It is to be hoped that this legislation will be of some benefit in securing and preserving this great service to the rural population of the Nation.

---

**Address of Hon. John J. Fitzgerald.**

## EXTENSION OF REMARKS

OF

# HON. DANIEL J. GRIFFIN,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. GRIFFIN. Mr. Speaker, in pursuance of the permission of the House granted me to extend my remarks in the RECORD, I am inserting the forceful and eloquent speech of my distinguished colleague, Hon. JOHN J. FITZGERALD, delivered at the Democratic State conference, held at Saratoga Springs, N. Y., on August 11, 1916.

ADDRESS OF HON. JOHN J. FITZGERALD, CHAIRMAN OF THE DEMOCRATIC CONFERENCE AT SARATOGA SPRINGS, N. Y., AUGUST 11, 1916.

We meet under most favorable auspices. Our country is prosperous and at peace; our party is united and harmonious. Our opponents have lost their jaunty confidence, and have degenerated into chronic scolds and wearisome faultfinders.

Heretofore it has been the custom of Republicans sneeringly to challenge the Democratic Party to exhibit its contributions to the constructive legislation essential for the advancement of the people and the complete development of the country. As our party had long been out of power the task was impossible, and we have had to rely upon the accomplishments of days long past, and upon our professions of present-day capacity and our sincerity to strive disinterestedly for the public weal.

As representatives of the Democratic Party we now have just cause to rejoice. Conditions are completely changed. We no longer rely upon professions. Our performances speak eloquently of our capacity and of our good faith. Every department of the Government has felt the stimulating influence of Democratic control, and the country responding to the same impulse is prospering, while the people are enjoying a measure of contentment and of tranquility never before experienced in the history of our country.

HUMAN FREEDOM.

Prior to the present Democratic administration the Republican Party had been for 16 years in complete and uninterrupted control of the Federal Government. During that time a great world movement, especially manifest in our own land, gathered irresistible momentum. The demand was insistent that governments should be more efficient instrumentalities for the uplift of humanity, and that their powers should be more freely and fully utilized to curb greed, to end the economic enslavement of the individual, and to broaden the opportunities of the everyday man to attain a fair measure of the benefits which would result from the just distribution of the fruits of his toil.

GREED AND MONOPOLY CHECKED.

Those in control of the Republican Party distrusted the people. A system had developed under which a comparatively few men almost completely dominated the Government and had acquired practically absolute control of our national finances and large business enterprises. Business and politics were so interwoven that the welfare of the great masses of the people was subordinated by those in control of the Government to the interests of the few specially favored financial dictators and their pet enterprises.

To thwart the humane and patriotic movement to free the people from the grip of greed and monopoly the stand-pat Republicans had resort to every trick and device that skillful, cunning, able, and unscrupulous men could devise. But the people would not be denied. Their patience was exhausted. They demanded speedy relief from intolerable conditions. Tired of reiterated promises and unfulfilled pledges, aroused by the repeated betrayal of their interests, and angered at the continued and complete subserviency of their chosen officials to an arrogant financial oligarchy, the country repudiated the Republican administration with all of its works and idle promises and returned to power a united and a rejuvenated Democracy pledged and determined to end the shameful conditions which under Republican rule prevailed in practically every department of the Government.

A GREAT LEADER FOR THE CRISIS.

No trifling task awaited the Democracy. It was not the work of a day, nor of a year, nor even of a decade that had to be undone. Imperative reforms were demanded in government, in finance, and in business, while vicious and indefensible conditions in the industrial world had so ramified as to affect disastrously every part of the social structure. Giants were needed for the work in hand, and a leader was required who possessed unusually unique qualifications for the task to be done.

From the very beginning our country seems to have been specially favored by Divine Providence. The man for every crisis has always been at hand. Such a one was selected by the Democratic Party to lead the contest in 1912. Speaking of him in that campaign I said:

> He has a profound knowledge of our history, of our Government, and of the development of our country; he keenly appreciates the proper force of the many varying elements responsible at different periods of our history for many movements of far-reaching consequences; he has an accurate understanding of the complicated methods of modern finance and business; he has devoted his entire life to the study of public questions and to the consideration of adequate remedies for existing or possible abuses in our governmental system. He has in a marked degree the ability to discern capacity in men and to utilize them in a common movement for the best interests of the people; he has a rare charm of manner that attracts men and makes easy their cooperation under his guidance; he is admittedly free from obligations of every character excepting those incumbent upon him as a public official to dedicate his best efforts in unselfish service of the people. He knows and respects our Constitution and he comprehends the genius of our Government.

Under the wise, courageous, and inspiring leadership of such a man the Democratic Party has successfully accomplished innumerable and much-needed reforms. The country has not yet enjoyed the full measure of the benefits of his brilliant administration. Sufficient time has not elapsed to enable his beneficial achievements to be fully comprehended. But as the days pass on and the people realize that the new freedom has been attained, as they gradually step forth from the oppressions of the past and find themselves free from the shackles of prior days, as they more fully appreciate the social and industrial revolution which has been quietly but effectively accomplished, as their hearts beat more rapidly with new hopes of happier and brighter days, and as their ambitions to enjoy a fuller and better and more noble existence are the more and more realized, then the wisdom, the courage, the patience, the prescience, the patriotism, and the disinterested devotion of their great leader will sink more deeply into their consciousness and they will universally and enthusiastically proclaim as the first friend of humanity, the determined foe of oppression, the unrelenting enemy of evil in government, the fearless champion of social and industrial reform, the candidate of the Democratic Party in this campaign, the present and next President of the United States—Woodrow Wilson.

CONSTRUCTIVE LAWS ENACTED.

The record of achievements upon which these assertions are based is unrivaled in our history. The Democratic Party in three brief years has enacted more progressive, remedial, and beneficial legislation than had been perfected previously in any

two decades. Problems were pressing for solution from every quarter in almost endless confusion, but the task was done in a systematic manner, and so effectively as to compel our political opponents to support many of the measures which they now vociferously condemn.

DIRECT ELECTION OF SENATORS.

To end the constantly recurring scandals in the election of United States Senators we proposed, and the States ratified, a constitutional amendment to provide for their election by direct vote of the people.

THE INCOME TAX.

To more equitably distribute the burdens of taxation and to relieve the backs and the tables of innumerable toilers of the unequal proportion of the cost of the Government, which properly should be borne by the wealth of the land, we proposed, and the States ratified, a constitutional amendment empowering the Congress to levy a tax upon incomes without apportionment among the several States. This amendment was ratified, despite the powerful opposition of the Republican candidate for President while governor of this State.

Under the authority conferred by that amendment, the Democratic Congress levied the present income tax, which has yielded during the 32 months in which it has been in operation more than $137,000,000.

THE TARIFF REDUCED.

We reduced the tariff. Both the great political parties promised to do so. The Republican Party, however, betrayed its trust, violated its pledge, and actually increased many rates in the odious Payne-Aldrich Act.

The Underwood tariff law is an honest compliance with the promise of the Democratic Party to revise the tariff downward. It was framed by men who were under neither express nor implied obligations to secure special advantages to favored individuals or industries. The welfare of all of the people was the controlling motive in its preparation, and it was designed to be fair and just alike to the producer and to the consumer.

It destroyed the disgraceful alliance which had so long existed between certain monopolistic enterprises and the Republican Party. It ended the evil practice of adjusting tariff schedules in proportion to the amount of the campaign contribution. It freed industry from the possibility of legislative blackmail, and it initiated the movement to have our tariff laws based upon accurate information after exhaustive investigation by disinterested officials, so that there should be no special and unjust favors in future revisions.

Intended to raise revenues adequate for the Government under the conditions existing at the time of its enactment, it exceeded the estimates made by its framers and produced ample revenues until the present world war radically disarranged our commercial relations with other nations.

BANKING AND CURRENCY REFORM.

For more than 40 years our banking and currency systems had been universally condemned. The Republican Party dallied and toyed with the problem, indulging in caustic criticisms of the prevailing conditions, and promising profusely to remedy the admitted evils. All of its efforts were of a makeshift and temporary character.

The Democratic Party, with broad vision and sound statesmanship and displaying a knowledge and a grasp of the problems to be solved, which amazed the country and silenced criticism, enacted the Federal reserve act. It is concededly the most comprehensively constructive legislation enacted since the Civil War. It has made impossible the recurring of money panics of Republican administrations and has rendered stable and secure the financial transactions essential for the unrivaled commerce of our country.

LOANS FOR THE FARMER.

While the Federal reserve act made possible certain farm credits, the Democratic Party did not stop its efforts to provide adequate financial aid to those engaged in agricultural pursuits, so the rural-credits act, which completely rounds out our financial system and extends the same needed facilities to the farmer as had been provided for those engaged in commerce, was enacted. Although the Republican platform denounces the law as "ineffective," it is a noteworthy fact that only 5 votes were cast against it in the Senate and but 10 in the House of Representatives. Never in our history has any law honestly believed to be ineffective by any substantial body of our citizens been approved by the two Houses of Congress with but 15 adverse votes out of a combined membership of 531.

ADVICE AND ASSISTANCE FOR BUSINESSMEN.

As a result of Republican maladministration the business of the country had been plunged into a state of uncertainty and chaos. Business men were dismayed. All of their enterprises seemed to depend upon the partisan whim of the Attorney General. Those who desired to comply with the law were as gravely menaced as those who sought to evade it. The Democratic Party ended the uncertainty and restored confidence in business circles by the enactment of the Clayton Act and the creation of the Federal Trade Commission, which, as President Wilson said in his Detroit speech, substitutes "for the harsh processes of the law the milder and gentler and more helpful processes of counsel." The purpose of this legislation has been to help, not to harass; to build up, not to destroy.

The evils resulting from trusts and monopolies have practically been eliminated. No honest man now need fear the heavy hand of the law for innocent acts in the conduct of legitimate business, while the dishonest, the unscrupulous, and those inclined to resort to unfair practices alike injurious to the individual producer and to the purchasing public have been compelled to abandon their evil ways and to conduct their business with decent regard for the rights of others.

GOOD ROADS.

Inadequate transportation facilities have added largely to the cost of commodities. While many States have been alive to the necessity of good roads a comprehensive plan for the entire country is required to obtain lasting results. To this end the Democratic Congress has enacted a good-roads law to encourage and to aid the construction of such highways as will make readily available the great markets for our farm products.

A MERCHANT MARINE.

A universal demand has long existed that our merchant marine be rehabilitated. When the great maritime nations became involved in war and the ships in the over-sea trade were turned from the peaceful channels of trade to the necessities of the war a staggering blow was dealt our commerce. Lack of shipping has seriously embarrassed our foreign trade; abnormal carrying charges have placed undue burdens upon it; and the warring nations have arbitrarily regulated and controlled the transportation facilities demanded by our commerce greatly to its disadvantage. Commodities from the West have been delayed, stranded in box cars which stretched inland from the seaboard for many miles, all because of lack of cargo-carrying ships under the American flag.

There are but three ways to establish a merchant marine. By the investment of private capital, by subsidies from the Federal Treasury to those most highly favored by the controlling element in our Government, or by the construction, and, if necessary, the operation, by the Government itself of sufficient cargo ships to make our foreign commerce free from alien domination.

The Democratic Party has determined to provide the ships at public expense and to have them privately operated under suitable regulations, or, as a last resort, to have the Government itself operate them. Despite the divergence of opinion as to the wisdom of the plan it is the best solution thus far proposed. Since 1872 the Republicans have talked of restoring our merchant marine, but have accomplished nothing. They offer no specific remedy now for the appalling conditions which prevail. They severely denounce what Democrats propose in an idle effort to prevent some practical movement to afford facilities imperatively required.

AGRICULTURE, PENSIONS, CONSERVATION, AND FLOOD PREVENTION.

Within the time at my disposal it is impossible to discuss in a comprehensive manner all of the legislation proposed and perfected by this Democratic administration for the alleviation of the evils which Republican misrule had brought upon the country.

We have enacted the Agricultural Cooperative Extension Act of inestimable value to those engaged in agricultural pursuits; liberal pension laws for the survivors of our wars and for those who were dependent upon them; conservation laws to enable the people to utilize the wonderful natural resources of the country; and legislation designed to end the disastrous floods which have so long devastated the Mississippi Valley, so that an area equal in extent to many ancient empires may be available for the cultivation of commodities essential for the sustenance of our people.

HUMANITARIAN LAWS FOR THE LABORER.

The welfare of the toiler has not been neglected. By the Clayton Act and the anti-injunction law laborers struggling by legitimate means to better their condition have been freed from the menace of hostile courts. For the first time in our history there has been written into the law the principle that human labor is no longer to be considered in the category of a mere commodity, but rather as a thing of flesh and blood. By the enactment of the eight-hour law, the safety of railway employees act, the creation of the Bureau of Safety, the Children's Bureau, the proposed child-labor bill, and the Kern-McGillicuddy compensation bill more forward steps have been taken to con-

serve the health, safeguard the lives, and promote the welfare of our people than was done during the long period of Republican control.

PREPARATION FOR THE NATIONAL DEFENSE.

Other matters of vital importance to the national security had to be adjusted. With the civilized world convulsed with the shock of the most horrible war of all time, it was suddenly realized that our country should make additional provision for the national defense. Radically divergent views were entertained by the best equipped military experts as to what was required and what should be done. The legislation needed could not be drafted overnight. It required careful study, thorough consideration, and statesmanship of the highest order to determine what was essential for the national welfare and the methods most desirable to adopt to secure the Nation against foreign aggression.

Under such conditions no legislation could be framed that would fully satisfy every element of the body politic. What is being done, however, in the opinion of the men best fitted to judge, fully meets the necessities of the Government. The appropriations for the national defense during the present session of Congress will aggregate more than $700,000,000.

The naval bill, for instance, as it passed the House of Representatives provided more money, excluding authorizations to make contracts, than Great Britain expended in 1915, and it was $130,000,000 in excess of the largest appropriation ever made for the Navy by a Republican Congress.

In his speech of acceptance Mr. Hughes asserts that—

It is not words, but the strength and resolution behind the words that count.

It is not words, nor is it merely the strength and resolution behind them, but it is deeds that count. The Democratic Party demands that its position regarding the safety and security of the Nation, as well as upon all other public questions, be measured neither by its own words, nor by the misleading assertions of its opponents, but by its acts and its deeds, which alone have made the country safe.

AMERICA PEACEFUL AND PROSPEROUS.

There are two simple facts of tremendous importance to the country which our Republican opponents desperately seek to minimize. All the keenness and ingenuity of a judicially trained mind have not enabled Mr. Hughes to do more than reiterate threadbare and fallacious arguments. Strive as they may they can not blind the people to the fact that the country is enjoying a period of heretofore undreamed-of prosperity, and that during many months of temptation and travail during which he has been nagged and abused and violently and unreasonably denounced the President of the United States has with a dignity and patience and courage that has commanded the respect of mankind so conducted our relations with the warring nations of the world as to keep our own beloved country at peace.

OUR PROSPERITY PERMANENT.

Mr. Hughes, in his speech of acceptance, states that the "temporary prosperity to which our opponents point has been created by the abnormal conditions incident to the war." Since when was he endowed with prophetic vision to enable him accurately to predict the future? How does he know that this unexampled prosperity is temporary? This prosperity is temporary only in the sense that it began after the Democratic Party assumed the management of the Government, and it will only end should Mr. Hughes, by any fortuitous combination of circumstances, be successful in this campaign.

It is intimated by him and boldly asserted by other Republican spokesmen that our prosperity is due entirely to our traffic in munitions of war. The assertion is unjustified; it is preposterous. Our exports have practically doubled since the advent of President Wilson's administration, now aggregating the enormous sum of $4,000,000,000 annually. The value of munitions exports is not 6 per cent of the total.

The present prosperity is not due primarily to abnormal war conditions. Only biased partisans make such a claim. While some industries have undoubtedly benefited because of unusual demands resulting from the war, it must be remembered that a tremendous stimulus was given to business by the Democratic legislation which provided a suitable and elastic currency and substituted scientific and modern banking facilities for the archaic systems in vogue during Republican administrations. The removal of the uncertainty existing prior to the advent of this administration because of the inability of business men safely to embark in new enterprises or to extend existing ones has immeasurably aided the healthy expansion evident in every phase of industry. Democratic policies, legislation, and leadership have been the chief factors contributing to our present marvelous prosperity which is universal in our land. Steadily increasing bank deposits and continued widespread increases in all lines of industry are the evidences of a business renaissance—one of the beneficent results of the administration of President Wilson.

Only the other day it was pointed out that for the four weeks ending July 8, 100 new mills were reported for textiles, with 135 expansions in prospect; that there have been 187 wage increases in 34 States to those engaged in the building trades; that our banking resources increased in the year ending March 1, 1916, $2,271,000,000; that during the present administration the bank deposits of New England increased 31 per cent; of the Dakotas, Nebraska, Kansas, Montana, Wyoming, Colorado, New Mexico, and Oklahoma, 42 per cent; that Oklahoma, where there are no munition plants, increased her deposits 100 per cent, while the only State which showed no increase is Delaware, the home of the du Ponts, the chief munition makers of the United States.

There is another significant and controlling cause of our phenomenal prosperity. The country knew that its affairs were in safe hands. It had no fear that it would be plunged into an unnecessary and unjustifiable war. It had accurately appraised the character of President Wilson and realized that to serve no personal or selfish ambition would he unnecessarily bring upon his countrymen the horrors and the miseries and the incurable heartaches which war entails.

Capital is notoriously timid. If just cause existed to involve this country in hostilities, or if some swashbuckler were now our Chief Executive, the needed funds would not have been advanced, nor would the necessary credits have been extended to make possible the wonderful business expansion so conclusive of the progressive efficiency of the Democratic administration.

DOES MR. HUGHES WANT WAR?

Mr. Hughes in his speech of acceptance viciously criticises President Wilson for his attitude toward Mexico and for his foreign policy. What would Mr. Hughes have done had he been President of the United States during the past three years? Would he have thrown into Mexico a great armed host to subjugate a people already prostrate and the victims of unscrupulous bandit chieftains?

Would he have made imperative demands upon the warring nations in Europe in the asserting of American rights, and limit the negotiations to a single exchange of notes? He complains that the Wilson administration has pursued too leisurely a correspondence. Would he have compelled the belligerent nations to suspend hostilities to answer forthwith his peremptory demands? Where, except in his own mind, even if there, does the belief prevail that if Mr. Hughes had been President during the past two years that he could have accomplished more, or even as much, as President Wilson has done? Let Mr. Hughes answer the American people in definite and unqualified terms—would he have involved the country in war with any nation for any of the occurrences of President Wilson's administration had he been President and obtained no more favorable results from negotiations than have resulted from President Wilson's efforts? That question can not be evaded. It must be squarely met. The home makers of our country demand an answer. It means much to them. The women of America are vitally interested in this campaign.

AMERICA'S WOMEN ARE WATCHING.

They know what is happening in Europe. They do not want husbands, sons, fathers, or brothers taken in the heyday of life to gratify some one's lust for power. They are not anxious to satisfy the craving for the spectacular for the price involved. They believe, indeed they know, that national rights may be enforced, national honor may be preserved, and national dignity may be maintained without quick resort to bloody war with all of its harrowing consequences. Their heartstrings are attuned to the soft, sweet, and alluring music of peace, of domestic happiness, and of national tranquillity. They do not desire to have those heartstrings torn out by the impetuous rashness or the vainglorious pride of a timid or a scheming leader. As they contemplate what is happening in the war-stricken nations, as they realize the heartaches their sisters in those unhappy lands suffer, as they dwell upon the dreadful agony and horror from which they have been providentially spared, it will require no desperate and unique appeals to incite the women of America to an interest in this campaign. But theirs will not be a boisterous part. It will not be evidenced by parades and political rallies and frenzied appeals to passion. Who looks for such manifestations will look in vain. But in every home, however humble, where woman in all the glory of womanhood reigns supreme, her interests will be determined.

There will be no noisy demonstrations to affect the public judgment; but in the sanctity of the home, surrounded by happy

and innocent children, the women of America will offer silent, fervent, and all-persuasive prayer to the God of Nations that the light be given to our people to know the right, and that strength be given them to do it by continuing in place and power in our beloved land him who, despite temptation, the urgings of unruly ambition, the promptings of selfish interests, steadfastly stands for the right of humanity, for the welfare of his countrymen, for the preservation of American homes, for the cause of American womanhood, for peace on earth and good will to all men, President Woodrow Wilson.

DEMOCRATIC ACHIEVEMENTS IN NEW YORK STATE.

Our demand to be judged by our acts is not confined alone to our conduct in National affairs. It applies with equal force to our conduct in State affairs.

When in control of the State government the Democratic Party carried to successful enactment a program of long demanded and imperatively needed humanitarian legislation of incalculable benefit to the people of our State. The legislation was universally commended. It gratified those unselfishly laboring for the cause of humanity; it cheered those becoming despondent over the apparent irresponsiveness of our institutions to the progressive demands of the day; it awakened renewed confidence in the capacity, the willingness, and the determination of the Democratic Party to execute the expressed will of the people in the administration of their government.

A Democratic legislature ratified the amendments to the Federal Constitution providing for the direct election of United States Senators by the people, and authorizing the imposing of an income tax without apportionment among the several States. It gave to the people the State-wide direct primary, so that they themselves might select their candidates for public office. It adopted the Massachusetts ballot to compel a closer scrutiny by the electors of the candidates for the various offices to be filled.

It enacted the workmen's compensation act, and as a result of the labors of the Wagner-Smith factory investigation commission adopted a large number of recommendations to secure the safety and to improve the conditions of those engaged in many industries.

The banking laws were revised. So admirably was the work done that the statutes have been considered as model laws and have been followed closely by many other States. Legislation to regulate the stock exchange, for State farm credits, for the licensing and bonding of commission merchants, for the standardization of insurance policies, and establishing the optional charter for certain cities is the permanent and indestructible monument to Democratic statesmanship and Democratic control.

PROGRESSIVES COMMEND DEMOCRATS.

The Republicans came into power after a campaign in which the Democratic Party was charged with waste, extravagance, incompetency, and criminality. Widely heralded as the great apostle of reform Gov. Whitman was inaugurated with the announced determination to put Democratic rascals in jail, to reform the fiscal system of the State, to eliminate waste, and to lead a forward movement for humanitarian legislation and social reform.

It was an ambitious program, worthy of a great leader of men, and requiring capacity and courage of the highest order.

The people who had been misled by false and unwarranted assaults upon Democratic officials soon had ample cause to regret the return of the Republican Party to power.

On August 9, 1915, Mr. George W. Perkins in a letter to a prominent Progressive said:

> In this State the Democrats have given us the only social-justice legislation that has been enacted; while the Republicans have since tried to nullify that legislation. You all know that personally I am opposed to Democratic rule, that I have not approved of President Wilson's policies. No one can accuse me of leaning in that direction, but as matters stand to-day it would be more easy to make an argument for our affiliation with the Democrats than with the Republicans.

That indorsement of the Democratic Party and condemnation of the Republican Party is by one who is opposed to Democratic policies and Democratic control.

A DESTRUCTIVE REPUBLICAN ADMINISTRATION.

Upon the record of the parties no other conclusion could be justified. The Republican Party has not to its credit a single important enactment beneficial to the State. All of its energies were concentrated to undo what had been done during Democratic administrations, and where unable to completely emasculate the humanitarian legislation enacted to make inefficient its operation.

Against the overwhelming protests of the people the workmen's compensation act was amended so as to permit of private settlement of claims. It was one of the glaring evils of our social system designed to be eliminated by the statute. The law was intended to secure the dependent and unfortunate against the greed and cunning of those upon whom the liability was imposed. By permitting private settlements of claims the protection of the State is withdrawn and those whom the law was designed to protect are left subject to the coercion and pressure exerted by their better informed and more skillful adversaries.

In his speech of acceptance Mr. Hughes criticizes President Wilson for replacing Republicans in the Diplomatic Service of the Government. Since the formation of the Republic it has been the recognized and uniform policy to have as representatives to foreign Governments men in sympathy with the party in power and in harmony with its policies. In following this custom President Wilson acted as the country expected he should and as Mr. Hughes would do himself if President of the United States. But if it were just ground for the condemnation of the Democratic national administration, will Mr. Hughes's vocabulary be sufficiently extensive to furnish suitable words to condemn Gov. Whitman and his Republican associates in this State for their indefensible conduct in emasculating Democratic humanitarian laws for the sole purpose of eliminating competent officials whose only offense was their Democracy.

Upon his inauguration into office the governor caused searching investigations to be made of every governmental service under the control of the Democratic officials. Not only did those investigations fail to disclose a single criminal act upon the part of any Democrat, but there was no evidence of any irregularity or incompetency upon which he could remove a single Democratic official from office.

Then was initiated the scheme of reorganizing various governmental activities. The primary purpose was to terminate the services of Democratic officials, not to improve the public service. The result was chaos in the State government and widespread disgust among the people.

REPUBLICAN FLAYS REPUBLICAN.

The situation was tersely stated on April 24, 1915, by the New York Tribune, a stalwart Republican paper, in an editorial speaking of the Republican majority of the legislature, in the following manner:

> They discerned a license to destroy legislation that represented gains for humanity and protection for the less fortunate, and an opportunity to plunder the great city of New York. To the failure of the legislature there has been added that of the governor. * * * When the situation required courage he could only resort to cunning. When his party called out for leadership, he could not make up his mind whom to follow. When the State demanded an executive, he could only be a candidate.

GOV. WHITMAN'S BUNGLING FINANCIAL POLICY.

The most conclusive proof of the incapacity and failure of Gov. Whitman is his management of the finances of the State. He charged the Democratic Party with extravagance, with waste, and with the profligate expenditure of public moneys. His charges were unfounded; but if all he asserted were true, it but the more convincingly demonstrates his own incompetency and failure.

The total appropriations approved by the last Democrat who occupied the office of the governor of the State were $47,000,000. That record will continue as an enduring monument to the courage, the capacity, and the unswerving devotion to public duty of one of the most competent officials who has ever served the people, and who has been an honor to the State and a credit to the Democratic Party, the Hon. Martin H. Glynn.

During the campaign Gov. Whitman charged that the appropriations were too great; after his inauguration he claimed they were inadequate.

He approved appropriations during the first year of his service aggregating $63,000,000, which resulted in a direct tax of $20,000,000.

There had been no direct tax during the administration of Gov. Glynn; there would have been none had he been reelected. There should have been none under Gov. Whitman, but it was necessitated because of an unpardonable error of $18,000,000 in the preparation of the budget.

In the second year of his administration he approved appropriations totaling $59,000,000. As the fiscal year had been changed, these appropriations were for a period of only 9 instead of 12 months.

In submitting to the legislature his budget which, exclusive of debt service, amounted to $45,597,564, Gov. Whitman said:

> I feel sure the legislature can reduce these figures from $1,000,000 to $2,000,000 more.

Instead of reducing they increased them to $48,355,140 and the governor approved the bills with legislative additions. His action was in striking contrast to his declaration in December, 1915, when he said:

> I propose to carry through my financial program for economy in State affairs if it is the last thing I ever do as governor.

If a Republican governor's program for economy results in an increase of $14,000,000 in expenditures, an increase of practically 30 per cent over the previous Democratic administration, may we not well appeal to the people to spare us from the calamity of a Republican administration that will not strive so desperately to safeguard the public funds?

Gov. Whitman attributed his failure to keep down appropriations in his first year to his ignorance and incompetency. In December, 1915, he said:

When I took office of governor last January I knew absolutely nothing about State finances. It was made apparent to me when I went over the bills that there were many useless and extravagant appropriations. Salaries were padded, department heads stood before me and pointed to items which they declared they had never seen or heard of before. I determined then that I would have a budget prepared for this year which would bear my name as sponsor.

The bills which contained the vicious and unnecessary items and padded salaries were passed by a Republican legislature with a majority of two-thirds in each house; the department heads who "stood before him" and furnished the information were Republicans appointed by himself. Despite his unequivocal declaration to end such abuses the appropriations approved by him this year, the budget "which bore his name as sponsor," was more indefensible than the previous one and equally as large though covering only a period of 9 instead of 12 months.

HIS BUDGET DENOUNCED BY EMINENT REPUBLICANS AND PROGRESSIVES.

The governor could not plead ignorance for this year's acts. It was clearly a case of "when an executive was needed he could only be a candidate." The vicious features of the budget which bore his own name as sponsor were pointed out in unmistakable terms. The bureau of municipal research which he invited to cooperate in the preparation of the budget denounced it in unmeasured terms. The tax reduction committee, which numbered among its membership such distinguished Republicans as William R. Wilcox, chairman of the Republican national committee, Joseph H. Choate, William M. Calder, Willis L. Ogden, and Alexander M. White, and was headed by the chairman of the Kings County Progressive committee, Mr. William Hamlin Childs, a distinguished citizen and a prominent business man of the metropolis, denounced the budget and urged the governor to veto specifically enumerated items aggregating $14,000,000. But to them all the governor turned a deaf ear. He ignored his own declaration that the budget as submitted by himself could be reduced by the legislature from $1,000,000 to $2,000,000 and he approved appropriations $5,000,000 in excess of the sum he had publicly stated was sufficient to meet the expenses of the State.

REPUBLICAN PARTY STILL REACTIONARY.

The Republican Party has not only demonstrated its incompetency but its record discloses that it has not changed its reactionary character. It was not the fault of the Republican legislature that women and children are not working 18 hours a day in the canneries of the State. The legislature passed a bill to undo the work of reform accomplished under the Democratic administration, and only a protest so vigorous, so pronounced, so determined as to be irresistible deterred Gov. Whitman from approving that detestable bill.

The action of the legislature in that respect was characteristic of its party's action and policies.

A Democratic legislature had provided for a constitutional convention. It was realized that the time had come to submit to the people many important questions relative to the organic law that would mean much for the future development of the State and for the security and happiness of the people. Unfortunately the convention was controlled by reactionary Republicans, and its labors were so repugnant to the people that the proposed constitution was rejected by an overwhelming and unprecedented vote.

A calm survey of the political field makes readily apparent the causes of the buoyant hopes of the Democracy and the gloom and despair of our Republican opponents.

NATIONAL AND STATE WELFARE DEPENDENT ON DEMOCRATIC SUCCESS.

Democratic administration of public affairs in both the State and Nation has displayed the same attractive characteristics. Everywhere the public service has been improved. Men of demonstrated capacity and of unimpeachable integrity have safeguarded the public interests and have added to the renown of the Government. Our legislative acts have been wise, progressive, beneficial, and democratic. No existing evil, however trivial, has been permitted to continue unchecked. No abuse has been disclosed that determined efforts have not been made to end it. Our pride in the accomplishments of the Democratic Party is increased because of the vicious criticisms leveled by our opponents. Our confidence in our party's capacity is augmented by the desperate and unfounded attacks made by Republican candidates upon Democratic officials. Abuse and vituperation will not be sufficient to snatch the victory from us. The American people, just and discriminating, will not be mislead by idle chatter and random abuse.

They know that the country has been passing through a crisis that only undaunted courage, extreme patience, and superb statesmanship could master. They are familiar with the comprehensive program of beneficial legislation enacted despite the fierce opposition of the heretofore unchecked hordes of desperate reactionaries. Our house has been cleaned; its affairs have been put in order. Under Democratic leadership the people have been restored to the control of government. We are living in an era with peace, plenty, and prosperity prevailing in our own land, while nearly every other nation is devastated by the ravages of bloody war.

We appeal to the people upon our unparalleled record of demonstrated capacity. We enter this contest without fear or doubt. We confidently call to the hosts of Democracy—regardless of the standards which they may have previously followed, indifferent to the cause with which they have heretofore been identified—to unite in a common and patriotic effort to sustain the foremost statesman of our time by earnestly and heartily and effectively supporting the Democratic cause under the inspiring leadership of a true and really great American citizen, President Woodrow Wilson.

## An Open Letter to the Old Soldiers of the Country.

The Democratic Party, with grateful acknowledgment of the splendid work of the "old boys," has provided generously for them in their declining years.

The Republican Party, forgetful of that splendid army who sacrificed so much for their country, fails to even mention them in their party platform.

## EXTENSION OF REMARKS

OF

## HON. JOHN A. KEY,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. KEY of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD I submit, as chairman of the House Committee on Pensions, the following open letter to the old soldiers of the country:

WASHINGTON, D. C., *August 15, 1916.*

To the VETERANS OF OUR COUNTRY AND THEIR DEPENDENTS.

DEAR FRIENDS: You have doubtless noticed that the Republican platform of this year, as well as that of 1912, is absolutely silent on pensions and the old soldier who saved this Nation from ruin. This characteristic indifference to the "old boys," whose political usefulness is on the wane, is in striking contrast to the broad and generous pension plank in the Democratic platform. The Democratic Party can point with a glow of pleasure to its record in pension legislation and its broad and liberal administration of the pension laws. The Sherwood Act of May 11, 1912, eclipsed in its breadth and benefits all previous legislation, and was conceived by a grand old Democrat, Gen. SHERWOOD, of Ohio, and passed by a Democratic House, and since March 4, 1913, has been administered by Democrats.

The Russell amendment of March 4, 1913, also a Democratic measure, relieved pensioners of the necessity of applying for the increases fixed in the act of May 11, 1912, thus providing for automatic increases, without further effort on the part of the pensioner. This act, as amended, has reached and relieved more real need and suffering throughout this broad land, and in a shorter period, than any pension legislation ever enacted, and, as now administered by our able and generous Commissioner of Pensions, is from day to day demonstrating to the country and its defenders that the love of the old soldier and the high estimate of his value to the Nation still deeply stirs the warm heart and deathless memory of the Democracy, however lukewarm it may have grown with those whose political power has heretofore so largely rested upon the soldier vote; however he may be forgotten by those for whom his efforts at the polls made victory possible in the years before age and decrepitude made him, in their opinion, a negligible factor!

There are now pending in Congress pension bills which are designed to supplement and very largely extend the benefits of present laws. This legislation, conceived and enacted by the Democracy, reaches the high-water mark of liberality in pension matters, not only for this country but for the entire world. It will be administered in the same broad spirit of liberality by a Pension Bureau so organized and conducted that its every impulse is for the square deal to the soldier.

The Key bill, which would provide liberal pensions for needy widows and minor children of Spanish War veterans, has passed the House and is now on the Senate calendar.

The Ashbrook bill that has passed the House and is now pending in the Senate is for the relief of Civil War veterans' widows, and has four principal provisions, which would admit many worthy women to the rolls who are now barred through some legal technicality. Under this measure widows who were wives while their husbands were in the Civil War service will get $20 per month. Widows of veterans of the Civil War who were not wives until after the Civil War, but who

are now 70 years of age, will get $20 per month. Widows who lost their pensions upon remarriage will be restored to the rolls if again widowed. The House provision extending the limitation on marriage from June 27, 1890, to June 27, 1905, was further extended through the efforts of Senator JOHNSON of Maine, of the Senate committee, to include the date of the final passage of the act. Senator JOHNSON in the Senate and Gen. SHERWOOD in the House are and have always been vigilant for the best interests of the old soldier and originators and stanch supporters of all proper measures for his betterment. Senator JOHNSON has, in addition, secured the passage of a great many deserving private pension bills for the veterans of Maine, his own State.

All veterans of the Grand Army who visited Washington at its last Grand Army of the Republic reunion must retain a vivid recollection of the kindness and courtesy with which they were received at the Pension Office Building, which was a restful rendezvous for the visiting veterans. They will remember how the efficient officers and force of this important bureau decorated the grand court of the building with flags, bunting, and numerous Army corps emblems, and provided seats around the fountain for the weary and footsore and a hospital tent with trained nurses and physicians for prompt attention to the sick and indisposed. Here in this great court the broadminded, genial commissioner, G. M. Saltzgaber, held daily receptions and listened to the complaints of his welcome old comrades, promptly adjusting any grievance and furnishing, through a corps of trained examiners, expert information as to their claims and pension matters generally. Hundreds of cases were drawn from the files for the inspection of the old boys who wished to see their papers and understand the processes of adjudication. The veil was lifted and all realized that the procedure was open, fair, and honest, and that every claimant could confidently depend upon getting all that he is legally entitled to. All carried away with them the satisfying conviction that the heart of the Democracy, and of its great instrument, the Pension Bureau, still throbbed warmly for those who sacrificed the strength and vigor of their young manhood that the Union should stand.

The Pension Bureau since March 4, 1913, has removed many of the long-prevalent irritating features, both of procedure and payments. It has eliminated the annoyance and hardship of requiring all pensioners to produce certificates for comparison with the certificate numbers on their checks before payment could be made. This mode of procedure was of little use for identification, yet caused at times great irritation and delay. It was therefore abolished as ineffective and unnecessary.

Claims that heretofore were many months, and even years, in process of settlement are now adjudicated promptly and justly. Letters of inquiry receive immediate attention and reply, so that correspondence is current, and this huge mill through which literally billions of dollars have been disbursed, relieving real want and suffering, continues to grind out its grist of beneficence from month to month in a steady stream that reaches and carries succor to every village, town, and hamlet from Maine to California, from Alaska to the Panama Canal, from Porto Rico to the far Philippines, of our own country, and even penetrates the remotest recesses of most of the countries on the globe; all resultant from the undying gratitude of a generous people.

Should the pending pension bills become law, it will be necessary only for prospective beneficiaries to write to their Senators or Congressmen for information, and they will be promptly supplied with all necessary blanks, instructions, etc.

With sincere asurance of continued interest,

Your friend,

JOHN A. KEY,
*Chairman House Committee on Pensions.*

## Child Labor.

## EXTENSION OF REMARKS
OF
## HON. J. M. C. SMITH,
OF MICHIGAN,
IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. SMITH of Michigan. Mr. Speaker, the second Sunday in May is designated as Mother's Day and is observed throughout the Nation. In some of the States the first Sunday in June is designated as Father's Day. Bills have been introduced that this day may be observed as Father's Day throughout the Nation.

On the passage of this bill this will be a children's national remembrance day, and throughout the length and breadth of our land the great masses of our youths, the children of our land, will get a beneficial recognition which will inure to their earthly welfare and be a direct benefit to them in the after years of their life.

In considering the question of child labor we are too prone to think that a child of tender years had better be to work than idle. I think this comes from the fact that many are forced to employment in the years after they attain the age of 16 upward than from the consideration of those of less mature and more tender years.

I do not think a child within the age of 14 years ought to be employed in a factory. Neither do I think a child within the age of 16 years ought to be employed in a quarry. The tree is largely formed from the way the plant is looked after and cultured. I think that the instruction of the child in its early years largely shapes not only the disposition but as well the temperament and physical development of the grown person.

It is to the credit of nearly every State in the Union that they have laws prohibiting the employment of child labor within the age of 14 years in factories, and under 16 years of age in quarries, and it is designed by this bill to have a uniform law passed by Congress which will affect every State in the Union alike.

I incorporate a table showing the number of children employed in factories in the different States:

*Number of children employed in 1910 in industries affected by the bill.*

| | Manufacturing and mechanical (specified occupations). | | Extraction of minerals (specified occupations). | |
|---|---|---|---|---|
| | 10-13 years. | 14-15 years. | 10-13 years. | 14-15 years. |
| Total | 27,005 | 176,137 | 2,266 | 15,401 |

I do not think that it is harmful to have a uniform law wherever its application will affect all people alike.

I think it will be conceded that to work a child in a factory within the age of 14 and in a mine within the age of 16 is a recognized evil.

We have uniform laws affecting our commerce, uniform laws against the adulteration of our foodstuffs. We have uniform laws concerning the employment of labor among Federal employees, laws affecting the health and morals of our people, as well as other laws that might be incorporated. All of these are important, but none more important than laws affecting the welfare and vitality of our children.

The greatest asset of the State, and hence of the Nation, is the child. A sickly or deformed child is greatly to be regretted. This is not the fault of the child, and generally not of the parent. The children elicit our sympathy, and an appreciative public comes to their relief in the establishment of many institutions for their care and protection.

I think a better feeling will exist between the States when the law is uniform. I am not solicitous concerning the constitutionality of this act, because I think that under the Constitution the general welfare will be promoted best by doing all we can to promote the welfare of the child, and the act will be held clearly constitutional.

I am one of those who would be glad to vote for a uniform education law whereby the Government might contribute to the intellectual welfare of the child in caring for its education. A

step in the right direction is the vocational education bill now before the Committee on Education, and which will open the door of opportunity to thousands throughout the land who otherwise might be kept in ignorance and darkness throughout life.

According to the Census Bureau of 1910 there are 1,990,215 children from 10 to 15 years of age in gainful occupation in the United States, 1,353,139 males and 637,086 females, and by eliminating those engaged in agricultural pursuits leaves many thousands engaged in factory and mine, as is shown by the report of the States above mentioned.

It is to be noted that the bill aims at children working in factory, quarry, and mine. I incorporate that provision of the law prohibiting the shipment of goods manufactured by children so employed.

That no producer, manufacturer, or dealer shall ship or deliver for shipment in interstate or foreign commerce any article or commodity the product of any mine or quarry, situated in the United States, in which within 30 days prior to the time of the removal of such product therefrom children under the age of 16 years have been employed or permitted to work, or any article or commodity the product of any mill, cannery, workshop, factory, or manufacturing establishment, situated in the United States, in which within 30 days prior to the removal of such product therefrom children under the age of 14 years have been employed or permitted to work, or children between the ages of 14 years and 16 years have been employed or permitted to work more than eight hours in any day, or more than six days in any week, or after the hour of 7 o'clock p. m., or before the hour of 6 o'clock a. m.

It is needless to say that I would go much further than this bill and I would prohibit the importation of goods into this country which are manufactured by child labor.

Some say that this bill is supported by the labor unions. If it is, so much more then to the credit of those organizations who know how to work and who know what it is to work and know what the child has to endure in following their occupation.

But to me comes the appeal, not from the labor unions so much as from the mothers and women's organizations who have the care of the child in its infancy and who know best its capability and its capacity.

The great medical authorities in this country and of Europe are opposed to child labor, and so uniform is the opposition to child labor that every State in this great Republic has laws regulating child labor.

And I recite from the statement of Hon. A. J. McKelway, secretary for the Southern States of the National Child Labor Committee, who testified before the committee considering this measure, that from the Census Bulletin No. 69, entitled "Child Labor in the United States":

That the census takers were not required to report children at work under 10 years of age, due to the complacent assumption, I presume, that there were none. Some of them exceeded their instructions and did report such children. Two children of 5 were reported at work, 1 6 years of age, 27 of 7, 87 of 8, and 250 of 9 years of age, a total of 370 children reported employed from restricted areas in North Carolina and South Carolina and the State of Georgia.

To me it is inconceivable that a child of 5, 6, 7, 8, or even within the age of 14 years, should be set to work at manual labor.

I want, in justice to these States and this condition of things, to state that they are correcting this abuse and have since passed laws to remedy such employment, so that only two of them permit the employment of children in factories within the age of 14, namely, North Carolina and South Carolina. The work is too severe and often the place too damp in quarry and mine for child labor; while the dust, lint, and noise of a busy factory undermines its health.

Mr. Speaker, I am in favor of this bill because it tends to eradicate a well-recognized evil. I have yet to find a person who states that he is in favor of an infant child working in factory or mine. The school is the place for such a child. It makes him a better citizen. It preserves his health, and with the opportunities in this country, open to everyone with good health and an ordinary education in the simple rule of three—reading, writing, and arithmetic—it is not only a benefit to the child but likewise to our Republic, composed of enlightened and cultured citizens.

The bill also prohibits the employment of the child for more than eight hours a day or six days in the week. In some of the factories longer hours are required, and, as shown by Mr. McKelway, in his report before the committee, the laws of some of the States require the child to work 11 and 12 hours.

I think there should be no night work for a child. In most of our well-organized factories work is done by the hour, and where it is not, many of them require only eight hours of labor for a day, which is the Government standard in all its factories and for all its employees.

I give this bill my whole-hearted support, and I believe that in the end, when even those who are now opposing this measure adjust their factories to the employment of more mature labor, they will benefit by it, and that better conditions will exist on account of the passage of this meritorious act.

## The Illinois Waterway. Its Great Advantage to the People of the Mississippi Valley. Its Construction Prevented by the General Government. The People of Illinois Impatiently Demand that Permission be Given to Make This Much-needed Internal Improvement.

### EXTENSION OF REMARKS

OF

### HON. BURNETT M. CHIPERFIELD,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 19, 1916.*

Mr. CHIPERFIELD. Mr. Speaker, the construction of a waterway in connection with the Illinois River that will connect the Great Lakes with the Gulf is a project that has been much in the mind of the people of Illinois for many years.

For some reason or other the construction of such waterway has repeatedly encountered obstacles on the part of the Federal Government that, it seems to me, are wholly unreasonable and entirely unjustified.

The attitude of the recent Secretary of War, Hon. Lindley M. Garrison, denying permission to the State of Illinois to construct this waterway is, in my opinion, arbitrary.

In this connection I desire to submit a brief history of this proposed waterway.

A WATERWAY FROM THE GREAT LAKES TO THE GULF OF MEXICO.

A waterway connecting the Great Lakes with the Gulf of Mexico, via the Des Plaines, Illinois, and Mississippi Rivers, has been the prophecy and the recommendation of the pioneers and statesmen of the State of Illinois from the time that Pere Marquette and the explorer, Joliet, discovered the portage between the Chicago and the Des Plaines Rivers in 1673 down to the present time.

THE ILLINOIS AND MICHIGAN CANAL.

When the State of Illinois, in 1818, was admitted to the Union, Nathaniel Pope, the far-sighted representative of the Territory in Congress, secured an amendment to the act fixing the boundaries of the State of Illinois, shifting its northern boundary so far north as to bring within the limits of the projected State the upper portion of such a waterway. The State was hardly admittted to the Union when the agitation of its statesmen was directed toward the construction of a canal between Lake Michigan and the Illinois River. Congress, in 1822, and again in 1827, provided for the construction of this waterway by the generous donation of lands owned by the Government to the State of Illinois.

The construction of the canal was begun shortly after 1827, and was opened for use by the public in 1848. At the time it was designed and completed it was considered to be of adequate size to provide for the development of waterway commerce. At that time the only known motive power for the operation of boats upon canals was animal power. Not a steam railroad existed in Illinois, and no railroad was in operation in the State of Illinois until six years after the canal was opened for public use.

The only way then known to propel barges was by horses and mules, and a canal boat with a capacity of 200 tons was the then known limit of barge propulsion. A speed of from 3½ to 4 miles an hour was the utmost that could be considered in a canal. With this motive power in view, and this capacity in contemplation, a canal adequate for the then possibilities of operation was constructed from Chicago to La Salle, about 100 miles in length. At La Salle this canal entered the Illinois River, which has a natural depth from La Salle to the Mississippi of 7 feet. This canal had a depth of 6 feet, a width of 36 feet at bottom, and 60 feet on water line. Its locks were 100 feet long and 17 feet in width and only 4½ feet deep. Soon afterwards, however, the whole science of transportation was revolutionized.

Steam was harnessed, and adapted to railway and water transportation, and although the canal for many years proved to be a practical waterway and paid for its construction with the revenues derived therefrom, it became very apparent 30 or 40 years ago that the canal as constructed must fall into disuse because of the competition of modern transportation as developed in railroads, and the inadequate dimensions of the canal.

For the last 15 or 20 years the canal, built in the first half of the nineteenth century, has been practically fossilized and useless. In the last decade of the nineteenth century, however,

it again became apparent that transportation by water between the Great Lakes and the Illinois River must be provided.

THE SANITARY DISTRICT CHANNEL.

The sanitary district of Chicago was organized in 1890, primarily for the purpose of affording drainage and sanitation to the great city of Chicago, but the public became impressed with the fact that while primarily the object of the sanitary district canal was for drainage and sanitation, incidentally it should provide for navigation as far as it was built, and therefore a tremendous waterway was constructed from Chicago to Lockport, with a depth of 22 feet to provide for the commerce of the future. This provides a waterway of adequate depth from Chicago to Lockport, a distance of over 30 miles. From Lockport to Joliet, about 3 miles, there is a natural depth in the river, with which the sanitary district canal connects of over 100 feet.

Since the completion of the sanitary district canal the citizens of Illinois have been confronted with the following waterway situation: A channel from Chicago to Joliet, over 30 miles, with a depth of approximately 22 feet, and a depth in the river of over 10 feet for the 3 miles between Lockport and Joliet. Thence a gap between Joliet and La Salle of 65 miles, in which the Des Plaines and Illinois Rivers flow over a sharply descending rocky ledge of 144 feet declivity, making the river in its natural condition impractical for utilization as a waterway. Alongside of the river on this stretch is the old Illinois and Michigan Canal, with a present depth of about from 4 to 5 feet, with a width of 60 feet and with locks of such narrow dimensions as to be impractical for modern use. From La Salle to Grafton, where the Illinois River enters the Mississippi River, we have a stretch of 233 miles, a waterway created by the Almighty, with a natural depth of 7 feet, easily capable, by dredging, of being deepened to 8 feet by the expenditure of a comparatively small amount of money.

From Grafton, where the Illinois River enters into the Mississippi River, down past St. Louis to Cairo we have a depth in the Mississippi River of 8 feet, with no immediate prospect of securing a further depth without the expenditure of an enormous amount of money, an amount so enormous as to justify the Federal engineers in declaring that at the present time it is, from an engineering standpoint, impractical of development to a greater depth. This has been the situation confronting the people of the State of Illinois for the last quarter of a century.

THE DEMAND FOR AN ADEQUATE WATERWAY.

The necessity for the development of a waterway between Joliet and La Salle has been clearly recognized by the people of this State. In 1907, or thereabouts, the people of this State, upon a referendum vote, amended the constitution so as to provide for the issuance of $20,000,000 worth of bonds to construct and create a deep waterway between Joliet and La Salle. After the passage of this constitutional amendment providing for the issuance of these bonds for this purpose a controversy arose between the engineers as to the depth and capacity of the proposed waterway. Some advocated a 14-foot channel, others a greater depth, and still others advocated the rehabilitation of the old canal to a depth of 6 feet. Unfortunately, as the result of this engineering controversy, the project of the creation of a waterway over the 65 miles between Joliet and La Salle has languished and nothing has been done.

This being the situation, Gov. Dunne invited several prominent engineers to accompany him, in the summer of 1914, on a trip down the old Illinois and Michigan Canal for the purpose of becoming acquainted with the physical surroundings thereof.

During that trip on the Illinois and Michigan Canal the governor suggested to the engineers that, in view of the fact that there was only an 8-foot depth in the Mississippi River for over 200 miles between Grafton, the mouth of the Illinois, and Cairo, it might be wise to devise some engineering scheme which would give the people of the Mississippi Valley a depth of 8 feet in the Illinois River and from Chicago to Grafton in such a way as not to foreclose the future depth of the Illinois waterway, in the event that engineering science would hereafter discover a way to give us a greater depth in the Mississippi River. These engineers readily promised to give the matter consideration, and in 60 days thereafter they devised a scheme, which they submitted to the governor in a written report, and which he submitted to the legislature, to various associations of commerce in the State of Illinois, to engineering boards, and to other bodies, and this scheme has received practically universal approval.

THE ILLINOIS WATERWAY LAW.

The law recently passed by the Legislature of Illinois provides for the deepening and using of the old Illinois and Michigan Canal for 20 miles between Joliet and Dresden Heights, thence entering the Illinois River and deepening the channel thereof to at least an 8-foot depth and 150-foot width and using it as a waterway for 45 miles from Dresden Heights to Starved Rock, which is located just above Utica, except for about 2 miles at Marseilles, where the waterway channel is diverted from the river to a by-pass along the south side of the river and thence back to the river after passing the private dam and water power of the Marseilles Water & Power Co. This diversion is made for the purpose of avoiding any legal delays or complications with that company which now maintains a dam and electric-light plant at Marseilles. If this project as above outlined be carried out, it will be seen that it would afford the people of Illinois a continuous waterway with a minimum depth of 8 feet from Lake Michigan to Cairo and thence by the Mississippi River to New Orleans and the Gulf of Mexico.

Heretofore, as has been said, there has been a wide divergence of opinion between engineers as to the depth of the proposed waterway. But in view of the fact that the Federal Government maintains a channel of only 8 feet for 225 miles in the Mississippi River—between Grafton and Cairo—and in view of the further fact that there is no probability of a greater depth being attained in the Mississippi River between the said points for a generation at least, the governor was convinced, after reading the report of the Federal engineers as to the condition of the Mississippi River, that it would be useless to attempt the construction of any waterway at present in the Illinois and Des Plaines Rivers between Lockport and Utica at a greater depth than the channel in the Mississippi River.

AN 8-FOOT CHANNEL SUFFICIENT FOR THE PRESENT.

At the same time it was believed to be unwise for the State of Illinois to delay the construction of a usable canal, and if an 8-foot channel can be secured at the present time without in any way jeopardizing the future greater depth of the Illinois River in the event that a greater depth could hereafter be obtained in the Mississippi River, such a course should be pursued. Four engineers, appointed by the governor, after carefully examining the subject matter, made a unanimous report, in which report was developed a scheme for the construction of an 8-foot waterway between Lockport and Utica. That scheme with some amendments demanded by local conditions at Dresden Heights, Marseilles, and Ottawa has, after the fullest discussion in the press and before committees of the legislature, been finally adopted and crystallized into the law.

The project will cost the State of Illinois not to exceed $5,000,000, which is to be paid for by the issuance of bonds not to exceed that amount. The waterway power to be developed at Starved Rock and at Joliet at the present time will, it is estimated by these engineers, not only pay interest upon those bonds but will pay an amount every year into the sinking fund to help retire these bonds.

THE PLAN OF THE ILLINOIS WATERWAY.

The plan contemplates the using of the Illinois and Des Plaines Rivers for 45 miles at the present time, and the use temporarily of about 20 miles of the old Illinois and Michigan Canal between Joliet and Dresden Heights. The temporary use of the canal for this 20 miles at the present time is necessitated by the fact that the Economy Light & Power Co. claims rights through a lease in the regular course. This lease prevents the State from utilizing the river at the present time between Dresden Heights and Joliet without paying this company a very large amount of money demanded by them to cancel their lease. It is intended to proceed promptly with the construction of the waterway between Dresden Heights and Starved Rock over the 45 miles in which the river channel is used, and to endeavor in some way to procure a surrender, or cancellation, or make some arrangement with the Economy Light & Power Co. under which the river may be utilized between Dresden Heights and Joliet. Failing so to do the old canal will be used temporarily between these points, enlarging the locks and deepening the channel to an 8-foot depth.

THE WATERWAY AN URGENT NECESSITY.

As before stated a navigable commercial waterway between the Great Lakes and the Mississippi River has been the prophecy and recommendation of every great statesman in Illinois from the very earliest down to the present day. These prophecies and recommendations seem to be realized so far as legislative action is concerned, by the Illinois law, and it is believed that tremendous commerce will be developed over this waterway as soon as it is opened to the public.

The city of New Orleans has already spent $9,000,000 in the construction of its municipal docks and wharves, preparing for a trade that must inevitably come down the Mississippi Valley en route to the Pacific coast through the Panama Canal. New Orleans is 900 miles nearer the Panama Canal than the ports of New York, Boston, and Philadelphia.

For this reason this project is of enormous value to the whole Mississippi Valley. It will cheapen freight rates between the Gulf of Mexico and the Great Lakes, which must redound to the benefit of this great manufacturing and agricultural valley.

LACK OF WATER TRANSPORTATION FACILITIES A SERIOUS HANDICAP.

To let the waterway proposition linger along as it has done for the last quarter of a century with nothing done in the way of opening up a practical channel would be a commercial, financial, and political blunder.

The reasons that can be adduced for the immediate construction of this waterway are overwhelming, as shown by the statements of such manufacturers, merchants, and shippers as those identified with Marshall Field & Co., Carson, Pirie, Scott & Co., Libby, McNeil & Libby, Edward Hines Lumber Co., Illinois Malleable Iron Works, W. W. Kimball Co., and a host of other manufacturers, merchants, and shippers almost too numerous to mention.

Since the opening of the Panama Canal, ocean traffic has been wonderfully developed between the eastern and western seaboards of the United States. The ocean tariff has proved to be much more economical than the transcontinental railroad tariff, and as a result the transcontinental railroad tariff has been lowered, but not lowered in the Mississippi Valley.

THE WATERWAY WILL REDUCE FREIGHT RATES.

Mr. S. A. Thompson, secretary of the National Rivers and Harbors Congress, declared before the Illinois Legislature that the opening of the Panama Canal instead of being a benefit to the Mississippi Valley would be a disaster to that valley, unless we availed ourselves of waterway transportation down the Illinois and Mississippi Rivers to New Orleans. New Orleans is 900 miles nearer the Panama Canal than is New York, and, if the citizens of the Mississippi Valley were in a position to ship their manufactured products to New Orleans by water, they would be in a position more nearly equal with the manufacturers who ship from New York, Baltimore, and Philadelphia.

The Edward Hines Lumber Co., in a letter addressed to the Legislature of Illinois, declared that the railway tariff upon lumber from the Gulf of Mexico to Chicago is now $12 per 1,000 feet, and that, if the 65 miles between Joliet and La Salle were provided with an adequate waterway, these rates by water from the same point will not exceed $6 per 1,000 feet, and that the saving by reduction of freights upon lumber alone from the Gulf of Mexico to Chicago, if only one-half of the lumber shipped to Chicago were shipped by the waterway, would amount to $1,800,000 a year.

Mr. Thompson, secretary of the National Rivers and Harbors Congress, also produced figures before the legislature showing that the cost of waterway transportation on the Great Lakes was one-eighth of the railway transportation between the same points thereon, and that all waterway transportation was at least one-half less than the cost of railway transportation.

Self-propelled barges carrying from 1,000 to 1,500 tons of freight can and will operate over this waterway between Chicago and New Orleans, to the great benefit of the people of the Mississippi Valley, if this imporant waterway be constructed and placed at the disposal of the people.

THE CONTROVERSY RELATIVE TO THE UNITED STATES GOVERNMENT PERMIT.

The State of Illinois by an act of its legislature has authorized the construction of this connecting link of 65 miles in the 1,600 miles of waterway between Chicago and the Gulf of Mexico at its own expense, for the benefit of both the State of Illinois and its sister States in the Mississippi Valley.

An application for a permit to construct the waterway has been made to the Secretary of War and the Engineer in Chief of the War Department. That application is still pending and undetermined. It would, no doubt, have been granted some time ago were the question not raised that the construction of this gap in the waterway would require the diversion of additional waters from Lake Michigan.

Some of the great cities on the inland lakes have become unnecessarily alarmed over this bugaboo. The State of Illinois does not require for the construction or operation of this waterway one gallon of water in excess of the 250,000 minute-feet which have been permitted to be diverted by the Secretary of War to the sanitary district of Chicago for nearly 20 years last past. The waters pouring into the Illinois River from the Des Plaines, Kankakee, and Fox Rivers, together with the amount legally permitted for years last past to be diverted through the Chicago River for sanitation purposes, are more than ample for all the needs and necessities of the proposed waterway. The sanitary district of Chicago and the city of Chicago are desirous of securing from the Secretary of War additional flowage of water for sanitary purposes, but this is an issue created by the sanitary needs of the great city of Chicago, with its 2,500,000 population, and not an issue raised in any way by the application for a permit to construct this waterway.

UNIVERSAL APPROVAL OF THE PROJECT.

Eight governors of eight of the great States in the Mississippi Valley have joined in requesting the Secretary of War to grant the permit for the building of this waterway. The executive officers of nearly every great city in the Mississippi Valley from New Orleans to Minneapolis and St. Paul, including St. Louis and other large cities on the Mississippi and Illinois Rivers, have also requested the Secretary of War to act favorably and grant the permit desired.

New Orleans has spent millions of dollars in building municipal docks and wharves to prepare for the trade that must go to that great city from the Mississippi Valley and thence to the Panama Canal. Nearly all the great cities on the Mississippi and Illinois Rivers are preparing to erect or have in contemplation the erection of municipal docks and wharves to take care of the commerce that is certain to develop when this waterway is opened. Nearly one-half of the population of the United States resides in the Mississippi Valley, and the retardation of the opening of this great improvement will work incalculable damage to the interests of that great valley.

In these days, when an outcry is raised against the pork barrel, attention may be properly directed to the fact that Illinois for this great improvement does not seek one dollar from Congress. That great State is prepared to take upon itself the expense of the whole project, which will inure not only to its own benefit, but to the benefit of its sister States in the Mississippi Valley.

On May 16, 1916, when the State of Illinois was appearing before Secretary of War Baker and the Board of Engineers of the United States Army asking that the decision of former Secretary of War Garrison should be reviewed and that permission be given to the State of Illinois to construct this waterway, I appeared before the Secretary of War and the Board of Engineers at the request of the State of Illinois and presented the following argument:

ARGUMENT OF HON. BURNETT M. CHIPERFIELD, OF ILLINOIS, BEFORE THE SECRETARY OF WAR AND THE BOARD OF ENGINEERS OF THE UNITED STATES ARMY.

"Mr. CHIPERFIELD. I wish to say to you at the commencement of the remarks that I desire to make that I have no interest of any kind in this proposition except as a citizen of Illinois.

"Gov. Dunne is not of my political household. I have no expectant or possible connection with this waterway if it becomes an established fact.

"I could not take any other position than that which I do take favoring this project as a citizen of Illinois and having its best interest at heart. * * *

"It is surprising, when we attempt to bring to successful fruition an enterprise that has slumbered in the imagination of the people of the State of Illinois for many years, how many guardians rise up for the State of Illinois and tender their services to prevent the accomplishment of what we think the State of Illinois has an absolute right to accomplish.

"In the first place, there are numerous questions that have been suggested by such self-tendered guardians here that, in my judgment, are not the principal questions, but are only collateral and not in any way associated with the proposition which is before us to-day. For instance, there is the proposition that has been raised by the gentleman from Wisconsin [Mr. STAFFORD], who has become, in connection with the lowering of the water level in the Milwaukee River and Lake Michigan, so much interested in the conservation of the water power in the State of Illinois, which comes just to this, that the question of the ownership of the water power of Illinois in an intrastate stream is no longer an open question, either so far as principle or the decisions of courts are concerned.

"The Illinois River runs wholly within the State of Illinois.

"The General Government, in a certain sense and to a certain extent, is vested with jurisdiction for the purpose of navigation over this stream. Those of us who have spent our lives in Illinois and know intimately every step connected with the matter know that the people do not feel overwhelmingly a sense of gratitude for the things that the General Government has done for the Illinois River, for it has done practically nothing.

"There is no lively sense of obligation upon our part. The Government made a survey of the river and built two dams that my friend, Mr. RAINEY, is seeking to have removed because they overflow lands in which he and his friends are concerned. And, parenthetically, I might say that Mr. RAINEY's proposition was a 14-foot waterway and is not entirely dissociated from the idea that property will be improved in which he and his col-

leagues are very directly interested. But the United State Government has done practically nothing for the Illinois River.

"In the State of Illinois, by a long line of decisions, as my esteemed friend Gen. Crowder will corroborate, he having looked with care into this question, the title to the bed of the Illinois River is in the riparian owners.

"The adjoining owners on either side own to the center of the stream.

"The United States Government has no interest, Mr. Secretary, to the amount of a single fluid ounce in the water power that is created in the Illinois River. You may talk about conservation—and with that I am not going to quarrel to-day, for it is not raised here in any way—but the Federal Government has absolutely no interest in the water power of the Illinois River, and that has been decided both by State and by Federal courts, the ownership being entirely private, subject merely to one easement, to one reservation, and that is the easement and the reservation of navigation that exists in the Federal Government.

"I will not take the time to cite cases, because there can be absolutely no question but this is the fact and has been decided, as I say, by both Federal and State courts, notwithstanding the imaginings of my friend Mr. Cahill.

"Maj. ANSELL. May I interrupt you?

"Mr. CHIPERFIELD. You may, Major.

"Maj. ANSELL. Is the power of Congress over a river that is intrastate more limited than it is over a river that is interstate?

"Mr. CHIPERFIELD. What power, Major?

"Maj. ANSELL. This easement that you refer to, the navigation easement. Does it differ?

"Mr. CHIPERFIELD. I am not seeking, by anything that I may say, to limit this department to exercising such control over this stream as would be exercised over an interstate stream, so far as navigation interests are concerned. I do not attempt to distinguish in that respect, nor will I attempt to distinguish between the two. The principle of the right to regulate navigation is well established. Many decisions have made this principle closed and adjudicated, unless they should be disregarded and overturned.

"Yesterday there was mentioned by some of those who presented the matter the Illinois and Michigan Canal. The Illinois and Michigan Canal was built at a time when the internal improvement of the Nation was one of the questions that vitally concerned all the people. It served its day and its generation, and the State of Illinois expended millions and millions of dollars for its creation and millions of dollars for its continuation and for its upkeep, and the State of Illinois only lost its interest, and an interest, I might say in passing, that was without bounds of generosity, when this canal, by reason of its limitations and its location no longer did the business of the State of Illinois, or any considerable portion of it.

"In that day when the wilderness was developing and when the movement was from East to West, thousands and thousands of the settlers traveled over this canal, thousands and thousands of tons of freight were brought in by this route, and there was a time when commerce was most lively upon this canal in the antiquated methods then used.

"But because of the doctrine of the survival of the fittest, it fell into disuse, Mr. Secretary, and no one is so lowly now to do it reverence. It became a stench; it became a matter of offense; it became a matter for which there was no utilitarian use. It became a place that was filled with stagnant water and the decaying ribs and bones of abandoned canal boats, and it virtually passed out of existence because the need for it had passed out of existence. And, parenthetically, I might remark that I know whereof I speak, for I was for some time the attorney for the Illinois and Michigan Canal. I know its internal workings, and I know, without the slightest question, the statements I make to be true.

"You may withhold the permit to construct this waterway. If you feel it your duty, you may withhold the permit, but the Illinois & Michigan Canal will not be revived by that act.

"It will lie sleeping with the useless dead, stagnant, and of no serviceable purpose. It will create no new condition.

"About the land that is occupied by the bed of the canal, I would respectfully submit—is that a question that concerns this department in any way? If there are lands of the United States Government that belong to the United States Government by reason of the breach of some condition regarding the canal, I inquire of all of the gentlemen who are associated in interest in the hearing of this matter if that is a matter that concerns this department in any way?

"I think not.

"I think it concerns another department of the Government. And whatever action the Government may see fit to take with reference to the misuse of this canal can not properly enter into the matter of the granting of the permit to construct this waterway, it seems to me.

"It would be a singularly ungracious act of the United States Government to claim these lands, taking into consideration the fact that Illinois is paying one-eighth of all the internal revenue of the United States, and that in three years it has paid in $360,000,000; and when the Government needed its services, out of the 2,700,000 enlistments furnished for the Civil War, Illinois depopulated itself by furnishing 270,000. I say it would be a singularly ungracious act, it seems to me, after the furnishing of this waterway, after saying to the people of the United States, 'Come, and use it freely at our expense, without adequate compensation,' to advance any claim for the lands granted to aid in the construction of the canal.

"Maj. ANSELL. I hate to interrupt you.

"Mr. CHIPERFIELD. You need not hate to, sir.

"Maj. ANSELL. Do you concede, Mr. CHIPERFIELD, that one of the conditions of that grant made to the State of Illinois was that the State should not only construct but also maintain?

"Mr. CHIPERFIELD. Oh, no, Major; I do not concede that.

"Maj. ANSELL. What is your view about that?

"Mr. CHIPERFIELD. I would delight to go down to your office and go over the matter with you for two reasons: First, that we might discuss the legal features and that I might have the pleasure of the personal visit. But the United States Government made its grant at the time when the lands were practically without value and when Chicago was practically a morass, for the purpose of aiding in the construction of this canal, as it aided in the construction of railways; and without going into it, you know where these railways have fallen into disuse what the rule has been, and how it was not a condition precedent or subsequent to the making of the grant, as in the cases which I have in my possession is clearly shown. So I say that that question does not properly enter into this matter.

"Gen. BLACK. I have been very much troubled and worried about one thing in connection with this matter, not being a lawyer. As I understand it an intrastate stream is a stream of waters which are gathered together within the limits of a State, flowing within its boundaries, running through its minor water courses, and comprising a stream altogether within the State.

"Mr. CHIPERFIELD. General, I would have to differ with you very positively, so far as my mental assent is concerned. I do not think that that is a fair definition. I do not assume any monopoly on legal knowledge. I have been practicing my profession for 25 years. I can not decide this question offhand, but I will tell you what my idea is——

"Gen. BLACK. I will tell you what I was leading up to. We had the condition on the Des Plaines River of a stream which originally was entirely within the State but which now owes its capacity for the development of power and the development of navigation almost entirely to the waters that are drawn from without the State. Does that make any particular difference in your mind?

"Mr. CHIPERFIELD. It does not, in my opinion. I think that an intrastate stream is a stream that rises and has its mouth within the borders of a single State.

"Gen. BLACK. In saying "rise," what do you mean by rise?

"Mr. CHIPERFIELD. I mean where the stream itself is developed. I realize there are more than 24,000 square miles in the watershed of the Illinois. I realize that right in the——

"Gen. BLACK. I do not want to take up your time, but can the Des Plaines River, with the waters now flowing through the Des Plaines River, be said to rise within the limits of the State of Illinois?

"Mr. CHIPERFIELD. It does not. I am quite convinced if you mean the origin of the waters——

"Gen. BLACK. Yes; the origin of the waters.

"Mr. CHIPERFIELD. The waters of other rivers go to make up the Illinois. They rise in Indiana. A great deal of water has been added to the Kankakee River by the artificial reclamation in the State of Indiana.

"The SECRETARY. The fact about it is that an intrastate stream is a portion of a larger body of water to which a single name is applied only within the limits of a particular State.

"Mr. CHIPERFIELD. That is my estimate of the situation.

"Mr. MATHIAS. I think the construction of the statute would be that an intrastate stream is a stream the navigable portions of which lie wholly within a State.

"Mr. CHIPERFIELD. I would not take any exception to that definition. And why should we raise consideration of that, when not only the navigable portions, but all the portions lie within the State of Illinois, even if that rule be the correct one?

"Speaking of the flow from Lake Michigan, it is only fair for me to tell you one thing. For many years I have represented

the sanitary district of Chicago. I do not come here under false colors. My firm is representing the sanitary district of Chicago to-day. I have had charge of the overflow cases in the Illinois River Valley, and I do not believe in posing in any attitude that I can not gladly and clearly disclose. It is a legitimate employment which I have the right to take, but you should know the fact. So far as the flow from Lake Michigan is concerned, it is entirely separate and divorced from the question that is presented to you, sir. It may extend to the development of this power by the fact that the more water the greater power; but this enterprise does not rest in any way, shape, or manner, upon the amount of water which you have allowed to be drawn from Lake Michigan.

"The SECRETARY. Suppose the Government found it necessary to forbid the further taking of water by the sanitary district of Chicago, in order to maintain the levels of the Great Lake system.

"Mr. CHIPERFIELD. You mean any water?

"The SECRETARY. Any further.

"Mr. CHIPERFIELD. This project would suffer most sadly. There is no use in attempting to becloud the issues. Two things would happen; first, you would kill off the people of Chicago——

"Gen. BLACK. Oh, no. I claim a little knowledge of sewage disposal.

"Mr. CHIPERFIELD. No; you could not put that water into the lake for 48 hours without contaminating the water supply of the people of the city of Chicago. You have in mind one thing and I have another.

"The SECRETARY. Every one of the Great Lake cities started out with the project of dumping its sewage into the lake. They are not now doing that. Chicago is the only one that is attempting to avoid that heavy burden, and they are doing it by taking out water from the lake and turning it down into the Mississippi River. If that method is profoundly prejudicial to the Great Lakes I can easily imagine the Government saying to the city of Chicago, "You can not do that." And if that should happen to be the fact, then would this waterway be of any value?

"Gen. BLACK. I might add to that that the system at Chicago is entirely unsatisfactory to Chicago itself.

"Mr. CHIPERFIELD. I can not go quite that far with you, General, because with all due respect to your knowledge on this subject, which I very freely concede, I do not think your statement is accurate in that matter, because the health statistics of the city of Chicago, sir, show that it is singularly immune from those diseases that can be traced to water contamination sources. There can be no question about that.

"Gen. BLACK. It has helped Chicago very largely; there is no question as to that. But Chicago itself is now engaged in studying how it can be bettered. Conditions are getting very bad.

"The SECRETARY. Gen. Black's proposition is, I think, conclusively proved by the fact that the limit that is imposed is 25,000 cubic feet per minute. As a matter of fact the system requires 500,000, or some other figure.

"Gen. BLACK. And must be assisted in addition.

"Mr. CHIPERFIELD. I do not think anyone can question the statement that the more the sewage is diluted the better the condition becomes from a sanitary standpoint when it has flowed through the channel. Everybody knows that; and they are getting as much water as they can. I do not want to becloud that issue. But, Mr. Secretary, upon the question of the right of the city of Chicago to conduct these operations, it was passed upon by the Supreme Court of the United States, and its right was sustained in the case of the Sanitary District of Chicago against the State of Missouri and the State of Illinois. There the whole plan was laid before the Supreme Court of the United States.

"The SECRETARY. That, however, from the names of the parties in the case, raised only the question as to whether the city of Chicago had the right to pass its sewage from these other cities.

"Gen. BLACK. Whether it would interfere with the other cities?

"The SECRETARY. It did not raise the question, probably, as to the power of the Government to control the withdrawal of water.

"Mr. CHIPERFIELD. I would not pretend that it went that far; but the State of Missouri asked for an injunction, claiming that it was going to be injurious to its citizens——

"Gen. BLACK. That the Mississippi would be contaminated unduly.

"Mr. CHIPERFIELD. And the health of the various cities on the stream would be affected prejudically. There the matter was passed upon by the Supreme Court. I would not be understood for a moment as saying or suggesting that this went so far as to say that this department would not have power to regulate the flow, and, perhaps, under some conditions, to abolish it. Those are mooted questions that I would not attempt to pass upon. But I want to say this: This is a matter that is particularly dear to the people of the State of Illinois. The United States Government has done nothing—before I get to that point, however, let me say that so far as we are concerned in connection with the waterway we do not care what you do with the flow if there is a minimum of 250,000.

"I think that, so far as the entire Illinois delegation is concerned, with its great interest in the city of Chicago, they would bitterly fight any attempt to prevent the use of the sanitary district channel. I think the sanitary district of Chicago would make a very vigorous insistence, and the city of Chicago would do it also. But so far as this enterprise is concerned, Mr. Secretary, it does not depend upon any increased amount of flow. So far as the State of Illinois is concerned, it is vitally interested in this question.

"Here is what we propose: We propose to give to the country at large, in place of the obsolete Illinois & Michigan Canal, a waterway more than 60 miles in length covering a portion of the river where a scow can not go through at ordinary times, in the Des Plaines River, connecting the sanitary district channel with the Illinois River by the route that is outlined in the plan, and thence with the lower Mississippi, giving a better route when it is completed than any that is found in the Mississippi River to-day, because it would not be subject to the same changes of channel. It would not be subject to the same embarrassing situations that tend to hamper navigation in the Mississippi occasionally.

"I was surprised at the statement of my friend Mr. STAFFORD that no commerce would use this canal in connection with the Panama Canal. Mr. Secretary, adjacent to this proposed enterprise is that part of the State where I have had the great pleasure of living. It is the richest portion of the Nation. Bayard Taylor, after wandering all over the country and over the civilized and uncivilized lands on the earth, pronounced it to be the heart of the Nation. It is, in fact, the garden of Eden of the whole Central West. Here is produced practically every product—live stock, coal, stone, sand, corn, grains, fruits, all the agricultural products—and there are manufactures through that valley that are reaching out for markets all over the world.

"Why, sir, the Illinois Manufacturers' Association, which is so vitally interested in this project, manufactures every year $3,000,000,000 worth of products within the territory that would be affected by this waterway. I do not know what our national wealth is at the present time, because no one knows. It was somewhere in the vicinity of $160,000,000,000. They figure it now as high as $200,000,000,000; but we are manufacturing on that basis more than 1 per cent of all the national wealth every year. Our products are of unnumbered millions. Our people desire an additional outlet. They desire access to the Mississippi River, and the Mississippi River people desire access to and from the city of Chicago. This enterprise has been indorsed by Gov. Bilbo, of Mississippi; Gov. Hall, of Louisiana; Gov. Clarke, of Iowa; Gov. Major, of Missouri; Gov. Hammond, of Minnesota; and Gov. Dunne, of Illinois.

"I was in the Legislature of the State of Illinois at the time the constitutional amendment was submitted to the people. It passed the house by more than a two-thirds vote and was submitted to the people of the State of Illinois, and by an overwhelming majority at the polls the people confirmed and adopted it. Then the project failed for reasons I will not take the time to relate now; and after Gov. Dunne came into office it was again sought to put this project through. There was a Republican house and senate at the time, and the Republican house passed it by a two-thirds vote, and also in the Senate. The people of the State of Illinois are vigorous in demanding the right to make this improvement, subject, sir, to your right of supervision and inspection and approval.

"As I understand it—and I have no desire to misstate anything—the legal features of this plan have been, to a large extent, approved by the Judge Advocate General's Department of the United States Army. There is a report of the Engineer's Office practically approving it, as far as the engineering features are concerned.

"What can be the possible detriment which this department would be called upon to take into consideration to justify its refusal? Only one. Water power, sir. And I stake my reputation as a lawyer, for whatever it may be worth—and I would not be ashamed of it in the State of Illinois—I stake my reputation that the Government of the United States has not one iota of interest in the water power of the Illinois River. Then, what is the objection? It gives a channel where none existed before.

The United States Government does not propose to build it. We are not come, sir, like the States from the South, that seek to improve creeks and streams where, according to popular reputation, artesian wells are needed to supply them. We are not spending millions and millions of dollars of United States money in an effort to improve a worthless stream; but we are seeking to give our State and the people of the United States an 8-foot channel without one dollar expense to the General Government. It brings up this question——

"The SECRETARY. A great many of these southern streams would not need artesian wells if they had Lake Michigan.

"Mr. CHIPERFIELD. That is very true, Mr. Secretary; but let me tell you that when these gentlemen would have you believe that the Illinois River is a meager stream, I will tell you that the Illinois River, in high stages, has certain places where it is from 6 to 7 miles wide from shore to shore. There is plenty of water there; there is no question about that.

"But to get back to my subject: We are not asking the Government for a single dollar. We are asking the right and the privilege of doing this work in aid of the commerce of the State of Illinois and in response to a long-felt want. We are not asking the Government to forego any of its substantial rights. Your department, sir, as I understand it, has jurisdiction upon one theory, and that is the theory of a disturbance or interference with the navigation of the river. At the present time, for the kind of trade we desire to put upon the Illinois River, there is no navigation. Do not misunderstand me. I do not mean that boats do not ply on this stream. They do. I do not mean that cargoes are not hauled over this stream. They are.

"Gov. DUNNE. Not between Lockport and Utica.

"Mr. CHIPERFIELD. Oh, no; you can not row a boat through that. But the Illinois River has some use as a carrying stream under certain high-water conditions. But we propose to establish a channel that will carry cargoes from the city of Chicago and to the city of Chicago that will link that city and the Illinois and the lower Mississippi together. The Illinois is not alone interested in this plan. Association after association throughout the South——

"The SECRETARY. I will have to leave, now, Mr. CHIPERFIELD, and attend a Cabinet meeting. I am very grateful for all that you have said, and if you care to be heard any further I can hear you at 2 o'clock this afternoon.

"Mr. CHIPERFIELD. If I may have 10 minutes more at 2 o'clock, I will not further inflict myself upon you.

"(Whereupon, at 11 o'clock a. m., a recess was taken until 2 o'clock p. m.)

"AFTER RECESS.

"TUESDAY, MAY 16, 1916.

"The hearing was resumed, pursuant to the taking of recess at 2 o'clock p. m.

"The SECRETARY. You may continue, Mr. CHIPERFIELD.

"ARGUMENT OF HON. B. M. CHIPERFIELD.

(Continued.)

"Mr. CHIPERFIELD. Resuming where I left off and making this as concise as I can, because I do not want to take any more of your time than is absolutely necessary, I wish to speak of the universal desire of the people of the State of Illinois that this canal may be constructed and put into operation as speedily as possible. Now, I am fully aware that if the only argument we had to offer were public opinion—or, if that expression does not suit, public clamor—it would not be a very substantial basis for an argument. In the State of Illinois, however, Mr. Secretary, there was as nearly a unanimous sentiment in favor of this waterway as I think has ever existed upon any question within the borders of the State.

"The SECRETARY. On which of these problems was it based—the power or the transportation end?

"Mr. CHIPERFIELD. I can say very frankly for our people, if it were purely a power proposition, they would repudiate it absolutely.

"Now, let me make a little diversion from my subject along that line. Gov. Deneen, who preceded Gov. Dunne, at a time when I was in the Legislature of the State of Illinois, put in a bill for the construction of a waterway. The main thing sought, however, was power. A vast amount of water power was to be produced, and that proposition smacked so much of pure commercialism that the legislature smote the proposition hip and thigh.

"Gov. DUNNE. How many special sessions were called for the purpose?

"Mr. CHIPERFIELD. Well, Governor, we were like firemen at that time. We slept in our clothes and waited for a call for a special session.

"The proposition then was to create water power. The people of the State of Illinois rejected it; and if that were the proposition to-day they would reject it again. The people of the State of Illinois are desirous of connecting the State of Illinois with the balance of the Union by a water route; and in connecting the rest of the Union with the State of Illinois they incidentally furnish one of the greatest public highways in the Union. As to the water-power proposition, since you refer to it, Mr. Secretary, let me say what I had in mind to say somewhat later on. The water-power proposition, or the water power that is to be developed, is merely incidental. It is not the main thought, Mr. Secretary. Every Illinoisan connected with this enterprise would pledge his word that it is not the main thought. But, in the construction of this enterprise they have got to create power.

"The SECRETARY. Why?

"Mr. CHIPERFIELD. Well, Mr. Secretary, as to the project for the creation of power, these gentlemen of the Engineer Board and the Chief of Engineers can advise you so much better than I can that I hesitate to speak. In order to get the depth for the pools, and in order to get the available channel for navigation through these stretches of the river, where the fall is more precipitous, the pools are created by the construction of dams. There is one of these dams at Starved Rock.

"Gov. DUNNE. The only one is at Starved Rock. The other dams are diverting it down.

"Mr. CHIPERFIELD. Well, the only power plant involved here in this present plan is the one at Starved Rock. By that construction they get an added depth and also gain power that has been referred to.

"As to the power proposition, we have proceeded, in the State of Illinois, upon the theory, Mr. Secretary, that the natural resources shall be conserved as far as possible and shall be devoted to public uses and the interest of the State upon the best terms possible. Illinois has been essentially a conservation State.

"The SECRETARY. Without wishing to interrupt you, Mr. Chiperfield, I want to follow that line until we get to the end of it. If I understand the production of hydroelectric power, it requires water to do it?

"Mr. CHIPERFIELD. Yes, sir.

"The SECRETARY. If you have a dam that holds back water in Lake Michigan, except you let it out, then all you take out for power purposes is taken out of Lake Michigan and reduces the level to that extent. If you eliminate the power element entirely, would not that conserve the water in Lake Michigan to that extent?

"Mr. CHIPERFIELD. I wonder if you have this situation correctly in your mind?

"Gov. DUNNE. The Starved Rock Dam is 100 miles away from Lake Michigan and about 150 feet below the——

"Mr. CHIPERFIELD (interposing). The waters of the Sanitary District Canal ultimately discharges into the Des Plaines River. They proceed along in that stream until they reach the Kankakee River; the Kankakee River comes in here [indicating], joining with the Des Plaines River, and then the Illinois River is formed. I presume that Starved Rock must be 30 or 40 miles below the junction of the Kankakee with the Des Plaines, making the Illinois. In that distance, Mr. Secretary, there is a drop of more than 100 feet. This dam is but a few feet in height. Your thought is that there would be an added incentive for a greater discharge through the canal because of this power. It is recognized that so far as the flow of water from Lake Michigan for Sanitary District Canal purposes is concerned, within all reasonable limits that question is in your hands. What is a reasonable limit, and what is the effect it is having are questions now in the courts, but the ultimate effect of the flow of this water can be entirely eliminated, because, so far as we are concerned, you are in control of that proposition. I have not the faintest idea that under the conditions existing the Secretary of War will say that there shall be no flow from Lake Michigan. I do not believe you will ever get to that point. However, the State of Illinois is willing to take its chances on that proposition.

"The SECRETARY. What power is now developed in the sanitary district by the Sanitary Canal?

"Mr. CHIPERFIELD. I was going to say about 22,000, but Mr. Kelly has been one of the engineers, and he knows exactly.

"Mr. KELLY. Twenty-two thousand is about right.

"Mr. CHIPERFIELD. There is absolutely no connection between the sanitary district and this proposition.

"The SECRETARY. Except that the water is turned over to the State of Illinois and subsequently turned out by the State of Illinois.

"Mr. CHIPERFIELD. If you had that matter before you, you could say to the State of Illinois that so long as it can properly use that power for public purposes——

"The SECRETARY (interposing). There are some things where it pays to stop before you begin. If we allow water power to be built up, of 18,000 horsepower, and it turns out to be a useful and cheap mode of obtaining power, the pressure upon this department to allow an increase in the water power will be constant. There will be a more or less constant demand for an increase in water power. This is the situation: Illinois is a sovereign State, but it is a sovereign State against a sovereign State. The interests of Ohio, Michigan, Wisconsin, and New York—all States that touch this systems of waterways below the Great Lakes—are in opposition to any such change as would advantage the State of Illinois.

"Gov. DUNNE. I think I can safely say that the height of this dam has been fixed at the lowest possible stage that it can be to secure a waterway.

"Mr. CHIPERFIELD. If the people of the State of Illinois and those who are now coming before you present their cause to you by saying that they are willing to take the proposition as they find it; that they are not collaborating with the sanitary district of Chicago or anyone else upon the question of the flow of water; that they are not seeking to bind any future action of this department, it seems to me there could not be any exception taken by you to that position, and that it could not be held that there was implied bargaining that would embarrass the action of this or any other department, or any of your successors, I should say.

"The SECRETARY. Suppose the State of Illinois, under authority granted by this department, were to put five or six or seven million dollars into water power from that waterway and into hydroelectric-power development, and then would come back to the department and say, 'We thought we did not need any more water—the engineers advised us so—but by reason of a number of things we find we do need more water, and we want to take more water out of Lake Michigan.'

"Mr. CHIPERFIELD. It would be a very brave man, indeed, who would come back and ask for more.

"The SECRETARY. It is at the beginning of it that we have to be very careful.

"Gov. DUNNE. Is not the legitimate business of the State to develop water power?

"Mr. CHIPERFIELD. This water power, Mr. Secretary, is purely incidental. It is not the main idea at all. Here is the situation: The position I take, Mr. Secretary, is that we should build up the welfare of the General Government, and at the same time not do damage to the individual States. Illinois as a State can not prosper, and concerns that may use this power can not make returns to the Government and can not pay their proportion of the burden; can not carry their part of the load, without its inuring beneficially to the best interests of the General Government. As to this proposition, you would say that the State of Illinois was profligate, and that it was careless, if it did not conserve this power that it was creating. It is not creating this power because of a desire to go into business, but the power is being created incidentally and must go to waste if it is not used. The people of the State feel that ordinary conservative methods would require that it shall be saved and used. I can not understand how it would embarrass this department.

"Col. TAYLOR. This is based on the 18,000 plan?

"Mr. CHIPERFIELD. Yes, sir.

"Col. TAYLOR. And that requires double the amount of water that is required to go through the Sanitary Canal?

"Mr. CHIPERFIELD. I have not figured the matter.

"Col. TAYLOR. As a matter of fact, the limit which is allowed now, 250,000 cubic feet, will permit the development of approximately 9,000 gross horsepower?

"Mr. CHIPERFIELD. That is low water.

"Col. TAYLOR. That is what?

"Mr. CHIPERFIELD. I say, that is low water.

"Col. TAYLOR. That is the primary horsepower; that is the all-the-year-round power. Now, suppose that you make your plant capable of developing 18,000 horsepower, and you make a contract with somebody to deliver that power to them. Don't you think it would be right embarrassing for the department to have to limit it to 250,000 cubic feet and cut it down to 9,000 horsepower?

"Mr. CHIPERFIELD. We could not make that contract.

"Gov. DUNNE. We could not make those contracts and we would not make those contracts.

"The SECRETARY. We all seem to be having difficulty, not with the State of Illinois but with the subordinate governmental agency of the State of Illinois. Apparently neither this Government nor your government is able to control the city of Chicago.

"Mr. CHIPERFIELD. You mean so far as flow is concerned?

"The SECRETARY. Yes, sir.

"Mr. CHIPERFIELD. For a number of years the flow was approximately 250,000 cubic feet. I know that to be true. It approximated that flow. I do not understand, although the opinion of the Chief of Engineers and of this board would be vastly superior to anything that I can say, that any injurious condition, so far as the lake levels is concerned, resulted when the flow was limited to that amount.

"Col. TAYLOR. I think the reports show that the level of the lake began to fall in 1900 and has continued to fall ever since, and that it has never reached since 1900 the mean lake level.

"Mr. CHIPERFIELD. It has never gone to the average since that time?

"Col. TAYLOR. Has never gone back.

"Mr. CHIPERFIELD. Mr. Secretary, so far as this proposition is concerned, the State of Illinois is asking for permission to construct and operate this waterway. The State of Illinois will take its chances on what this department may require it to do. Of course, I undersand the difficulties attending the situation. This amount of flow from the sanitary district at times is absolutely negligible in the Illinois River. There are times when the flow does not equal 6 inches of added depth. Those high stages prevail a good many months during the year.

"Col. TAYLOR. How many months do they prevail?

"Mr. CHIPERFIELD. It is a matter that has been in evidence many times. I would say that the high stage of water—that is, considerably above the low—will prevail for five or six months during the year.

"Col. TAYLOR. 'Considerably above the low' does not mean extreme high.

"Mr. CHIPERFIELD. The crest of a flood in the Illinois River only lasts a very short time. It is a case of rising until that crest is reached, and then receding.

"It occurs to me that there would be no estoppel, if I may use that expression, or there would be no embarrassment to this department in what it might be required to do.

"Now, Mr. Secretary, I want to leave with you—I did not know that your name appeared upon the first page, or I might not have done this—the editorial comments of the State of Illinois with reference to this waterway and water-power situation. The newspapers of Illinois are unanimous on this proposition. The civil bodies are unanimous. Why do I mention it? I mention it for this reason: Illinois is a sovereign State. We do not require, in the State of Illinois, any guardian for our internal affairs. It is only when we get to the place where we encroach upon the rights of others that such a thing is necessary. The Congressman from Illinois [Mr. RAINEY] gave the impression, by innuendo, if not by a direct statement, that this plan had not been approved by the people of the State of Illinois. I want to sweep away any such idea as that. There was never a plan more fully considered; there was never a plan more fully approved.

"The SECRETARY. As I understood it, the argument was that the project for the 8-foot waterway and the development of 18,000 horsepower had never been submitted to a popular vote.

"Mr. CHIPERFIELD. That is right in that sense. I would feel grieved if my remarks were misconstrued. I do not want to say an unkind word. I do not care to criticize the Congressman. It is just a matter upon which he and I do not agree. I do not want to misquote. The matter was submitted to the Legislature of the State of Illinois, and the public bodies of the State of Illinois swooped down upon the legislature and required the passage of this bill.

"Let me dwell upon one phase of this matter, and then I am through. There is a question of tolls. If I understood you correctly, at the time the hearing commenced you stated you had a natural prejudice against any avenue or course that was public in its character being subjected to tolls. There is a proposition in which I can sympathize with you. But the situation is this: The State of Illinois has committed itself to the principle of some toll. They are constructing and building a waterway where none exists. They are affording a channel for the cheap transportation by barge and by boat where there is no channel at all to-day. For 19 miles, or thereabouts, they construct an artificial channel.

"Gov. DUNNE. In the old canal?

"Mr. CHIPERFIELD. Yes; in the old channel. Then they have used some of the basin of the Des Plaines River, where no boat could navigate to-day. They make this channel; they make this waterway; and the State of Illinois is willing to bring itself within any suggestion that the Secretary of War or this depart-

ment may make that does not totally abolish the principle of tolls. Under the provisions of the legislature that can not be done. It can be made upon such a basis as would not be onerous or burdensome to any degree, excepting it does not comply absolutely with the principle of free waterway. It would amount to that.

"Mr. RAINEY yesterday said that it was a treaty obligation that might interfere with the imposition of tolls. There is no such obligation. As I understand the treaty obligation, it is simply that citizens of Canada and of Great Britain shall be upon the same basis as our own citizens with reference to the use of water.

"The SECRETARY. It is a stipulation for equality of rights?

"Mr. CHIPERFIELD. Yes. If our citizens are taxed, they should be taxed, and vice versa. It seems to me, so far as the treaty objection is concerned, that disposes of that.

"The people of Illinois, 6,000,000 of them, come before you and say, 'We want to internally improve our State in this respect; we are not going to do any harm whatever to any other interests; we are not going to ask the United States Government for one dollar.' I was very much impressed by the speech that was made by our Chief Executive at the opening of Congress, wherein he very graphically and very forcefully painted the necessity for industrial preparedness in this country. I can not conceive of a thing that would go further toward encouraging enterprise than to have this channel available for all uses that might be made of it; to have this power available for manufacturing; to have, in the inland section of the country these facilities that would be naturally attractive; to have greater avenues of commerce and trade, avenues for the carrying on of the industries of the land, to promote the agricultural and mining interests, and all the allied industries. That is the only thought that was embraced within this bill that was passed the other day by the Legislature of the State of Illinois, and is now embraced within this application. I am inclined to think, Mr. Secretary, that quite unconsciously, perhaps, there has gotten into your mind, to some extent at least, the belief that there is some pooling of interests between the sanitary district of Chicago and this waterway.

"The SECRETARY. Quite the contrary. I am surprised at the alienation that exists between these two naturally wedded interests.

"Mr. CHIPERFIELD. They are not wedded. We of the State of Illinois would do all we can to support the sanitary district, but the sanitary district is doing nothing for this waterway except letting the water pass through its channel where they have to let it go. They have no power to retain it. It goes, and after it goes it is not subject to their direction.

"The people now ask that this permit shall be granted. They see no possible detriment to any person or to any interest. They have loyally supported the Government. They certainly are intensely patriotic in their every impulse. I tell you, Mr. Secretary—and I say this in all frankness, because I despise a man who would not speak frankly on a subject of this kind—that the people of Illinois would feel intensely hurt if they could not carry on this enterprise that they so much desire. There was a time when many of the best lawyers of the State of Illinois—and I say to you that there is some basis for their statement—believed that the consent of the Secretary of War was not required. There were those who did not share in the desire to avail themselves of that opinion or to ascertain whether it was correct or not. They wanted to work in harmony with the Federal Government. I venture to say that of all the States of the Union there is not one that has a greater desire to stand with the Federal Government than has the State of Illinois. They come here asking for this consent, and they can not understand why, as a sovereign State willing to spend this money, permission can not be given. They have been disappointed and grieved.

"The SECRETARY. You are in Congress. Why have you not gotten a bill through?

"Mr. CHIPERFIELD. I disapprove of that method. I think this is a matter that is under the jurisdiction of this department, and I am not in favor of establishing a rule in one case that does not apply in another. I believe that when the law confides this matter to your department in a regular manner that it is not right to seek to obtain something in an irregular manner. I say this to you very frankly, because the suggestion has not come from those who are most interested in this matter that there has been no desire to escape the consequences of coming here.

"I have taken more time than I intended to.

"The SECRETARY. The point that I am especially interested in, and which I trust Gov. Dunne will note, and which has impressed me as being a very serious one, is the effect of this withdrawal of water on the lake levels. I regard that as a serious matter. Mr. RAINEY yesterday was disposed to feel that that did not make any difference. He is in favor of taking a lot more.

"Mr. CHIPERFIELD. His idea, I would say—and I do not say this in a spirit of unkindness—is to cut down that channel.

"The SECRETARY. I understood him perfectly.

"Mr. CHIPERFIELD. He has land that would be drained. If he can get this 14-foot channel, then his agricultural proposition is all solved.

"The SECRETARY. The second point upon which I want to have a statement, or be put in the way of getting some evidence, is the real value of the waterway when it is done. I am disposed to have an uninformed doubt on that subject. That is not addressed to you, however, Mr. CHIPERFIELD. I am told that the New York Central lines offered the State of New York that they would carry free from Buffalo to Albany all the grain offered if the State of New York would give the interest annually on the amount which it proposed to expend in the deep-water canal which it is building. That is simply an illustration of one view.

"Gov. DUNNE. Would they have done that if there was not a canal to be built there?

"The SECRETARY. It illustrates the view which is current in the country that these inland waterways, at the present price of coal and under present conditions, are not so valuable.

"Gov. Dunne gave me yesterday a picture of a boat which it is proposed to use on this canal. It looks like a small boat. Just what the value of that kind of transportation would be I do not know. I do know that the Chesapeake & Ohio Canal, which was the same sort of an enterprise, has become practically useless. The Susquehanna Canal did practically the same thing. I am wondering whether there is any belief that the canal you propose to build is sufficiently an advance over the old Illinois & Michigan Canal, from a commercial standpoint, to justify the project.

"Gov. DUNNE. We have a lot of data on the amount of commerce that can be accommodated.

"The SECRETARY OF WAR. You do not arrive at it by showing the capacity of the canal. You have to show that it will be used to capacity. You can say that a million tons can be drawn over the canal, but will there? That is the question.

"Gov. DUNNE. I think we have data from manufacturers as to the use of the canal, and I would be very glad to go to the Manufacturers' Association at Chicago to get such information. As you have been told, they manufacture about $3,000,000,000 worth of material. They can give that information. I have also a statement from the greatest lumber dealer in the Northwest, the Edward Hines Co.

"The SECRETARY. The question is, of course, Would it move in such large quantities? You have given the figures showing that Chicago manufactures $3,000,000,000 worth of merchandise and manufactured articles. Of course, a substantial part must go by railroad. Now, what I want to get at is some pretty sure basis of estimating how much will go by canal. I have to determine this question, and it is a difficult one, involving large responsibility. I have to determine two or three things about that. First, is any canal at this place a peril to the Lakes. If so, is the advantage of such character that it outweighs the disadvantage. Second, is it a useful enterprise?

"I can not guess at that. I can not take the capacity of the canal and say that demonstrates the proposition. I will say, however, that before I reach any conclusion or determination as to the application of the State of Illinois, or before I reach any conclusion that is adverse, I am going to submit tentatively a basis of such judgment, or any doubt I have, and you may have the opportunity to supply me with any evidence which would militate against any such decision.

"Gov. DUNNE. We have some data, and I think we will be able to furnish you with that."

Mr. Speaker, in conclusion let me say that the people of the State of Illinois are very impatient with the delays caused by the General Government which have up to this time prevented the construction of this great waterway.

In preventing the construction of this waterway the General Government has done a distinct injury to the development of Illinois, and when it injures the development of Illinois it injures itself.

We indulge the hope that at an early day this permission will be granted and that the waterway will be an accomplished fact.

When this is realized a long step forward will have been taken in solving the problems of transportation between the Lakes and the Gulf, and every square mile of the territory lying adjacent to the waterway for a great distance on either side will have been materially increased in value and in productivity. That this day may speedily come is the hope of us all.

## The Naval Bill.

### EXTENSION OF REMARKS
OF
### HON. J. CHARLES LINTHICUM,
OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. LINTHICUM. Mr. Speaker, I shall vote for the adoption of the conference report and the Senate amendments providing a larger program for naval construction and improvement therein, because it seems to me that one of the great lessons we should take from the present war in Europe is that preparation, even if it is with the expenditure of millions of dollars annually, is indeed far cheaper than war, which not only costs billions of dollars but the lives of millions of our ablest and bravest citizens, together with the vast hoard who are permanently disabled, disfigured, and rendered helpless, and the countless number of widows, orphans, and mothers, who by the loss of their loved ones are forced to endure poverty and suffering.

As we continue to grow in prosperity and wealth and forge further to the front as one of the most progressive countries in the world we are sure to be embroiled in war unless our state of preparedness and readiness renders attack upon us too great a hazard to be undertaken.

NAVAL PROGRAM.

I would like to point out that the difference between the number of ships recommended by the Secretary of the Navy and the General Board of the Navy does not indicate a difference of opinion between these parties. The Navy Department has submitted a five-year building program and has recommended an appropriation for the next fiscal year for the construction of a certain number of vessels included in this program; the General Board has recommended larger programs, especially in the number of ships to be authorized now. And in addition to this many individuals, the president of the War College, and the commander in chief of the Pacific Fleet have recommended even more extensive programs; but it can clearly be seen by carefully reading the report of the Secretary that, in his opinion, if a sufficient sum of money were available, he, too, would recommend enlarging the program submitted by him. As this question is a matter which should be decided by Congress, to my mind we should in no way endeavor to evade the responsibility, but to so enlarge and supplement our resources as to adjust the financial status to the defense needed by the country. I am happy to see that the Senate has authorized an enlargement as to the number of ships to be constructed and the time to be consumed in their construction, and trust that my colleagues in the House will support the larger program and provide the revenue for its construction and maintenance.

WHAT OTHER COUNTRIES ARE DOING.

It is a well-known fact that Great Britain and Germany have a shipbuilding capacity far in excess of this country. In view of this and the additional fact that their peace program for the year 1914–15 consisted of 15 dreadnaughts and battle cruisers, and that this was in addition to the merchant tonnage output of these countries, we can readily see how adequately Great Britain and Germany are supplied with the various kinds of ships.

While it is impossible to secure any data as to the number of ships being constructed by Germany since hostilities began, we do know that the men engaged in shipbuilding trades have been exempted from military service; that every effort is being made to increase the output of shipbuilding establishments by overtime work, a close supervision of the men, the utilization of alien workers and prisoners of war; also that according to some authorities the German shipyards are capable of constructing 25 capital ships at one time, in addition to the usual auxiliaries and merchant ships, it would certainly appear that a vast amount of work is being done by them.

I am strongly of the opinion that the nations engaged in the present war are building men-of-war as rapidly as possible, and in that event it is highly possible that after the present conflict is concluded they will be possessed of not only more experience than we have, but a correspondingly larger supply of ships. It is highly necessary, therefore, when taking into account the various factors of the present situation, we lay down a program that will enable us to hold our own against any invading power and be able to protect our interests at all times.

DUTY OF CONGRESS.

One of the duties of Congress is to provide for common defense, and we can only do this by providing an adequate and efficient Navy and a trained Army, supplied with all the necessities thereof in the way of equipment and munitions. Under existing conditions I can not see how it could be possible for Congress to refuse to make adequate appropriation for enlarging, developing, and maintaining our Navy, our first and, to my mind, most important line of defense, particularly so because of our geographical location—the countries to the north and south of us not being formidable foes; all the rest of the world must approach us from the oceans and seas.

With 3,000 miles separating us from the warring nations of Europe and 7,000 miles between our western shores and the continent of Asia and the Far East, with the sea guarded by a strong Navy and modern fortifications, we need have little fear of the landing of a hostile army on our shores. However, without a Navy of sufficient size and strength to prevent the enemy from gaining a foothold upon our soil, we are open to attack, and if the enemy take advantage of the opportunity we afford them we will be powerless to defend ourselves against the seasoned and well-trained soldiers, modern guns, and other instruments of warfare unless we have a great standing army, equip our forts and fortifications with the various guns, and so forth, and have in reserve vast quantities of arms and ammunition. Even if we have such an army and could drive them out, would it not be better to be able to prevent the foe from landing rather than to drive them out after they have succeeded in piercing our lines, which is usually difficult, as shown by the war in northern France?

While we have no desire to take advantage of any other nation, I firmly believe that we should build a large Navy and assume a position which would give our people security and protection. I believe this is their desire, judging from the great parades taking place in all centers of population, which indicates public sentiment in favor of preparedness. I have heard a great deal said in this committee about the hysteria in the country for preparedness, and some seem to think it will not last. I do not agree with this view. I know that the people of this country will never feel safe again until there is provided and maintained an adequate Army and Navy and a large reserve force. I wish to say to the committee—and I do not propose to take many minutes in saying it—that I have always stood for a large Army and a very large, substantial Navy, the latter second alone to that of Great Britain. I feel that in a democratic government like ours, where the government rests with the people, it is the duty of Representatives elected by them to carry out their wishes in matters of legislation and government.

In my district the sentiment is overwhelmingly for preparedness—for very substantial preparedness—and for that reason I voted for a larger Army than the bill gives—2 additional battleships and to construct 50 submarines instead of 20. I felt then, as I do now, that I was voicing by my vote the views and wishes of my constituents.

As additional proof and to show conclusively that the sentiment is strong in my district and in the State of Maryland, and particularly in Baltimore City, I desire to call attention to a campaign the Baltimore Sun recently conducted, in which it asked the people, "Are you in favor of preparedness?" The Sun stated what the War College had recommended for the Army and what the General Board of the Navy had recommended for the Navy. They also asked the people whether they were in favor of a universal military system and stated definitely the Swiss system, and in reply to that request there were 9,732 ballots cast. The total for preparedness out of the 9,732 was 8,591 and against it 781. In other words, 91 per cent of all the people who voted, out of nearly 10,000, voted for adequate preparedness in line with what the War College and the Naval Board has recommended. In the city of Baltimore they were stronger for preparedness than they were in the counties. In the city the percentage was 95 in favor of preparedness. In the counties it was 75 per cent in favor.

Now, I merely bring these figures before the committee to show the sentiment in the State of Maryland, which adjoins the Capital here, as it were, and particularly in my district, in the city of Baltimore. This balloting was carried on with absolute fairness. The number of men recommended for the Army and the number of ships recommended for the Navy was distinctly stated, and the people voted with a full knowledge of what the vote stood for. Eighty-seven per cent voted in favor of a universal military system in line with the Swiss system. And you might like to know that the women voted strongly in favor of preparedness and a universal military system. Eight to one of them voted for preparedness and six to one for universal service.

Now, Mr. Speaker, I do not want to take any more time, but I ask leave to extend my remarks in the RECORD by inserting therein the articles from the Baltimore Sun to which I have referred.

The SPEAKER Is there objection? [After a pause.] The Chair hears none.

Mr. HULBERT. I would like to ask the gentleman how many people participated in this canvass?

Mr. LINTHICUM. Ninety-seven hundred and thirty-two.

Mr. HULBERT. And what percentage of the people who participated were registered voters?

Mr. LINTHICUM. The article does not state.

Mr. HULBERT. I would like to say to the gentleman——

The SPEAKER. The time of the gentleman from Maryland has expired.

Mr. LINTHICUM. The following are the articles to which I have referred:

ARE YOU IN FAVOR OF PREPAREDNESS?

The Sun wants to know what its readers think about national defense.

Adequate military preparedness, in the opinion of the Army War College, means a Regular Army of 281,000 men, with a regular reserve, bringing the total number of soldiers available at home at the outbreak of war up to 500,000. In addition, it thinks there should be 500,000 more men ready to take the field at the outbreak of war, with sufficient training to enable them to meet a trained enemy within three months' time. The War College proposes a program which will take eight years to organize fully an army of this size.

Adequate naval preparedness, in the opinion of the General Board of the Navy, means the construction within the next five years of 10 dreadnaughts, 6 cruisers, 10 scouts, 50 destroyers, and 67 submarines, with appropriate subsidiary craft.

The Swiss Army system, generally regarded as the model universal military system for democratic countries, requires military service of all physically fit male citizens. Each Swiss youth in his twentieth year must spend from 60 to 90 days, according to the branch of the service to which he is assigned, in a training camp. After that, for 11 years he must spend 11 days annually in camp to refresh his training. During the next 12 years he must spend 11 days each alternate year in training.

With these definitions in mind—

Are you in favor of preparedness?

Are you in favor of universal military service?

The Sun would like to know what its readers think, and to that end asks them to cut out and mark the ballot below and mail it or bring it to the Sun, Baltimore:

For preparedness _____

Against preparedness _____

For universal service _____

Against universal service _____

Name ——— ———,
Address ——— ———.

[From the Baltimore Sun, June 2, 1916.]

NINETY-ONE PER CENT VOTED FOR DEFENSE—RESULT OF THE SUN'S POLL SHOWS AN OVERWHELMING SENTIMENT FOR NATIONAL PREPAREDNESS—9,732 BALLOTS WERE RECEIVED—UNIVERSAL SERVICE A CLOSE SECOND, WITH MORE THAN 87 PER CENT—25 STATES WERE HEARD FROM—WOMEN STRONGLY IN FAVOR.

More than 91 per cent of the nearly 10,000 persons who were enough interested in the subject voluntarily to send their ballots to the Sun are in favor of preparedness for national defense, and more than 87 per cent are in favor of universal military service, most of them according to the Swiss system.

The result is perhaps as surprising to the Sun as to any others, especially the percentage in favor of universal service, for, like England, America has always heretofore been wedded to the volunteer system and very loath to adopt any form of conscription or compulsory enlistment.

About four men voted to every woman, which was rather disappointing, but the composite decision of the women was rather astonishing. They voted nearly 8 to 1 for preparedness and about 6 to 1 for universal service, and a great many of them insisted that women should be trained to do their part in case of war as well as men—that service should be really universal.

BALLOTS STILL COMING IN.

Hundreds of ballots are still being received every day, but as the averages have not differed materially at any time since the beginning, and as there is no prospect that they will, it has been decided to announce the result now.

The Sun believes that this vote is fairly representative of public opinion, at least east of the Alleghenies. It was, in the first place, entirely voluntary. No effort was made by the Sun outside of the invitation in its own columns to get any person whatever to vote, and, of course, no effort to influence any vote. The fact that nearly 10,000 should have accepted the invitation, more than half of them expending postage for the privilege, shows the widespread interest in the subject.

In the second place, a great majority of the ballots came singly or in little batches of two, three, or half a dozen. A few batches of votes came from big business houses, but it was noticeable that in these different opinions were expressed, the averages differing very little from the general averages. A few bundles of pacifist votes also came, chiefly from the counties of Maryland. There was some evidence that a little organized effort was being made on both sides, but it did not appreciably affect the result. The Sun believes that it was a spontaneous and representative expression of public sentiment.

It was remarkable how evenly the trend of opinion ran. On no single day were the votes received anything but overwhelmingly in favor of preparedness and universal service, and the same may be said of every hundred votes cast. All through the counting the averages showed surprising consistency.

VOTES FROM 25 STATES.

Votes were received from 25 States, besides the District of Columbia, and from Americans in Canada and Cuba. Among the voters were a great proportion of the most prominent men in Maryland, but the large majority of the votes came from the plain people, many of them workingmen of little education. They came from every sort and condition of men and women, the millionaire and the ditch digger, the club woman and her cook, the Sons and Daughters of the American Revolution and the Colonial Wars, and the recently arrived immigrant, from the rampant Roosevelt man and the no less earnest Wilson admirer. The electorate was remarkably representative, apparently, and that is why the Sun is so confident that the result plainly indicates popular opinion.

The total number of votes received was 9,732. The total for preparedness was 8,591, and against it 781. The total for universal service was 8,186, and against it 1,055. This was divided as follows: Men for preparedness, 7,307; against, 572; for universal service, 6,632; against, 811. Women for preparedness, 1,644; against, 209; for universal service, 1,554; against, 244.

The votes were divided according to localities, as follows: From Baltimore and its suburbs (including all Baltimore County), 7,169; from the balance of the State, 1,542; Virginia, 375; West Virginia, 295; District of Columbia, 156; Pennsylvania, 53; North Carolina, 45; New Jersey, 22; New York, 20; Delaware, 14; South Carolina, 6; Massachusetts, 5; Michigan, 4; Alabama, 4; Texas, 2; Florida, 2; Illinois, 2; Ohio, 2; Tennessee, 2; Maine, 1; Arizona, 1; Montana, 1; Kentucky, 1; Oregon, 1; Georgia, 1; Arkansas, 1; Rhode Island, 1; Canada, 3; and Cuba, 1.

CITY STRONGEST FOR DEFENSE.

The strongest sentiment in favor of preparedness was shown in Baltimore City and suburbs, as was natural, and the strongest pacifist sentiment was disclosed in the vote from the counties of Maryland, but it did not vary greatly. In the city the vote was probably about 95 per cent in favor of preparedness, and in the counties it was fully 75 per cent, although the vote was not divided and tabulated in that way. Virginia was stronger for preparedness than the counties of Maryland and a little weaker on it than West Virginia and North Carolina. All were strongly in favor of both propositions.

The whole object of the Sun's effort to get this poll was to test public sentiment on one of the most momentous and interesting questions before the American people. The support given Henry Ford in the Middle West and the noise made by pacifists and "hyphenates" all over the country led many persons to the conclusion that Americans had become imbued with the peace-at-any-price idea; that they had lost their patriotism and become cowardly and timid and lazy and not disposed to defend their country. The Sun wanted to find out for its own and its readers' benefit. The result ought to be a conclusive answer to the question.

That every effort has been made to make the poll as absolutely fair and uninfluenced as possible and the result correctly ascertained ought to go without saying. For some reason the antipreparedness people have shown a disposition to be angry and insulting. A sample of this was received yesterday, which reads as follows:

"How much graft does the allies' American press and preparedness pay the Baltimore Sun? By what and whose authority does the Sun undertake to act as sponsor for the American Nation? Who will believe the Sun's lies in this matter?

"PATT."

As the Sun does not know who the writer is nor his address, his vote could not be counted, but a number of similar epistles have actually been registered in the pacifist result.

DOUBTERS MAY HAVE RECOUNT.

In this connection the Sun wishes to say that the ballots have been preserved, and if a respectable committee of pacifists who doubt the Sun's honesty in the matter would like to have a recount it can be easily arranged so that the committee may itself count them.

It has not always been easy to get at the exact sentiments of the voters. A good many voted in favor of the Swiss system and against preparedness. These were counted as marked, although it seemed that the vote against preparedness was the result of misunderstanding. Many voted only for universal service, and these were counted for preparedness as well. Many others voted simply against preparedness, and these were counted against the universal service as well. It was believed that in doing this the real sentiments of the voters could be best obtained.

If any very large number of ballots is received hereafter, or if they change materially the percentages as given, a supplementary announcement of the change and the results will be made, but this is not expected.

BUILDING PROGRAM.

The provisions of this bill as provided by the Senate amendment comprise the largest building program for strengthening a navy that has ever been undertaken by any Government in the history of the world. It has been agreed upon after an exhaustive investigation as to the types of ships necessary to better balance our fleet and increase its fighting efficiency. The number and character of ships recommended are as follows:

Ten first-class battleships, carrying as heavy armor and as powerful armament as any vessel of their class, to have the highest practicable speed and greatest desirable radius of action; four of these at a cost, exclusive of armor and armament, not to exceed $11,500,000 each, to be begun as soon as practicable.

Six battle cruisers, carrying suitable armor and as powerful armament of any vessels of their class, to have the highest practicable speed and greatest desirable radius of action; four of these to cost, exclusive of armor and armament, not to exceed $16,500,000 each, to be begun as soon as practicable.

Ten scout cruisers, carrying suitable protection and armament suited to their size and type, to have the highest practicable speed and greatest desirable radius of action; four to cost, exclusive of armor and armament, not to exceed $5,000,000 each, to be begun as soon as practicable.

Fifty torpedo-boat destroyers, to have the highest practicable speed and greatest desirable radius of action; 20 to cost, exclusive of armor and armament, not to exceed $1,200,000 each, to be begun as soon as practicable: *Provided*, That not less than four of these shall be built on the Pacific coast: *Provided further*, That the cost of construction on the Pacific coast does not exceed the cost of construction on the Atlantic coast, plus the cost of transportation from the Atlantic to the Pacific.

Nine fleet submarines.

Fifty-eight coast submarines, of which number three to have a surface displacement of about 800 tons each, to cost, exclusive of armor and armament, not to exceed $1,200,000 each, and 27, which shall be the best and most desirable and useful type of submarine which can

be procured at a cost, exclusive of armor and armament, not to exceed $700,000 each, shall be begun as soon as practicable; and the sum of $8,217,000 is hereby appropriated for the construction of said submarines, to be available until expended. Not less than 12 of the submarines herein authorized to be begun as soon as practicable shall be built on the Pacific coast: *Provided*, That the cost of construction on the Pacific coast does not exceed the cost of construction on the Atlantic coast, plus the cost of transportation from the Atlantic to the Pacific.

One submarine, equipped with the Neff system of submarine propulsion, exclusive of armor and armament, $250,000: *Provided*, That the owners of the Neff system of submarine propulsion will construct, in accordance with drawings, plans, and specifications provided by them, one coast-defense submarine of about 150 tons displacement when submerged, carrying armor and armament similar and equal to that of the "C" class of submarines, with fittings, equipment, machinery, devices, appliances, and appurtenances of every kind with latest improvements, complete in all respects, and suitable for naval purposes: *Provided further*, That the money appropriated for this purpose shall not be paid to the builders of said boat until the same has been completed, passed satisfactory service tests, and been accepted by the Secretary of the Navy; but upon such completion, tests, and acceptance by the Secretary of the Navy the sum appropriated shall be paid.

Three fuel ships, one at a cost not to exceed $1,500,000, to be begun as soon as practicable.

One repair ship.

One transport.

One hospital ship, at a cost not to exceed $2,350,000, to be begun as soon as practicable.

Two destroyer tenders.

One fleet submarine tender.

Two ammunition ships, one at a cost, exclusive of armor and armament, not to exceed $2,350,000, to be begun as soon as practicable.

Two gunboats, one at a cost, exclusive of armor and armament, not to exceed $860,000, to be begun as soon as practicable: *Provided*, That the 66 vessels directed herein to be begun as soon as practicable shall be contracted for or shall be begun in navy yards within six months from the date of the approval of this act.

The Secretary of the Navy shall build any of the vessels herein authorized in such navy yards as he may designate should it reasonably appear that the persons, firms, or corporations, or the agents thereof, bidding for the construction of any of said vessels have entered into any combination, agreement, or understanding the effect, object, or purpose of which is to deprive the Government of fair, open, and unrestricted competition in letting contracts for the construction of any of said vessels: *Provided*, That the Secretary of the Navy is hereby authorized to build any of the vessels herein authorized in such navy yards as he may designate.

Construction and machinery: On account of hulls and outfits of vessels and machinery of vessels heretofore and herein authorized, to be available until expended, $59,000,194.

Increase of the Navy, torpedo boats: On account of submarine torpedo boats heretofore authorized, to be available until expended, $5,282,593.

Increase of the Navy, armor and armament: Toward the armor and armament for vessels heretofore and herein authorized, to be available until expended, $47,110,000.

Increase of the Navy, ammunition: Toward ammunition for the vessels herein authorized, to be available until expended, $19,485,500.

Total increase of the Navy heretofore and herein authorized, $139,345,287.

I am aware that the Navy bill of this Congress is very large, as I have said before—the largest ever passed. I am aware that the total amount appropriated is tremendous. But, in my opinion, money spent on the Navy is the most economical expenditure we will make. I do not believe there is an American of any party who begrudges sufficient money to build and maintain the American Navy, which safeguards and protects our people. To endeavor to do it cheaply or slowly would be the falsest kind of economy. We have a gigantic task before us to make our Navy what it should be, and this bill goes a long way toward placing it on a proper footing.

It is highly essential that we have a well-proportioned Navy, and for this reason I was and am unalterably opposed to abandoning our program for enlarging from year to year our dreadnaught fleet, which must necessarily constitute our first line of defense. It has been said that the dreadnaught has played but little part in the present war, but to my mind that is in a large measure one of the strongest arguments in their favor; they are so formidable no warship desires to attack. So convinced am I of the importance and necessity of a great Navy and more dreadnaughts that I voted for two of them in addition to the battle cruisers provided by the Navy bill when it was before the House prior to its passage by the Senate, and am pleased that the correctness of my views as expressed by that vote has been confirmed by vote of this House upon the Senate amendment. It has been clearly demonstrated that the theory upon which all nations have acted, that the dreadnaught, the heavy armored fighting ship, is the backbone of the navy, is sound, and that whatever we do in adding to our Navy we must keep the great central fighting force always up to the highest level which we seek to attain. Admiral Fletcher, in his statement before the Committee on Naval Affairs of the House, in speaking of the relative standing of the various navies of the world, said:

If we consider that dreadnaughts constitute the main fighting strength of any navy, and place navies in the order of number of dreadnaughts now in commission, it would run something like this: England, 48; Germany, 25; the United States, 8; France, 7. That includes battle cruisers.

Which but demonstrated how lax this country has been in providing the proper fighting units, and in endeavoring to keep at least in line with the improvements and additions being made by the other nations.

A nation's naval policy must depend on its requirements. If other nations did not maintain navies it would not be necessary and really uncalled for for us to do so. But if the nations with which we are likely to be brought in contact maintain extravagantly large forces, it is absolutely necessary for us to do so if we wish to maintain our standing among the nations of the world. There is a general feeling that the Navy is for the first line of defense, its value as such a weapon depends upon the knowledge that its units can be moved from one place to another, and be used as an offensive weapon, as well as for defending our coasts and outlying possessions.

While considering the question of the effectiveness of dreadnaughts, I wish to say that while the dreadnaughts we have to-day are in every way most desirable and up to date, they are lacking in one most important, indeed, paramount feature, and that is they have not the speed that would enable them to effectively cope with the dreadnaughts of foreign nations. This question of speed is one that should be given the most careful attention of all those concerned about the effectiveness of this type of ship.

Our fastest dreadnaughts have a speed of 21½ knots, while the English average nearly 4 knots greater speed, and some of the newer types constructed by them are capable of making 29½.

NORTH SEA BATTLE.

To illustrate the need of speed, let us take, for instance, the battle which took place in the North Sea between the German and English armored cruisers. The German fleet consisted of the battle cruisers *Moltke*, *Derfinger*, *Seydlitz*, *Von Der Tann*, and *Blücher*, all, with the exception of the *Blücher*, capable of making 28 knots. Had they come in contact with British ships of inferior speed, they would no doubt quickly have dispatched them to the depths of the ocean; but it happened that they were attacked by the British cruisers *Lion*, *Tiger*, and *Queen Mary*, all of the latest, fastest, and most improved type, slightly larger than the German ships, and averaging 1½ knots greater speed. They were, of course, so far as speed was concerned, immeasurably superior to the German ships, at least to the *Blücher*, which was 2 knots slower than the other German ships, and this, coupled with the fact that their guns were slightly larger, enabled them to overhaul the German ships, rendering telling damage; and while, with the exception of the *Blücher*, the German ships escaped through disabling the *Lion*, yet we know that the *Blücher*, because slower than the other vessels, was completely crippled and promptly sunk by a destroyer. Yet the *Blücher* was capable of making 26 knots, just 4½ knots faster than our fastest.

BATTLE CRUISERS.

The House committee, after carefully considering the matter of the various types of ships, recommended as most needed to balance our main fleet and increase its fighting efficiency an increase in cruisers, saying in their report:

It is a significant fact that officers of the War College who have been studying war games and the officers of the fleet, including its commanders in chief of the Atlantic and Pacific Fleets, who have been taking part in the war games and in maneuvers, recommend the construction of battle cruisers in this year's program. These officers contend that battle cruisers are needed to support our own scouts and assist them to break through the enemy's scouting line, technically known as the enemy's screen; also that they are needed to support our own screen and prevent the enemy's scouts from breaking through; also to seek and destroy the battle cruisers of the enemy which might be operating to intercept the supply ships along our trade routes or on our coasts. Battle cruisers are used to harass the enemy's supplies and to act in concert with the battle fleet in a general action by placing the enemy at a tactical disadvantage, as their superior speed enables them to obtain a superior position or prevent the enemy's battle-cruiser division from obtaining a similar tactical advantage. In operations against an enemy that possesses battle cruisers the United States without any such vessels will be at a most serious disadvantage, for the reasons above set forth. At the outbreak of the present war there were of this type, built and building, in the British Navy, 10; in the German Navy, 8; in the Japanese Navy, 4; and in the Russian Navy, 4. Recent reports tend to indicate that these numbers are being added to as rapidly as building facilities under war pressure will permit. A lesson to be learned from this war seems to be that if a possible enemy is operating vessels whose speed enables them to elude a battleship with certainty and which are powerful enough not to fear smaller craft, the only method of defense against the battle cruiser seems to be the battle cruiser.

The compelling reason for the recommendation for the battle cruiser is the fact that each of several foreign navies have the battle cruiser, and it therefore becomes an absolute necessity for the proper naval defense of the country for the United States to likewise equip the Navy with this type of vessel. If no other nation possessed battle cruisers, it is not likely that a recommendation by this committee would be made for their construction, but when a comparison of relative strengths of the navies of the world is made the committee deems that the time has arrived when battle cruisers in sufficient number should be authorized in the interest of preparedness for a proper naval defense of our country.

In addition to the fighting qualities of the battle cruiser, the European war demonstrates that a battle cruiser acting independently can act over wide areas, protect its own commerce, and destroy the enemy's

merchant marine. They even prove successful in raids on vulnerable points of the enemy's coasts, and owing to their great gun power can, within a very short period of time, work great destruction before a superior enemy force can arrive on the scene.

While it is realized that there have been no major fleet operations, the dreadnaught fleets of Great Britain by their mere existence and their readiness to act have kept the fleet of the enemy in port behind mines and shore defenses. It is not denied that the dreadnaught is the backbone of the fighting efficiency of any proper naval defense of a country. Yet the employment of battle cruisers in the present European war has been effective in the raids in the North Sea and in the protection of commerce, and if possessed by the enemy can be defended against only by vessels of the same type.

Admiral Fletcher, when asked how many battle cruisers he would build this coming year, said: "I would build all the country can build." Then, too, Admiral Knight, in speaking of battle cruisers, said:

The experience of the War College, repeated day after day and month after month and year after year, emphasizes the absolutely vital necessity for scouts and battle cruisers. Of course, if we could make them all battle cruisers, as was said in that report, that would be fine, because then the moment contact is made with the enemy the battle cruiser breaks through their scouting line and finds out what is behind it. When he comes closer to the enemy he finds the enemy's main fleet, surrounded by what we will call a defensive screen, and he is able to make touch with that and perhaps to break through it and find out what lies beyond it. In other words, he has all the powers of a scout and a great many more, as stated in the General Board's report; but if we can not have every one of our scouts a battle cruiser—and it seems a little too much to ask—then we should have our line of scouts backed up by battle cruisers, so that when the scout sees something that looks a little dangerous he calls for the battle cruisers to deal with the situation.

This is the experience of every officer who comes to the War College. Officers come there not very friendly to the battle cruiser; they do not know just what it really is. But I venture to say there is not one of them there now—and there are 36 there—who to-day would not say, "Give us battle cruisers first of all." Before I left there to come down here a number of officers urged me to speak out strongly for this type.

To further illustrate the practicability and usefulness of the battle cruiser I quote from the statement of Capt. McKean, as follows:

Capt. McKean. Battle cruisers have different uses at different stages of the campaign. At the commencement, when we were in search of the enemy, we would have scouting vessels—purely information seekers—out ahead of the fleet, and so would the enemy. Their business is not to fight; it is to get information; and, if they carry out their job, they will avoid each other and go on through when these two lines come together in an effort to get information. At a certain later stage, by the time you come up against a screen, which is the inner circle about your fleet, that is to deny information. Your scouts can only get information just as a cavalry picket, by avoidance, going around the other fellow, and not fighting; but you get into that screen, and then the enemy is going to try to deny you information. Then your force must be such that you can butt through or drive through, as a division of cavalry does; get in touch with the enemy, determine exactly what his forces are, how they are distributed, etc., and come back with the information. When your enemy tries to pick up your scouts on this outer line with his battle cruisers you are, in turn, trying to pick up his, and that will probably bring on a battle-cruiser action way out at the front on the scouting line; but as the two forces approach each other each will be trying to drive through to get the information about the other's formation and their exact number.

That may bring on another battle-cruiser action, or, if one side's battle cruisers have defeated the other, they will have to send out some of their battleships to fend off that group, so they can not tell what you are doing and how many of you there are, etc. Now, when it comes to battle, before the battle I believe the battle cruiser would be useful in running in and scattering the scouts and the screens, so that our destroyer attack could go home—at night, this is; then, when it comes to the day of the battle, you would pick up the destroyers you have left after your different night attacks, and soon; and then the battle cruisers would, through their speed and their gun power, lead these destroyer flotillas around to the head of the enemy's column, or at the tail, so that if he reversed his movement they would be at the head for launching the torpedo attack as soon as the main fleets became busily engaged with their main batteries, one against the other. Each would be trying to bring in a torpedo attack. Your battle cruisers would have torpedoes as well as guns, and they would clear the way; the one that had succeeded in defeating the enemy's battle cruisers, and so on, would drive away the others, so that their torpedo boats could make a daylight attack during the action; and the special qualities of these vessels is that they have the speed to get away from anything that they can not whip; they have the gun power to defeat anything except their own class or a battleship; they have the radius of action to accompany the scouting vessels and to remain at sea a long time. They have two functions—information gathers at the critical time, and still can take their place in the battle.

A VALUABLE LESSON.

**The history of the world teaches one sure lesson—that naval supremacy ultimately means national preeminence and triumph. More than ever before sea power is the best and strongest military power. The rise and fall of nations and empires teaches us the same lesson—that national safety and national success are inseparable from naval strength and naval power. The destruction of the Spanish Armada in the English Channel was the first and controlling cause in the bloody drama which ended a few years ago when the flag of crimson and gold was banished from the Western World and Spain closed her glittering career.**

**If we are to build a navy, then we should build a large one. It is an ambitious and expensive policy, but it is the best of the two open for us—either to provide a navy of sufficient force to defeat the naval forces of our probable enemies or entirely** abandon our naval program rather than maintain an insufficient force, which would bring nothing but dishonor and defeat when brought into conflict with any nation or nations.

In this connection all phases of the situation must be taken into consideration, and we must consider what kind and number of ships will best round out our naval force. This, as all know, can not be accomplished without a sufficient number of battle cruisers. I do not express my opinion as that of an expert, nor do I claim to be one, but the impression which I in common with most of our people have received as to the lessons of the European war is that the battle cruiser has proved its value as an essential factor of a naval establishment. The almost unanimous opinion of the men in active command, as expressed before the Naval Committee, was in favor of the battle cruiser as the first essential to round out our Navy so that it might cope with the navies of other powers.

Our officers frankly admit that until recently they had not become thoroughly convinced of the great importance of battle cruisers, but they now find that to send our fleet of battleships to sea without battle cruisers would be like depriving it of its real eyes. In addition to the five battle cruisers indorsed by the House to carry out the views of the experts, it was my pleasure to vote for the amendment providing for the two dreadnaughts, and to-day I vote for the larger and more comprehensive Senate program.

SUBMARINES.

Regardless of all views as to what shall constitute our Navy, we all agree that we want to be safe from foreign invasion; that is our main object. The best method to insure safety from invasion at a comparatively small cost and with quickness and dispatch is the submarine. And we do not need experts to extol the virtues of the submarine—the daily press is telling us, and has been telling us, of the value of the submarine as a weapon for war. I find that during the progress of the war so far 6 battleships and possibly 7, if we admit the *Audacious* was sunk by a submarine, have been sunk by submarines, and also 5 armored cruisers, 3 protected cruisers, 6 cruisers, 5 destroyers, 1 auxiliary cruiser, 3 torpedo gunboats, 2 torpedo boats, 1 gunboat, 3 submarines, 1 mine layer, 1 scout, 3 transports, and 3 coast-guard vessels, a total of 43 or 44 war vessels sunk by submarines. The article from the Marine Review, given below, will illustrate the loss sustained through the use of this weapon of war:

[From the Marine Review.]

NINE HUNDRED AND NINETY VESSELS SUNK IN WAR OPERATIONS—NEARLY 1,000 MERCHANT SHIPS DESTROYED IN 17 MONTHS OF HOSTILITIES—SUBMARINES CAUSE 55 PER CENT OF LOSS.

The European war up to January 1, 1916, has caused the loss of 990 merchant vessels of all classes, with an approximate gross tonnage of 1,878,003 tons. This estimate is probably below the actual loss as the tonnage of some of the ships sunk could not be learned. The accompanying compilation was prepared by The Journal of Commerce and supplements the data published in the Marine Review, August, 1915. The table showing vessels lost includes those destroyed between June 30 and December 31, 1915. The ships sunk previously were shown in the former article.

WORLD'S TONNAGE AND SHIP LOSSES.

The following table shows the number, tonnage, and nationality of steam and sailing vessels destroyed in operations directly or indirectly resulting from war operations during the first 17 months, and shows also the number and tonnage of vessels owned in each country. The tonnage given in "tonnage owned by nations" is gross for the steam vessels and net for the sailing vessels:

| Flag. | Steam and sailing vessels owned according to Lloyd's Register Book, 1915-1916. | | Gross tons of sail and steam vessels destroyed in war (17 months). | |
|---|---|---|---|---|
| | Number. | Tons. | Number. | Tons. |
| United Kingdom | 9,285 | 19,541,364 | 602 | 1,192,551 |
| British Colonies | 2,068 | 1,732,700 | | |
| United States[1] | 2,580 | 3,522,943 | 7 | 14,087 |
| Austro-Hungary | 433 | 1,018,210 | 6 | 13,240 |
| Danish | 835 | 854,966 | 29 | 53,293 |
| Dutch | 809 | 1,522,547 | 21 | 36,843 |
| French | 1,539 | 2,285,728 | 54 | 125,973 |
| German | 2,166 | 4,706,027 | 65 | 161,888 |
| Italian | 1,177 | 1,736,545 | 24 | 60,217 |
| Japanese[2] | 1,155 | 1,826,029 | 3 | 10,415 |
| Norwegian | 2,174 | 2,520,188 | 77 | 103,023 |
| Russian | 1,256 | 1,054,762 | 31 | 34,193 |
| Spanish | 642 | 899,204 | | |
| Swedish | 1,462 | 1,122,883 | 35 | 52,667 |

[1] Excluding vessels trading on the Great Lakes of North America.
[2] Japanese sailing vessels are not inserted in Lloyd's Register Year Book and are therefore not included in these tables.

ENGLAND'S LOSSES 1,192,551 GROSS TONS.

England's merchant marine aggregated 21,274,064 gross tons on June 30, 1914, according to the last official figures given by Lloyd's. Without reference to the number or tonnage of enemy vessels held or captured by

the respective belligerents. England's gross tonnage in the first 17 months of the war had been reduced by about 1,192,551 tons. A total of approximately 602 vessels flying the Union Jack has been destroyed by submarines, mines, cruisers, or from other war operations. The British tonnage losses were divided about as follows: Three hundred and thirty-eight merchant steamers and 264 trawlers, fishing smacks, steam drifters, and sailing vessels.

Germany's merchant tonnage at the last official reckoning aggregated 4,706,027 gross tons. Up to the close of 1915, or in 17 months of the war, close search of all available records shows that this gross tonnage had been reduced through actual destruction of about 65 vessels of all classes, by approximately 161,888 tons. This comparatively small loss of tonnage through destruction, against the total losses of England, results largely from German and Austrian vessels rushing into shelter at all ports of the world when the war broke out.

The detailed tabulations of the merchant tonnage losses by the different nations indicate, in striking manner, the power of the submarine in destroying commerce. Considerably over 55 per cent of the vessels given in the lists have been destroyed by such instruments of warfare. The serious danger to shipping in war time from mines is also evident. Neutral tonnage of the Scandinavian countries, adjacent to Germany, being exposed to mine hazards to the greatest extent, have suffered extremely heavy losses from such weapons of war, although in the more recent instances of neutral ship losses, attacks by hostile submarines have also occurred.

LOSSES BY NATIONS.

How the various nations have suffered in the loss of tonnage as the result of the war, is shown in the following table, showing the number of vessels and their aggregate known gross tonnage:

| Country. | Number ships of lost. | Gross tons. |
|---|---|---|
| England, including 320 merchant steamers, and 264 trawlers, sailing vessels, etc. | 602 | 1,192,551 |
| Germany, vessels of all types | 65 | 161,888 |
| Norway, vessels of all types | 77 | 103,023 |
| France, vessels of all types | 54 | 125,978 |
| Denmark, vessels of all types | 29 | 33,293 |
| Sweden, vessels of all types | 35 | 32,667 |
| Holland, vessels of all types | 21 | 36,843 |
| Russia, vessels of all types | 31 | 34,193 |
| Greece, Spain, and Japan, all vessels | 15 | 39,662 |
| Italy, vessels of all types | 24 | 60,217 |
| Turkey, vessels of all types | 18 | 18,150 |
| Belgium, vessels of all types | 6 | 12,211 |
| Austria-Hungary, vessels of all types | 6 | 13,240 |
| United States, vessels of all types | 7 | 14,087 |
| Total | 990 | 1,878,003 |

We do not need experts to tell us that the weapon that will drive a battle fleet out of our waters and keep it out and prevent it from returning, that will make our shores safe from invasion or attack by hostile fleets, is the submarine. Sufficient submarines will keep any enemy fleet out of gunshot of the American coast.

PERSONNEL OF THE NAVY.

Much has been said about the lack of personnel in the Navy—shortage of both officers and men. I feel that if those who harbor this belief will but read the testimony of Admiral Fletcher, in command of the Atlantic Fleet, he will be convinced that many of the slanderous statements made against our fleet and its present head are base misrepresentations.

Below I quote a portion of Admiral Fletcher's statement:

The personnel now with the fleet meets every requirement. There is no body of officers in any navy of the world that are better educated. There are none more skilled in their profession, and none required to maintain a higher standard of efficiency than those in our Navy.

The enlisted men who man our battleships are the best the country can produce. They come from good homes and from every State in the Union. They are picked men from a high mental and physical standard for their work. They are well cared for, well clothed, well fed, and well paid. They have plenty of exercise, and drilling in the open air. They lead healthy lives and are afforded every practicable recreation and amusement. We are amply repaid for this by their efficiency.

As far as can be ascertained there is no fleet that is more constantly drilled or exercised than our fleet on the Atlantic coast, or any fleet where more exacting requirements are demanded. This is borne out by the results shown in our maneuvers, our war games, our tactical problems, and our target practice. Had I any doubt upon these questions of personnel and efficiency as far as the active fleet is concerned I would not hesitate to inform this committee in order that steps might be taken to remedy any defects.

In my annual report there are pointed out some defects in the material of the fleet and its needs and requirements to make it a more effective fighting force. These are of long standing and are only now emphasized by events abroad. The Navy Department has done everything that lies within its power to remedy the shortcomings and carry out the recommendations from the fleet, but most of these requirements are beyond the control of the department and require the legislation of Congress.

All the experts have said that our Navy is in good condition, although all seem to voice different opinions as to just how it could be improved. I am strongly of the opinion that our Navy is in as good shape at this time as it has been in years, although of course, with the increased number of ships, it will be necessary to materially increase the personnel, hence the provisions contained in this bill for that purpose.

Our Navy should be our pride and boast. We should be and are proud of its achievements, men, and tradition. It has never been whipped, and whenever it has been called to action it has performed its work with signal efficiency and success. At all hazards it has defended our country, and no one has ever questioned its devotion.

AUXILIARIES.

In all the desire to have an abundant supply of weapons of war, we must not forget the important rôle of the auxiliaries—the mine layers, mine sweepers, fuel ships, repair ships, transports, supply ships, etc.—and the fact that our Navy must be provided with an adequate supply of same. I feel, however, that the provisions made in this bill and the ships of these various types already on hand will be sufficient, and that we will have a well-balanced Navy in every respect.

AERONAUTICS.

Aircraft, the latest development in the naval service, although comparatively new, is most important. They are the eyes of the Navy, and are rapidly developing into means of defensive attack. The aeroplane, although it has a small carrying space and limited radius of action, is decidedly useful in every way for fast scouting purposes, and in that respect will be a necessity and of great value. If our fleet did not have them, and the enemy's fleet did, we would be absolutely handicapped. In addition to this, aeroplanes are absolutely necessary for fighting the enemy's aeroplanes to prevent them from getting information. It is the most efficient method to pursue.

The aeroplane is rapidly developing, and although we may say that it is in its infancy, owing to its small carrying power and range of action, I feel that it will not be long before these drawbacks are overcome. The reports from abroad indicate that they are building aeroplanes of 1,000 horsepower, having a high speed and long range of action, but of course to just what extent this is done we are unable to estimate except by experimenting with the designs we use. When the problem of the motor question is effectively solved I am of the opinion that we will be able to outclass any of the foreign nations engaged in the building of aircraft.

The statements of Capt. Mark L. Bristol, United States Navy, when he appeared before the Committee on Naval Affairs, in speaking of the purposes for which aircraft are desired, said as follows:

Aircraft for the fleet are required for three general purposes, namely, the mobile fleet, the coast defense, and the advance bases.

Aircraft have passed the experimental stage in development to a great extent. The general principles of design and construction are fairly well established. It is now a question of deciding upon the mission they have to perform in war and providing the necessary types of aircraft and the officers to man and maintain them in order to carry out that mission. It is not a question of developing this service gradually, but of getting it as soon as possible, so that our fleet will conform to existing requirements. The mission of our air service, though it may be changed in the future, is for scouting, for patrolling, for fighting an enemy's aircraft, for attacking submarines and unarmed vessels and naval auxiliaries, for controlling gunfire of battleships, battle cruisers, and coast fortifications, and for carrying dispatches. Aeroplanes and dirigibles are required for all these duties. Kite balloons are required for controlling gunfire from ships and advance bases as well as elevated points of lookout from aircraft stations.

There are several secondary duties that aircraft may be required to perform, according to the special character of the operations of the fleet.

I am thoroughly convinced from the statements made by the various naval officers and those with thorough knowledge as to the condition of your air service, that we are more backward in aeronautics than any other one thing. It is our one weak point, and we should strive to overcome this at the earliest practical date. For this reason, aeronautical appropriations should now and hereafter be ample, for until battleships and battle cruisers can be built and commissioned, the Pacific coast must look to submarines and aeroplanes for its defense. If we could secure, say, 1,000 aeroplanes, with a well-organized corps, we would have an air force that could drop large bombs and launch torpedoes against invading forces and thus prevent an attack. On the whole, I believe that by means of aeronautics we can accomplish more in a short space of time than by anything else.

I do not think that the appropriation for this branch of the service is in anywise too large, and expect to hear of wonderful improvements in the aeronautic field, improvements that will cause our aeroplanes to at least equal, if not surpass those now being used by the warring nations.

The newspapers are daily bringing us reports of the increased activity of air craft, of various air raids, in which large numbers of aeroplanes have participated at one time, and which have been attacking cities, destroying railroads, numbers of troops, supply stations, etc. It is a well-known fact that they now operate in fleet formation, are equipped with machine guns, and fight other aeroplanes to prevent them from carrying on attacks or securing information. It is not an uncommon thing

nowadays to hear of aeroplanes bombarding battleships or sinking submarines.

It has been said, and I doubt not its correctness, that Germany has 9,000 aeroplanes available and not less than 5,000 trained aviators; that England has 900 trained aviators in the reserve corps alone, who are waiting for machines, and that France and Russia are not so far behind in the development of this branch of endeavor. The aeroplane is not only a spy and scout, but likewise is able to defend and destroy.

Earl Kitchener is reported as having said that "an aviator is worth an army corps," and the developments of the present conflict in Europe have demonstrated the truth of his conviction.

NAVAL LABORATORY.

I am particularly pleased with the provision in this bill providing for the establishment of an experimental and research laboratory, as follows:

Experimental and research laboratory: For laboratory and research work on the subject of gun erosion, torpedo motive power, the gyroscope, submarine guns, protection against submarine, torpedo, and mine attack, improvement in submarine attachments, improvement and development in submarine engines, storage batteries, and propulsion, improvement in radio installations, and such other necessary work for the benefit of the Government service, including the construction, equipment, and operation of a laboratory, the employment of scientific civilian assistants as may become necessary, to be expended under the direction of the Secretary of the Navy, $2,000,000.

There is need of mobilizing the inventive genius and organization of the Republic for national defense. While it is fully recognized that the naval experts have been responsible for the chief development of the Navy by invention and progress, some of the greatest improvements utilized by the Navy came from civilian inventors and civilian engineers. It was a civilian who gave us the *Monitor*, who built the first submarine, who mastered the science of flight, who perfected wireless communication, who invented the gyroscope compass, electric steering gear and electrical propulsion, and silk-floss life preservers. Most of the development of the larger naval ships, throbbing with electricity and delicate engines of all sorts, was perfected by naval officers. There has been a feeling among civilians that their suggestions did not receive friendly consideration from naval experts. This feeling is not well founded, but it is widespread and doubtless grew up because there was no well-organized method of getting the naval expert and civilian expert together.

There is no great business establishment that does not have a workshop similar to the one now proposed for the Navy to study scientific and efficiency methods. The work to be done in the laboratory for the Navy Department is to be entirely under the control and advice of scientific experts. It is intended to inaugurate a practical business investigation of the needs of the Navy and the Army. Gun erosion is one of the very important subjects they will study, and if we can make a saving there we will save the amount appropriated very quickly. We should, in my opinion, by all means have a laboratory or some proper means of practically ascertaining the best way to prevent the rapid erosion of our guns.

It is perhaps true that the great gun factories and manufacturing establishments have applied every scientific test, but we must remember that the Government manufactures a great many of its own guns; therefore we should have an equal opportunity to find the best, cheapest, and most scientific way of accomplishing something. If this country wishes to have its fighting machinery kept up to date and not excelled or equaled by any other nation, that machinery may be thoroughly tested and standardized and duplicates obtained at low cost from competitive manufacturing plants, then the establishment of an experimental laboratory is the way to accomplish the desired result. Through this method we can give our Army and Navy a chance to have the most scientific assistance possible. If we are to have an Army and Navy, it seems to me that we ought not hesitate to equip it with the best of everything that can be obtained. When we realize all the improvements that have been made in armaments, in guns, in ammunition, in shells, in aeroplanes, which were the result of investigation, we certainly ought to have our Navy scientific and efficient enough to make further improvements, especially in aeronatics and submarines, and particularly when the department earnestly requests that it be put on an equal footing with private plants that construct guns, gunpowder, torpedoes, submarines, various laboratories, and scientists.

The German nation is to-day the greatest nation for efficiency, and it is needless to relate the wonderful achievements of that country. The German Government has laboratories of its own and makes experiments in agriculture, war, munitions, and all directions in which it can ascertain the efficient, economical, and scientific way of accomplishing things.

Then, too, we are particularly fortunate in being in position to put such a plant under the experts of the Navy, with the advice of 22 of the most scientific men in America, headed by Mr. Edison, who himself has accomplished so much in our interest, and all this without any expense whatever to the Government in making the laboratory a success.

I can not understand how anyone could be in favor of the large appropriations we are making for increasing our Navy without also sanctioning the appropriation for a naval laboratory, so that the new ideas for submarines, air craft, new explosives, and so forth, can be tested, and thus save the Government millions of dollars. We are able to learn wonderful lessons from the present struggle in Europe, and it is up to us to take advantage of this knowledge and enable our men to make such tests and experiments as may be necessary.

I know our men have as much initiative, brains, energy, and inventive genius as any other people on earth. We have made wonderful discoveries in the past, and in the future, as in the past, will make more discoveries that will startle the world. That the Government should teach them how to be efficient is well demonstrated by the fact that the German people are able to hold their own, although facing great odds, by virtue of the fact that they are so wonderfully efficient.

To my mind there is nothing so important as keeping abreast of the various new ideas offered the Government. They should be thoroughly examined, tested, and the result of this examination and testing be kept secret, so that no other nation may profit by what we have learned. It is through this method that Germany has been able to startle the world with the wonderful equipment with which she is provided. With the aid of the scientific members of the board in this laboratory we could do this in half the time and with greater thoroughness than any other body of men, because they are fitted for it. They are scientists, engineers, mechanics, and inventors.

I believe that this laboratory is one of the most vital items in this bill. It will be a clearing house for American inventors and revolutionize warfare. And when a man has an invention he wishes to submit to the Government he will know that it is given due attention, not submitted to some naval officer who has neither the time nor inclination to give the matter the serious consideration necessary, and who merely informs him that he does not find it practicable.

There is little doubt in my mind but that the work performed in such a laboratory would in a short time pay for itself many times over, and result in the improvement in the construction of torpedoes, submarines, battle cruisers, aeroplanes, etc.

This laboratory should be located near deep water where the largest ships can come alongside and where propellor and other tests relating to naval architecture and marine engineering and ordnance installation could be carried on, and for this reason I wish to urge that it be located at Baltimore.

Baltimore, the thriving commercial and industrial city, situate on the Patapsco River near the head of the magnificent Chesapeake Bay. As a city and a seaport it possesses opportunities and advantages second to none on the Atlantic seaboard, while its ample harbor and water front, though highly developed, still offer an abundance of virgin opportunity.

The growth of any port is naturally restricted by its geographical location and limited by the confines of its harbor. The first essential to growth is, therefore, the necessary available room for expansion. While other cities on the Atlantic coastal plain have almost reached the ultimate of their possibilities in this respect, Baltimore's extensive waterfront presents a well-nigh unlimited field for future development and its superior advantages are attracting the serious attention of the maritime and commercial world.

The fortunate location of Baltimore in its nearness to the agricultural, industrial, and commercial centers gives it a decided advantage over other Atlantic ports. This is illustrated and emphasized when we realize that Baltimore is 1,369 miles closer than San Francisco to the Panama Canal; is 470 miles closer than San Francisco to the city of Valparaiso, Chile, which latter city is the chief seaport on the western side of South America; that after computing the 50 miles which is the length of the canal from Colon to Panama, it is only 4,670 miles from Baltimore to Valparaiso, while it is 5,140 miles from San Francisco to that place? Baltimore is closer to Cuba and Jamaica than any of the big Atlantic seaports; and nearer to the Middle West by many miles than they.

Baltimore may well boast of a harbor whose salient features are unsurpassed. Entering the Patapsco River from where it empties into the bay at historic North Point, one finds a broad, well-sheltered expanse of naturally deep water made navigable to the largest ocean liners by a dredged channel 600 feet wide and 35 feet deep, which channel under the report recently submitted by the Army engineers, it is hoped will in the near future be further improved by an appropriation of $800,000 to

carry out the work recommended by them for the further improvement of our harbor. Tributary to the river on the north and south are numerous creeks whose deep water and proximity to railroad facilities have already attracted many large manufacturing industries. Chief among these tributaries is Curtis Bay with a 31-foot channel leading to an excellent harbor. Its merits are attested by the multitude of big plants located along its shores.

Passing up the river, one enters a commodious landlocked harbor, which spreads like the fingers of a giant hand in four huge, navigable prongs from northwest to southwest, with Curtis Bay for the thumb. Here, indeed, is found a port that affords every facility for anchorage and dockage, of loading and unloading to all manner of craft, from the far-famed oyster pungy to the leviathan Atlantic liner. The harbor proper is about 150 nautical miles from the capes where Chesapeake Bay enters the Atlantic Ocean, and is 14 miles from the mouth of the Patapsco River. The mean average tide is but 12 inches. There are 38 miles of dockage and water front within the present city limits, and a total of 120 miles of available water front facing at least 10 feet of water in the immediate environs of Baltimore Harbor. A uniform depth of 35 feet is maintained up to the piers provided for trans-Atlantic liners. The city of Baltimore, through the harbor board, will have expended at the close of pending operations $2,800,000 for deepening the harbor and $9,200,000 for public wharves and docks and marginal or water-front streets. In addition to this the National Government has spent more than $9,000,000 in improving the channel approaches to the port—an aggregate of $21,000,000.

Although Baltimore is the youngest of the commercial cities on the Atlantic seaboard, it has always been a prominent seaport. At this port, the *Dewey*, the largest floating drydock in the world, was constructed in 1905. Shipbuilding and various other enterprises are engaged in by a number of representative firms, and many of the merchant vessels of this and foreign countries, as well as some of the finest colliers and torpedo-boat destroyers of the United States Navy, have been built here.

The city's proximity to the mines, together with the modern coal piers equipped with rapid-loading devices, makes Baltimore the greatest exporter of coal on the continent. For instance, the Baltimore & Ohio Railroad has one of the largest and best equipped coal terminals in the world. Its pier is 800 feet long and can accommodate vessels up to 30 feet draft. On November 23, 1912, the United States collier *Neptune* was loaded here in 3 hours and 45 minutes with 7,500 tons of coal. In addition to this, the railroads make no charge for the use of their water-front terminals on shipments over their lines.

Many experts have declared that Baltimore has the finest, most advantageously situated harbor in the entire world. This should certainly demonstrate the practicability of selecting Baltimore as the site for the proposed laboratory, even without the many other advantages that make it such an ideal spot. Battle cruisers and dreadnaughts could come almost to the door of the laboratory should it be erected in Baltimore. In addition to this Baltimore's proximity to Washington, the home of the Navy Department and the naval gun factory, where many of the Navy's largest guns are made, should be considered. It seems to me that the laboratory should be so located that the scientists located there would be able to quickly get in touch with these branches of the Government. The excellent railroad service, the number of plants engaged in the manufacture of chemicals and other things valuable to the Nation industrially and defensively.

THE DEUTSCHLAND.

Another illustration of the accessibility of Baltimore and its splendid harbor is given in the fact that the German Government selected Baltimore as the port of entry for the first of their submarine liners, the *Deutschland*. The first trans-Atlantic submarine the world has ever known.

INTERNATIONAL TRIBUNAL.

While I am extremely anxious to appropriate sufficient money to maintain a splendid Navy that will be able to cope with that of any other nation, and provide our scientists with a laboratory in which to perfect inventions, continue research, and examine the inventions submittted them, yet I hope that the day is not far distant when all disputes between nations may be settled by courts of arbitration. Every civilized country in the world requires its subjects to submit their differences and disputes to tribunals and courts that have been organized under the forms of law for their settlement, and yet these same nations violate the principle of the law which they compel their subjects to obey.

Citizens must settle their differences before courts organized according to law and based upon justice and right, and yet kings and rulers settle their disputes by battles, without any regard of justice. Among the educated people of the world a strong sentiment for universal peace is growing, and in every civilized Government public sentiment is the great moving force and will be finally victorious. War has never settled any dispute on a principle of equity, morality, or justice. All wars that have been held, of course, have not been wrong or could have been avoided, but why should there not be some practical way of solving the difficulties that arise?

What nation is best fitted to take the important step of endeavoring to organize such a tribunal; surely no nation is in better position to do so than the United States. It is, therefore, to be hoped that the power invested in the President of the United States by the following provision:

Upon the conclusion of the war in Europe, or as soon thereafter as it may be done, the President of the United States is authorized to invite all the great Governments of the world to send representatives to a conference which shall be charged with the duty of suggesting an organization, court of arbitration, or other body, to which disputed questions between nations shall be referred for adjudication and peaceful settlement, and to consider the question of disarmament and submit their recommendation to their respective Governments for approval. The President is hereby authorized to appoint nine citizens of the United States who shall be qualified for the mission by eminence in the law, and by devotion to the cause of peace, to be representatives of the United States in such a conference. The President shall fix the compensation of said representatives and such secretaries and other employees as may be needed. Two hundred thousand dollars, or so much thereof as may be necessary, is hereby appropriated and set aside and placed at the disposal of the President to carry into effect the provisions of this paragraph.

That if at any time before the appropriations authorized by this act shall have been contracted for there shall have been established, with the cooperation of the United States of America, an international tribunal or tribunals competent to secure peaceful determinations of all international disputes, and which shall render unnecessary the maintenance of competitive armaments, then and in that case such naval expenditures as may be inconsistent with the engagements made in the establishment of such tribunal or tribunals shall be suspended, when so ordered by the President of the United States.

will enable him to put into execution this highly desired and necessary function. However, until this happy state is established we must be thoroughly prepared in every way by enlarging our military preparations, increasing the strength of our Army and Navy, and industry, so that we may, in the event of necessity, have a wealth of strength in these various branches, each of which is more or less dependent upon the other. We are not constructing this Navy for aggressive purposes, but solely for the purpose of defending our land in the event of an attempt to invade it; to maintain and preserve the greatest Republic which the world has known. I can therefore see no reason why we should not build a larger Navy, and yet, at the same time, endeavor to establish peaceful relations and a court of arbitration. It can never be estimated when the former may be needed until the latter is in working force.

After a careful study of facts, and I have enumerated a number of them, I am firmly convinced that the people of the country will be entirely satisfied with the action of Congress upon preparedness; that they will feel this bill sufficiently increases the Navy to meet any present or future emergency, and will bring it up to the highest point of efficiency.

When taking into consideration the vast sum of money required to complete and maintain the proposed naval program, we must also bear in mind that we are one of the largest and most progressive nations on the globe; that in our hands has been lodged those priceless principles of government established by our forefathers, not alone to be enjoyed by us, but to be handed down to the generations yet to come; that in the protection of our people and the Government so established, it is the duty of Congress to provide the way and for the people to stand shoulder to shoulder with its lawmakers in providing this country with ample protection, as a safeguard in the event of war with foreign nations. There is an old saying, and a very common one, that "An ounce of prevention is worth a pound of cure." I feel that this saying, though old, is applicable to the preparation of this Nation while at peace for emergency in the event of war.

There is a story written in Æsop's Fables where the boar is whetting his tusks against an old tree. The fox, who happened to come by at the same time, asked, him why he made those martial preparations of whetting his teeth, since there was no enemy near that he could perceive? "That may be, Master Reynard," said the boar, "but we should scour up our arms while we have leisure, you know; for in time of danger we shall have something else to do." So it is with the American Nation. We should be doing our preparing now, and not be preparing when we ought to be fighting.

## Laws Governing the Selection by and Exchange of Lands with the Several States.

### EXTENSION OF REMARKS
OF
### HON. JOHN E. RAKER,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,
*Tuesday, August 15, 1916.*

Mr. RAKER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a letter from the Department of the Interior in regard to the bill H. R. 15096.

The letter is as follows:

DEPARTMENT OF THE INTERIOR,
*Washington, August 14, 1916.*

MY DEAR MR. RAKER: Referring to H. R. 15096, an act to amend the laws governing the selection by and exchange of lands with the several States, I submit the following facts in connection with the measure and the importance of its early enactment:

The purpose of this bill is to make certain the proper administration of the above act, but does not in any way enlarge grants heretofore made to the various States for common-school purposes, nor permit the States to receive lands in lieu of other lands which they did not receive. The uncertainty which attends the administration of this law is due to the different construction placed thereon by this department and some of the State courts, as well as the Federal courts, and it is to clarify this situation that the bill has been introduced.

The department has held that said act provides for and authorizes exchange of title between State and Federal Governments, as well as indemnity in case of loss to the State of granted lands. See Henry C. King (14 L. D., 332), Gregg *v.* Colorado (15 L. D., 151), McNamara *v.* State of California (17 L. D., 296), Rice *v.* California (24 L. D., 14); Dunn *v.* State of California (30 L. D., 608), Territory of New Mexico (29 L. D., 364), Territory of New Mexico (34 L. D., 599), State of California (34 L. D., 613).

Under these rulings a large number of selections based upon the principle of exchange were made and carried to certification, wherein were designated as bases sections 16 and 36 in various reservations that were established subsequent to the public survey.

This construction of the act of 1891 has been the subject of judicial decisions, in which the view of the department did not meet with approval; it being held in the case of Hibbard *v.* Slack (84 Fed. Rep., 571) and Deseret Water, Oil & Irrigation Co. *v.* State of California (138 Pac., 981) that said act does not authorize such exchanges, but only indemnity to the States for losses of lands to which they were entitled.

With respect to the school land grants made the States of Washington, Montana, North Dakota, and South Dakota, by the act of February 22, 1889 (25 Stat., 676), the Supreme Court of Washington, in the case of the State of Washington *v.* Whitney (120 Pac., 116), held in substance that the grant was a grant in præsenti, applicable to all lands, whether surveyed or unsurveyed. The three other States named have not made this contention, but have offered lieu selections or exchanges for lands lost or included within national forests. The department has held that the grant does not attach until the land is surveyed, and that Congress may make other disposition thereof before that time. State of Washington *v.* Geisler (41 L. D., 621).

There have been other decisions of the State courts dealing with and complicating the question of these grants and exchanges; and, in view of the various decisions referred to, the department has felt that it was incumbent upon it to suspend pending applications for indemnity selections or for the exchange of lands, and to refuse to entertain further applications therefor. This situation has resulted in delay and hardship to the States and to purchasers of lieu lands from the various States, and calls for action which will enable the United States and the States to adjust and settle these grants. It is the purpose of this bill to accomplish this object.

Section 1 of H. R. 15096 declares that the provisions of sections 2275 and 2276 of the Revised Statutes, as amended by the act of February 28, 1891, are applicable to all grants of school land heretofore made by Congress, and proposes to ratify and confirm all pending and unapproved indemnity selections heretofore made for losses incurred under the school grants and in accordance with the statutes just cited, if otherwise valid, and for nonmineral lands, and which were subject to selection at the time the applications were filed, unless the same have been reserved under the act of June 25, 1910 (36 Stat., 847). With respect to lands so withdrawn, it is provided that selections made prior to such withdrawals may be approved subject to such conditions, limitations, or reservations as may be authorized by present or future acts of Congress. The latter clause has particular reference to lands withdrawn because of their oil or phosphate content, in which cases the act of Congress of July 17, 1914 (38 Stat., 509), permits, under appropriate conditions, the issuance of a patent for the selected land, reserving to the United States, however, all of the minerals therein, with the right to enter upon the land, extract, and remove such minerals. The last-described clause is only proposed to be made applicable to lands, the surface of which is found to be of substantial value for agriculture, grazing, or timber.

Section 2 of the bill proposes a method for the exchange of surveyed school sections in national forests owned by the State and for the taking of indemnity for unsurveyed sections lost to the State by the creation of the forest, providing that the State and the Federal authorities may enter into an arrangement whereby the said lands scattered throughout various parts of the national forest may be surrendered and a solid block or blocks of lands of approximately equal value within the boundaries of any national forest within the State may be acquired in lieu thereof. This is manifestly to the advantage of all parties concerned.

Section 3 proposes to ratify the exchanges heretofore made under the practice of this department of surveyed school sections in place in forest and other reservations for vacant nonmineral public lands of the character described in the bill, and further provides that exchanges in future may be made either in the form provided in section 2, or at the election of the State, vacant unappropriated nonmineral public lands of equal acreage outside the limits of national forests may be taken in lieu of lands surrendered or relinquished within the forest, or at the discretion of the Secretaries of the Interior and Agriculture, State lands outside may be exchanged for lands within national forests.

Section 4 ratifies agreements of exchanges heretofore made between the States of South Dakota and Idaho and the United States, concerning consolidation of holdings within national forests in those States.

Section 5 provides that the provisions of the act shall be applicable only where the State is now authorized by law to make such selections, relinquishments, or exchanges, or shall hereafter by constitutional legislative enactment authorize the same to be done.

The department is heartily in favor of the enactment of this measure, believing that it will be of mutual benefit to the States and the Federal Government; and that it will permit of the early adjustment of the school grants, and I trust, therefore, that it will receive favorable consideration at this session of Congress.

Cordially, yours,

ANDRIEUS A. JONES,
*Acting Secretary.*

Hon. JOHN E. RAKER,
*House of Representatives.*

## Federal Trade Commission.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM W. HASTINGS,
OF OKLAHOMA,
IN THE HOUSE OF REPRESENTATIVES,
*Tuesday, August 15, 1916.*

Mr. HASTINGS. Mr. Speaker, on August 15, 1916, I introduced a joint resolution (H. J. Res. 297) authorizing and directing the President to place an embargo on print paper, pending the report of the Federal Trade Commission, as follows:

Whereas the Federal Trade Commission was by Senate resolution, adopted April 24, 1916, requested to inquire into the increased price of print paper; and
Whereas the Federal Trade Commission has not as yet submitted its report; and
Whereas the price of print paper has more than doubled within the past six months; and
Whereas it is believed that the increase in the price of print paper is due to contracts for the exportation of large quantities to European countries and not to increased cost of manufacturers: Therefore be it

*Resolved, etc.*, That the President of the United States is hereby authorized, empowered, and directed to place an embargo on the shipment out of the United States of print paper until the report of the Federal Trade Commission is submitted, as requested by Senate resolution (S. Res. 177) adopted April 24, 1916.

In support of the statements made in the preamble of the resolution, I desire to read an article from The Fourth Estate of date July 22, 1916, a magazine published in New York City in the interest of newspapers:

THE PRINT-PAPER SITUATION—REDUCTION IN RATES FOR OCEAN FREIGHT MAY AFFECT UNITED STATES USERS.

The following is a fairly close approximation of the present prices of news print paper in various foreign countries and we believe it will be of interest to the newspaper publishers of this country:

Great Britain: 6 to 7 cents.
France: 6½ to 7 cents.
Germany: Don't know.
Austria: Don't know.
Italy: 6½ to 7 cents.
Spain: 6½ to 7 cents.
Holland: 6½ to 7 cents.
Denmark: Don't know.
Norway: 5 to 6 cents.
Sweden: 5 to 6 cents.
Russia: Don't know.
Japan: Don't know.
Australia: 6 to 6½ cents.
New Zealand: 6 to 6½ cents.
Brazil: 6½ to 7 cents.
Uruguay: 6½ to 7 cents.
Argentine: 6½ to 7 cents.
Chile: 7 to 7½ cents.
Peru: 7 to 7½ cents.

In the United States spot-cash sales are being made to-day at 3 cents to 4½ cents.

The attractive prices offered for foreign shipments and the heavy ocean freight have served to indicate to the paper manufacturers how much the customer would stand in the foreign countries.

Last week in the Baltic alone over 200 cargo steamers were released by employing governments and are now available for handling commercial tonnage.

Ocean rates have fallen practically 50 per cent within the past three weeks, and tonnage is now being solicited by the steamship companies. This will naturally mean that the paper manufacturers of this country can get still larger net mill prices for shipments abroad.

Hence the temptation will be correspondingly greater to take export business.

The output of the news print mills for the month of June exceeded that of any prior month in the history of the industry in this country and Canada. The spur of high prices has worked wonders in this respect, and yet the demand keeps pace with this condition.

The following article is taken from the Editor and Publisher, of New York City, for July 22, 1916, a publication, as its name indicates, devoted to the interests of newspapers:

STRONG MEASURES REQUIRED TO CURB GREED OF NEWS PRINT MANUFACTURERS.

The news print situation grows more serious. If the manufacturers are to have their way, and are to be allowed to fix prices arbitrarily when deigning to make new contracts with publishers, newspaper profits, in the coming year, will be largely turned over to them as spoils of the economic war they are waging against the publishing interests of this country.

They are finding it possible to export white paper to France, lured by the war-time profits of the game, but contend that they are unable to meet the home demand.

The present outlook is for prohibitive prices for domestic consumers after January 1, 1917. In cases where contracts expired on May 31 and June 30 publishers have been compelled to meet advances of from 40 to 50 cents per hundred pounds on contracts which will expire on December 31. When these short-term contracts expire their renewal will present further difficulties, if present indications count.

One of the leading newspaper publishers of the country, reported to be making a profit well toward the half-million mark, recently stated that if he had to pay such exactions to the paper makers all his profit would be wiped out. Another publisher said that the increased penalty he is now paying would amount to $240,000 a year.

These advanced prices for news print would amount to a general confiscation by the manufacturers of the earnings of newspapers.

According to figures printed in the Editor and Publisher last week 2,282 tons of print paper had been exported to France from July 1, 1915, to and including May, 1916, as against none for the five previous fiscal years.

The exports of news print paper for the past five fiscal years ending June 30 were: 1911, 99,510,875 pounds, valued at $2,434,964; 1912, 103,573,428 pounds, valued at $2,501,529; 1913, 100,426,614 pounds, valued at $2,450,520; 1914, 88,966,738 pounds, valued at $2,177,483; 1915, 125,681,633 pounds, valued at $3,079,137. For the 11 months of the present fiscal year, up to May 31, the exports of news print were 112,668,568 pounds, valued at $2,735,533.

If, lured by the temporary high prices to be obtained abroad, the news print manufacturers plan to divert from home markets so large a part of their product as to create a real shortage here, through which domestic prices are to be boosted to prohibitive levels, then, in the public interest, Congress should place an embargo on the export of white paper.

According to conservative reports, paper can be made and delivered in New York at a fair profit from $34 to $37 a ton, or about $1.75 per hundred pounds. Publishers of very important newspapers, using enormous quantities, have recently been paying $1.90 and upward at the mill.

An embargo on exports would serve to readjust this disturbed market—to put a sudden stop to the joy-riding and war-baby tactics now being indulged in by the manufacturers—and avert a menace of such serious import that it involves and endangers the public interest.

Reports from cities throughout the country indicate that the manufacturers are unwilling to quote to publishers a price applying to renewals of contracts until such contracts shall have expired, and not then under competitive conditions. It is safe to assume that there does not exist any written agreement between manufacturers, but there is assuredly a common understanding that they shall demand all that the traffic will bear.

The investigation by the Federal Trade Commission should disclose what part is being played in the drama of confiscation by stock-watering methods. It should make clear to what extent the product of the mills is being held in reserve for possible export profits. It should establish the actual present per ton cost of production; and if this varies materially with different manufacturers, the matter of over-capitalization in particular instances should be sifted.

An embargo on exports of white paper would be a strong measure, but it may be a necessary one. And if the publishers of the country stand as a unit in favor of it, Congress will promptly enact it.

In my judgment, these articles abundantly sustain the statements made in the resolution and warrant an immediate investigation by Congress; and if found to be true, prompt action should be taken.

On April 26, 1916, the Senate adopted a resolution requesting the Federal Trade Commission to investigate the increase in the price of print paper. Inquiry of the commission as to when a report may be expected brings the information that it may not be made until October. By that time Congress shall have adjourned. Contracts for print paper will be renewed before Congress reconvenes in December. If relief is to be given, action should be taken now.

I am submitting this resolution and these articles in support of the statements made at this time:

First. To invite the attention of the Committee on Ways and Means to the matter in the hope that prompt consideration may be given it.

Second. To have the Committee on Rules take such action as will permit consideration of the resolution by the House at this session.

Third. To call the attention of the country to the reasons for the increase in the price of print paper, trusting that if the facts set forth in these articles are true, newspaper publishers will verify them through their Members of Congress.

Fourth. To bring the matter to the attention of the Federal Trade Commission.

Press reports indicate that newspapers for business reasons hesitate to aid the commision by submitting proof.

A large number of daily papers throughout the United States are increasing their subscription price and their advertising rates because of the increase in the price of print paper, among them being the Republic and the Globe Democrat, of St. Louis, Mo. A responsible newspaper publisher of my own State informs me that he is now paying $3.85 per 100 pounds for paper which he used to buy for $1.85, and that his supply will be exhausted the last of August, after which he does not know where or at what price he shall be able to get paper. He made a trip to New York City and thence along the Canadian border in an effort to secure a supply at living rates, but was unable to make a contract at reasonable figures. Many small publications will be forced to suspend.

I submit that the question is so serious that it should engage the immediate attention of Congress.

## The Work of the Administration for Agriculture.

### EXTENSION OF REMARKS

OF

### HON. ASBURY F. LEVER,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. LEVER. Mr. Speaker, under the leave granted to me to extend by remarks in the RECORD, I include a letter received by me from the President of the United States containing a brief summary of the work of this administration for agriculture.

The letter is as follows:

THE WHITE HOUSE,
*Washington, August 11, 1916.*

MY DEAR MR. LEVER: It has given me much satisfaction to approve to-day the bill making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, and for other purposes, because the bill not only makes very generous provision for the improvement of farm production in the Nation and for investigations and demonstrations in the field of the marketing of farm crops and of the organization of rural life, but also contains three well-conceived measures designed to improve market practices and the storage and financing of staple crops. As the passage of this bill marks the practical completion of an important part of the program for the betterment of rural life which was mapped out at the beginning of the administration, I feel that I can not let the occasion pass without conveying to you and to your associates in both Houses my appreciation of the service rendered to the Nation in strengthening its great agricultural foundations.

The record, legislative as well as administrative, is a remarkable one. It speaks for itself and needs only to be set forth.

1. Appreciation of the importance of agriculture has been shown through greatly and intelligently increased appropriations for its support.

2. Particular pains have been taken to foster production by every promising means, and careful thought has been given especially to the matter of increasing the meat supply of the Nation.

3. Greatly increased provision has been made, through the enactment of the cooperative agricultural extension act, for conveying agricultural information to farmers and for inducing them to apply it. This piece of legislation is one of the most significant and far-reaching measures for the education of adults ever adopted by any Government. It provides for cooperation between the States and the Federal Government. This is a highly important and significant principle. When the act is in full operation there will be expended annually under its terms, from Federal and State sources alone, a total of over $8,600,000 in the direct education of the farmer; and this amount is being and will be increasingly supplemented by contributions from local sources. It will permit the placing in each of the 2,850 rural counties of the Nation two farm demonstrators and specialists, who will assist the demonstrators in the more difficult problems confronting them.

4. Systematic provision for the first time has been made for the solution of problems in that important half of agriculture which concerns distribution marketing, rural finance, and rural organization.

5. Provision was made promptly for the creation of an Office of Markets and Rural Organization, and the appropriations for this office, including those for enforcing new laws designed to promote better marketing, have been increased to $1,200,000.

The more difficult problems of marketing are being investigated and plans are in operation for furnishing assistance to producers of perishables through a market news service. A similar service for live-stock interests will be inaugurated during the year.

6. The problem of securing the uniform grading of staple crops, of regulating dealings and traffic in them, of developing a better system of warehouses, and of providing more available collateral for farm loans has been successfully dealt with.

7. Under the cotton-futures act standards for cotton have been established, the operations of the future exchanges have been put under supervision, and the sale of cotton has been placed on a firmer basis.

8. The United States grain-standards act will secure uniformity in the grading of grain, enable the farmer to obtain fairer prices for his product, and afford him an incentive to raise better grades of grain.

9. The United States warehouse act will enable the Department of Agriculture to license bonded warehouses in the various States. It will lead to the development of better storage facilities for staple crops and will make possible the issuance of reliable warehouse receipts which will be widely and easily negotiable.

10. Of no less importance for agriculture and for the national development is the Federal aid road act. This measure will conduce to the establishment of more effective highway machinery in each State, strongly influence the development of good road building along right lines, stimulate larger production and better marketing, promote a fuller and more attractive rural life, add greatly to the convenience and economic welfare of all the people, and strengthen the national foundations. The act embodies sound principles of road legislation and will safeguard the expenditure of the funds arising under the act not only, but will also result in the more efficient use of the large additional sums made available by States and localities.

11. The Federal reserve act benefits the farmer, as it does all the other people of the Nation, by guaranteeing better banking, safeguarding the credit structure of the country, and preventing panics. It takes particular note of the special needs of the farmer by making larger provision for loans through national banks on farm mortgages and by giving farm paper a maturity period of six months.

12. It was essential, however, that banking machinery be devised which would reach intimately into the rural districts, that it should operate on terms suited to the farmer's needs, and should be under sympathetic management. The need was for machinery which would introduce business methods into farm finance, bring order out of chaos, reduce the cost of handling farm loans, place upon the market mortgages which would be a safe investment for private funds, attract into agricultural operations a fair share of the capital of the Nation, and lead to a reduction of interest. These needs and these ideals have been met by the enactment of the Federal farm-loan act.

I am glad to have had an opportunity to take part in the execution of this large program, which, I believe, will result in making agriculture more profitable and country life more comfortable and attractive, and therefore insure the retention in rural districts of an efficient and contented population.

Faithfully, yours,

WOODROW WILSON.

Hon. A. F. LEVER,
*Chairman Committee on Agriculture,*
*House of Representatives.*

## Increase of the Navy.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM H. COLEMAN,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. COLEMAN. Mr. Speaker, under general leave granted to the Members of the House to extend their remarks in the RECORD on the Senate amendments to the naval bill, H. R. 15947, with special reference to amendment No. 238, increase of the Navy, I wish to state that I shall vote for the amendment because of a forced choice to either support or oppose it as a whole without opportunity of further amendment.

Having voted for the Browning motion to recommit the naval bill to the Committee on Naval Affairs, with instructions when the bill was formerly before the House on June 2, which instructions contemplated a building program of two battleships and six battle cruisers, making eight capital ships in all, I have no hesitancy in voting for the immediate building program in the Senate amendment which provides for four battleships and a like number of battle cruisers still comprising eight capital ships in all changed only as to the relative number of battleships and battle cruisers.

But, like the gentleman from Wisconsin [Mr. LENROOT], I do not approve of the continuing program and, were opportunity afforded, would cast my vote against it. Unfortunately, under the present parliamentary status, an amendment to limit the building program to one year is not in order, and believing a present emergency exists justifying a present substantial increase in capital ships I shall support the amendment as drawn, reserving the right, however, to vote in the next session, or in the Sixty-fifth Congress, should I be so fortunate as to be a Member, as the conditions confronting our Nation at such time shall warrant.

Permit me to take this occasion to call the attention of the country to the danger of being carried too far on the present preparedness wave. And while ready to discharge our duties in meeting the existing exigency, let us remain free to perform our duty in the future as the requirements of that future shall demand. No man knows what the effects of the present European war will be on the question of armaments of nations. Let us hope that some earnest effort will be made looking to the curtailment rather than the increase of the armies and navies of the world.

I am pleased that the present bill recognizes in some degree this possibility, providing as it does:

> If at any time before the construction authorized by this act shall have been contracted for there shall have been established, with the cooperation of the United States of America, an international tribunal or tribunals competent to secure peaceful determinations of all international disputes, and which shall render unnecessary the maintenance of competitive armaments, then, and in that case, such naval expenditures as may be inconsistent with the engagements made in the establishment of such tribunal or tribunals may be suspended, when so ordered by the President of the United States.

This, at least, looks forward to the possibility of the establishment of a world court or some such tribunal. I am in favor of a world court, and trust that this Nation of ours will assume a prominent place in a sincere effort to bring about such a desired institution. Of course, I do not anticipate that such a tribunal, if established, would put an end at once and forever to war, but I do believe that it would go a long way in lessening the chances of war, and would lead more speedily to the creation of a sentiment throughout the world that would in the end banish this scourge from mankind, as it led to a higher conception of the meaning of human brotherhood.

## Mr. James H. Patten.

### EXTENSION OF REMARKS
OF
### HON. GUY T. HELVERING,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. HELVERING. Mr. Speaker, on July 18 a speech was made on the floor of this House denouncing my close personal friend, Mr. J. H. Patten, who is a native of my State, a graduate of the University of Kansas, and who has many warm personal friends residing in the district which I represent.

It was my intention to refute some of the statements made in the speech by the gentleman from South Carolina, but I am to-day in receipt of a letter from the editor of the Farmers Tribune published at Anderson, S. C., which explains the situation possibly more comprehensively than I could by a speech at this time; therefore I ask unanimous consent to extend my remarks in the RECORD by printing a letter I have to-day received from Mr. V. B. Cheshire.

The letter is as follows:

THE ANDERSON FARMERS' TRIBUNE,
*Anderson, S. C., August 14, 1916.*

Hon. GUY T. HELVERING, M. C.,
*Ways and Means Committee, House of Representatives,*
*Washington, D. C.*

DEAR SIR: I see by the Congressional Directory that you are the Kansas member of the Ways and Means Committee. The Ways and Means Committee being the committee of the House which selects the

various committees of the House, and really constitutes the steering group of the House, and you, being one of the Democrats on that committee and a Democratic Congressman from the State in which Mr. J. H. Patten was born, and, I take it, familiar with his reputation, I am writing to call your attention to certain facts with reference to an attack made upon him on the floor of the House July 18, 1916, by the Congressman from this congressional district, the Hon. WYATT AIKEN.

As I understand, the Constitution and the laws forbid a Congressman being questioned or held to account for anything said on the floor or inserted in the proceedings of the House in "any other place." For a person to assault a Congressman for what that Congressman has said about him a non-Member, would be contrary to the Constitution, and for a non-Member to even "question" a Congressman about anything said on the floor in any other place makes him liable to arrest, being brought before the bar of the House and convicted of contempt of the House and violation of the Constitution. But the Congressman can be questioned there, in the House, and only there. The only way open to the non-Member therefore is for him or some friend or person who resents the attack to write or have some Congressman reply to the attack.

It is for that reason that I am writing you. I am writing you because Congressman AIKEN stated that Mr. Patten was not well thought of down here and was known as a grafting lobbyist, had been fired from the purity federation and the farmers' union, was a Republican, and a number of other things, to which reply ought to be made, if those remarks of Congressman AIKEN's are to stand in the official published proceedings of Congress if for no other purpose than to clear the record from the hearsay allegations, which, if unchallenged, might be a source of affliction to the innocent friends and relative of the accused.

I am not asking that any vituperative innuendoes or floating rumors carried around by scandal mongers or irresponsible gossips be used, but that merely authentic signed statements, genuine letters, and other authoritative, unanswerable evidence be inserted.

* * * * * * *

On the first page of the speech is the following: "I thereupon wrote to Hon. John Gary Evans, Democratic State chairman for South Carolina, and who was himself a delegate to the St. Louis convention, and have received a reply in which he says:

"'Patten took no part in the proceedings of the convention as an alternate from South Carolina, but merely was given a ticket and badge to enable him to get into the convention.'

"It thus appears that Patten was simply given a ticket of admission to the convention."

Mr. Evans has written: "I can not imagine why WYATT AIKEN read only one sentence of my letter into the RECORD" and has sent a copy of his full reply, with permission to use in any way seen fit, since "Mr. AIKEN has done what he did." The rest of the letter reads as follows:

SPARTANBURG, S. C., *June 24, 1916.*

Hon. WYATT AIKEN,
*Washington, D. C.*

MY DEAR SIR: I have your telegram asking me if J. H. Patten was appointed alternate from South Carolina to the St. Louis Convention, etc. Mr. Patten came to me with a letter from Hon. SAM. J. NICHOLLS, asking me to do what I could for him at the convention. He claimed to be a South Carolinian and the husband of a daughter of Senator Latimer. * * * As none of our alternates attended the convention, we gave all of their seats to South Carolinians who were present in St. Louis. This is all I know about it. * * * Mr. Patten also produced a telegram from Senator TILLMAN asking me to do what I could for him. He did no harm that I know of.

Very truly, yours,

JOHN GARY EVANS,
*State Chairman.*

With reference to the next statement of Mr. AIKEN that: "I am told that upon his return to Washington he stated that he went to St. Louis in response to a telegram from Hon. SCOTT FERRIS, of Oklahoma, a Member of this House."

Mr. Patten denies ever having told anyone any such thing, and says that Congressman FERRIS spoke to him immediately after Mr. AIKEN asked him as to what Patten was doing in St. Louis and about what Patten wired him (FERRIS) and said that Mr. AIKEN replied, in answer to his query, that "Patten was a hell of an enemy of his," and that he (FERRIS) said that Patten was a friend of his, and he did what he would do for any friend in arranging for hotel accommodations at his hotel.

The gist of Mr. AIKEN's next paragraph is that when the officers of the National Farmers' Union "found out what kind of a man that he (Patten) is, they removed him from the position" of general counsel early in 1914. The official minutes of the 1914 annual convention of the National Farmers' Union and the following letters do not seem to bear out that information, which Mr. AIKEN said was conveyed to him by President Barrett and E. W. Dabbs.

The official printed "Minutes of the National Farmers' Educational and Cooperative Union of America, tenth annual session, held in Fort Worth, Tex., September 1, 2, 3, 1914," at pages 33 and 34 show that delegates in national convention assembled still considered Mr. Patten general counsel, for he is commended for his "valuable services," and "instructed" with reference to criticizing in private conference with Congressmen the administration of the "bureau of markets," which he seems to have looked upon as more or less of a "joke," the way it was being administered. That is doubtless the "convention condemnation" spoken of.

The following telegram to a Congressman seems to point clearly to the fact that State President Mobley, who was at Fort Worth, and the membership still regarded Mr. Patten as general counsel, and there is no reason to regard him otherwise after the action at Fort Worth in 1914, since there is not a word in the minutes of that convention about his being retired or his resignation, which he had tendered to President Barrett in March, 1914, being accepted. His successor has not yet been chosen.

With reference to what National President Barrett and National Secretary Davis thought of him is shown by the following extracts from letters extending over a period of three years:

"On March 14, 1911, National Secreatry A. C. Davis wrote a letter to Mr. Patten, closing with the following: 'Patten, I am glad that you continue to keep things moving,' and on April 7, 1913, Secretary Davis wrote Mr. Patten at some length, closing as follows: 'On behalf of the organization and also personally, I desire to thank you for the excellent services you have rendered the union. * * * It is indeed a rare thing to find a man who is willing to do things for the good of a cause and not for the filthy lucre. My experience in this office has been that most fellows take every occasion to dig into the funds, and it is quite a pleasure to find one whose standards are higher than a few cents.'

"A. C. DAVIS, *National Secretary.*"

"On October 22, 1910, National President Barrett wrote Mr. Patten among other things: 'Dear Patten: * * * Now, Patten, I am preparing an article for the brethren on the tricks and schemes of politicians, so you see what I want. Please help me out. I know you know just how they manipulate things in Washington.' * * *

"C. S. BARRETT."

"On July 1, 1913, National President C. S. Barrett wrote Mr. Patten: 'Brother Patten: I see that lobby committee is going to summon Bowen to appear before it. Of course you know the farmers' union is not responsible for Bowen's conduct, and I wish you would go over to the hearing when he is to appear. The last question he asked me in Washington was whether you were our attorney. I told him that you were the chief counsel of the whole shebang.' * * *

"C. S. BARRETT."

—

In this connection the following letter from the past national president, past chairman of the national legislative committee, and past State president of the Georgia division is most complimentary to Mr. Patten:

UNION CITY, GA., *August 4, 1916.*

Mr. J. H. PATTEN, *Washington, D. C.*

DEAR PATTEN: I am surprised that anybody would attack your record as general counsel for the Farmers' Union.

As president of the Georgia division, national president, and chairman of the national legislative committee, I know the union's affairs and your connection with the union for some seven years—four years of which you were general counsel.

I remember you resigned in March, 1914, but I think you will find from consulting the national minutes of September, 1914, that no action was taken on your resignation, and the union in national convention assembled was still instructing you in your official acts, which proves the delegates in national convention assembled considered you still to be their attorney.

My records show that you answered some inquiries from members in Alabama with reference to the record of Oscar Underwood some time in February, 1914, Underwood being a candidate for the Senate. To my knowledge you stated facts.

* * * * * * *

Your friend,

R. F. DUCKWORTH,
*Ex-National President of the National Farmers' Union, Ex-Chairman of its National Legislative Committee, and Ex-State President of the Georgia Division of the National Farmers' Union.*

* * * * * * *

Mr. AIKEN next states that Mr. Patten sent letters into the late Judge Witherspoon's district, but does not offer one of the letters in evidence, and Mr. Patten asserts that he wrote only one letter in which he named Congressman Witherspoon, and that was in response to the direction of the Mississippi State Union secretary, who did not live in Congressman Witherspoon's district, she having asked for the vote and attitude of the Mississippi congressional delegation on parcel post, which he gave, as shown by the CONGRESSIONAL RECORD, a public record.

With reference to Mr. AIKEN's assertion that Congressman BENNET, of New York City, Republican, denounced Mr. Patten for sending letters into his district, Mr. Patten denied that at the time in the following interview, which was incorporated in a speech by Congressman Macon, of Arkansas, February 8, 1910, as follows:

"Now, Mr. Chairman, it is easy to denounce a statement as false, just as it is easy to call a defenseless person a liar, but proving the fact is a different thing. After the gentleman had made his speech in reply to what I had to say in regard to the conduct of the commission, Mr. Patten was interviewed by an Evening Star reporter of this city on Thursday, January 27, and, among other things, said:

"'Representative BENNET is quite mistaken in representing that I did anything one year ago last fall to prevent his reelection to Congress.

"'His allegations, in so far as they are material and implicate me as knowingly or unknowingly misrepresenting the situation, are absolutely untrue, false, and unfounded in fact, and he does not dare to prosecute my statements or to make his libelous statements in an unprivileged place.

"'One year ago Representative Victor Murdock, of his own motion and notion, and without any knowledge on my part, called attention to the commission's expenditures. Similarly Senator Gary, in the Senate, February 18, 1909.

"'The best authority is perhaps Representative Tawney, who said Monday, after the debate on the commission's expenditures, according to page 947 of the RECORD: "All the facts brought out in this debate came to the Committee on Appropriations, were discussed," and resulted in the commission's curtailment.

"'I mention this to show that the gist of the episode certainly can not be attributed to my fabrications, as Mr. BENNET's accusations allege.'"

Mr. AIKEN seems to have been misinformed about Mr. Patten having "worked for PENROSE" last election and having "stumped" Pennsylvania "from one end of the State to the other denouncing President Wilson's administration," according to the following letter from Senator PENROSE, who ought to know better than some gossiper who seems to have imposed on Congressman AIKEN, for Senator PENROSE wrote Mr. Patten:

UNITED STATES SENATE,
COMMITTEE ON ADDITIONAL ACCOMMODATIONS
FOR THE LIBRARY OF CONGRESS,
*July 22, 1916.*

J. H. PATTEN, Esq.,
*Washington, D. C.*

DEAR SIR: I have yours of July 19, calling my attention to a statement in the CONGRESSIONAL RECORD to the effect "that during the last senatorial campaign in Pennsylvania Patten was in that State working for PENROSE, the Republican candidate, against Palmer, the Democratic candidate, and went from one end of the State to the other denouncing the Democratic Party and the Wilson administration."

This statement is absolutely without foundation. I know very well that you took no part in the State campaign in Pennsylvania in my behalf or in behalf of any other candidate. The statement is so entirely without basis of fact or color of truth that it is hardly worth notice or denial.

Yours, sincerely,

BOIES PENROSE.

Likewise Congressman AIKEN'S statement that Mr. Patten was "removed bodily" from office in the Purity Federation seems to be based on erroneous information, for the president of the Purity Federation has just written as follows:

LA CROSSE, WIS., *July 21, 1916.*

MY DEAR MR. PATTEN: I have your favor of July 19, and am very much surprised, indeed, to learn of the remarks that Congressman AIKEN made relative to yourself and the Purity Federation.

You were for some years with the federation as legislative superintendent at Washington—having been chairman of the national legislative committee of the American Purity Federation, of which I was president, a position which you retained until it was merged into the present federation—and to the very best of my knowledge you performed the duties of the office with great care and thoroughness. You rendered very signal and valuable service in securing the passage of the Kenyon red-light bill and in many other matters that benefited our work and promoted the great cause for which we stand.

It is true that at our congress, held in Minneapolis, Mr. Pringle was appointed legislative superintendent to take your place, but only because he was moving from Maine to Washington, and we understood he would be in the city the entire time and could possibly be in a position to render even better service than you had done. But you were continued as assistant legislative superintendent, and you are still holding that position, so this refutes any statement on the part of anyone that you were thrown out of the federation, or out of official position with the federation.

Very truly, yours, B. S. STEADWELL,
*President World's Purity Federation, Successor to American Purity Federation.*

—

With Mr. Patten's being a common lobbyist, Senator OVERMAN, who ought to know and who ought to be an authority on lobbies and lobbyists, since he presided over the Senate Lobby Investigating Committee, and Senator UNDERWOOD, who was Democratic House leader for several years, until he was elevated to the United States Senate by the people of Alabama, seem to violently differ with Congressman AIKEN'S opinion of Mr. Patten. Senator OVERMAN, a North Carolina Democrat, wrote me the following letter in reply to an inquiry of mine:

UNITED STATES SENATE,
COMMITTEE ON RULES,
*Washington, D. C., January 5, 1916.*

Mr. VICTOR B. CHESHIRE,
*Editor Anderson Farmers' Tribune,*
*Anderson, S. C.*

DEAR SIR: Replying to your inquiry of recent date, in regard to Mr. J. H. Patten, the Washington representative of the Farmers' Union and other farmers' organizations, I beg to say that I have known Mr. Patten for a number of years, and I have never heard, and so far as I know he has not been regarded here in Washington as a common lobbyist.

As chairman of the Senate Lobby Committee, I subpœnaed and caused to appear before the committee quite a number of witnesses to give testimony, but Mr. Patten was never subpœnaed, nor did he appear before the committee.

I regard Mr. Patten as a man of fine character and thoroughly competent to properly execute his duties as representative of the different organizations which he is connected with, and any report to the contrary I believe to be unfounded.

Very truly, yours, LEE S. OVERMAN,
*Chairman Senate Lobby Investigation Committee.*

The above letter was written long before the present controversy arose, as was the following letter by Senator OSCAR UNDERWOOD, who at the time he wrote it to Col. Forney Johnston, of Birmingham, Ala., February 13, 1914, was House Democratic leader and in a position to know whereof he spoke:

"Mr. Patten is the son-in-law of the late Senator Latimer, of South Carolina, who was known as the leading farmer Senator from the South for many years. The family owns a large amount of cotton lands around Belton, S. C., and Mr. Patten is interested in the agricultural development of the South. He is also assistant secretary of the Farmers' National Congress of the United States of America. Mr. Patten is and has been for years identified with the World's Purity Federation, of which Rev. B. S. Steadwell, of La Crosse, Wis., is president. This organization is urging the passage of laws curbing the liquor traffic and aimed at the white-slave traffic and commercialized vice. The last issue of The Light, which is the official publication of the Purity Federation, gives Mr. Patten and Rev. Wilbur F. Crafts the credit for having introduced and pushed the passage of the so-called Kenyon red-light bill for the District of Columbia, which is directed at the red-light district of this city. Rev. W. F. Crafts is the leading spirit in the International Reform Bureau and is well known by the clergy throughout the country.

"Mr. Patten occupies a very prominent position as the representative of farmers' societies and uplift societies throughout the country."

I have a letter from Mr. Frank Morrison, the secretary of the American Federation of Labor, which shows in what high esteem Mr. Patten is held by the officials of the labor movement, men who are devoting their lives to the improvement of conditions and whose hearts beat continually and continuously for humanity. Mr. Morrison wrote me under date of January 4, 1916, as follows:

"DEAR SIR: Your favor of December 31 was duly received to-day, in which you ask me what I think of Mr. J. H. Patten and what standing he has in Washington with the true friends of labor and with labor representatives and the cause for which we stand.

"I desire to say that I have known Mr. Patten a number of years. He has twice been a fraternal delegate to the American Federation of Labor at Philadelphia and the convention held last November in San Francisco, representing the Farmers' National Congress. As a representative of farmers' organizations he has been not only sympathetic but helpful in the efforts to secure remedial legislation for organized workers as well as the farmers' organizations which he represents. He is here at the present time representing the farmers' organizations, and we expect his cooperation in securing much-desired and needed legislation. His services are appreciated, and I have never heard a word from anyone reflecting upon his activities except the statement contained in your communication to me.

"Yours, very truly,

"FRANK MORRISON,
"*Secretary American Federation of Labor.*"

An anonymous statement was made down here in a paper that Mr. Patten was not much of a lawyer and that he had never had a case, when I knew he had right here, but I wrote a Washington firm and received the following, which might explain why some don't like him:

WASHINGTON, *May 24, 1916.*

Mr. V. B. CHESHIRE,
*Anderson, S. C.*

DEAR SIR: I have your letter of last Saturday making inquiry about Mr. J. H. Patten, and stating that some one has said in print that he is not a lawyer and never had a case in any court.

The above firm, of which I am the president, has employed Mr. Patten as our attorney on several occasions, and has found him capable, efficient, and well qualified. He is and has been admitted to practice in the courts here for some years, and everyone up here seems to think the District examinations for admission are severe.

The official records of the municipal court here will show that during the past year Mr. Patten has been our attorney in a case against a United States Senator, and in a case against a Member of the House, among others, and that single handed and alone he successfully prosecuted each case and secured everything we claimed.

I have known Mr. Patten personally for some time, and can state from personal conversation had with him four years ago, and from a knowledge of printing done for him at the time, that he favored and worked for the election of Woodrow Wilson as President.

Mr. Patten has represented and still represents a number of farmers' and patriotic organizations, which speak for the people, and whose principles are Democratic. Having been a lifelong Democrat myself, I am confident I know whereof I speak.

It is most astounding to hear that any such extraordinary statement was made, as your letter indicates, and particularly in the very section of the South to which I have heard him repeatedly refer as "home." I can not comprehend any respectable person making such a groundless allegation, and I am looking forward with much interest to learning from Mr. Patten, when he returns shortly, as I understand over the phone that he is expected back from South Carolina within a few days, the party and occasion for its having been made.

Very truly, yours,
C. F. SUDWARTH,
*President Sudwarth Printing Co.*

—

I have gone into the matter thoroughly because I have come to look upon Mr. Patten, whose "in-laws" live in this county, with much favor and pride. I know he has been doing and is doing a great work for the farmers, the plain folks, for humanity and right. I think I appreciate the need of his not being falsely accused and of his not being crippled as the result no doubt of the big selfish interests and others opposed to the objects he has in mind in fighting for the classes and the causes he represents. It is because of the fear that he might be crippled in his work as a result of men being imposed upon and him being put in a wholly wrong light, just as Congressman AIKEN seems to me clearly to have been misinformed about him and to have gotten the wrong ideas about him, precisely as the Congressman did about Carrier W. R. Clark, as shown by the letters he wrote the Post Office officials accusing Clark of things and painting as a creature he was later found not to be, Mr. AIKEN manfully apologizing for the mistake he made.

As a result of these convictions, I want to include two more letters, and then I am through, although there is much other evidence that can not be controverted, which I would like to include, but won't, as this letter has become quite lengthy. The first letter is from Senator HOKE SMITH of Georgia. It is as follows:

UNITED STATES SENATE,
COMMITTEE ON EDUCATION AND LABOR,
*Washington, D. C., May 24, 1916.*

Mr. V. B. CHESHIRE,
*Anderson, S. C.*

DEAR SIR: Your letter of the 20th instant has been duly received and it gives me pleasure to reply to your inquiry.

I have known Mr. James H. Patten ever since I came to the Senate in December, 1911, and had heard of him previously through officers of the State and national farmers' unions, as the general counsel of the national union, and officer of other farmers' organizations.

I recall distinctly the origin of the market bill to which you refer. In January, 1912, when the national legislative committee of the Farmers' Union was in session in Washington, President Charles S. Barrett, ex-national president and ex-State president and chairman of the national legislative committee; Mr. R. F. Duckworth; National Secretary A. C. Davis; Mr. T. J. Brooks; and Mr. Patten, general counsel for the national organization, called on me several times to discuss the interests of the farmers and the people. One of the topics we discussed was the need of the Government doing something to stimulate the marketing of farm products. As the Federal Government was assisting in the matter of production, it seemed to me that something ought to be done to facilitate the marketing process, and I urged these men to outline a bill. They did so, and after going over it with them and making certain changes, I introduced it and secured its passage through the Senate.

It was with reference to this bill that I appeared before the House Committee on Agriculture, of which Congressman LEVER, of your State, was then a member and is now chairman. Mr. Patten, State president Dabbs, of your State, National Secretary Davis, and other members of the national legislative committee of the Farmers' Union also appearing and arguing in favor of the bill being reported, which was done later by the House committee. Mr. Patten appeared as general counsel for the National Farmers' Union, argued for the proposition, and introduced to the committee other officials of the Farmers' Union, who urged the reporting of the bill and its passage.

I may be mistaken as to all of the gentlemen whom I have mentioned having been engaged in support of the Bureau of Markets at the times stated, but it was with Mr. J. H. Patten, representing the National Farmers' Union, that I most frequently conferred, the other officers of the union having left the matter largely to his direction. I went over the bill with him a number of times, and I relied upon him to actively represent the National Union in connection with its passage.

Mr. Patten is most favorably known here and has done good work in behalf of the farmers and for the farmers' organizations which he has represented. I am glad to give you this information.

Yours, very truly,
HOKE SMITH.

The last letter is one written by the Senate Democratic leader, who was a presidential standard bearer with Bryan in 1896 and who I regard as the salt of the earth. Senator JOHN W. KERN wrote me as follows:

UNITED STATES SENATE,
COMMITTEE ON PRIVILEGES AND ELECTIONS,
*Washington, D. C., June 3, 1916.*

VICTOR B. CHESHIRE, Esq.,
*Anderson, S. C.*

DEAR SIR: Answering your recent letter of inquiry will say that I have known Mr. James H. Patten since I have been in Washington and his relatives in Indiana for very many years. His uncle, Capt. James B. Patten, after whom he was named, was a very dear friend of mine and one of the best known and best loved Democrats in Indiana. He was a member of the State senate for years and held many other offices of trust and profit.

Our Mr. Patten's father, H. H. Patten, was also born in Indiana, and, like his brother, Capt. Patten, was a sturdy Democrat. His cousin, William T. Patten, Esq., the son of another brother, lives in my home city of Indianapolis and has just completed a term of four years as auditor of the county.

All the Pattens I have ever known are splendid Democrats, and I have no reason for otherwise regarding Mr. James H. Patten. I have known him and Mrs. Patten very pleasantly since I have been in Washington, they having lived at the same hotel with me. He and his wife are regarded highly by the many Congressmen living at that hotel and by everybody else here, so far as I know.

I understand Mr. Patten is identified with certain farmers' organizations, one of which, the Farmers' National Congress, meets in national session at Indianapolis next fall.

I am very glad to number Mr. and Mrs. Patten amongst my warm personal friends.

With kind regards, I am,
Yours, very truly,
JNO. W. KERN.

I thank you.
Very truly, yours,
V. B. CHESHIRE,

## The War and the Tariff.

### EXTENSION OF REMARKS
OF
### HON. JOHN JACOB ROGERS,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. ROGERS. Mr. Speaker, on January 27 last I made a speech, "The war and the tariff," CONGRESSIONAL RECORD, page 1822. In the course of that speech I referred to the effect of the war on certain classes of exports from the United States. I desire to submit a table giving this information in greater detail and down to the 1st of June.

The table is as follows:

*Table showing effect of war orders on export trade of the United States.*

| Class. | Payne law. | | Underwood law. | |
|---|---|---|---|---|
| | Peace period. | | War period. | |
| | Oct., 1912–July, 1913. | Oct., 1913–July, 1914. | Aug., 1914–May, 1915. | Aug., 1915–May, 1916. |
| Aluminum and manufactures | $794,000 | $956,000 | $2,946,000 | $4,808,000 |
| Cattle: | | | | |
| Horses | 3,511,000 | 2,824,000 | 55,820,000 | 59,141,000 |
| Mules | 677,000 | 562,000 | 10,159,000 | 18,296,000 |
| Brass and manufactures | 6,755,000 | 6,184,000 | 15,779,000 | 128,388,000 |
| Breadstuffs and oats | 189,057,000 | 132,523,000 | 513,287,000 | 383,697,000 |
| Buttons and parts | 700,000 | 540,000 | 972,000 | 1,515,000 |
| Cars, carriages, etc., aeroplanes and parts | 74,000 | 201,000 | 1,115,000 | 5,755,000 |
| Autos and parts | 27,740,000 | 28,279,000 | 51,936,000 | 99,942,000 |
| Auto tires | 3,234,000 | 2,769,000 | 3,883,000 | 15,730,000 |
| Steam railway cars | 14,347,000 | 7,768,000 | 2,910,000 | 23,909,000 |
| Miscellaneous vehicles | 6,847,000 | 5,865,000 | 9,042,000 | 11,929,000 |
| Acids: | | | | |
| Sulphuric | 63,000 | 101,000 | 450,000 | 1,557,000 |
| All other | 302,000 | 302,000 | 2,238,000 | 18,274,000 |
| "Other" chemicals | 7,084,000 | 7,575,000 | 18,713,000 | 45,313,000 |
| Copper pigs, etc | 115,405,000 | 120,929,000 | 80,008,000 | 139,888,000 |
| Cotton manufactures: | | | | |
| Knit goods | 2,064,000 | 2,039,000 | 11,417,000 | 17,104,000 |
| All other | 5,253,000 | 5,213,000 | 13,413,000 | 9,140,000 |
| Eggs | 3,654,000 | 3,028,000 | 4,435,000 | 5,433,000 |
| Explosives | 4,395,000 | 5,480,000 | 29,032,000 | 398,229,000 |
| Fish | 8,722,000 | 11,623,000 | 10,605,000 | 18,045,000 |
| Fruit, dried | 13,152,000 | 8,744,000 | 10,786,000 | 13,020,000 |
| Fruit, canned | 3,902,000 | 3,606,000 | 5,667,000 | 6,528,000 |
| Hay | 821,000 | 642,000 | 1,578,000 | 2,505,000 |
| India-rubber goods | 8,442,000 | 7,273,000 | 8,094,000 | 14,469,000 |
| Instruments, and appliances, medical, surgical, and optical | 2,341,000 | 2,638,000 | 5,743,000 | 7,617,000 |

*Table showing effect of war orders on export trade of the United States*—Continued.

| Class. | Payne law. | | Underwood law. | |

## Resolution Expressing the Hope that Hereafter Great Britain Will Treat the Irish Revolutionists as Prisoners of War.

### EXTENSION OF REMARKS
OF
### HON. L. C. DYER,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. DYER. Mr. Speaker, on May 12 last I introduced in this House a resolution asking that—

**This House expresses the hope that His Britannic Majesty's Government will hereafter treat such prisoners as it has taken or may take in the act of attempted revolution in Ireland as prisoners of war in accordance with the rules of international law, and hold them immune from punishment as traitors, outlaws, or criminals.**

At the time I introduced this resolution I issued the following statement:

The measure which I have introduced is one which I am confident voices the sentiments of America with regard to the recent and present tragic occurrences in Ireland. Without distinction of class, creed, party, or opinion on the European war, Americans must sympathize with patriots who strike for freedom according to their conscientious view of their duty to their Nation and must abhor the execution of such men by the swift, secret, and pitiless operations of the court-martial.

It is not within the province of the Congress of the United States to express an opinion on the merits of a war existing between two other nations. It is, however, distinctly within the privilege of Congress to voice a sentiment which has swept the country as the sentiment of horror at the executions of Irish patriots has done. It is within the province of Congress to express an opinion that the laws of civilization should be observed when those laws are being so flagrantly disregarded. It is proper for Congress to hope, as surely we may hope, that the second thought of the English Government, harkening to the voice of the English people, will correct the harsh and cruel procedure which seems to have been adopted in a moment of panic.

"International law as set forth in The Hague conventions and in the United States Army Regulations, and as interpreted by the leading authorities, recognizes the right of rebels and revolutionists to treatment as belligerents or public enemies according to the laws of war, provided they are commanded by a responsible person, have a distinctive and recognizable emblem, carry arms openly, and conduct their operations in accordance with the laws and customs of war. All these requirements were met by the Irish rebels, who were for three or more years organized as the Irish volunteers and the citizens' army. They were commanded by officers, they were drilled, and they obeyed discipline. That they were subject to authority is shown by the fact that when the bitter order to surrender was given by their own chiefs, all whom that order reached obeyed. They bore arms openly, most of them were uniformed, and they fought according to the rules of war. The English Government accorded them belligerent rights while they retained their arms, as is conclusively proved by the negotiations carried on under flags of truce. International law as it stands to-day does, to be sure, sanction the treatment of men who have been recognized as belligerents as traitors after their capture. But this sanction, accorded by professors of the law who naturally side with established power, clearly runs counter to the dictates of fairness, chivalry, and humanity, and is seldom acted on. This rule of the international code should be revised to accord with the practice of the United States after the Civil War, when none of the brave soldiers of the Confederacy, though regarded as traitors, were treated as such. I maintain that our example in 1865 established a precedent which is in accord with the supreme law of civilization. These Irish prisoners should be treated as prisoners of war, and no other way. Their leaders were men of spotless character and nobility of motive comparable to Washington, Jefferson, Adams, Franklin, and Hancock. The rank and file were the flower of Irish manhood, and whatever we may think, they thought they were following the footsteps of the founders of this Republic, with the same justification. They conceived Ireland and the Irish race as totally distinct from England and the English, entitled to full freedom, and under no obligation to their rulers for seven centuries of most tragic history. We can express only private judgment as to the correctness or incorrectness of these views, but in the light of American tradition, and in gratitude for the inestimable services of Irishmen to America, surely we may, recognizing the purity of their motives, voice without fear the American opinion that, having fought as soldiers, they should be treated as soldiers when captured."

The resolution went to the Committee on Foreign Affairs, where it has been ever since without action. Since that time Sir Roger Casement has been hanged by the British Government, and another great outrage against humanity and international law perpetrated. In the St. Louis Post-Dispatch of Sunday, August 13, 1916, appeared the following article:

CASEMENT AND WASHINGTON.

To the EDITOR OF THE POST-DISPATCH:

The writer, signing himself "Real Mercy to All," expresses the characteristic sentiments of the extreme British Tory. He thinks that the American press is "quite right" in its criticism of the "hyphenates," but is influenced entirely by fear of the Irish vote in its condemnation of the Casement execution. The press, of course, overlooked the German vote when it rebuked the "hyphenates"; otherwise it would not have done so. Typical Tory logic.

What does "Real Mercy" think of George Washington? Like Casement, he also rebelled against English tyranny and "traitorously" accepted the assistance of England's enemy, France. The American Colonies belonged to England, but Ireland was stolen from the Irish by England. The wrongs of the American Colonists were petty compared with the centuries of persecution and suffering endured by the Irish in their struggles to free their native land. Was Washington a "murderer and traitor," who should have been "justly executed"? If a man robs you of your property and beats you nearly to death besides, is he justified in murdering you for trying to recover your property? That is what England did to Casement, the personification of Ireland's wrongs.

JEFF MACKAY.

The above in a few words tells how the American people look upon this execution of Sir Roger Casement and the other Irish patriots of some months ago. My resolution was intended to put an end to all this, and I am sure that my action was justified by all the circumstances. Shortly after introducing the resolution I presented to the Speaker a petition signed by a number of the Members of this House, asking action by the House. That petition was as follows:

To the SPEAKER OF THE HOUSE OF REPRESENTATIVES:

We, the undersigned Members of the House of Representatives, believing that a great service can be rendered to the cause of humanity and to the cause of international law by the passage of House resolution 235, hereby petition you that by the publication of this memorial in the House the attention of the Committee on Foreign Affairs may be called to the desirability of action on said House resolution 235, which is as follows:

"*Resolved*, That the House of Representatives, remembering how this Republic was erected by men who had the courage to shed their blood and to risk condign punishment for their country's sake, hereby expresses the horror of the American people at the summary execution by His Britannic Majesty's Government of the Irish patriots, who, following the inspiration of the American Revolution and dedicating themselves to their country's cause as they conceived it, attempted, as an organized military force and under the forms of war, to erect a republican form of government; and be it further

"*Resolved*, That recalling how the American Revolution and the Civil War between these States furnish notable proofs that the cause of humanity is best served when established governments treat the participants in organized military operations against their authority as public enemies possessed of the rights of belligerents, this House expresses the hope that His Britannic Majesty's Government will hereafter treat such prisoners as it has taken or may take in the act of attempted revolution in Ireland as prisoners of war in accordance with the rules of international law and hold them immune from punishment as traitors, outlaws, or criminals."

L. C. DYER, twelfth district, Missouri; W. A. RODENBERG, twenty-second district, Illinois; JOSEPH TAGGART, second district, Kansas; JAMES A. HAMILL, twelfth district, New Jersey; JACOB E. MEEKER, tenth district, Missouri; JEFF MCLEMORE, at large, Texas; WM. J. CARY, fourth district, Wisconsin; THOMAS GALLAGHER, eighth district, Illinois; M. F. FARLEY, fourteenth district, New York; CLYDE H. TAVENNER, fourteenth district, Illinois; MARTIN DIES, second district, Texas; WILLIAM S. BENNET, twenty-third district, New York; WILLIAM W. WILSON, third district, Illinois; JOHN F. CAREW, seventeenth district, New York; JOHN J. FITZGERALD, seventh district, New York; ISAAC SIEGEL, twentieth district, New York; M. E. BURKE, second district, Wisconsin; OSCAR CALLAWAY, twelfth district, Texas; C. O LOBECK, second district, Nebraska; B. C. HILLIARD, first district, Colorado; JOHN J. ESCH, seventh district, Wisconsin; DANIEL J. MCGILLICUDDY, second district, Maine; CARL C. VAN DYKE, fourth district, Minnesota; P. D. NORTON, third district, North Dakota; N. J. SINNOTT, second district, Oregon; JAMES P. GLYNN, fifth district, Connecticut; STEPHEN G. PORTER, twenty-ninth district, Pennsylvania.

I received many letters and telegrams and clippings from the press of the country commending me for my action, and convincing me that the patriotic sentiment of the United States was for action by this Nation as outlined in that resolution. Yet nothing has been done; and as this session of Congress is about to adjourn without action, I insert some of these in the RECORD, that the people may know how greatly we have neglected an opportunity to do something for the patriotic people of Ireland, as follows:

BREWSTER, MASS, *May 13.*

Hon. L. C. DYER,
*House of Representatives.*

DEAR SIR: I earnestly hope that something similar to your resolution will be sent to England at once. I am neither of Irish nor German descent, but English and Welsh, and I love England, and I am horrified to see her stoop to such atrocities.

Yours, sincerely,
Mrs. GRACE E. ASHTON.

—

3549 OLIVE STREET,
*St. Louis, Mo., May 25, 1916.*

Hon. LEONIDAS C. DYER,
*House of Representatives, Washington, D. C.*

DEAR SIR: At a meeting of the Friends of Irish Freedom, held Thursday evening, May 18, 1916, the following resolution was adopted:

"Whereas Congressman DYER, of St. Louis, has introduced a resolution in the House of Representatives expressing the horror of the American people at the summary execution of those Irish patriots who fought for the same ideals which the fathers of our country fought for against the same oppressor: Be it

*Resolved*, That we, the Friends of Irish Freedom in St. Louis, hereby express our sincere appreciation of his stand for liberty for which our kinsmen have so gallantly fought once more and of his sympathy for the brave men who gave their lives for the principles so dear to every true American heart which beats in unison with the spirit of '76.

Very truly, yours,
JAMES J. O'PHELAN, *Secretary.*

—

ST. LOUIS, *May 13, 1916.*

Hon. L. C. DYER,
*Washington, D. C.*

DEAR MR. DYER: Your fine resolution introduced yesterday is the subject here of much comment, and I sincerely hope you will press it to passage. A vigorous debate supporting its sentiments would still more rivet the attention of the world on the hypocrisy and tyranny of the self-styled protector and guardian of small nations struggling for liberty.

Yours, sincerely,
O'NEILL RYAN.

Entirely sympathizing with above.

Truly, yours,
THOMAS MOON.

—

ST. LOUIS, *May 12, 1916.*

Hon. L. C. DYER, *Washington.*

DEAR SIR: It is to be hoped that the resolution mentioned in the attached press clipping will be passed as an act of humanity.

We hear a lot in the press against the men in Dublin for their attempt to establish a republican form of government and realize the ideal of Emmett, but I believe every American, regardless of the blood in his veins, feels that even in their failure to effect their aim they should be treated with regard for the high ideal which prompted their acts. Had we after the Civil War shot Davis and Lee, how England would have howled and held us up to derision of mankind. It is the inherent right of every people to take forceful action to recover their liberty or to establish it, and any party or person who holds the contrary to be the case can not be regarded as a believer in the government of the people. The people of Ireland are held to the Government

of England by force of arms, and it is only by the same force they can be freed. The Dublin revolt was caused by the fact that the English Government had planned to disarm and disband the Irish citizen forces and then to enforce the draft act against all Irishmen, and those who led the revolt only died in Ireland in place of being forced to die in France. Had they gone to France to fight for England and been captured by the Germans, they would not have been shot, so why should they be shot by the English for fighting for their own land and the right to govern same?

It does not seem proper that such a resolution as yours had to wait until now, as it seems to me it should have been fathered by the present Government, who we hear are very strong for the "rights of humanity"; so we hope they will support your resolution, unless it be that the Irish are not considered to be human and to have any rights. Anyway, you did the right thing, and good will surely come of it. With best wishes, I beg to remain,

Respectfully, yours,

DAN HOGAN.

---

JEFFERSON CITY, MO., *May 14, 1916.*

Hon. L. C. DYER,
*Washington, D. C.*

DEAR SIR: As one of the many who love fair play, "even in war," and justice to all, allow me to thank you for the resolution offered on the murder of the Irish patriots at Dublin. Though they may have been deceived and misguided, who can blame them for being ready to do or die for their country? Also your remarks as given in Globe-Democrat.

Yours, respectfully,

J. W. RUTHVEN.

---

[Telegram.]

NEW YORK, N. Y., *May 14, 1916.*

Congressman DYER,
*House of Representatives, Washington, D. C.:*

Congratulations on your true American-spirited resolution condemning British Government murder of Irish insurrectionary-war prisoners.

LEITRIM MEN'S ASSOCIATION,
Per JAS. F. P. KELLY,
*Chairman Pro Tempore.*

---

MAY 12, 1916.

Representative DYER,
*Washington, D. C.*

DEAR SIR: Permit me to thank you for introducing the resolution expressing the horror of the American people at the execution of Irish revolutionists.

While the same can not undo the murders, the same may prevent any further executions, and I trust that the proper steps are being taken by the committee to whom the resolution was referred so that the same may become known to the English authorities.

Very truly, yours,

L. WITSENHAUSEN
*37 Maiden Lane, New York.*

---

GALESBURG, ILL., *May 12, 1916.*

Representative DYER,
*Washington, D. C.*

DEAR SIR: I have just now read a copy of your resolution with regard to the leaders of the Irish rebellion in to-night's paper. It pleased me very much to read of it, and I hope that our Nation will show, by adopting it, that it takes the stand for freedom that it has always taken. As an American, as a citizen of the United States, and as an Illinoisan, I want to thank you for introducing that resolution into the House. While it may not be very patriotic to think of one State above another, yet I can not help but feel glad that your resolution has come from one of the States of the Mississippi Valley.

Please pardon the brevity of the address of this letter, but the newspaper account did not give your first name or initials, and though I have often read of your work in Congress before, I have forgotten them.

Yours, truly,

JOSIAH BABCOCK.

---

BOSTON, MASS., *May 13, 1916.*

Hon. Mr. DYER,
*Representative from Missouri, Washington, D. C.*

DEAR SIR: Good for you and your resolutions.

More power to you.

Yours, truly,

E. S. CONNOLLY,
*2576 Washington Street.*

---

BOSTON, *May 18, 1916.*

Hon. L. C. DYER, M. C.,
*Washington, D. C.*

DEAR SIR: In behalf of the committee whose names are appended to the resolutions herewith inclosed, I send you the same for whatever use you may see fit to make of them.

The sentiments therein expressed are the unanimous sentiments not only of the Irish clubs of Boston but of every man, woman, and child in Boston of Irish blood or extraction. However their views may have differed in the past as to Ireland's duty and responsibility in the present European struggle, they speak as one man in denouncing the British Government for the barbarous outrages perpetrated not only upon Irish prisoners of war but, in some instances, as we learn, upon the unarmed and defenseless civilian population as well.

Doubtless outrages have been committed by both sides in the terrible conflict being waged in Europe, but, as far as I have been able to discover, no Government except England's has openly sanctioned the execution of prisoners of war upon surrender or capture in open conflict. No troops save those of England and no naval forces except England's in that great struggle have stooped to murder their prisoners of war. The executed Dublin revolutionists and the murdered German sailors upon the steamship *Baralong* brands England as the foulest and most contemptible among the nations of the world.

Proud America must hang her head in shame and acknowledge that she has been deceived by the so-called self-styled champion of small nations. The people of Irish birth and blood in Boston heartily indorse the resolutions now before Congress of which you are the author, and in behalf of the Irish clubs of Boston I will ask you to kindly accept their sincere thanks.

Trusting that your efforts may be crowned with success and that the American Nation will honor itself by condemning those atrocities and adopting your resolutions, I am,

Yours, very truly,

MICHAEL F. O'MALLEY.

IRISH COUNTY CLUBS SCORE ENGLAND.

Resolutions denouncing Britain for brutal inhumanity were passed at the regular meeting of the Central Council of Irish County Clubs of Massachusetts, representing 18,000 members.

The resolutions were:

"Whereas the revolution in Ireland, which resulted in the massacre, torture, court-martial, execution, and cold-blooded murder of men of our race, has astounded the civilized world, which has heard so much of England's justice and civilization during the past two years and of her fight for humanity and on behalf of the small peoples of Europe, heard her hypocritical plea for the restoration of Belgium and Serbia, and all her many plausible tales of righteousness; and

"Whereas those Irish prisoners of war were not accorded the treatment which is given to prisoners of war in every civilized land and recognized by England herself in South Africa since the outbreak of the present European war, but were ruthlessly murdered after a so-called trial by court-martial by order of British officers who have so frequently during the present European conflict proven their utter inability to fight troops who could meet them on equal terms, while others were not even given such a trial, but were shot down in cold blood to appease the bloodthirsty and cowardly scoundrels who represented His Majesty, 'King George'; and

"Whereas these heartless ruffians, true to the traditions of English brutality against defenseless victims of its power, shamefully and cruelly tortured Irish prisoners, some of whom were mere boys, to force them to betray their brethren:

"*Resolved*, That we, the Central Council of Irish County Associations, representing the 32 counties of Ireland in Greater Boston, irrespective of religious belief or political views, in meeting assembled, do hereby lift our voices in denunciation of the British Government for having, through its military officers, brutally murdered in cold blood several of our fellow countrymen and inflicted upon others untold tortures and agonies under the guise of military law, and at which atrocities the whole civilized world stands aghast;

"*Resolved*, That we appeal to all liberty-loving Americans to denounce England for these, her latest acts of tyranny and barbarity against a weak and defenseless people, whom she has ruthlessly oppressed for generations for no other reason than their steadfast and unyielding struggle for justice and liberty.

"JOHN S. SMYTH, *President.*
"JOHN J. HICKEY, *Secretary.*
"M. F. O'MALLEY.
"PATRICK J. DROMGOOLE.
"DENNIS J. CARROLL.
"J. J. MCCARTHY.
"RICHARD F. CARROLL."

---

[From the Gaelic American, New York, May 20, 1916.]

THE RESOLUTION APPROVED.

Strong approval of Representative DYER'S resolution has already been expressed by numerous Members of the House. It is a fact that most of these expressions of sympathy have come from Republicans, but many Democrats are also known to be favorable, and while it is the fate of most resolutions to rest quietly in committee, there is hope that this measure will soon be acted on.

A very interesting thing about it is that Representative LEONIDAS C. DYER is of what is called "old American stock," though the name is probably a modification of Dwyer, and his remoter ancestors may have been among the numerous Irish immigrants of the early days. His family has a patriotic record which he has sustained. His father was a captain in the Union Army, and his uncle, now Federal Judge D. P. Dyer, was a colonel. LEONIDAS C. DYER himself served through the Santiago campaign, and is now National Commander in Chief of the Spanish War Veterans. He is a Republican, and the city of St. Louis, in which is located the twelfth congressional district of Missouri, may well be proud of him.

---

[From the Irish World, New York, May 20, 1916.]

ENGLAND'S BLOODTHIRSTINESS DENOUNCED IN CONGRESS—RESOLUTION INTRODUCED EXPRESSING "THE HORROR OF THE AMERICAN PEOPLE AT THE SUMMARY EXECUTION BY HIS BRITANNIC MAJESTY'S GOVERNMENT OF THE IRISH PATRIOTS"—ENGLAND REMINDED OF THE NOBLE EXAMPLE SET BY AMERICA—SHE IS ASKED TO TREAT CAPTURED IRISH INSURGENTS "AS PRISONERS OF WAR IN ACCORDANCE WITH THE RULES OF INTERNATIONAL LAW."

WASHINGTON, *May 12, 1916.*

Representative DYER introduced a resolution to-day asking Congress formally to denounce the action of the British Government for its execution of the leaders of the Irish rebellion. Congressman LEONIDAS C. DYER, of St. Louis, Mo., is a man of American stock, whose father and uncle were officers in the Union Army during the Civil War. Mr. DYER is a veteran of the Santiago campaign, and is National Commander of the Spanish War Veterans. In politics he is a Republican, and it would seem to be part of the penalty the Democratic Party is paying for the Toryism of the administration, that it was left to a Republican to ask Congress to raise its voice in behalf of Ireland.

---

[From the New York Freemen's Journal, May 20, 1916.]

William Dean Howells, the distinguished American author, voices the verdict of the American people when he says:

"The shooting of the Irish insurrectionists is too much like the shooting of prisoners of war. * * * England has aroused the moral sense of mankind against her."

In these words there is sounded the keynote of American sentiment. It was again sounded in Congress when Congressman DYER, of Missouri, introduced in the National House of Representatives his resolution.

The vast throng that crowded Carnegie Hall of this city last Sunday night gave vent to the feelings that dominate men and women of the Irish race in every part of this land. The speeches delivered and the resolutions adopted demonstrate that England by murdering 15 Irish patriots has flung a challenge at the Irish race the world over. Irish-Americans have accepted the challenge and have set themselves to the task of proving to England that she can not murder their Irish brothers with impunity. The issue is now made up. John Dillon outlined it a few days ago in the House of Commons when he said:

"You are letting loose a river of blood between two races which after 300 years of hatred we had nearly succeeded in bringing together. You are washing out our whole life work in a sea of blood."

Such is the outcome of England's giving way to her brutal instincts in murdering Padraic Pearse and his fellow Irish patriots.

## River and Harbor Appropriation Bill.

### EXTENSION OF REMARKS
OF
# HON. STEPHEN M. SPARKMAN,
OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 5, 1916.*

The House had under consideration the conference report on the bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. SPARKMAN. Mr. Speaker, the statement to which the House has just listened recites substantially the agreement between the House and the Senate conferees upon the disagreeing votes of the two Houses, so that very little need be said by myself or anyone else in explanation of the report. As the bill left the House it carried $39,680,000. As it came back to the House from the Senate, it aggregated $44,448,000. As a result of the conference this was reduced by $1,562,000, leaving cash and authorizations $42,886,000. There are some items of increase, however, in this bill to which I wish to call the attention of the House. One is the Passes at the mouth of the Mississippi River. That was increased from $400,000, as the House had it, to $1,000,000, and was made necessary by reason of a gale that passed over the upper Gulf region last fall, injuring several of the navigable waterways of that region, including the South and Southwestern Passes, the latter to such an extent as to make the additional amount necessary.

Now, when the bill was before the House I had some idea that a request for an increase would be made, but no estimate was before us, otherwise I should have asked that the necessary amount be put in the bill, because it is very necessary that those passes into the Gulf be kept open; hence the House conferees experienced little difficulty in agreeing to the increase. The same is true in reference to an item for Port Bolivar, where the amount was increased from $25,000 to $50,000, the increase having been made necessary as a result of the hurricane to which reference has been made.

Another item to which I wish to call attention, but which as a result of the conference goes out of this bill, is what is known as the Illinois waterway, a State project in its inception, having for its purpose the connection of the Great Lakes and the Mississippi River. The State of Illinois passed a law some years ago authorizing the construction of a canal connecting Lake Michigan, through the so-called Drainage Canal, with the Mississippi River. It requires the authorization of Congress to carry on this work, and the purpose of the Senate amendment was to grant such authority. At the last moment, when the proposition was before the Senate, an amendment was tacked on to the original Senate amendment restricting the amount of water that could be taken out of Lake Michigan through this drainage canal to 250,000 cubic feet per minute. The matter therefore presented two propositions, at least, to the House conferees: First, whether we should take on the project at all; second, if we adopted it, whether we should also accept the provision limiting the amount of water to be taken from the lake.

The House conferees were opposed to both propositions. To the first because we thought the time had not arrived for the beginning of that work. Besides, it has not been examined by us with that thoroughness we are accustomed to give all projects, especially those of such great importance. It may be a good project; it may be something that ought to be done; but, not having had time to investigate it, we were not prepared to pass upon it intelligibly. If the interests now behind the proposition should still desire congressional action, the Committee on Rivers and Harbors will be glad to go into the matter and give it full consideration in the near future.

Mr. STAFFORD. Will the gentleman yield?

Mr. SPARKMAN. Certainly.

Mr. STAFFORD. Was any consideration given by the committee to the amount of flowage going through the drainage canal as it lowered the lake levels of Lakes Michigan, Huron, Erie, and even Ontario?

Mr. SPARKMAN. To some extent, I will say to the gentleman, but not as thorough a consideration as ought to be given to a proposition of that kind.

Mr. STAFFORD. The mere elimination of the Senate amendment was not because the House was not in sympathy with the limitation of flowage of water through that canal?

Mr. SPARKMAN. Not at all.

Mr. REILLY. Did the committee get any information as to how much water is taken out now?

Mr. SPARKMAN. Something like 400,000 cubic feet.

Mr. REILLY. They go beyond the 250,000?

Mr. SPARKMAN. Yes; and in just a moment I will answer that question.

As I was saying, we were opposed to the original proposition without further investigation, and not having time to give it that thorough consideration its importance demanded, we concluded it ought to go out. I was also opposed to the amendment on account of the provision limiting the amount of water to be taken. I had theretofore given some thought to the subject. I had had occasion from time to time to consult the reports of the Government engineers on the subject with a view to determining, in so far as was possible, the amount of water that could, with safety to the navigation interests of the lakes, be discharged through that canal. But even now I must say I have not any clearly defined idea on the subject. There is a suit however, pending in the United States courts, having for its purpose the settling of that question, and it may be determined in that litigation. If now, however, and anyone wishes to present the proposition to the Committee on Rivers and Harbors, we will be glad to have hearings and thrash the matter out as best we can. We, of course, want to do what is right, but at present we do not know what is right, at least I do not. We do not want to injure the great city of Chicago or her people, nor do we wish to destroy or injure the navigability of any harbor on the Great Lakes or the shipping interests there. The paramount consideration is, of course, navigation. But along with that in this case is sanitation in the Chicago district, both of which may and should be considered together.

Mr. REILLY. At the present time the flowage is absolutely in the discretion of the Secretary of War, is it not?

Mr. SPARKMAN. Yes.

Mr. REILLY. Does not the gentleman think there ought to be some legislation at some future time making that a permanent matter of legislation instead of leaving it to his discretion?

Mr. SPARKMAN. Maybe so, but we will have to know a good deal more before we can legislate wisely on the subject.

Mr. REILLY. You do not think the committee has sufficient information on it at this time to make any recommendation of that kind?

Mr. SPARKMAN. I do not think so.

Mr. GALLAGHER. The fact is the committee has never investigated it?

Mr. SPARKMAN. That is true.

Now, with reference to new projects, it is well known by every Member here, I presume, that the House committee did not include any new projects in the bill, and that as it left the House none were embraced therein, save and except that portion of the East River project which provides for a deeper channel from New York Harbor to the Brooklyn Navy Yard.

I was sanguine enough to indulge the hope that no other new project would be inserted by the Senate. But that body saw proper to include several, and we did the best we could to eliminate them, with only partial success, for several still remain. However, we excluded some of them—for instance, the harbor of refuge at Duck Island. True, a provision still remains for work there, but it is purely for maintenance. The new project we struck out. The part remaining is only for maintenance.

The project for the improvement of the Narrows of Lake Champlain was also taken out. It is a good project, an excellent one, one that ought to be taken care of; but the Government engineer whom we consulted told us that this bill would probably not get through in time to make contracts for any work to be done there between now and next spring; that the water is frozen in the wintertime; that there was no urgent need of appropriating money now or adopting the project at this time; and that if it is cared for in the next river and harbor bill the work can be done about as early as if adopted now. And let me say right here that we propose, if possible, to have a bill with new projects in it at the next session. Further, that I see no reason now why this project should not be taken care of in that measure.

Another new item is that for the Savannah River at Augusta; but it is really not a new project. It is a maintenance proposition, and we let it remain in the bill.

The item for the removal of the middle ground in the harbor at Key West, Fla., went out. There has been no survey, nor any project covering it has been recommended by the engineers. This is a piece of work, however, that, in my judgment, ought to be done. Key West occupies a very important position on the Straits of Florida, and the commerce there is growing quite rapidly, so that this work will be needed in the near future. Indeed, in my judgment, it is needed now.

The same is true of the Sabine-Neches project, and partially so for that of the improvement of the harbor at Arcadia, Mich.

Neither of them was based upon a project recommended by the engineers. The bill, however, carries surveys for the harbor at Key West and the proposed cut-offs on the Sabine-Neches Canal.

The New London Harbor is one we left in. The people are building a pier and other terminals there at a cost of about $1,000,000, and most of this amount has been spent upon the work. We thought in fairness to the people there who are thus trying to help themselves the item should remain in the bill. I for one believe that such a display of interest in a project and of the commerce of an important port should be encouraged.

The provision for the improvement of Black Rock Harbor, N. Y., also remains in the bill. While this is, in a sense, a new project the item appropriates no money, as the work is to be done with funds heretofore furnished and yet in the hands of the engineers.

The St. Clair River project is one, in my judgment, of very great importance. The engineers say it is necessary to do the work without unnecessary delay, as, on account of the congested condition of the commerce in those waters, there is constant danger of collisions and other accidents to vessels, many of which have already occurred, resulting in great loss to vessels and shipping.

Two of these new projects are in California, one for the improvement of San Diego Harbor, the other the harbor at Los Angeles. Both are worthy and the work called for much needed. Under conditions imposed by the provision for the San Diego project the Government obtains, as a local contribution, 500 acres of valuable land near the city and contiguous to the navigable waters of the harbor.

The project for the improvement of Los Angeles is also adopted contingent upon certain conditions of local participation, which is estimated to cost nearly a million of dollars, almost, if not quite, as much as the amount to be expended by the Government. Moreover, this is an urgent improvement and is designed for the purpose of diverting the flood waters of the Los Angeles, San Gabriel, and connecting waters from the Los Angeles and Long Beach Harbors, into which these streams flow after heavy and torrential rains, and often with disastrous effect, as they at such times carry down large quantities of silt, completely blocking the harbor at some places to useful navigation. These floods are liable to occur at any time during the rainy season, and the House conferees thought that if any new projects were to be adopted, this being one among the most urgent, might be permitted to stand. Similar reasons, together with the fact that we could not eliminate all the new projects inserted at the other end of the Capitol without unduly delaying or imperiling the passage of the bill, caused us to agree to the retention of some of them. But I can assure the House that none have gone in that are unworthy, and that ought not to be adopted in the near future.

In this connection I will again call attention to the necessity for a bill at an early day, with the inclusion of new projects therein. Three years have now passed since any were adopted. During this time we have only been taking care of old work; projects theretofore adopted, mainly in the bill of 1910, and those of prior years. Since the bill of 1913 something like a hundred and fifty new projects have been recommended by the engineers, and are now before Congress awaiting action. The most of these are meritorious and urgent. I therefore hope that in the interest of commerce—yes, in the interest of preparedness, both for peace and war—the next bill, the one due at the short session of this Congress, may carry all such of these projects as are meritorious and pressing.

The delay in the passage of this bill has not perhaps cost the Government much up to date, but from now on every day's delay will result in loss, and this loss will grow heavier as its passage is deferred, and were it to fail entirely the loss would run into millions.

The failure of the bill of 1914 to become a law until some time in October of that year cost the Government directly nearly a million dollars, and indirectly nearly as much more; that, too, at a time when there was a large surplus on hand amounting to twenty or thirty millions of dollars. Now there is very little for any of the projects left unexpended since the close of the last fiscal year. Hence, the loss in the laying up of plants, the deterioration of work already done, and other direct losses would be considerable.

But, Mr. Speaker, who wants the bill to fail? Who desires that the work on the Ohio, the Mississippi, the Delaware, the Columbia and other rivers should cease? Who would like to see the work on our harbors, great or small, stop, and the easy and economical flow of commerce even partially impeded by the failure of Congress to furnish the necessary money for the continuation of these great works, for great and important they are. Few, I hope and believe. But if the work is to go on, if it is not to encounter a serious setback, the conference report must be adopted without delay.

Now, Mr. Speaker, I know this bill, even as a whole, as well as in some of its details, has been severely criticized. At the same time I know, and a majority of this House knows, that these criticisms have been and are unjust. That there are degrees of merit among the projects for which we are appropriating money in this bill is true. That some of them are more urgent than others we know, but I maintain that all of them have merit and are clearly in line with the policy pursued by Congress for the past quarter of a century, and especially since and including the year 1896. In fact, all of the projects thus criticized, with a single exception, I believe—that of the Albemarle and Chesapeake Canal—were adopted prior to the bill of 1912, the first framed by the committee since I have had the honor of being its chairman.

In this connection, I can not do better than to quote from some remarks I made on this floor in 1914, when the river and harbor bill of that year was pending in the Senate, where it was being severely criticized. After calling attention to those criticisms, and in discussing the nature of the bill, I then said:

After all, Mr. Speaker, what is the nature of the measure that seems to provoke such harsh language on the part of the gentleman from Wisconsin and a few others? Why, sir, it is a bill for the improvement of the navigable waters throughout the country in order that their efficiency may be increased so that they may aid the people, exporters and importers, shippers, farmers, manufacturers, and producers everywhere in reaching the consumers with the greatest ease and at the lowest possible cost, to the end that all, producers and consumers alike, may be benefited. It is a bill proposed in response to an economic, commercial, and popular demand, nation wide in its sweep, for liberal treatment of our rivers and harbors—a bill framed on the same lines and of like character, both in detail and substance, in purpose and effect, with its predecessors for the past 20 years and more.

Since 1894 there have been nine general rivers and harbors bills enacted into law, one for each of the years 1896, 1899, 1902, 1905, 1907, 1910, 1911, 1912, and 1913. That of 1896 carried cash and authorizations amounting to $76,195,570.37, being the largest in amount of any that had up to that time passed. In addition, it was the largest in the number of projects treated of any that has ever passed Congress, and may be said to have marked the beginning of the present liberal policy toward our navigable waterways.

True, the bill of 1899 was relatively a small one, only aggregating $36,730,166.07; the next bill, however, that of 1902, was much more liberal, carrying $65,107,602. Again, the bill of 1905 was not large as compared with the preceding one, only appropriating and authorizing $35,355,533.04; but this was followed in 1907 by a bill carrying in all $86,872,432, the largest by far that was ever enacted. Indeed, it was twice as large as the pending measure when it left the House. Nor were those the only efforts made during that time to enact river and harbor legislation, for in 1901 a bill framed by the Rivers and Harbors Committee of the House, during the chairmanship of the Hon. T. E. Burton, had passed the House and was sent to the Senate carrying $59,935,415. There, however, it was talked to death by a Senator who, having determined to kill the measure, procured and held the floor in a so-called discussion of its provisions until the session came to a close on the 4th of March of that year.

This was a very meritorious bill and ought to have passed, but the language used by that Senator and one or two others in its denunciation was almost if not quite as harsh as any used in criticism of this bill. For instance, in opening his remarks on the conference report, this Senator said:

"Mr. President, I have no hesitation in saying in the presence of the Senate that the basis upon which this bill and all river and harbor bills for a dozen years, within the scope of my knowledge, have been constructed is vicious and entirely contrary to just and equitable principles of legislation. Any Senator who will carefully read this bill and in conjunction with it the report upon which it is based will inevitably be driven to the conclusion, unhappy though that conclusion may be and humiliating as it is, that the bill is framed, constructed, and completed upon the despicable principle of division and silence."

Later on in the debate another Senator characterized it as "one of those iniquitous measures that is attempted to be passed upon each and every occasion by interesting this, that, and the other Senator in this, that, and the other State." He further expressed the belief that it was "an iniquitous measure—to use," as he said, "the vulgar term, a steal."

I only make these quotations, Mr. Speaker, to show not only that like criticisms of river and harbor bills have been going on for many years, but that one of the best measures ever introduced into Congress did not escape the severest condemnation. The bill was not only a highly meritorious measure, but was framed upon lines identical with others before and since, including the present, some of which passed without serious criticism.

After 1901 criticism ceased, or was considerably reduced in volume and vehemence, for several years. The defeat of the bill, however, of that year was not popular with the people of the country, but was severely condemned by them; and, noting the ease with which even a meritorious measure could be killed on its way to the statute books, they began to demand the enactment of annual bills. But it was not until 1890, and under the leadership of that able and progressive statesman, Hon. D. S. Alexander, who was then chairman of the Committee on Rivers and Harbors, that we embarked upon that plan. This measure was followed by three other measures—those of 1911, 1912, and 1913—all along the same line of policy we had been pursuing for nearly two decades—that of improving the navigable waterways of the country as rapidly as possible to their full economic capacity. These measures met with little or no criticism. But when the bill of 1914—one among the best that had ever been framed—was before Congress, and after 12 years of acquiescence in that line of policy by everyone, after its hearty approval by the great bulk of the people, and after we had appropriated more than $375,000,000 in pursuance of that

policy, a perfect storm of criticism began, which has been kept up ever since, some of the parties indulging therein no doubt believing that their political advancement would be more certain and rapid by such a course.

The two bills of 1914 and 1915, leaving the House in the usual form of appropriations for each project treated, came back to us with all such items stricken out and lump-sum appropriations recommended. These we accepted because it was found that it was the only way to keep the great work of river and harbor improvement going on and of preventing great loss to the Treasury and to the commerce of the country.

This bill now comes back to us unchanged in form. The other law-making body has returned to the old practice of treating individual projects on their merits, recognizing the right of Congress to say how much money shall be appropriated for each in a river and harbor bill, the only substantial change being to include several new projects, which the House, with one exception, declined to do. And I think we are to be felicitated and the country congratulated on this return to saner methods in dealing with this great work.

Mr. Speaker, there is no political advantage to be gained by the wholesale denunciation of river and harbor bills, as some have already ascertained and as others will discover in the future. The people—a large majority of them—want this work to continue, and they will have it go on despite criticisms, no matter from what source they may come.

## The Revenue Bill.

### EXTENSION OF REMARKS

OF

### HON. GUY T. HELVERING,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. HELVERING. Mr. Speaker, in giving consideration to the bill presented to this House to-day we are exercising one of the greatest powers vested in the National House of Representatives by our Constitution, namely, the "power to lay and collect taxes to pay for the debts and provide for the common defense and general welfare of the United States."

Every citizen as a unit of his Government must bear his proportional tax in accordance with the value of his property and the increased efficiency and strength of his country. A nation's wealth, I contend, depends upon its resources, the virtue of its citizens, and the ingenuity of its workingmen. The highest motive of any Government is to protect and safeguard its citizens in their social, commercial, and economic lives. The prosperity of to-day, however, differs from that of any other previous time during the past 30 years, in that it is shared by our whole people.

The farmer, the laborer, and the business man have all shared in this prosperity. Mr. Speaker, as a member of the committee upon whom devolved the task of framing the revenue bill, I do not hesitate in saying that in designing this far-reaching and vital measure we have avoided, as far as possible, all partisanship or politics. If we are to respond to the seeming popular demand for greater preparedness and if we are to meet the unprecedented conditions confronting us to-day, it becomes necessary for us to pass the pending revenue bill. Heretofore the cost of maintaining the National Government was met by the imposition of taxes, which increased the cost of living; but it is a pleasure for me to state that the plan devised by our committee proposes to raise $225,000,000 additional revenue and not one cent of it will be put on the shoulders of the farmer or the laborer. We propose to derive this amount of revenue by taxing incomes, large inheritances, and munition manufacturers—those who can well afford to pay a tax in return for the amount of protection their interests demand of the Government.

Under the emergency revenue act we levied a series of stamp taxes, which, while they were not a heavy tax, yet they were cumbersome and a great inconvenience to the business man—I refer to the stamp taxes on checks, documents, bills of lading, and so forth. In this connection I might state that I was in a measure responsible for the elimination of these stamp taxes, having made the motion in the committee to strike out all those sections of the emergency act relating to stamp taxes.

As I stated a few minutes ago, Mr. Speaker, if the United States must increase her military and naval strength and maintain that degree of prosperity which now prevails throughout our land, we must of necessity provide means for raising money to carry these plans into effect.

When our committee met to draft this measure, we realized that we were confronted by a condition and not a theory. We realized that unprecedented conditions prevail throughout the world, and these conditions have made a marked impression on our land.

With all the facts at hand we drafted a measure that is nonpartisan, businesslike, and will meet all exigencies that may arise. At least it is so sound and so far nonpartisan as to place any Member of the minority in great peril who does not support it. It is a measure which I honestly believe meets with the hearty approval of the people of the United States.

We have provided revenue in the amount of $225,000,000 to derived from three principal sources—from incomes, vast inheritances, and manufacturers of munitions.

First. An increased income tax:

The increase in the income tax will produce more than $100,000,000. As an explanation of this tax permit me to say that under the provisions of the bill before us we will be able to double the normal income tax and levy an additional sur tax, commencing with 3 per cent on incomes of $20,000 and graduating up to 12 per cent on annual incomes of $500,000 or more. We have placed the income exemption of single persons at $3,000 and married persons at $4,000. This phase of the income-tax provision is the same as found in the measure enacted two years ago.

Second. The Federal estate tax:

The revenue bill also provides for a tax upon inheritances exceeding $50,000. If the Senate sees the advisability of concurring with the committee in this provision we would produce $17,000,000 the first year and $54,000,000 each year following. We have been considerate in designing the rates on estates, in that we made allowance for administrative expenses, mortgages, loss by fire or storm not covered by insurance, and so forth; all these items we do not propose to include in taxing the estates. While it is true that most of our States levy an inheritance tax, yet they have never been a source of large revenue. Of the 42 States having such laws a total of about $25,000,000 only is derived. According to the plan of the inheritance tax bill the Federal Government will receive $17,000,000 for the year ending June, 1917, and the sum of $54,000,000 each succeeding year. In fixing the minimum at $50,000 we have been mindful of the widows and orphans who might otherwise be burdened with a tax and who could least afford it.

Third. The munitions tax:

The third method of taxation we designed was on the manufacture of munitions of war. We believe that this industry has been remarkably stimulated, due to extraordinary conditions, and they are able to share largely in furnishing a part of the additional revenue needed. I dare say, Mr. Speaker, 99 per cent of the people of the United States will heartily indorse the tax on munitions. Many of our citizens, directly or indirectly connected with the manufacture of guns, ammunition, and so forth, have made the loudest wail for more adequate armies, a better Navy, and more coast defense, and therefore they should help pay for such increased preparedness. I shall not take the time to fully discuss this subject, but I can not refrain from stating that I never sanctioned or boasted of the tremendous increase of business made by munition manufacturers, which is, to a large extent, due to the European war.

This tax is very reasonable, and I favored a heavier tax on this industry, inasmuch as this source of revenue would cease with the close of the war.

#### TARIFF COMMISSION.

The creation of a tariff commission has been advocated by the farmer, the banker, and the business man for a number of years. The subject was brought up and exhaustively discussed in several administrations. Many plans were submitted, but none of them found practical until the Democratic administration presented a bill for the establishment of such a commission that was absolutely nonpartisan and nonpolitical. We have long hoped for a commission that could effectively regulate tariff schedules to cope with conditions and emergencies as they might arise. We have all contended that the tariff should not be made a "football of party politics," because its final adjustment must consult the welfare of the citizen, the consumer, the producer, and the business man. As an indispensable means to the final settlement of this vital question I am proud to state our committee has taken action to provide for a permanent tariff commission, created on strictly nonpartisan, scientific, and eco-

nomic principles. Upon coming into power, this administration, always progressive in its ideas, realized that the time had come when we must emancipate the tariff issue from its century of existence as a part of party politics. We realized that public sentiment not only favored it, but demanded a tariff commission. In giving favorable consideration to the bill as presented by the Ways and Means Committee for such a commission, this House has the golden opportunity to meet that popular demand—an opportunity unsurpassed in the history of the country, and I believe we will avail ourselves of that opportunity.

I have always contended that tariff legislation must be of a nature that will not injure or destroy legitimate industry. In fact, any legislation which a Congress may deem necessary to enact should not disturb or disrupt the business situation. No administration should be so prejudiced or so narrow as to wantonly delay action on urgent questions that vitally affect the economic or commercial welfare of a nation. I am gratified to know that it can not be said of this administration that we have overlooked any vital issue or refused to act at the critical time.

We do not hesitate to legislate to meet new conditions; we realize that there must be some modifications and readjustments of the present tariff schedules to the end that legitimate enterprise may be reasonably sure of its ground, and that new industries which have sprung up as a result of the European war shall not be subject to deterioration immediately following the close of the war. The American dyestuffs industry is one example of the many new enterprises that have sprung up recently, which must be guarded against unfair competition.

The creation of a tariff commission, however, does not, as some believe, indicate that tariff schedules will be made higher or lower. The commission is not a device for either lowering or raising the tariff, but simply a means to ascertain what specific rates should be, whether more or less, according to existing conditions. I believe, however, that upon the establishment of such commission they will in all probability see the need of lowering some schedules and increasing others, only with a view to stimulate or safeguard American enterprise.

We have in our hands the means, both of accomplishment of what will be of inestimable value to American business and of prevention of what would be sure to injure American commerce. If we enact the tariff-commission bill into law, we will have the most thorough and practical means for the regulation and fixing of tariff schedules based solely on established principles of economic science by facts authoritatively gained without any partisan or political object in view. The tariff commission once in operation will aid in the stimulation of labor, agriculture, manufacture, and the expansion of American markets.

In concluding my remarks on the revenue bill that engages our attention at the present time, permit me to state that if we hope to continue our present prosperity, if we hope to carry out American ideals, if we hope to figure largely in the world's trade and wish to maintain our rank as one of the leading powers of the world, if we want our interests protected and our national honor guarded, it behooves every one of us to give his hearty and undivided support to this patriotic legislation.

## National Guard Rulings.

## EXTENSION OF REMARKS

OF

# HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. MOORE of Pennsylvania. Mr. Speaker, the status of the National Guard now along the Mexican frontier continues to be a subject of absorbing interest to the relatives and friends of those who have thus engaged in the public service. On August 2 I inserted in the CONGRESSIONAL RECORD certain rulings of the War Department, including an opinion from the Judge Advocate General, affording information and instruction upon certain mooted points raised by members of the National Guard and their families. Since new inquiries are constantly arising and are gradually being responded to from official sources, I shall insert under leave additional information with respect to some of them.

THE MATTER OF DISCHARGES.

I recently asked the War Department (a) as to the discharge of college students; (b) as to the discharge of soldiers having dependent relatives; (c) as to the length of time the guard would probably be kept upon the border.

The answer was as follows:

"WAR DEPARTMENT,
"THE ADJUTANT GENERAL'S OFFICE,
"*Washington, August 9, 1916.*

"Hon. J. HAMPTON MOORE,
"*House of Representatives:*

"Department commanders have been authorized to discharge as soon as practicable after September 1, 1916, all members of the National Guard mustered into the service of the United States who can show a bona fide intention of entering or returning to colleges or schools at the beginning of the fall term in 1916, unless the military situation at the time indicated shall be such as to render their retention in the service necessary.

"Therefore, if any soldier desires his discharge for the purpose indicated, he should make application for such discharge through military channels.

"This information has not yet been issued in printed form.

"Attention is invited to inclosed copies of Bulletin No. 20, War Department, July 18, 1916, relative to the discharge of enlisted men of the National Guard on account of dependent relatives.

"The length of time troops will be kept on the border will depend on future conditions.

"H. P. MCCAIN,
"*The Adjutant General.*"

DEPENDENT-RELATIVES BULLETIN.

Bulletin No. 20, to which Adjt. Gen. McCain referred to in the foregoing letter, is of such general interest that I include it herewith, not only for the information for the soldiers themselves but for inquiring relatives who desire to be informed as to the method of procedure:

"WAR DEPARTMENT,
"*Washington, July 18, 1916.*

"BULLETIN No. 20:

"The following rules are prescribed for observance in the cases of enlisted men of the National Guard or the Organized Militia who are called into the service of the United States and who have dependent relatives:

"(a) Department commanders may issue discharges to enlisted men, except noncommissioned officers, of the National Guard or Organized Militia called into the service of the United States, who are serving within their respective departments, provided applications for discharge are made to them in due form, through military channels, setting forth that the applicant has one or more relatives who are dependent upon him for support, each application to be accompanied by adequate written evidence of real dependency. Applications from noncommissioned officers for discharge under the conditions referred to herein will be forwarded to the War Department for action.

"(b) When it comes to the knowledge of a commanding officer, through authentic sources, that a soldier of his command has one or more dependent relatives, the soldier concerned will be informed of his right to make application for discharge on that account, and the discharge will be issued upon application if warranted by the circumstances. Should the soldier express a desire to remain in the service and at the same time decline to allot any portion of his pay to his family or dependents, the case will be reported to the War Department for final action.

"(c) When an application for discharge has been finally approved, the proper recruiting agencies will be at once informed, so that the vacancy caused may be filled as promptly as possible. Recruiting and mustering officers will be enjoined to avoid the acceptance of recruits having relatives dependent upon them for support. Department commanders will report to the War Department at the close of each month the number of soldiers discharged by them under these instructions during the month for which the report is made.

"By order of the Secretary of War:

"H. L. SCOTT,
"*Major General, Chief of Staff.*

"Official:
"H. P. MCCAIN,
"*The Adjutant General.*"

Another inquiry related to the appointment or promotion of National Guardsmen to higher positions than those now held by them. The War Department indicates that at the present time such appointments and promotions are vested in the State

authorities, as appears from the following letter signed by The Adjutant General:

"WAR DEPARTMENT,
"THE ADJUTANT GENERAL'S OFFICE,
"*Washington, August 10, 1916.*

"Hon. J. HAMPTON MOORE,
"*House of Representatives.*

"MY DEAR MR. MOORE: The Secretary of War desires me to acknowledge receipt of your letter of August 3 in regard to the appointment of ———, Company —, Engineers, Pennsylvania National Guard, as an adjutant of the Battalion of Engineers, and to inform you in reply that the appointment of all officers for the Battalion of Engineers, National Guard of Pennsylvania, is vested in the State authorities, and that the War Department is unable to recommend or control selections for these positions.

"Regretting that I can not be of assistance to you in this matter, I am,

"Very truly, yours,
"H. P. MCCAIN,
"*The Adjutant General.*"

INSPECTORS OF SMALL-ARMS PRACTICE.

On the other hand, the War Department seems to have the power to dispense with the services of inspectors of small-arms practice. The Organized Militia, under the so-called Dick Act, authorized these inspectors. They were omitted from the new national-defense act, and so far as the inspectors of the National Guard of Pennsylvania were concerned, they were recently given an unsolicited but honorable discharge. The Pennsylvania Guard is about the largest at the border, and the officers of the guard, from the major general down, were not inclined to approve the dismissal of these men with whom they had worked side by side for so many years. In this instance, however, the Regular Army prevailed, as will be observed from the following letter of the Secretary of War:

"WAR DEPARTMENT,
"*Washington, August 11, 1916.*

"Hon. J. HAMPTON MOORE,
"*House of Representatives.*

"MY DEAR SIR: I have the honor to acknowledge receipt of your letter of the 2d instant, inquiring as to the position of the War Department with regard to legislation looking toward the restoration of the office of inspector of small-arms practice, and to inform you that I do not deem it advisable to recommend such legislation. The office of inspector of small-arms practice has no tactical function when the National Guard is called into Federal service, and at other times the duties which have been performed by the incumbents of the office properly pertain to regimental officers. The observation of the War Department indicates that generally the existence of the office has in the past relieved regimental officers from a sense of responsibility for the instruction of their organizations in this most important work, and sometimes has resulted in conflict and interference. With the pay allowance provided by the national-defense act, company and regimental officers should be required to devote the necessary time and attention to the instruction of their organizations. If a special supervisor of target practice is desired in particular cases, there seems to be no reason why the duty can not be performed by staff and other officers of the regiments.

"The War Department appreciates the unfortunate position of those inspectors of small-arms practice who were mustered into the Federal service before the provisions of the national-defense act were on this subject generally understood.

"It is believed, however, that the proper remedy to be applied to these cases is to provide for their appointment to other offices in which vacancies may exist. Such appointments are, of course, in the hands of the governors of the States. It is believed that as officers of the former Organized Militia, inspectors of small-arms practice were, under the provisions of section 73 of the national-defense act, eligible to be placed on the reserve or unassigned list of the National Guard, and that they should now be held to be in that status from which, under the provisions of section 74, they may be appointed to any vacancy now existent in the active National Guard. The view of the War Department is that, while the office of inspector of small-arms practice was in effect abolished by the national-defense act, it was not the intention of the act to legislate the incumbents out of office in the National Guard, nor to limit the period of adjustment to a moment of time.

"Very respectfully,

"NEWTON D. BAKER,
"*Secretary of War.*"

While the Secretary states the Army view with respect to inspectors of small-arms practice, he also points the way for the retention of these officers in the service, if the governors of the States, who have the power of appointment, avail themselves of the opportunity.

The publication of the foregoing, it is hoped, will be of some service in aiding those concerned to a better understanding of the status of the National Guard.

A NATIONAL GUARD VIEWPOINT.

From numerous letters coming up from the frontier, some of them complaining, others expressing curiosity as to the purpose of the Government in holding the troops on the border, and others evincing a rare good humor over the situation, much of real value as to the relation of the guard to the Government can be ascertained. From one letter written by an officer whose sincerity of purpose can not be questioned, I extract this much of the views entertained by him. It should be of interest to the Regular Army as it is to the National Guard.

After detailing the difficulties of mobilization and analyzing the complaints resulting therefrom the writer says:

"It is also to be remembered that the regular service has a large number of extra officers in excess of the exact complement necessary to officer the troops, while the National Guard is entitled only to the actual number required to fill the specified positions with troops.

"In any consideration which you may give this subject permit me to suggest that not much attention should be given to individual complaints and criticisms or to newspaper reports of privations. There has been, of course, much discomfort at times and perhaps some personal suffering. But some of this was inevitable under our system and existing conditions. There has been considerable exaggeration of hardships; on the other hand, the official attitude that everything has worked out admirably is quite wrong. There are great lessons to be learned from this mobilization, but they will not be learned if the War Department and the Army do not frankly recognize and admit such shortcomings and mistakes as have been manifest to everyone in a position to learn of them by personal observation and experience.

"Individual blame or censure are not due; nearly everyone has probably done the best he could under the circumstances without previous experience on so large a scale and in the absence of means for better preparations for these large demands. It must be recognized that to many thoroughly competent regular officers and civil officials this mobilization presented problems relatively as new, untried, and difficult as those which would confront a peace time private suddenly required to assume the duties of a company commander in the field. Skill and experience in such large mobilizations can only be had with practice such as the European Governments gave in their autumn maneuvers.

"There have been doubtless some incidents of personal incapacity and individual blundering, such as can not but be expected where so many officers have to be intrusted with responsibile duties, but these have been the exception. Most of the difficulties are the result of inexperience and previous national indifference to preparedness. Most of the Regular officers were, through no fault of their own, just as inexperienced in the needs and requirements for quickly placing in the field so large a force as we now have as is a new and inexperienced National Guard officer in the duties of his position.

"Regular and Militia officers alike are men endowed collectively with about the same natural aptitudes and qualifications. The Regular becomes the better qualified in proportion to the greater opportunities and time he is able to devote to practice, and he has had next to no experience and practice in mobilization on as large a scale as this one, for which much of the equipment had to be newly provided.

"If any profit is to come to us nationally from the great public expense and private sacrifice which the organization of this force has caused, the mistakes must be studied in a broad and liberal spirit, with a view to their avoidance in the future rather than for the purpose of measuring out blame now. There should be no disposition to seek exoneration for one group by criticism of another. Civil officials, Regular officers, and National Guard officers should give chief consideration to the mistakes and shortcomings of their own organization rather than try to find fault with others. We are all—civil, Regular, and Militia—living in glass houses. Above all, the subject should not be made a partisan one. If it is, no real advancement in practical preparedness can be expected.

"It would, I think, be a good thing if a joint commission could be created, composed of competent and interested men of broad vision, with no selfish, personal, or partisan ends in view, to study the working out of this mobilization and concentration while the facts are fresh in memory. Such a commission should

include a representation of the legislative branch, of the War Department or Regular Army, and of the National Guard. It should visit all the concentration camps to seek first-hand testimony as to what difficulties were experienced in mobilization, recruiting, physical examination, mustering in, procuring equipment, local transportation, and so forth. Such a commission should, in the beginning, make clear that its policy would be not to encourage the airing of personal complaints and grievances, but to ascertain how any of these mistakes can be avoided in the future."

## Our Troops on the Border.

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. TREADWAY. Mr. Speaker, on March 9, 1916, a large number of Mexicans, under the leadership of Gen. Villa, crossed the Mexican border at Columbus, N. Mex., raided the town, killed citizens and soldiers, destroyed buildings, and performed various depredations. The events leading up to this occurrence have been repeated so many times that it is not my purpose to again discuss them. About a week later orders were given Gen. Funston to organize an expedition to pursue the bandits across the border and conduct a "punitive expedition," the main purpose of which was plainly shown in the official documents and orders, namely, to punish Villa for the atrocities committed at Columbus.

It will be noted that the raid on Columbus occurred more than five months ago. Having recently returned from a visit to the Massachusetts troops now stationed at Columbus, I feel it my duty to acquaint the House with the situation as I found it to be there.

On June 18 President Wilson issued an order calling out the militia of the various States. As quickly as possible these troops were mobilized and sent to the border. The Second Massachusetts, in which I was particularly interested, was ordered to Columbus. They have been there ever since. Camp conditions seem to be good. The food supplies, sanitary conditions, and other necessary features of camp life seem to me to be as satisfactory as could be expected under all the circumstances. In addition to the Massachusetts regiment, there are also a regiment from New Mexico and a large number of Regulars, all under Col. Farnsworth, stationed at that point. Columbus is the base for Gen. Pershing's army in Mexico, and nearly all of his supplies are being forwarded from that place. Through Col. Farnsworth's courtesy, I went about 20 miles beyond the border—far enough to form an excellent idea of the difficulties under which our troops are laboring in shipping supplies to the Army.

The situation is a peculiar one, and it is to this fact that I desire to call attention. Orders were given to conduct "a punitive expedition" into Mexico. Have the purposes of that expedition been accomplished; and, if not, what means are being taken to conclude them? Gen. Pershing's orders were evidently changed following the engagement at Carrizal. Up to that time he was pushing ahead, making considerable advance into the country. When I left the border, two weeks ago, he was camped near a small town called Colonia Dublan, 112 miles from Columbus. His advance line was 75 miles farther south, at a place called El Valle. There had been no movements of these lines for four weeks, and, so far as I am informed, they have not moved since.

It is a pertinent question to ask, What has become of the punishment feature of the original order issued to Gen. Funston? It would appear that Gen. Pershing has received revised orders of which the public is not aware. Quite likely these are based on the latest phase of the Mexican program which seems to be to establish a board of arbitration between this Government and the de facto government of Mexico, for which the principal object, "preferably," is to see in what way Gen. Pershing's army can be conducted out of Mexico. I am surprised that a board was not inaugurated which would ask Carranza's consent as to how the Army should get into Mexico. In order not to unduly displease this gentleman, who seems to be such a source of friendly interest to the administration, we have been to the great expense of purchasing an enormous number of automobile trucks and sending them over very poor apologies for roads, whereas we could with the greatest ease have taken possession of a railroad running conveniently near the base of the Army location.

It would seem to me much greater consideration has been shown Carranza than has been shown our own citizens. On Saturday night, June 17, thousands of our citizens left their usual pursuits, expecting to renew them on Monday morning. Instead they found themselves suddenly called upon to report to their various armories, join their companies, leave their personal affairs in a chaotic state, give up their occupations, break away from their homes and families, and march forth to the Mexican border.

Taking Columbus as a fair example of the posts to which our militia companies were sent, it is difficult for a layman to understand the reasons why they should be there. It is true they are receiving excellent drill and are under splendid discipline. If this is the sole object of their retention there, they, as well as the Government, are paying a high price. There seems to me to be only one possible explanation of the reason for the militia companies, now national troops, being retained on the border. Gen. Pershing is to await developments where he now is. If he should become involved in an engagement and assistance should be needed, the administration, retiring from its attitude of being "too proud to fight," can say we were prepared and had reenforcements on hand. If nothing of this nature develops before Carranza's mediation board tells Gen. Pershing how to retire, he will be able to follow up their suggestion, the militia will be sent home, and the voters of the country will again be told that it was through Mr. Wilson's wonderful wisdom and sagacity that we were kept out of war with Mexico.

It is very difficult to bring oneself to the belief that such a gigantic political movement as this could be conceived of, but the more I have thought of the matter since my return from the border the more I am convinced there is no other reason whatever for Gen. Pershing being in Mexico or our boys called upon to do police duty along the border. If there are other reasons, the American people are entitled to know them. If there are not, we should insist on the prompt return to their homes of the troops who have been so greatly inconvenienced by the President's order of June 17.

Our soldier citizens are patriots, willing and anxious to do their duty by the flag and their country. They are not contented to be a wheel of a political machine. The people do not expect this of them and will not accept a long continuance in this kind of service.

Provided there is no political significance in the attitude of the administration, are not the people entitled to know what object is to be accomplished by the police duty our men are performing and for how long a time the administration expects this service of them?

## Naval Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. HENRY D. FLOOD,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 18, 1916.*

Mr. FLOOD. Mr. Speaker, I had expected to be here on last Tuesday to vote on the conference report on the naval appropriation bill, but was detained by an unexpected illness in my family and was compelled to be absent on that day and secure a pair on votes that were taken upon that bill. I am glad to be here to-day to vote for the bill and to state in the RECORD my position upon that measure.

I very much wished to vote for the Senate amendments that were concurred in on last Tuesday. I believe a Republic of 100,000,000 people, with many miles of coast line to protect, with important insular possessions to defend, and with the Monroe doctrine to maintain, should have a strong Navy.

For these reasons I am for this bill. It provides for increases which are in keeping with my ideas and what I believe to be the sentiment of the country for preparedness.

The Democratic Party has shown in this Congress that it is for adequate naval and military preparedness. The Republican Party demonstrated during the 16 years of its control of this Government that it did not have the foresight and the statesmanship to provide for adequate national defense.

I desire to incorporate as a part of my remarks an article from the New York World of Sunday, July 2, 1916, showing

that under Republican administrations the efficiency of the Navy greatly decreased and that under the three years of the Wilson administration its efficiency has greatly increased, and under the policy of President Wilson will soon become a most efficient fighting organization. Many of the Republican shortcomings have already been eliminated and others will be in the near future:

SHORTCOMINGS OF HIS PREDECESSORS LEFT AS LEGACIES TO PRESIDENT WILSON.

One of the most serious criticisms of the Navy is its shortage of officers. As a matter of fact, the Navy was never so well supplied with officers as it is to-day. The records show most conclusively that more officers are assigned to our naval vessels to-day than formerly, and that among them there is much greater proportion of officers of experience.

The Wilson administration, of course, was obliged to take things as it found them. It found the Navy very much short of the number of officers required. It has been greatly hampered in increasing the complements of ships to the extent desired by the inherited shortage of officers and midshipmen and by the necessity for assigning officers to postgraduate courses in ordnance, engineering, submarine duty, aviation, and to the War College. Instruction along these lines is considered by naval experts vital to the future efficiency of the Navy; yet it had been almost entirely neglected in the past. If the present administration had followed the example of its predecessor and neglected this training of officers it would be able at once to assign nearly 150 officers to sea duty and to claim that it had increased the percentage of officers at sea from 69 to 75 per cent.

Secretary Daniels found it impossible to immediately remedy the shortage of officers, but he set about at once to correct the condition. Two months after he entered the office, and long before any suggestions from outside sources, Secretary Daniels had recommended and Congress had authorized an extension of the law, allowed by the Republicans to lapse, providing for two midshipmen for each Member of Congress. This one step permitted about 300 additional midshipmen to enter the Naval Academy during the past two years. This year, with the cooperation of the Democratic Congress, instead of two midshipmen to each Member, provision has been made for three, making 531 additional appointments immediately available, or a total of more than 800 additional midshipmen provided for in the first three years of the Democratic administration.

Compared with this record, the Republicans failed to increase the number of midshipmen and actually allowed the law which provided for two midshipmen to each Congressman to lapse. This is the real reason for the deficiency in naval officers about which George von L. Meyer, Secretary of the Navy under Taft and Roosevelt, Congressman AUGUSTUS P. GARDNER and other Republican Navy agitators have made so much noise.

As a practical administrative step for securing additional officers for active duty, provision has been made by the Democrats for the appointment of civilian aviators, civilian engineers, and civilian instructors at the Naval Academy. This measure will considerably relax the pressure for officers.

BETTER OFFICER SUPPLY.

As proof that the vessels of the Navy are better supplied with officers to-day than under the long and unbroken Republican régime a glance at the personnel of 11 of the battleships now with the Atlantic Fleet should be convincing. Only 11 of the ships are taken into consideration, because there are with the fleet at present some ships not in commission during the last Republican administration. The 11 ships mentioned in the following table were in commission on March 1, 1913, and will be with the fleet again on July 1 of this year. The table shows the number of officers assigned to each of these ships on the dates mentioned:

| Ships. | Officers, Mar. 1, 1912. | Officers, July 1 1916. |
|---|---|---|
| Wyoming | 23 | 36 |
| Arkansas | 32 | 36 |
| Florida | 28 | 34 |
| Delaware | 26 | 34 |
| Utah | 27 | 34 |
| Michigan | 23 | 31 |
| South Carolina | 24 | 31 |
| Vermont | 24 | 31 |
| New Hampshire | 23 | 31 |
| Minnesota | 24 | 31 |
| Kansas | 23 | 31 |
| Total | 287 | 360 |

These figures show that on board the 11 battleships named there are now 73 more officers than when Wilson was inaugurated, being an average increase of 7 officers to a ship. The increase varies from 3 on *Wyoming* to 9 on *New Hampshire* and *Kansas*.

On March 1, 1913, there were assigned to the torpedo-boat destroyers three officers each, against four officers at present. Under the Taft régime the rule was to assign one young officer to each destroyer placed in reserve. At present no destroyers are in a reserve status that corresponds to the reserve of March 1, 1913. On the contrary, all destroyers in the Atlantic Fleet which are not operating with the fleet are engaged in patrol or neutrality duty, each having two officers and in many instances three. Four officers are assigned to each of the 1,000-ton destroyers which have been added to the fleet since March 1, 1913, and this number is being increased to five officers as rapidly as the men can be found available.

An examination of the Naval Register will show that on March 1, 1913, only one officer was assigned to each submarine with the Atlantic and Asiatic flotillas. With the exception of the "A," "B," and "C" boats, which are of an early and small type, two officers now are assigned to each boat. In the near future two officers will be assigned to the submarines in the "C" class.

MORE EXPERIENCED.

In addition to increasing the number of officers on submarine and destroyer duty, Secretary Daniels has seen to it that more experienced men were chosen. For example, take the Asiatic destroyer flotilla. The Naval Register for April 1, 1916, shows that compared with conditions on March 1, 1913, the Navy has four more officers, all lieutenants, on Asiatic station.

Only 3 of the 24 officers assigned to the Pacific destroyer flotilla are ensigns. On March 1, 1913, 15 of the 22 officers assigned to destroyers in the Pacific were ensigns. In the Atlantic destroyer flotilla only 7 out of 116 officers are ensigns, compared with 45 out of a total of 71 on March 1, 1913.

On March 1, 1913, there were 16 submarines in commission. Of the 16 officers on these perilous underwater craft 14 were ensigns. On April 1, 1916, the Navy had 32 submarines in commission, to which were assigned 48 officers, of whom only 7 were ensigns.

The comparative assignments of officers under the Wilson and Taft administrations are shown by the official records to be proportionately the same on all classes of naval vessels as on battleships, destroyers, and submarines. The rule from the outset of the present administration has been to place more experienced men in command of all classes of ships, and to detail less experienced officers to post-graduate work in order to increase their efficiency.

THE ENLISTED MEN.

The unquestioned shortage of enlisted men in the Navy also is attributable to conditions inherited by the Wilson administration. The Navy, under Mr. Wilson, was presented with a shortage of men too great to be entirely overcome in any three years of peace. On top of this there was a prejudice against service in the enlisted ranks that had to be corrected before any considerable gains could be made.

No Republican administration in the 16 unbroken years of national rule by that party claimed to have enough enlisted men to man all vessels for war. The authorized strenght of the Navy—which means the strength that Congress was willing to pay for—was far below the number that would have been required. In the 16 years of Republican rule no provision whatever was made for a naval reserve with which to fill the big gap in the ranks that admittedly existed. Presumably, one reason the authorized strength was not made sufficient to properly man all vessels was that Republican administrations could not fill the ranks even to the limited strength previously authorized by Congress.

Until recently the Navy has not had enough men to adequately man all ships on a peace basis with some in reserve. At no time since the Spanish War have there been enough enlisted men in the Navy to man all ships on a war basis. For many years Congress authorized new ships without making provision for crews to man them. Had such provision been made it probably would have been ineffective under Republican administrations because of the fact that the authorized strength was never fully enlisted.

UNDER ROOSEVELT AND TAFT.

Col. Roosevelt might take a moment to look at these figures: When he began his second term the authorized strength of the Navy was 34,500. It was entirely inadequate, and 3,000 additional men were recommended during his first year. All told, during the Colonel's second term, 7,500 additional men were authorized. This number was barely sufficient to man the new ships authorized during the same period. It made no provision for a reserve or for cutting down the previously existing shortage, which was a legacy given to the Taft administration.

Here are some figures which should prove interesting reading to former Secretary of the Navy Meyer: The ships authorized in the Taft administration required 9,888 men. Mr. Meyer, who was head of the Navy Department during the entire administration, and who has seen fit to bitterly criticize the present administration for its lack of men, recommended an increase of 4,000 men and 1,000 apprentices. This was exactly 4,888 short of the number required to man the ships authorized while he was Secretary. It did not provide a single man toward overcoming the accrued shortage of preceding years.

Congress came to the rescue of Mr. Meyer to the extent of authorizing an increase of 6,000 men and 1,000 apprentices—the Democrat House voted for 4,000 apprentices which was still short more than 2,000 the number required for new ships. The increase in men actually enlisted under this authorization of 7,000 was exactly 3,200.

CRITICIZING THEMSELVES.

Just why the Wilson administration should be held responsible for the accumulated shortages of the Roosevelt administration and the Taft administration is anything but clear. Yet the very men responsible for those shortages are the ones who most bitterly criticize the shortage of to-day.

The authorized strength of the Navy on March 4, 1913, was many thousands short of the number actually required. In spite of this fact the Navy was turned over to the Wilson administration exactly 5,000 men short of the number authorized.

As a matter of record and unquestioned fact there actually were fewer men in the Navy when President Taft and Secretary Meyer left office than there were eight months prior to that day, although Congress had in that time authorized an increase of 4,000 men, and the retiring administration had the best season of the year in which to recruit them.

Under Secretary Meyer there were 10,360 cases of desertion in the Navy. Of the experienced men, with good records, honorably discharged upon completion of their enlistment only 52 per cent reenlisted. Under Wilson's administration desertions have dropped to less than 90 a month, or more than 50 per cent, and are steadily decreasing. Furthermore, by substituting more enlightened though stricter regulations, the administration has decreased the number of naval prisoners from 1,800 to 700.

DANIELS HAS ADDED 6,331.

During Secretary Daniels's régime 6,331 men have been added to the enlisted strength of the Navy, filling the vacancies which Secretary Meyer failed to fill. The much criticized vocational training established by Secretary Daniels is given credit for having greatly increased the attractiveness of the Navy for promising young men.

The fact that 85 per cent of honorably discharged men are now reenlisting bears eloquent testimony to improved conditions in the Navy from the standpoint of the average young man. For the first time in a great many years there are a few more men on the pay roll of the Navy than Congress has actually authorized.

Congress is providing in the pending naval bill for 16,650 additional men. Arrangements are now being perfected for carrying on an effective recruiting campaign to secure these men. Secretary Daniels is confident that all of them will be secured within his administration. This will mean an actual increase of 22,981 men in the Naval Establishment during four years of Democratic rule, compared with 3,500 under

President Taft. The permanency of the enlisted force, relatively speaking, is shown by the increase in reenlistments from 52 per cent under the last Republican administration to better than 85 per cent under the present administration.

The increase in personnel up to date was achieved under what some critics of the Navy predicted would be the handicap of more liberal regulation which allowed men to obtain their discharges prior to the expiration of their enlistments if conditions at their home made it essential. More than 2,000 enlisted men availed themselves of this privilege last year. Their loss to the service was probably compensated by the relative decrease in desertions. It was also discounted by the greatly increased number of experienced men who reenlisted. Improved conditions in the Navy, Secretary Daniels believes, will make easy the work of securing the large increase which Congress is now authorizing.

The Naval Reserve provisions in the new bill are calculated to quickly build up an effective force to fill prospective gaps in the future. The provisions are liberal. In addition to ex-service men, seafaring people, mechanics with a knowledge of the trades employed in the Navy, yatchsmen, and persons familiar with the handling of light craft are eligible to enlist in the Naval Reserve. Many duties in the Navy, aboard merchant scouts, fuel ships, mining vessels, and similar craft can be performed by competent men who have not had training on ships of war. The naval Plattsburg idea, for which the pending bill provides, will furnish this year a month's training on the sea for at least 2,500 men, many of whom undoubtedly will be found qualified for immediate admittance to the reserves.

VESSELS IN RESERVE.

The present administration has been seriously criticized for its policy in assigning vessels to a reserve status. The purpose of these criticisms has been to create the impression that the Democrats were decreasing in both number and strength the active fleet of the Navy and were assigning to reserve vessels powerful enough to justify their retention in the first line. As a matter of fact, the practice of assigning the older battleships to the reserve is not new with this administration. It was in vogue on March 4, 1913, when Mr. Wilson came into office. In fact, before leaving the Navy Department Secretary Meyer approved a plan to assign two battleships to reserve when the *New York* and *Texas* joined the fleet, although he knew that these two vessels would not be ready for active service until after he had left public life. The wisdom of the policy has appealed strongly to all great naval powers. It is by no means peculiar to the United States Navy. For example, when the great European war commenced England and all the powers now engaged had large numbers of ships in reserve. The folly of maintaining in full commission in time of peace every vessel which the Navy would commission in the event of war is too obvious to require comment, in the opinion of naval experts.

Under the present administration, however, an improved policy was followed in placing ships in reserve and maintaining them while in that status. For example, in 1913 the Taft administration had in reserve 11 battleships and 5 destroyers. In no instance was the personnel on those ships maintained to the same extent that it is maintained on ships now in reserve. Eight of the 11 battleships in reserve in 1913 had less than 200 men on board. One had 209 men, another 259, and a third, which was receiving ship, or depot, for new recruits pending their assignment to duty, had 700 men. All battleships in reserve now are maintained with 40 per cent of the complement aboard. This number is sufficient to keep the ships in material readiness to enable cruising and exercising within certain limits.

THE ATLANTIC FLEET.

There are 14 battleships now in reserve. All of these vessels will be in active service during the maneuvers this summer. One is assigned to patrol duty, 3 form a practice squadron for Naval Academy midshipmen, the other 10 are being, or will be, utilized for Naval Militia and civilian cruises. During the summer months there will be in commission on the Atlantic a total of 30 battleships, compared with a total of 19 three years ago.

The status of reserve destroyers is quite similar to that of battleships. Not one reserve destroyer now has a status corresponding to that in which destroyers were placed in 1913.

At the present time the number of vessels out of commission or in navy yards is the most insignificant part of the fleet. There are five battleships; three of them—*Massachusetts*, *Indiana*, and *Iowa*—have undoubtedly outlived their usefulness. *Connecticut* and *Georgia* are undergoing extensive boiler repairs. There are also out of commission six destroyers, all built under specifications and contracts approved by the last administration. Their absence from the fleet, with the exception of one, which was due to an explosion, is due to defective engines. In the Atlantic there is one submarine out of commission—the *E-2*, which was seriously damaged by an explosion and will require extensive overhauling. All these vessels hardly represent the fighting power of a single modern dreadnaught.

IN RESERVE FOR GOOD REASON.

There has been some criticism of the assignment of the battleship *North Dakota* and vessels of the *Connecticut* class to the reserve. As a matter of fact, all of these vessels have serious mechanical defects. All of them were authorized, designed, and built before President Wilson was elected. The Democratic administration is endeavoring to remedy the defects in them. While so doing all of them are kept in such condition that, if need be, they can be sent to sea on 24 hours' notice, ready to render an excellent account of themselves.

The engines of the *North Dakota* have been found thoroughly unreliable. They must be replaced. Instead of withdrawing practically the entire crew of the ship, in accordance with the Republican policy, the department has decided to maintain her present equipment in the most efficient state possible.

Four of the five vessels in the *Connecticut* class have broken their propeller shafts repeatedly, requiring numerous extensive overhaulings. Until the exact cause of the trouble and the remedy for it are found and applied, Secretary Daniels, Admiral Benson, and other naval experts believe the readiness of these vessels for immediate action can best be secured by keeping them in reserve and in a constant state of material preparedness. If permitted to operate actively with the fleet at present, these ships might become crippled and rendered wholly unsuitable for service by the defects which are known to exist in them.

AS TO SUBMARINES.

The submarines of the United States Navy, which have been quite severely criticized, were all authorized and built or contracted for under Republican administrations. Some of them unquestionably have defects which are a proper subject for criticism. On behalf of the present régime it is only fair to say that not until three years ago were the submarine difficulties treated seriously in the Navy Department. It is frankly admitted that we have an unsatisfactory motor, battery, and engine. Despite this fact, under the old régime only the youngest officers, lacking in theoretical and practical experience, were assigned to submarines and expected to solve their intricate problems.

Without intending to reflect in any way on the industry or the ability of these young officers, high administration officials now feel it is a most serious reflection upon those charged with the administration of the Navy that no experienced officers were assigned to submarine duty. Not a few naval experts believe that the facts warrant the assumption that our submarine troubles of to-day are due principally to the indifference with which the problem was regarded in the past.

Secretary Daniels and those under him have taken the submarine seriously and attempted to solve the many problems bound up in it. The flotilla has been detached from the destroyer flotilla and made an independent command under a rear admiral. The number of officers assigned to submarines has been increased, so that two instead of one are now assigned to each of the larger boats. Officers of experience have been selected for this work. The cooperation of manufacturers has been sought. Under the new policy, before assuming duty on a submarine, an officer is instructed at the works where the engine, batteries, and motors are manufactured. Had one-half of the work and study which the submarine question has received during the past three years been given to it during the Taft Administration, Secretary Meyer could not have turned over to his successor this highly important branch of the Navy in so pitiable a condition.

AVIATION BRANCH.

Like the submarine branch, aviation in the Navy has taken on a new lease of life. Secretary Daniels began with four aviators and four highly unsatisfactory machines. Until the present administration took hold the construction of naval aircraft had received little study in the Navy Department, and no more outside of it. While it can not be said that the Navy now has a machine which conforms to the reasonable requirements of the department, unquestionably much progress has been made. Naval experts are satisfied that this work has arrived at a stage where the immediate future can be faced with complete confidence.

There was no station under the Navy where aviators might be trained three years ago. One of the first things Secretary Daniels did was to appoint a board to study aeronautics. Its first recommendation was that such a school be established, and that it be located at Pensacola, Fla. During the past three years the abandoned naval station at Pensaco'a has been utilized as a training school. Consequently, the naval Aviation Corps now numbers 43 officers, of which 30 are certified air pilots, and 120 men. Eight additional officers are assigned to the stations every three months, the number being limited only by the number of officers available.

At present naval experts are experimenting with a steam engine for aircraft. Rear Admiral Griffin, chief engineer of the Navy, is personally interested in these experiments and is hopeful that such an engine may be perfected in the near future. Such an accomplishment would mark a great forward stride in naval aeronautics, since the motor continues to be the greatest weakness of the flying machine. Congress, in the pending bill, is providing $3,500,000 for aviation in the Navy, many times more than the aggregate appropriated in several preceding administrations. This total may be increased in the Senate.

MARKSMANSHIP.

Congressman GARDNER and other Republicans, to say nothing of outsiders, have taken occasion to seriously criticize marksmanship in the Navy. The Massachusetts representative has declared, in speeches in the House and in documents that he has circulated, that gunnery is on the decline in the Navy under the Wilson administration. Reputed scores were circulated to discredit the Democratic administration of the Navy. Comparison was made between the hits scored by naval gunners and those scored by Coast Artillery experts. In view of the fact that the Coast Artillery fire is always from a firm foundation, while the naval marksmen must fire from a moving vessel at a moving target, such a comparison, no matter what the figures show, was regarded as a compliment by naval experts.

From the standpoint of military policy the actual scores made by different ships of the fleet have always been withheld from publication. The propriety of discussing such a subject is even questioned by officials. Since high-ranking naval officers, such as Admiral F. F. Fletcher and Admiral W. S. Benson, appeared before the House committee and told its members the actual facts criticism of our naval marksmanship has ceased. Admiral Fletcher said in part: "Scores recorded at the last target practice were higher than ever before made at open sea and show not only an increase in accuracy of pointing but in rapidity of fire as well."

As a matter of fact, target practice held in southern waters last winter was at unprecedented ranges. The ranges were nearly twice as great as those at which the boasted records of the Roosevelt administration were achieved.

NAVAL BOARD SECRECY.

Much has been made of Secretary Daniels's reluctance to have the reports of the Naval General Board made public. The rule throughout the long Republican régime was to hold these reports confidential, not even turning them over to the naval committees of the Senate and House. Republican Secretaries of the Navy simply buried them from the date of the board's creation until they went out of power three years ago. Representative THOMAS S. BUTLER, of Pennsylvania, ranking Republican on the House committee, frankly confessed that he had "sat on this side of the table in this committee 18 years, and I have been in the dark for 18 years, and I have come to the point in my life where I do not want fine phrases, but I want plain language and I want honest instruction."

Here is what Representative ERNEST W. ROBERTS, of Massachusetts, second Republican on the House Naval Committee, said about the naval board's report: "I recall very well sitting here when Secretary Moody came before us and placed before us the plan adopted by the General Board, which he stated at that time was to be regarded as a naval secret. I will be frank to say that in the 14 or 15 years that I have never seen the complete report of the General Board until your report last year and this year. What we have had is the building program, just enumerating the units and classes."

OVERHAULS TOO FREQUENT.

With a view to getting a maximum of the Navy, Secretary Daniels, following the recommendation of Admiral Fletcher, issued orders requiring this class of ships to cruise for two years before going into overhaul. Admiral Fletcher reported that one of the weaknesses of the fleet under his command was too frequent overhaul of battleships.

Under the old régime battleships went into overhaul after a one-year cruise and remained for months at a time. The policy of the present régime is to keep them at sea two years unless accidents befall them and then send them in for general overhaul, the work to be accomplished in the shortest practicable time. The same rule as to expediting overhaul and repair work is applied to all classes of ships. It has resulted in keeping the keel in a much higher degree of efficiency and readiness for instant service than before its adoption by Secretary Daniels and Admiral Benson, the Chief of Operations.

Under the present system no battleship goes into overhaul until after it has been subjected to inspection by the Board of Inspection and Survey. There is no longer such a thing as a "routine schedule," by which ships automatically go to the navy yards for this purpose. Even after a ship is inspected and ordered into overhaul it is not sent to the yard until the equipment for its repairs is assembled and ready for immediate work. The new system has the effect of reducing to a minimum the length of time ships are absent from the fleet.

MINING AND MINE SWEEPING.

One of the marked shortcomings of the Navy when the Wilson administration took hold of it was in its mining and mine-sweeping equipment. Secretary Daniels early recognized the importance of this modern branch of the Naval Establishment. Steps were taken as early as the spring of 1913 to develop this arm of the service. In March, 1913, the Navy had just one mine depot ship, the *San Francisco*. In 1908 Congress authorized the conversion of both the *San Francisco* and the *Baltimore* into mine depot ships. Five years later work had not been completed on the *Baltimore*. It was immediately pushed after March 4, 1913. The *Baltimore* has been operating in this capacity for some time past. Since then the mining division has been organized, and the mine layer *Dubuque* and a number of fleet tugs equipped as sweepers have been assigned to it for conducting experiments and training crews.

The mining division has been created within the past three years. A large number of other vessels of the fleet have been equipped with mine-laying and mine-sweeping devices for use in emergencies. Furthermore, the Navy experts have fully realized the practicability and value of light merchant ships for this service. A large number of vessels considered suitable for such uses in time of war have been surveyed and are listed in the department.

The experiments in mining have extended to the equipment of the fleet with entanglements, nets, and mines. No such equipment, with the exception of a few mines of an antiquated type, was in existence or even designed up to two years ago. The first order for nets was placed on April 21, 1915. These nets were used during the winter maneuvers of the Atlantic Fleet in the Caribbean last winter.

NEW CHIEF OF OPERATIONS.

The new office of Chief of Operations, headed by Admiral Benson, and created under this administration, is believed by many officers to constitute a competent General Staff, an institution which many Navy enthusiasts on the outside are demanding from Congress in the pending bill.

Admiral Benson is known to believe that all is being done now that could be "reasonably expected" from a General Staff which critics of the Navy are demanding. A thoroughly competent staff has been built up in the Office of Operations and is running smoothly and in a thoroughly American and businesslike way.

Admiral George Dewey goes a step further than Admiral Benson in discussing the General Board, saying: "Our own General Board is, I think, the best General Naval Staff in the world."

Rear Admiral Knight, president of the Naval War College, where high officers of the Navy are instructed in modern strategy, made this statement while testifying before the House committee: "Secretary Daniels has done more for the War College than any of his predecessors."

THE WINE-MESS ORDER.

During the fiscal year ending June 30, 1915, the first full year of operation of Secretary Daniels's order abolishing the wine mess among officers on shipboard, 8 officers were tried by court-marial for drunkenness, compared with 15 officers during the preceding year, which also was in Mr. Daniels's administration. For the last fiscal year of the Taft administration, 3 months of which overlapped the Wilson administration, there were 13 court-martial cases for this offense. For the fiscal year 1912 only 9 officers were tried for this offense.

Secretary Daniels issued an order, dated September 10, 1913, requiring commanding officers of naval vessels and stations to report to him all cases of drunkenness and immorality among commisisoned officers. Theretofore commanding officers not infrequently reprimanded offending officers in person unless the case was grave or the offense frequently repeated.

It is believed doubtful by naval officers that the additional order, or wine-mess regulation, which was not issued until June, 1914, had much to do with the sudden drop in court-martial cases for drunkenness from 15 in the preceding year to 8 during the first year the new regulation was in operation.

THE PRIMARY OBJECT.

The primary object of the wine-mess order was to remove temptation from midshipmen and other younger officers while on board ships of the Navy. Many officers would drink wine when they found it constantly before them at mealtime who would not drink if they went ashore or under other circumstances. Many young officers would not acquire the drinking habit in the absence of wine from the mess, as Secretary Daniels viewed the matter.

Necessarily there is less drinking among naval officers afloat than at any time when the wine mess was in vogue. Many officers drink while ashore, and some of them drink too much. The fact that the 15 court-martial cases is the largest number in any one year since Mr. Daniels entered the department shows that the proportion of naval officers who drink to excess is relatively small.

The Navy regulations always have prohibited drunkenness and provided severe punishment for the offense. This applies to enlisted men as well as to officers. In the old days it frequently happens that the best sailors aboard naval vessels were regular "soaks" when they got ashore. This class of drinkers among the enlisted men would regularly lay in a stock of liquid refreshments too great to be borne and return to their ships intoxicated after shore leave, knowing full well that such conduct meant three months' enforced stay on the ship. This particular type of enlisted men has practically disappeared, although many Jack Tars still indulge freely in the flowing bowl. Naval officers in position to know the modern trend, however, declare there is much less drinking among enlisted men of the Navy than formerly.

## The United States Navy and John Ericsson.

### EXTENSION OF REMARKS
OF
### HON. GEORGE EDWARD FOSS,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. FOSS. Mr. Speaker, I introduced a bill in the Sixty-second Congress authorizing an appropriation of $100,000 for the construction of a suitable memorial to John Ericsson, the designer, inventor, and constructor of the *Monitor*, and I also introduced a similar bill in this Congress.

The Congress has passed a bill authorizing only $35,000 for such a memorial, and I greatly regret that it was not more, as John Ericsson proved himself a great patriot in an important crisis of the Civil War by the construction of the famous ironclad which revolutionized the naval architecture of the United States Navy and all navies.

I desire to briefly review his life and work:

John Ericsson was born on July 31, 1803, in Vermland, Sweden. He derived his mechanical bias, as Emerson would say, from his father, who was a miner, an educated man, a college graduate, and a fine mathematician. He derived his great, distinguishing characteristics, however, from his mother. She was a handsome, intellectual woman of large sympathies, a great reader, and student of fiction, poetry, and history. Young Ericsson received the best education that the means of his parents would permit, but his instruction was largely in the home. At an early age he secured a position as draftsman in the Gota Canal Co. and learned to draw maps, and later received lessons in architectural drawing. He studied Latin and French and mechanical drawing as well; but it was during his employment with the canal company that his superior work attracted the attention of Count Platen, the great engineer of the canal which connects the Baltic Sea with the North Sea, who from that time on took a special interest in his career. In fact, it was through his friendship that he was appointed cadet in the mechanical corps of the Swedish Navy. In 1817 he became a leveler on the canal; in 1820 he entered the Swedish Army, at 17 years of age, and went to Jemtland with his regiment, which it was ordered to survey. It was at this time that he conceived the idea of a flame engine, which he afterwards invented. Desiring a larger field for exploiting his invention, he obtained a leave of absence from the army and went to England on May 18, 1826, but overstayed his leave, and was technically a deserter. However, through the intercession of his friend, the Crown Prince, he was later restored to the Swedish Army, and received his commission as captain on October 3, 1827, when he resigned.

He remained, however, in England and pursued his work with increasing energy and zeal. He made many applications of power, invented surface condensation and a steam fire engine. He made the first use of compressed air and artificial draft, but his greatest invention at this time was a locomotive named "Novelty," which competed on October 15, 1829, with Stevenson's famous "Rocket" for the prize of £500 offered by the Liverpool & Manchester Railroad and nearly won the prize. It made a mile in 56 seconds, but on the third trip the boiler, which had been hastily constructed, burst, but nevertheless he was highly praised for the genius of his construction. He also applied steam to canal navigation, and in 1835 designed a rotary propeller to be actuated by steam power. This propeller he applied to a number of boats. In 1837 he designed an engine to impart motion to screw propeller shafts; this was the first direct-acting screw propeller engine ever built. During the same year he constructed a boat and invited the lords of the British Admiralty to take an excursion. This vessel, named *Francis B. Ogden* after the American consul at Liverpool, made the trip at the rate of 10 miles an hour, but the British Admiralty gave him little encouragement.

It was at this time, through Ogden, that he met Capt. Stockton, of the American Navy, who became much interested in Ericsson's steam propeller, and ordered two of them for the Delaware & Raritan Canal in New Jersey, and on May 30, 1839, a steam schooner, 70 feet long and 10 feet wide, with a tonnage of 30 tons, built by Ericsson and named after Capt. Stockton, arrived in New York after a 46 days' voyage, and was used as a towing vessel on the New Jersey canal for 30 years.

Ericsson at this time, discouraged somewhat by his failure to break through the crust of British Admiralty exclusiveness, and encouraged by his friends Ogden and Stockton to visit America, and with all his instincts, his heart, and his mind compelling him toward a larger field of activity, arrived in New York on the 23d of November, 1839, and made that his home ever afterwards; and here it was, under the invigorating spirit of our institutions, in this free land of America, where, as the Irishman once said, "Every man is just as good as every other man and a little better, too," that John Ericsson found the full scope for his genius, his industry, and his patriotism. He introduced his propellers on all the inland waters of the United States, fitting out merchant vessels on the canals and the Great Lakes. He was the father of the present steam merchant marine of the world.

But his great work was yet to be done. In 1842 he built the *Princeton*, of 1,000 tons displacement, the first screw steam war vessel ever built in any country. She was the first warship in which all her machinery was below the water line, out of reach of shot, and the first to be supplied with fan blowers for forcing the furnace fires. This vessel was received with great favor and was the wonder of the times. She carried Ericsson's wrought-iron gun, with which he experimented upon iron targets and proved that 4½-inch armor could not withstand it.

From this time on he was more or less engaged in assisting the Government. In 1854 he presented to Louis Napoleon the Third, of France, the plans and description of a war vessel which we declined, but seven years afterwards he made available in the construction of the celebrated *Monitor;* and this brings me to the greatest work of his lifetime, which was the invention and construction of that ironclad.

After Fort Sumter had been fired upon in 1861 and the war had broken out Ericsson addressed a letter to President Lincoln stating that, as the inventor of the present system of naval propulsion and the construction of the first screw ship of war, he now offered to construct a vessel for the destruction of the Confederate fleet at Norfolk and for scouring the southern rivers and inlets of all craft protected by Confederate batteries. The naval board appointed for the consideration of warships, after full deliberation, finally recommended the adoption of the Ericsson floating battery, but not without some misgivings as to its cruising ability. However, the contract for the construction of the ironclad gunboat was agreed upon on October 4, 1861, and work was commenced the day the contract was signed. Her keel was laid on October 25, she was launched on January 30, completed on February 15, turned over to the Government on February 19, and put in commission in command of Lieut. Worden on February 25, and on March 4 was favorably reported on by a board of naval officers, a remarkable record for speedy construction of a war vessel which was destined to revolutionize the navies of the world.

The vessel was designed in all its parts by Ericsson, and in a letter which he wrote he said that "the entire labor of preparing the original working plans was performed by himself, every line being drawn by my own hands." She contained at least 40 patentable contrivances, marvels of ingenuity and skill. She was a vessel 172 feet long, 41 feet 6 inches wide, and had a tonnage of 776 tons, and drew about 10½ feet of water. Her armament was two 11-inch Dahlgren guns in an iron turret 8 inches thick, having an inside diameter of 20 feet. An eminent authority on naval architecture has declared that the *Monitor* was a "creation altogether original, peculiarly American, admirably adapted to the special purpose which gave it birth."

When the Civil War broke out the Federal Government abandoned the navy yard at Norfolk and sunk some of its vessels there, including the *Merrimac*, a fine frigate of 3,500 tons, nearly five times the tonnage of the *Monitor*, which the Confederates, afterwards taking possession of the yard, raised and converted into an ironclad vessel. They cut her decks down to within 3½ feet of her light water line and roofed over her mid section for 170 feet with pitch pine and oak 2 feet thick, extending from the water line to a height over her gun deck of 7 feet, where the two sides joined at an angle of about 45°. The ends were covered over, thus making a shed. Her sides were plated with iron 4½ inches thick, which was bolted to the woodwork. She was provided with a cast-iron ram, which projected about 4 feet. This vessel was 280 feet long, breadth 57 feet, and her draft in water 24 feet. Her armament consisted of two 7-inch guns at the bow and stern and two 6-inch guns and six 9-inch guns on her sides, 10 in all. Such were the two vessels which were to meet in awful combat.

On Saturday, the 8th of March, 1862, the *Merrimac*, under command of Capt. Buchanan, with 300 men on board, left the Norfolk Navy Yard a little before noon, steamed into Hampton Roads, and began her attack upon the Union fleet, which consisted of the *Cumberland*, *Congress*, *Minnesota*, *Roanoke*, and *St. Lawrence*, the flower of the Union Navy, all wooden ships and all unarmored. She was attended by several gunboats. She fired upon the *Cumberland*, and her fire was returned by the Federal fleet, but did no damage, as the shots glanced from her sloping iron sides. She steamed down past the *Congress* and then turned around and made for the *Cumberland* and rammed that vessel, breaking a great hole in her side, so that 40 minutes afterwards she went down with the American flag flying at her peak and her guns still firing. This collision tore the ram off the bow of the *Merrimac*. Then she made for the *Congress* and ran her ashore, firing into her with such tremendous effect that the *Congress* hoisted her white flag as a token of surrender, and then scattered the other boats into the shoals and left, on account of the approaching darkness, for Norfolk Navy Yard.

The effect of this terrible defeat of the Union Navy, in which her finest ships were crippled, was a tremendous blow to the North and created tremendous consternation in Washington, which city would naturally be the objective point of the enemy. A great army was at that time being massed in Virginia, and the *Merrimac's* victory, according to the commanding general, was likely to change the whole plan of campaign just on the eve of execution. On the following day President Lincoln convened a special Cabinet meeting, at which the Secretary of War, Mr. Stanton, expressed the general feeling of the hour in these words:

> The *Merrimac* will change the whole course of the war; she will destroy seriatim every naval vessel; she will lay all the cities on the seaboard under contribution. I shall immediately recall Burnside; Fort Royal must be abandoned. I will notify the governors and municipal authorities in the North to take instant measures to protect their harbors. I have no doubt but that the enemy is this minute on her way to Washington, and it is not unlikely that we shall have a shell or a cannon ball from one of her guns into the White House before we leave the room.

Lincoln himself was much cast down.

On the other hand, the South was wild with exultation over the victory. Great crowds flocked to every station along the railroads to get the latest news. The hopes of the Confederates rose to the highest pitch.

On the following morning the victorious *Merrimac*, after being overhauled at the navy yard, returned to the fray to destroy the rest of the Union ships. She made for the *Minnesota*, which was lying helpless upon the shoals, when lo! behold, the little *Monitor*, which the night before had come down through a stormy sea with a crew of 57 officers and men under the command of Lieut. Worden and had anchored at the *Minnesota's* side, unexpectedly steamed out and without apology made for the *Merrimac*. The *Merrimac* opened the battle with the firing of her 7-inch gun, and the *Monitor* replied with her two 11 inch. The battle raged furiously for hours between the ironclads, with the shots of each having but little effect upon the other, when suddenly the *Merrimac* withdrew from the scene of battle. Neither vessel inflicted any serious damage upon the other, although both smokestacks and the muzzle of two of the guns of the *Merrimac* were shot away. Each side claimed the victory, and while it may be regarded as a drawn battle, yet, nevertheless, the *Monitor* remained the undisputed mistress of the sea, as the *Merrimac* never returned to finish the fight.

The North which but a day before was wrapped in gloom and despondency now broke out in joyful acclaim. John Ericsson, the designer, the inventor, and constructor of the *Monitor*, was the hero of the hour. Resolutions from chambers of commerce and boards of trade and State legislatures showered in upon him. The Congress of the United States presented him with a vote of thanks for the great service which he had rendered the country, and made public acknowledgments "for his enterprise, skill, energy, and forecast displayed by him in the construction of his ironclad, the *Monitor*, which under gallant and able management came so opportunely to the rescue of our fleet in Hampton Roads and resisted the work of destruction then being successfully prosecuted by the enemy with her ironclads, seemingly irresistible by any other power at our command."

But throughout the festivities of that hour John Ericsson bore himself with the modesty and mien of a true patriot, and when in after years it was proposed to give him some financial recognition for his services he gave expression to the noble spirit of unselfish devotion to his country when he said, "I have not received any remuneration from the Nation for the *Monitor*, nor did I patent the invention, as I intended it as a contribution to the glorious cause of the Union."

This contest between the ironclads revolutionized the naval architecture of the world. The battle of March 8 between the *Merrimac* and the Union fleet demonstrated that wooden ships could not stand up against ironclads, and the battle of March 9, the day we celebrate, between the *Monitor* and the *Merrimac*

demonstrated that the little ironclad, with its single turret and superior guns, could hold its own against its greater antagonist. At that time began the race between armor and projectiles.

The Battle of Hampton Roads created a sensation in every nation of the world. Every shipyard stopped and took notice of the great lesson drawn from this naval conflict, and immediately started to profit by it. The London Times of that day said:

> Where, as we had available for immediate purposes 149 first-class warships, we have now 2, these 2 being the *Warrior* and her sister, *Ironsides*; there is not now a ship in the English Navy apart from these 2 that it would not be madness to trust to an engagement with the little *Monitor*.

The "cheese box of Ericsson" became the prototype of the great battleship of to-day, which is but a duplication or multiplication of turrets on a high freeboard. The fighting ships of all the navies of the world bear upon them to-day the evidence of the overmastering genius of the greatest engineer of this time.

John Ericsson afterwards contributed much to the cause of science and engineering, and gave the benefit of his services oftentimes to his native country and was crowned with many honors by foreign nations. He closed his useful and honorable career at the age of 86 years, on the 8th day of March, 1889, on the twenty-seventh anniversary of the *Merrimac's* victory, which his indomitable skill transformed on the following day into a glorious Union triumph. Sixteen months later the United States cruiser *Baltimore*, under the command of Capt. Schley, bore his remains to the land of his birth, where he sleeps among the beautiful hills of Vermland, in the land of legend, of romance, of poetry, and of song.

John Ericsson was the greatest contribution ever made by the Swedish nation to the United States of America.

**Trade, Commerce, and Transportation Rates in Alaska.**

---

## EXTENSION OF REMARKS

OF

## HON. JAMES WICKERSHAM,

OF ALASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. WICKERSHAM. Mr. Speaker, Henry Villard was the first great organizer of transportation on the north Pacific coast. His first view of Alaskan trade and transportation in "A Journey to Alaska" is interesting for comparison:

"In April, 1876, I sailed from San Francisco, on the old paddle-wheel steamer *John L. Stephens*, for Portland, Oreg., where I was to assume control as president of the properties of the Oregon Steamship Co. On reaching the mouth of the Columbia River, we saw a little screw steamer of 300 tons register dancing up and down on the agitated sea. It proved to be the *Gussie Telfair*, belonging to the company, on her way from Alaska to Portland, but detained outside by the rough sea on the bar. She brought down from the recently acquired American possession 3 passengers, a score of tons of miscellaneous freight, and a letter bag with less than 30 letters. The United States Government, having established some civil authorities and a military post at Sitka, was in duty bound to maintain communication with its representatives and troops, and the steamship company had reluctantly undertaken to perform a mail contract requiring it to make monthly trips to the point named. The passenger and freight traffic was too insignificant to make the route a profitable one. The trifling load described was about equal to the average one for a trip one way, and the business of the year aggregated only a few hundred passengers and not exceeding 700 tons of other than Government freight. That represented practically the total of the Alaskan trade in those days, and it grew very slowly, as no white settlements were made, with the exception of a few trading posts and fisheries and the opening on a small scale of two or three mines."

A comparison of the Villard statement of the small Alaskan trade of 1876, with the official figures of the trade in 1915, is highly suggestive and interesting. The official customs report of the Alaskan trade for the latter year shows that Alaska purchased from the merchants of the United States and imported to the northern territory merchandise of the value of $28,017,307, while the exports of gold, copper, fish, furs, and other production amounted to $54,856,875, a total Alaskan trade for the year of $82,874,822.

A more suggestive contrast may be had by comparing the Alaskan trade for specified years with that of the United States with China and the Philippine Islands. The following table shows the total imports and exports of Alaska for the years 1913, 1914, and 1915, and also the total imports and exports for the same period between the United States and China and the Philippines:

| Country. | Years. | Imports. | Exports. | Total. |
|---|---|---|---|---|
| China | 1913 | $40,120,826 | $25,299,802 | $65,420,628 |
| | 1914 | 36,313,770 | 20,367,701 | 56,681,471 |
| | 1915 | 52,837,503 | 19,752,824 | 72,590,327 |
| Total, 3 years | | 129,272,099 | 65,420,327 | 194,692,426 |
| Philippine Islands | 1913 | 26,676,261 | 16,434,018 | 43,110,279 |
| | 1914 | 24,020,395 | 24,427,710 | 48,448,105 |
| | 1915 | 26,381,069 | 23,653,211 | 50,034,280 |
| Total, 3 years | | 77,077,725 | 64,514,939 | 141,592,664 |
| Alaska | 1913 | 26,761,848 | 40,767,677 | 67,529,525 |
| | 1914 | 25,849,944 | 44,655,924 | 70,505,868 |
| | 1915 | 28,017,307 | 54,856,815 | 82,874,122 |
| Total, 3 years | | 80,629,099 | 140,280,416 | 220,909,515 |

The total trade of Alaska with United States merchants exceeds the total trade and commerce of the United States with China or the Philippines or any other country in Asia, excepting only British India and Japan; it exceeds that of every country in South America, excepting only Argentina and Brazil; it exceeds that of every country in North America, excepting Canada, Mexico, and Cuba. It is greater than the total trade between the United States and all the countries on the African continent combined. Its trade with the United States is national in amount and constantly increasing. Alaska is the best customer the United States has in four continents, for every dollar in the Alaskan trade, both imports and exports, is an American dollar, engaged both ways in American trade. There is no balance of trade against the United States in either direction. Every dollar flowing into or out of the United States from the Alaskan trade helps to increase the trade and labor product of the whole United States and aids in developing the great national resources of our common country. The greater the trade is between the United States and Alaska the greater will be the development of Alaska; the greater the development of Alaska the greater will be the trade with the United States. A foreign trade is a 50-cent trade; that with Alaska is dollar-for-dollar trade.

A BILLION-DOLLAR-TRADE TERRITORY.

The total amount of merchandise purchased by Alaska from the merchants of the United States since its acquisition in 1867 amounts to the sum of $331,072,778. In that period the people engaged in developing Alaska have paid into the United States Treasury for internal revenue, customs, public lands, and other public dues the sum of $17,787,153. Alaska has produced more than 47 per cent of all the canned or other fish marketed from the Pacific coast, including Canadian waters; the value of the Alaskan fish and fur output since 1867 now amounts to the sum of $326,083,246. Alaska's mineral production for the same period amounts to the sum of $333,840,589.

| | |
|---|---|
| Credit Alaska with her cash trade value since 1867: | |
| Merchandise imported from the United States | $331,072,778 |
| Cash paid into the United States Treasury | 17,787,153 |
| Production of fish and furs | 326,083,246 |
| Mineral production | 333,840,589 |
| Total trade value of Alaska since 1867 | 1,008,783,766 |
| Charge Alaska with all national expenditures: | |
| Purchase price paid to Russia | $7,200,000 |
| Treasury Department expenditures, 1867–1916 | 43,904,681 |
| Commerce Department expenditures, 1867–1916 | 7,271,657 |
| Interior Department expenditures, 1867–1916 | 8,127,810 |
| Agriculture Department expenditures, 1867–1916 | 859,934 |
| Justice Department expenditures, 1867–1916 | 8,394,676 |
| Navy Department expenditures, 1867–1916 | 1,146,665 |
| War Department expenditures, 1867–1916 | 24,573,702 |
| Labor Department expenditures, 1867–1916 | 76,068 |
| Total national expenditures a/c Alaska | 101,355,193 |
| Trade balance due Alaska | 907,428,573 |

The trade of Alaska with the United States for 1915 exceeded $82,000,000; that for 1916 will exceed $100,000,000; if that for 1917 shall be as large, the total trade balance due Alaska on October 18, 1917, the date of the semicentennial of its purchase from Russia, will exceed $1,000,000,000 over and beyond all the national expenditures made in its purchase, government, and development.

The trade of Alaska for 1916 will amount to more than $100,000,000, and every pound of it, both imports and exports, must move over transportation lines, to, from, or in Alaska. The miners and merchants, the shippers and settlers of Alaska now pay, and for years have paid, the most extortionate freight rates of any people in the world. Nothing has been done by their government, or its appointive officials in Alaska, to protect them from unreasonable and discriminatory rates, and the transformation of Alaska into a land of homes and developed industries is being actively consummated under greater handicaps than ever before burdened any part of our American frontier. The enormous output of the Territory to date has been produced from that portion of its natural resources most easily and readily to be reached. It has come from bonanza placer mines and other resources on the seashore where the cheapest rates obtain. Any attempt, however, to develop lower grade placer and quartz gold, copper, or other mineral products in the interior or at any distance from the seacoast must fail until some governmental control of rates of transportation will enable capitalists and laborers alike to have reasonable and equal charge for freight. Settlers away from the coast can not get household goods and farm implements to their farms, or their farm products to market, without that control is exercised. In short, the greater development of Alaska waits on the control and reduction of transportation rates.

UNCONTROLLED TRANSPORTATION CONDITIONS IN ALASKA.

Prior to beginning construction on the Government railroad from Seward to Fairbanks in 1915, the total railway mileage in Alaska was as follows:

| Name of railroad. | Terminals. | Gauge. | Mileage. |
|---|---|---|---|
| White Pass Ry | Skagway-Summit | 3-foot | 20 |
| Yakutat & Southern Ry | Yakutat-Situk | do | 9 |
| Copper R. & N. W. Ry | Cordova-Ken'cut | Standard | 195 |
| Alaska Northern Ry | Seward-Mile 71 | do | 71 |
| Council C. & S. Ry | Solomon-Penelope | do | 32.5 |
| Wild Goose Ry | Council-Ophir | 3-foot | 7 |
| Seward Peninsula Ry | Nome-Shelton | do | 86.5 |
| Tanana Valley Ry | Fairbanks-Chatanika | do | 45 |

Total railway mileage in Alaska, 1914, 466 miles.

The Alaska Northern Railway mileage included in the foregoing statement was purchased by the President of the United States in 1915 under authority vested in him by the act of Congress approved March 12, 1914, "An act to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes" (38 Stat. L., 305). No other railroad construction is in progress in Alaska except that carried on by the President in extending that road to the Matanuska coal fields and to the Tanana Valley and Fairbanks.

The following steamship lines operate from Seattle to Alaska:

The Alaska Steamship Co.
Pacific Coast Steamship Co.
Pacific-Alaska Navigation Co.
Border Line Transportation Co.
Humboldt Steamship Co.

A single line (the Canadian Pacific Ry. Co. steamships) operates from Vancouver, British Columbia, via Prince Rupert, British Columbia, to Skagway, Alaska, where it connects with the White Pass & Yukon Route Railway and steamers on the Yukon River.

On the Yukon and Tanana Rivers from Whitehorse, British Columbia, to points in Alaska, the White Pass & Yukon Route operates the American Yukon Navigation Co. steamboats and Northern Navigation Co. steamboats.

While other smaller or tramp steamships infrequently ply from Puget Sound to Alaskan ports, they do not substantially affect the situation, for the foregoing steamship lines are the principal carriers and control the trade. The Humboldt Steamship Co. runs only one small vessel to Skagway and way ports. The Border Line Transportation Co. runs two steamers on the same limited route, while the Pacific-Alaska Navigation Co., the "Admiral Line," runs two steamers on the through route to Anchorage and Kodiak. The Canadian Pacific Railway steamers from Vancouver, British Columbia, via Prince Rupert, British Columbia, to Skagway are foreign bottoms and carry but little, if any, American freight and do not really affect the transportation situation in Alaska.

The large and dominating factors in steamship transportation between Seattle and Alaskan ports are the Alaska Steamship Co. and the Pacific Coast Steamship Co. Their dominating influence comes from their ownership and use of a large and well-manned fleet of vessels, well adapted to the Alaskan carrying trade, but more particularly from their unity of action and their interlocking stock and traffic connections with each other, and with the White Pass & Yukon Route, over both its Alaskan-Canadian Railway and its Yukon and Tanana Rivers steamboats; also with the Copper River & Northwestern Railway Co., the Kennecott Copper Corporation, and, prior to its purchase by the United States, with the Alaska Northern Railway Co.; and their joint-stock ownership or control of the wharves at Ketchikan, Juneau, Skagway, Cordova, Valdez, Seward, St. Michael, and Nome.

Under the House resolution No. 587, Sixty-second Congress, second session, the House Committee on the Merchant Marine and Fisheries was authorized to, and did, make an investigation of alleged shipping combinations and steamship agreements and affiliations in the American foreign and domestic trade, and therein made a brief inquiry touching the combinations and affiliations in the Alaskan carrying trade. In volume 4 of its report, beginning on page 347, it submitted some facts and conclusions on "Steamship company affiliations on the Pacific coast," and on page 351 on "The trade between Puget Sound and Alaska." Beginning on page 352 of that report, the following conceded facts in relation to combinations for the control of Alaskan rates are made by the committee of the House of Representatives:

"Steamship consolidations in the Alaskan trade: With the exception of the Alaska Coast Co., the Northland Steamship Co., and the Humboldt Steamship Co. (the last two companies operating only one steamer each, of 697 and 1,075 gross tons, respectively, on the southeastern route), all of the above-mentioned lines operating to and from Seattle and Tacoma seem to be affiliated through stock ownership or traffic agreements. In the first place, $1,499,100 of the $1,500,000 of the capital stock of the Pacific Coast Steamship Co. is owned by the Pacific Coast Co., the latter company owning 14 steamers of 34,683 gross tons, and the former operating them. The Pacific Coast Co. (with outstanding common stock of $7,000,000, first and second preferred stock of $1,525,000, and first-mortgage bonds of $5,000,000) controls through stock ownership numerous companies besides the Pacific Coast Steamship Co. Among the companies thus controlled should be mentioned the Juneau Steamship Co., whose entire capital stock is held half-and-half by the Pacific Coast Co. and the Alaska Steamship Co.; and the Ketchikan Wharf Co., whose entire stock is also owned in equal shares by the same two companies. Two-thirds of the capital stock of the Western Alaska Steamship Co. (which owns no vessels but charters them from various parties, including the Alaska Steamship Co. and the Pacific Coast Steamship Co.) is also owned by the Alaska Steamship Co. and the Pacific Coast Steamship Co., each owning one-third of the $25,000 of capital stock outstanding.

"The Alaska Steamship Co. (with $3,000,000 of common stock outstanding and representing a consolidation of the Alaska Steamship Co. and the Northwestern Steamship Co. (Ltd.)) owns and operates 13 steamers of 28,319 gross tons, and, aside from the company's interest in the Juneau Steamship Co. and the Ketchikan Wharf Co. (acquired in 1908), owns all of the stock of the Union Wharf Co. (owner of a wharf at Juneau). The Pacific Coast Steamship Co. reported to the committee that it 'has at times had arrangements or understandings with the Alaska Steamship Co. as to sailing dates between Puget Sound and Alaska, with a view to avoiding sailing of different boats on the same date, but has now no such arrangements.' The Alaska Steamship Co. reported that it now 'has no agreements or understanding with any other navigation companies, except that a practice exists of exchanging traffic with the Juneau Steamship Co. at Juneau, when such traffic is to or from points reached by that company and not by our own vessels.' All the other companies engaging in the Alaskan trade denied the existence of any agreements or understandings with other navigation companies; yet the foregoing facts clearly indicate that the three lines operating on the Nome or Bering Sea route—the Alaska Steamship, Western Alaska Steamship, and Pacific Coast Steamship Cos.—are closely interrelated through stock ownership.

"The aforementioned carriers also have, or recently have had, traffic agreements with the two dominant carriers on the Yukon River route, viz, the Northern Navigation Co. (operating 34 steamers and 45 barges, with a total of 32,619 gross tons) and the Merchants' Yukon Line (operating 10 steamers and 23 barges, with a total gross tonnage of 14,644). Both of these companies, as already stated, quote the same rates on through business between Puget Sound and Yukon River points exchanged with the Alaska Steamship and Pacific Coast Steamship Cos. at the mouth of the Yukon. The Alaska Steamship Co. states in its answers to the committee's schedule of in-

quiries that it has an arrangement with the Northern Navigation Co. for through routing and a division of through rates on traffic destined to points on the Yukon River in Alaska, this arrangement, however, to expire on December 31, 1912. On the other hand, the Western Alaska Steamship Co. (two-thirds of whose stock is owned in equal portions by the Alaska and Pacific Coast Steamship Cos.) reports that it has a traffic arrangement for the interchange of freight at St. Michael with the Merchants' Yukon Line, the arrangement being based on a percentage division of through freight rates quoted in a joint through tariff. The Northern Navigation Co., it may be added, represented at the time of organization a consolidation of the Alaska Commercial Co., the Alaska Exploration Co., the Empire Transportation Co., and the Seattle-Yukon Transportation Co.; and following its organization absorbed the Alaska-Yukon Transportation Co. and the firm of Thebo & Oachon. All of its capital stock of $2,125,900 is owned by the Alaska Commercial Co., the Alaska Gold Fields (Ltd.), the International Mercantile Marine Co., and the Northern Commercial Co. Four of the directors and important officers of the Northern Navigation Co. are also directors and officers of the Alaska Packers' Association, a private carrier operating 31 steamers, schooners, and other vessels (with a total of 41,750 gross tons) between San Francisco and Puget Sound ports and the Alaskan canneries of the association.

"Not only have the aforementioned companies entered into traffic arrangements with the two dominant Yukon River lines connecting at St. Michael, but according to the latest advises received by the committee the Alaska Steamship and Pacific coast steamship companies, together with the Canadian Pacific Railway Co. and the Pacific & Arctic Railway & Navigation Co., also control the so-called White Pass & Yukon Route via Skagway. This route comprises the steamship service from Puget Sound and Vancouver to Skagway, at which port the entire wharfage facilities are said to be owned by the North Pacific Wharf & Trading Co., thence by railroad—the White Pass & Yukon Route is the trade name applied to the route composed of the Pacific & Arctic Railway & Navigation Co., British Columbia Yukon Railway Co., British-Yukon Railway Co., and the British-Yukon Navigation Co. (Ltd.), all appearing to be operated under a common control or arrangement for through carriage. These various companies are designated hereafter, both in the text and in the cases to be referred to, as the "railway company"—to the headwaters of the Yukon River, and thence by boat down the Yukon to Dawson and other points. According to the report of the Interstate Commerce Commission (Humboldt Steamship Co. *v.* White Pass & Yukon Route et al. Opinion No. 1347, decided June 6, 1910) the one steamer of the Humboldt Steamship Co. was operated during 1902 and 1903 in conjunction with the Alaska Steamship Co., under an arrangement whereby the Alaska and Pacific coast companies collected freight money and sold tickets for the Humboldt Co. upon a commission basis. Upon the termination of this arrangement, early in 1909, the White Pass & Yukon Route et al. canceled their through routes and joint rates with the Humboldt Co. As the Humboldt Steamship Co. reported to the committee, under date of October 10, 1912, 'we have a verbal arrangement with the White Pass & Yukon Route for through billing of freight and through ticketing of passengers beyond Skagway, Alaska, but there are no joint rates, the through rates being the sum of the locals.'

"The situation in this respect, until very recently at least, is fully set forth in the case of United States *v.* Pacific & Arctic Railway & Navigation Co., Pacific Coast Steamship Co., Alaska Steamship Co., and the Canadian Pacific Railroad Co. (228 U. S., 87 and following), decided April 7, 1913. From the facts outlined in this case it appears that by mutual agreement among the Alaska Steamship and Pacific Coast Steamship Cos., the wharves company, and the 'railway company' through routes and joint rates were established, thus making one continuous line of common carriers for freight and passengers between the United States and northern Alaskan ports. By agreement, however, the railway company 'refused to make any through route or joint rates with the Humboldt Co., or with any of the independent steamship lines, and refused to bill freight or passengers from the United States to Yukon River points or reversely, except by ships belonging to one of the defendant lines.' By the same arrangement the railway company fixed local rates between Skagway and the Yukon River, which were very much higher than the railroad's pro rata share of the through rates; while the wharves company charged $2 a ton for freight if shipped on a vessel not owned by one of the defendant companies, but only $1 to those who had entered into or were about to enter into a contract to have all shipments carried by the defendant lines. As a result of this agreement it is stated in the case:

"'Shippers were compelled to use only the ships of the defendant companies, as in that way alone could lower through rates be obtained. Competition in water transportation was destroyed between the defendant steamship companies and the independent lines, defendants obtaining a monopoly of the transportation business between the United States and Alaska, and the Humboldt Steamship Co. was discriminated against in the matter of through rates.

"'The only possibility of competition is in the water part of this route. The entire transportation is controlled, and the means of control is an agreement between the defendants to throw all the trade into the hands of the defendants' steamship companies, by the railroad company establishing through rates and joint rates with them and refusing to do so with the Humboldt Co. or any of the independent companies.

"'The wharves company gave its assent by its wharfage charges, and all evasion was prevented by so fixing the local rates that their combination was greater than the through rate agreed upon. It is manifest that the scheme was effective and cut out the Humboldt line and the independent lines as factors in the routes of transportation between the United States and the Yukon River points.'"

These findings of the House Committee on the Merchant Marine were made on written inquiries submitted to the steamship companies, and their voluntary answers, in 1912 and 1913, were probably correct, so far as the facts were disclosed, at that time. Since that time, however, other and more important combinations have been made, by which closer affiliations have been secured in favor of a new dominating force, the Kennecott Copper Corporation, representing the Alaska Syndicate.

THE ALASKA SYNDICATE TRANSPORTATION MONOPOLY.

The Alaska Syndicate has for a decade controlled, and now controls, transportation combinations and transportation rates to and from and in Alaska. Through stock ownership in the transportation, mining, and smelting companies it completely dominates transportation by rail and by sea. It controls and limits the production and transportation of copper from Alaska. It thus owns and controls the copper smelters on the Pacific coast, the Everett and Tacoma smelters in Washington and the Selby smelter at San Francisco. It controls the copper market on the Pacific coast. It thus owns and controls the Kennecott and Beatson copper mines in Alaska, the Copper River and Northwestern Railway, and the Alaska Steamship Co. Through its joint-stock ownership and affiliations with the Pacific Coast Steamship Co. it controls the steamship carrying trade to and from Alaska and the wharves at Ketchikan, Juneau, Skagway, Cordova, Valdez, and Nome. Through its affiliation with the White Pass & Yukon Route it controls rates over the White Pass Railway and over its line of steamboats on the Yukon and Tanana Rivers to every point in interior Alaska. It assumes to and does exercise a more practical and forceful control over all transportation rates in Alaska, or to or from Alaska, than the Interstate Commerce Commission and exerts a greater power of governmental dominance over Alaska and its people than the Government of the United States.

On February 18, 1910, Messrs. Stephen Birch and John N. Steele, special representatives of the Alaska Syndicate, appeared before the Senate Committee on Territories and sought to stem the tide rapidly carrying their principals toward indictment in the United States courts in connection with the Alaska coal-land frauds, by ostentatiously laying their cards on the table where the Government officials might see, and seeing, be barred. They were tenderly permitted to cross-examine each other, not under oath, and the Delegate from Alaska was excluded from asking either of them questions by a formal vote of the Senate committee. Notwithstanding the care taken to prevent them from disclosing real facts to the public, they did testify with regard to the personnel of the Alaska Syndicate, and their statements are to be found in the printed hearings of the committee on that date at page 72, as follows:

"Mr. STEELE. Who compose what is known as the Alaska Syndicate?

"Mr. BIRCH. The Messrs. Guggenheim and J. P. Morgan & Co.

"Mr. STEELE. When you say 'The Messrs. Guggenheim,' do you mean M. Guggenheim Sons?

"Mr. BIRCH. M. Guggenheim Sons.

"Mr. STEELE. Who have charge of the affairs of that syndicate in New York?

"Mr. BIRCH. Mr. S. W. Eccles, Mr. John N. Steele, and myself.

* * * * * * * *

"Mr. STEELE. About when was this Alaska Syndicate formed? In the spring of 1906, was it not?

"Mr. BIRCH. In the spring of 1906.

"Mr. STEELE. In what enterprise in Alaska is that syndicate interested?

"Mr. BIRCH. They are interested in the Northwestern Commercial Co., the Alaska Steamship Co., the Northwest Fisheries, the Kennecott Mines Co., the Copper River & Northwestern Railway, and the Katalla Co.

"Mr. STEELE. We will take up first the Northwestern Commercial Co."

On page 88 of the committee hearings is the record where these two gentlemen very carefully interrogated each other with respect to the community of interest which existed between the Alaska Syndicate and the White Pass owners. Of course, they told no more than just enough to put up bars to the feared indictments, and the Delegate was not allowed to cross-examine them. They testified as follows:

"Mr. STEELE. Who at that time owned the Copper River Railway?

"Mr. BIRCH. At that time——

"Mr. STEELE. I mean at that time.

"Mr. BIRCH. The Alaska Syndicate owned it.

"Mr. STEELE. At the time the Copper River & Northwestern Railway was first acquired by the Alaska Syndicate, who owned the Copper River Railway?

"Mr. BIRCH. M. J. Heney, Mr. Graves, and Close Bros., of London.

"Mr. STEELE. Did the Alaska Syndicate acquire the entire interests of those gentlemen in the Copper River Railway?

"Mr. BIRCH. Yes, sir; by permitting them to participate in the Alaska Syndicate up to the amount they had expended.

"Mr. STEELE. In other words, they gave them a participation in the syndicate up to the cash amount they had expended in the construction of the Copper River Railway to that time?

"Mr. BIRCH. Yes, sir. Mr. Chairman, I have a map showing this railroad, if you desire it."

Here, then, is the carefully stated testimony of the Alaska Syndicate itself, disclosing who its principal owners are and admitting its ownership or control of the Alaska Steamship Co., the Kennecott Mines Co., the Copper River & Northwestern Railway Co., and its affiliation with the White Pass & Yukon Route by joint ownership in the Copper River & Northwestern Railway.

Again, on May 8, 1913, when the Alaska Syndicate lobbyists were in Washington opposing the passage of the Alaska railway bill, Mr. O. L. Dickeson, the president of the White Pass & Yukon Route, in his testimony before the Senate Committee on the Territories, hearings, page 155, testified on the same general matter as follows:

"Senator MCLEAN. Have you any interest in common with the Guggenheims?

"Mr. DICKESON. Yes, sir; we have. Frankly, I might say here that in this talk that I have made against the extension of that line, I am talking against a part of our interests. The interest comes about in this way: The firm of Close Bros. & Co. and a man by the name of M. J. Heney, who built the White Pass & Yukon road, entered into the original scheme of building the Copper River & Northwestern Railroad. We went down in our pockets and each of us put up 50 per cent of the money to start the project. We got to the 20-mile point, and we found that some one was building over the Valdez route—I think it is the Valdez route—and we found that this man was one John Rosene, who is now projecting the Haines route, and we also found that this man was backed by the Morgan-Guggenheim Syndicate, and that being true, and our making efforts to raise money in New York to complete the extension of this plan, we did not feel that we were likely to be very successful, and we therefore thought that the only other thing to do was to go to England and get the money.

"Mr. WICKERSHAM. Why could you not raise the money in New York in opposition to them?

"Mr. DICKESON. I was not with the road then, Mr. Wickersham. We thought the only thing to do——

Senator JONES. If you had been, do you think you could?

"Mr. DICKESON. No, sir; I do not believe I could. We thought the only other thing to do was to go to England, and, in going to England, the English people, who had or could have raised the money to put up for a railroad project, said the White Pass & Yukon route had not paid anything, and they said, 'Why ask us for money to build another railroad?' So we could not raise the money there. We had considerable difficulty, so we dropped the whole scheme and sold out to the Morgan-Guggenheim Syndicate, which is known as the Alaska Syndicate, and accepted paper for our interest. We sold for the paper."

The admission of Birch, Steele, and Dickeson, taken in connection with other well-known and admitted facts, conclusively established the intimate association of the Alaska Syndicate with the transportation companies mentioned, and shows why Close Bros. and Heney could not get financial support in their effort to build an independent road into the Alaska Syndicate's "sphere of influence," to wit, the copper region near Kennecott.

THE TRANSPORTATION MONOPOLY CRIMINAL.

The Alaska Steamship Co., the Pacific Coast Steamship Co., the White Pass & Yukon Route Railway and subsidiary lines, and the Canadian Pacific Railway Co. entered into a special combination to control the facilities of commerce and the transportation of freight into the Yukon Alaska via Skagway, the White Pass Railway, and thence down the Yukon River to Alaska points. Their arrogance became so great that they excluded other companies and heaped excessive burdens on the public. The prosecuting attorney at Juneau caused the United States grand jury to indict the members of the combination on several counts for conspiracy in restraint of trade, for violation of the interstate commerce laws, the antitrust act, and other criminal statutes. The attorneys for the Alaska Syndicate appeared as leading counsel in all those cases, and the decisions of the local court thereon will be found in the Fourth Alaska Report, at pages 518, 530, 552, 574, 583, 587, and 685, where a general discussion of the facts and law relating to the criminal combinations and conspiracies against the people of Alaska and the United States Statutes will be found.

Another of this series of indictments not reported in the Fourth Alaska came from the district court of Alaska on error to the Supreme Court of the United States. This case is entitled "United States of America *v.* Pacific & Arctic Railway & Navigation Co., Pacific Coast Steamship Co., Alaska Steamship Co., Canadian Pacific Railroad Co." (228 U. S., 87). The court stated the facts upon which the indictment was based, as follows:

"Indictment for alleged violation of the Sherman Antitrust Act and of the interstate-commerce act. The indictments contain six counts. The first and second counts charge violation of the antitrust law. The first, by the defendants engaging in a combination and conspiracy in restraint of trade and commerce with one another to eliminate and destroy competition in the business of transportation in freight and passengers between various ports in the United States and British Columbia in the south and the various cities in the valleys of the Yukon River and its tributaries, both in British and American territory, in the north, upon a line of traffic described, for the purpose and with the intention of monopolizing such trade and commerce. The second count charges monopolization of trade and commerce in the same business between the same ports. The manner of executing the alleged criminal purposes is charged to be the same in both counts.

"The places of the incorporation of the corporate defendants are alleged, and the following facts: The Pacific Coast Steamship Co. and the Alaska Steamship Co. operate, respectively, lines of steamships, as common carriers of freight and passengers, running in regular routes between Seattle, State of Washington, and Skagway, Alaska, etc. * * * Continuously during the three years immediately preceding the finding of the indictment the defendants combined and conspired together to eliminate and destroy competition in the transportation business between the said southern ports and Skagway for the purpose and with the intention of giving to and creating for the Alaska Steamship Co., the Pacific Coast Steamship Co., and the Canadian Pacific Railroad Co. a monopoly of such business."

The Supreme Court sustained the indictment and remanded the case to the district court in Alaska "with instructions to proceed in accordance with this opinion." As soon as the cases were ready for further action in the Alaska court the defendants appeared, plead guilty as charged in the indictment, and were fined $25,000; paid the fine, and the rates are now higher to the same Yukon and Tanana points over the same route.

COMBINATION CONTROLLING RATES OVER THE WHITE PASS & YUKON ROUTE.

That the White Pass & Yukon Route was in combination with the steamship lines on the Seattle-Skagway route and on the Yukon and Tanana Rivers is now so well established that it hardly needed the admissions of Birch, Steele, and Dickeson to place it beyond doubt. This control began at the time Mr. Birch said the Alaska Syndicate was formed—"in the spring of 1906."

On March 28, 1906, a written agreement for the control of business and rates on the Yukon River was entered into by the British Yukon Navigation Co., by S. H. Graves, the president of the White Pass & Yukon Route, of which the British Yukon Navigation Co. was a subsidiary, the North American Transportation & Trading Co., and the Northern Navigation Co. These three were the owners of independent steamboat lines plying on the Yukon and Tanana Rivers, and that contract was made to

limit and restrain their competing business and to enable them to increase and maintain excessive rates.

This contract required the British corporation to turn over to the American corporations at Dawson all freight for points below Dawson, which covered all the interior Alaskan freight for the Yukon and Tanana Rivers. Excessive freights were provided for and agreed divisions made. Freight for the Yukon-Tanana points in Alaska were to be local and not through freights, and the British company was bound "not to issue through bills of lading or through passenger tickets by any other boats than those owned or operated by the parties of the second part."

This contract was to cover the years 1906, 1907, and 1908, but at the end of that term it was extended by other secret contracts until December 31, 1912. The contract of March 28, 1906, was the basis of the contracts between the White Pass & Yukon Route, these two American river lines, and the Seattle-Skagway steamers which sought to put the Humboldt Steamship Co. out of business by control of the Skagway Wharf, and which brought on the fight on May 26, 1909, before the Interstate Commerce Commission, in Washington, D. C., and the subsequent indictments in the district court in Juneau, Alaska. It is the contract, or one of them, mentioned in the report of the House Committee on the Merchant Marine and Fisheries, 1914, page 354, as follows:

"The Alaska Steamship Co. states, in its answer to the committee's schedule of inquiries that it has an agreement with the Northern Navigation Co. for through routing and a division of through rates on traffic destined to points on the Yukon River in Alaska, this arrangement, however, to expire on December 31, 1912. On the other hand, the Western Alaska Steamship Co. (two-thirds of whose stock is owned in equal portions by the Alaska and Pacific Coast Steamship Cos.) reports that it has a traffic arrangement for the interchange of freight at St. Michael with the Merchants' Yukon Line, the arrangement being based on a percentage division of through freight rates quoted in a joint through tariff."

This is a general statement of the transportation combination which existed from March 28, 1906, to December 31, 1912, and which included the Alaska Steamship Co., the Pacific Coast Steamship Co., the White Pass & Yukon Route from Skagway to Dawson, the Northern Navigation Co. from Dawson to St. Michael, where the combination between the Alaska Steamship Co. joined with the Northern Navigation Co. from St. Michael to Dawson. The combination thus covered the whole of the trade routes of interior Alaska, and all other Yukon and Tanana River points from Skagway to St. Michael. This secret combination, bound together by contracts in violation of the Sherman antitrust and the interstate commerce acts, fixed the excessive rates which burdened the Alaska miners of the interior for seven seasons.

In his report upon "The Mining Industry in 1909," in Bulletin 442, United States Geological Survey, 1910, pages 23–31, Alfred H. Brooks presents a study of transportation in that region at that time. With regard to the transportation of freight from Nome, then controlled by the Alaska Steamship Co., he says, on page 25:

"The total transportation charge on the supplies of Seward Peninsula will, then, be about $1,200,000, or nearly 30 per cent of the value of the entire gold output of the year."

He says of the interior rates and freight traffic, on page 26:

"No exact figures are available in regard to the amount of freight annually shipped to the Alaska portion of the Yukon Basin, but it is probably safe to say that this amounts to 30,000 tons, and that it costs over $2,500,000 to land it at the end of steamboat transportation."

It is simple division to demonstrate that this freight costs the people of Iditarod, Ruby, Fairbanks, and other interior points at the average rate of $83.33 per ton.

"The great tax on the mining industry of Alaska, caused by the present system of transportation, is strikingly illustrated by the fact that the annual freight bill—much, to be sure, paid indirectly—for every white man, woman, and child living in inland Alaska and on Seward Peninsula is over $350. As this figure is based on incomplete data concerning tonnage and on estimates of population, it is only approximate, but it at least indicates to what order of magnitude the true figures belong. If these estimates are correct, the amount paid for freight in the placer camps of Alaska is equal to nearly half of the value of the annual gold production. The freight charges are reflected in the high cost of all supplies and of labor. All of this clearly indicates why only the richest placer ground is being mined, and suggests that the present industrial advancement of inland Alaska is small when compared with that which will take place when railway communication with tidewater has decreased the cost of operating."

The freight rates to these interior points are now higher than they were in 1909, while the output of placer gold is less. The burden upon the average interior Alaska shipper and miner is heavier in 1916 than it was in 1909.

COMPETITION—THEN COMBINATION.

From March 28, 1906, to December 31, 1912, secret corporate contracts controlled the rates and the facilities for the transportation of freight on the Yukon River to the Interior Alaskan mining camps. These ceased to bind on January 1, 1913, and for the year 1913 there was competition in the carriage of freight over the Yukon and Tanana Rivers, and consequently reasonable rates. The White Pass subsidiary, the American Yukon Navigation Co., no longer bound by its contract of March 28, 1906, as extended to December 31, 1912, entered into competition with the Northern Navigation Co. below Dawson, and ran its boats to Fairbanks. The Northern Navigation Co., entering its freight via St. Michael, sought to protect itself in its old "territory," and for one brief season—and for only one—there was fair competition in freight traffic in the interior of Alaska.

In my possession are 14 receipts, aggregating $1,538.80, given by the American Yukon Navigation Co. (the White Pass & Yukon steamer trade name) for freight carried by the White Pass & Yukon Route from Skagway Wharf to Fairbanks for the Samson Hardware Co. in the open season of 1913. The articles of freight are generally iron and hardware. The flat rate is $25 per ton, but on some articles there is an exceptional rate of $45, and on the highest $55 per ton. These rates are from Skagway Wharf, the local rate from Seattle to Skagway, $5 per ton, being prepaid and additional.

Also I have in my possession 15 receipted bills, aggregating $784.49, together with 21 unreceipted original expense bills, all of which were paid, given by the Northern Navigation Co. for freight carried by it, as connecting carrier, from Seattle, to Fairbanks, Alaska, for the Samson Hardware Co. in the same open season of 1913. This freight came to Fairbanks via St. Michael and the mouth of the Yukon River. The freight was hardware, the same class of freight as that covered by the receipts given by the American Yukon Navigation Co. above. The receipts show the flat rate first charged was $50, but upon the showing that the competing line was only charging $39 the Northern Navigation rate was reduced to $40 flat from Seattle to Fairbanks, and the receipts are given for that rate. The general average freight rate paid by this shipper over both routes in 1913 was $35 flat. There was competition in freight traffic on the Yukon and Tanana Rivers in 1913—never before, never since.

The Northern Navigation Co. was a subsidiary company owned by the Northern Commercial Co. Both were owned by the Sloss group of financiers, of San Francisco. They organized the Natomas scheme of developing marshlands and placer mines near Sacramento, Cal., and about 1913 became heavily involved financially. (See Poor's Manual of Industrials, 1913, p. 1922.) Whereupon the competitive fight on them by their former friends of the Transportation Trust, beginning with the close of the secret contracts of combination and control on December 31, 1912, the Natomas failure and one year of competition put the wounded wolf on the ground.

During the winter of 1913–14, a new combination and a new contract was entered into between the Northern Commercial Co., the owner of the Northern Navigation Co. steamers, and the White Pass & Yukon Route, whereby the latter company obtained "control" over the boats and transportation facilities of the Northern Commercial Co., upon an agreement whereby the Northern Commercial Co. was to have an exceedingly low rate of freight in payment for a large sum of the purchase price of "control" held out to that use. The White Pass & Yukon Route, in its statement in Poor's Manual of Railroads, 1915, page 1985, makes this luminous admission:

Notes: In March, 1914, company sold £70,000, 6 per cent secured notes at 96, the proceeds to be used in purchasing control of the Northern Navigation Co.

What really happened was this: The Northern Commercial Co. agreed to put its fleet of river steamers, operating from St. Michael to Fairbanks, and on the upper Yukon to Dawson, on the ways and to keep them there, with the exception of some of the smaller ones to be used by the White Pass & Yukon Route; and the White Pass & Yukon Route agreed to pay to the Northern Commercial Co. $200,000 and to carry its freight for its Yukon and Tanana Rivers mercantile establishments at a greatly reduced special rate. This rate was to be exclusive to the Northern Commercial Co., and so far below the public rate

established by the interstate commerce tariffs for all other through shippers as to enable the Northern Commercial Co. to undersell all its competitors so far as to restrain and prevent competition with it in its mercantile business. This secret rate was then and is now sufficiently lower than the rate to other merchants to give the Northern Commercial Co. a monopoly of the mercantile business in the Yukon and Tanana Basins. It was and now is a flat rate, without exceptions, and did then and does now operate to restrain and to prevent other competitors of the Northern Commercial Co. from carrying on the mercantile business at a profit in that region.

While the Northern Commercial Co. was thus given a monopoly of the mercantile business in the Yukon and Tanana Basins, with no limit to its excessive mercantile prices, the White Pass & Yukon Route was equally given a monopoly of all river transportation on the Yukon and Tanana Rivers, with no limit to its excessive freight charges upon all the public excepting only the favored Northern Commercial Co. Immediately after the contract of monopoly between these two companies in the spring of 1914, and the withdrawal of the Northern Commercial Co.'s boats, the freight rates to the public were at once advanced higher than in previous years.

The Alaska Steamship Co. and the Pacific Coast Steamship Co. carried the freight to Skagway and to St. Michael as formerly, but it was now taken over at both ends of the great river, at the Skagway and St. Michael gateways, by the British transportation monopoly, the White Pass & Yukon Route, and carried to American miners in Alaska at higher rates than are charged anywhere else in civilized countries for a similar service. Competition has now given way to combination.

And now look at the freight rates. In my possession are 32 receipts aggregating more than $7,000 given in 1914 by the White Pass & Yukon Route, as the successor to the two competing companies of 1913, for freight carried by its railroad and steamboats from Skagway wharf and by its boats from St. Michael in the open season of 1914 for the Samson Hardware Co. to Fairbanks, Alaska. Notice the increase in the rates of 1914 over those of 1913. The maximum of 1913 became the minimum of 1914. The minimum flat rate of 1913 from Skagway wharf was $25; that for 1914 was $55, an increase of 120 per cent. The rates in 1913 from Seattle did not exceed $30 flat; in 1914 they are $55, $61, $63.75, $64, $66, $68.50, $77, $78.50, $82, $83.50, $92.75, $96, $110, $139.50, $142, $165.50. The average rate from Seattle to Fairbanks for 1913 was increased in 1914 more than 200 per cent and yet remains at that high-water mark. These excessive rates are now in force and now burden the shippers and miners of the great interior of Alaska and will continue to do so for two or more years until the Government railroad reaches the Tanana, without some action is taken by the order of the Interstate Commerce Commission to reduce them.

THE NORTHERN COMMERCIAL CO.'S MERCANTILE MONOPOLY.

The Northern Commercial Co. was incorporated April 15, 1901, in New Jersey to do a general merchandising business in the Yukon Valley. It was formed by a consolidation of the Alaska Commercial Co., the Alaska Exploration Co., the Empire Transportation Co., and the Seattle-Yukon Transportation Co. See Poor's Manual of Industrials, 1915, page 1429. The Alaska Commercial Co. was organized about 1868 and had the first United States 20-year lease of the Pribilof fur-seal islands. The Sloss-Liebes were the financial power behind the consolidation of 1901. The Alaska Commercial Co. and its successor, the Northern Commercial Co. have been continuously engaged in the mercantile business in Alaska since 1868.

When the Dawson and Nome gold strikes were made, in 1897–98, the Alaska Commercial Co. established a string of stores on the Bering Sea coast and along the Yukon River from Nome and St. Michael to Dawson and along the Tanana to Fairbanks and beyond. It owned and operated a line of packets and freight boats on these rivers, and from its St. Michael base supplied the merchandise to its own stores and along the route. The Alaska Exploration Co. and the Seattle-Yukon Transportation Co. were also engaged in steamer traffic and merchandising, so they were both absorbed. The Empire Transportation Co. was taken over and its boats added to the boneyard. The Northern Commercial Co. soon had the trade of the rivers and was the master of the mercantile and transportation business on the Yukon and Tanana until Natomas speculation crippled it financially in 1913. Owning the only regular line of steamers on the rivers, connecting at St. Michael with the Alaska Steamship Co., with whom it had a beneficial combination, it was able to crush all mercantile competitors by charging them such excessive transportation rates and applying other burdens that it soon became and long remained in control of the trade in and transportation of all merchandise on those rivers.

Natomas wrecked its owners in California, and in the spring of 1914 its boats were taken in "control" by the White Pass & Yukon Route and it became a participant in that combination, though not in "control" of transportation. It retained the exclusive control in the field of merchandising along the White Pass & Yukon Route in Alaska. Its secret and low rate of freight over the White Pass & Yukon Route enables it to crush out all competitors and to retain its control over and monopoly of the mercantile business in the interior of Alaska. No independent merchant can do business in interior Alaska in opposition to the Northern Commercial Co. because of its illegal rebates.

THE COPPER RIVER GATEWAY.

How enormously valuable this gateway to the Alaska copper fields is, how completely it is monopolized, and how highly capitalized by the Alaska Syndicate may be seen by an examination of the financial statement made by the Kennecott Copper Corporation on February 14, 1916, to the New York Stock Exchange, and which was approved by the governing board of the exchange on February 23, 1916. This financial statement admits many facts heretofore in doubt about the control of transportation in Alaska by the Alaska Syndicate and is conclusive proof of others. Among other items of admitted fact of interest in this inquiry are these:

On April 29, 1915, the Kennecott Mines Co., the Copper River & Northwestern Railway Co., the Beatson Copper Co., and the Alaska Steamship Co., all engaged in mining or transportation in Alaska, together with the Braden Copper Mines Co., engaged in copper mining in Chile, were combined into one company and incorporated as the Kennecott Copper Corporation under the business corporation law of the State of New York. The stocks of the old companies were traded for that of the new corporation upon an agreed basis, and other portions of the stock of the new company were traded to the Guggenheim Exploration Co., for a big block—about one-fourth—of the stock of the Utah Copper Co. These combined properties are capitalized at about $165,000,000, though the real value probably lies in the Kennecott copper mines, at the interior terminal of the Copper River & Northwestern Railway, and the ownership and control of that railway and the Alaska Steamship Co.'s boats and business.

The Copper River & Northwestern Railway Co. was incorporated May 16, 1905, under the laws of Nevada by the Alaska Syndicate interests, to construct a railroad to the Kennecott copper mines which it had previously purchased and then owned. The Alaska Steamship Co. was organized by the same interests under the laws of Nevada, November 12, 1907, as an auxiliary line to the Copper River & Northwestern Railway Co. to carry the Kennecott copper ore from Cordova, the ocean terminal of the railway, to its Tacoma smelter. The primary object of both the railway and the steamship line was to market Kennecott ore, and the business of carrying freight for the public was then and now is only secondary and incidental. They expected to and have made their profits out of the large output of highly valuable copper ore which they owned at Kennecott and which they desired to carry to their Tacoma smelter. The American Smelting & Refining Co., controlled by the Guggenheim interests, own the Everett and Tacoma smelters in Washington and the Selby Smelter at San Francisco, the only commercial copper smelters to be reached by Alaska ores. All these are controlled by the Kennecott Copper Corporation, so far as Alaska ores are concerned.

With this general plan of exploiting this Alaskan bonanza copper deposit—the greatest in the world—and making their returns on their investments from it, the Alaska Syndicate took possession of the Copper River gateway to the copper fields of Alaska. They exerted the powerful influence of J. P. Morgan & Co.; Kuhn, Loeb & Co.; the American Smelting & Refining Co.; the Guggenheim Copper Trust; and other influences to clear the gateway of obstructions and to enable them to secure an exclusive possession. In the canyons of Alaska and on the floor of Congress they slew their opponents where they were obliged and bought them off for participation where they could. The Home Railway Co. and its section men were shot; the partly constructed Close Bros.-Heney Railway, from Cordova to the Copper River gateway, was given over to the sydicate for participation. Those who sought to get a foothold at Katalla were clubbed into submission at the crossing, or placed under Senate Rule IX by one of the senatorial owners of the Alaska Steamship Co., aided by the senatorial treasurer of the Pacific Coast Co. In this high-handed way the Copper River gateway was cleared of all prior and independent enterprises, and the syndicate entered and took and has ever since maintained an exclusive and unchallenged possession.

MONOPOLY AND SUPPRESSION OF ALASKAN DEVELOPMENT.

The Alaskan Syndicate constructed their own Copper River & Northwestern Railway and organized their own Alaska Steamship Co. to transport their own Kennecott copper ores

to their own Tacoma smelter. These were merely separate elements of a single private enterprise, and the transportation of passengers and property for the public was, and now is, a secondary matter. These lines were intended primarily as private carriers of privately owned copper ore to a privately owned smelter. Even as they are now managed, less than 10 per cent of the earnings of the railway and less than 50 per cent of those of the steamships are derived from carrying for the public.

Nor is that result disappointing to the syndicate. No one knew better than they the conditions in the Copper River region when they built the railroad and organized the steamship company. They knew there was no traffic there—that it was an uninhabited wilderness. They knew that traffic must be created, if desired. They knew if traffic was developed, inducements must be offered to capital to come in and prospect for and open mines, extract the copper and other ore for shipment—or they must depend upon their own mines and enterprises to furnish freight. Their object then was, now is, and will continue to be, to bar all other enterprises, to prevent other mine development, and to suppress the independent copper operator that the syndicate may acquire the greatest copper deposits in the world and create great wealth for themselves. In aid of that object the Alaska syndicate has systematically and purposely restrained and prevented the opening and development of any independent copper mines in the region along its railroad and at its terminals, and has refused to give other mine owners who sought to open and develop properties there either reasonable or just rates or any facilities whatever for engaging in business there.

Their policy and purpose has been to bar all development along the line of their railroad, or "in their territory," except such as they created in their own interest. If rich prospects appeared they were in the market to buy, not for fair prices, but generally for "participation," or a pittance, for the mine could not be opened or developed without their aid as carriers or smelters, and they gave neither. Their policy seemed sound to them, and its success has demonstrated that it was flawless.

They openly and purposely wrecked every attempt to build any other railroad into their "territory," and with excessive, unjust, and unreasonable rates, and by refusing to give the usual facilities to competitors, wrecked and destroyed every independent attempt to develop other mines on the public domain in their "Kennecott territory." Their lines were constructed and were and are now operating to aid them in suppressing competition and in securing the ownership of other rich mines and development of their own, and not those of independent miners.

Their lines were not constructed then, nor operated now, as common carriers in good faith in aid of the public service. They were constructed and are now operated as a part of their conspiracy to secure to themselves the well-known great undeveloped copper riches of that region. Their purpose and policy was to control the Copper River gateway, out of which these great riches must come, and the rates, the ocean transportation, the smelters, the prices, and the copper market, in aid of securing the ownership of the copper wealth of Alaska—the greatest in the world. They fought interstate commerce control for years, and their lobbyists fought the passage of the act of Congress authorizing the President of the United States to locate and construct the Government railroad in Alaska. They dominate and control the Katalla coal fields as certainly as they do the Kennecott copper fields. They have always maintained excessive, unjust, and unreasonable rates, for it makes no difference to them in the movement of their own copper, how high the rate is—what they pay out of one hand they take in with the other—it is a mere matter of bookkeeping.

And in the Prince William Sound copper region the same successful policy of suppression, discrimination, and monopoly has enabled them to prevent the opening and development of a single successful shipping mine by any independent operator. Take the Beatson, for instance. Its owners were unable to operate it owing to the syndicate's control of transportation and smelters. They were compelled to sell to the syndicate for whatever "participation" they could get, but now that it has fallen to the syndicate this mine is capitalized on the New York Stock Exchange at a value of about $6,000,000. Hundreds of other good mines in these two copper belts are made valueless and their owners paupers by this repressive policy of the syndicate and its control of transportation, of rates, of smelters, and the copper market.

THE SYNDICATE'S COPPER ORE RATES.

The act of June 29, 1906 (34 Stat., 584), declares:

"All charges made for any service rendered or to be rendered in the transportation of passengers or property as aforesaid, or in connection therewith, shall be just and reasonable; and every unjust and unreasonable charge for such service, or any part thereof, is prohibited and declared to be unlawful."

The following is a copy of the special ore rate tariff over the Copper River & Northwestern Railway and the Alaska Steamship Co. boats from "Kennecott territory" to the Tacoma smelter:

*General ore rates.*

[Rates in cents per ton of 2,000 pounds.]

| Item No. | Articles. | To— | From— | Actual value per ton of 2,000 pounds not to exceed— | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | $25 | $40 | $50 | $65 | $80 | $100 | $125 | $150 | $175 | $200 | $300 | $400 | $500 |
| 4-A (cancels 4). | Ore and concentrates, bulk, carload, minimum weight 40,000 pounds (reissue, effective Aug. 16, 1915, in Supplement No. 5). | Seattle and Tacoma. | Alaganik | 575 | 750 | 900 | 1,100 | 1,250 | 1,250 | 1,300 | 1,400 | 1,450 | 1,450 | 1,710 | 1,840 | 1,970 |
| | | | Bremner | 985 | 1,050 | 1,100 | 1,200 | 1,300 | 1,300 | 1,400 | 1,500 | 1,600 | 1,850 | 2,190 | 2,360 | 2,530 |
| | | | Chitina | | | | | | | | | | | | | |
| | | | Kostina | | | | | | | | | | | | | |
| | | | Strelna | | | | | | | | | | | | | |

| | | | Long Lake | | | | | | | | | | | | | |
| | | | Porphry | | | | | | | | | | | | | |
| | | | McCarthy | | | | | | | | | | | | | |
| | | | Kennecott | | | | | | | | | | | | | |

Before noticing the magnitude of these rates attention is called to other features of the tariff sheet. The fixing of these rates is assumed by the public to be an official act of the Interstate Commerce Commission under the United States statutes by which a just and reasonable charge is to be fixed for the control of the shipper and the transporting company. Notice the rates are fixed on the "actual value" of the ore. On an ore not exceeding $25 in "actual value" the rate is $10 flat. As the "actual value" increases the rate increases, until a $500 ore takes a flat rate of $33.70.

The greatest evil in this rate sheet lies in the words "actual value." Undoubtedly, the value of an article offered for shipment must be taken into consideration in fixing the rate.

But here a new and peculiar element is injected into the rate by the consent of the Interstate Commerce Commission. The "actual value" must be determined before the carrier is compelled to accept the freight or the payment for its transportation. How is that "actual value" to be determined, and by whom, and when and where? As a matter of 10 years actual practice, it is determined by smelting the ore, by the Copper Trust, when the ore reaches its Tacoma smelter. The use of the words "actual value" in that rate sheet gives the syndicate and the Copper Trust as complete control over the ore shipped over its lines as if they were the owners of it. Not only must the ore go to its Tacoma smelter to have the "actual value" determined, but because of that necessity the Interstate Com-

merce Commission, in effect and actual practice, requires every shipper to pay the smelter charge of $3.75 and the wharfage and to accept the discount of 3 cents per pound upon his copper after it is reduced and refined. It forces a sale of the copper to the carrier on the carrier's own terms.

It is an unjust and unreasonable charge and in effect a transfer to the carrier of the shipper's control and ownership over his property. It is useless to split hairs and talk about the tariff sheet merely fixing the rate—fixing that rate upon "actual value" enables the carrier and the smelter to fix the other charges, and gives the carrier and the smelter the exclusive control over the price and the sale of the product.

While "actual value" does not contain the words "at the Tacoma smelter," it is equivalent to that for there is no other smelter nearer to Alaska. In addition, of course, there is the Everett smelter, at Everett, Wash., and the Selby smelter, at San Francisco, but both these are owned by the owners of the Tacoma smelter. The Granby smelter in British Columbia would not be allowed to compete, for the Alaska Steamship Co.'s boats would not carry the ore there. Nor is it the policy of our laws to compel the American ore shipper to send his product to a Canadian smelter, even if he could do so, and the fact that he has no other measure of freedom of trade is a most obvious reason for some relief from our own courts.

Nor are the tariff rates fixed by the Interstate Commerce Commission the only charges upon the transportation of copper ore from "Kennecott territory." There is, first, the wharfage charge of $1.60 per ton at the Cordova Wharf, also owned by the Kennecott Copper Corporation. Whether there is a wharfage charge at the Tacoma smelter is not stated. On application the following information was received as to Tacoma smelter charges:

"Rates Tacoma smelter are on basis of $1.50 per ton, but depend on character of ore and varying demand at smelter for ores carrying excess of iron, lime, silica, etc. They charge penalty on excess silica and pay bonus for excess lime and iron, resulting in no smelting charge on some iron ores from Prince of Wales Island and rates at least as high as $2 on siliceous ores from same region. One copper smelter deducts 1.3 per cent from wet assay to cover losses in slag and pays in matte 3 cents less than New York quotations."

One independent copper operator who attempted to open a copper mine and ship ore out of "Kennecott territory" was charged a total of $3.75 smelter charges per ton, and was forced out of business by the accumulation of charges and rates. After the ore is reduced, "actual value" fixed, the rate determined, the smelter and wharfage charges paid, the smelter then takes the product at 3 cents per pound less than the New York market price. What justice there is in that is not apparent to the owner, but he can not help himself. It is a part of the burden imposed upon him by the "actual-value" clause, and he has no relief. He must either submit or lose much more in seeking a new market which does not now exist.

The following table is constructed from the foregoing data and shows the gross expense which every independent copper shipper from Alaska must pay at the Tacoma smelter on his ore shipped from "Kennecott territory." The items in the first two columns are taken from the Interstate Commerce Commission's official tariff sheet:

| "Actual value" ore at Tacoma smelter. | Freight rate to Tacoma. | Wharfage charge, Cordova. | Smelter charge, Tacoma. | 3 cents discount, Tacoma. | Total charge. | Total "actual value" taken. |
|---|---|---|---|---|---|---|
| | | | | | | *Per cent.* |
| $25.00 | $10.00 | $1.60 | $3.75 | $3.00 | $18.35 | 73.4 |
| 40.00 | 10.50 | 1.60 | 3.75 | 4.80 | 20.65 | 51.6 |
| 50.00 | 11.00 | 1.60 | 3.75 | 6.00 | 22.35 | 44.7 |
| 65.00 | 12.00 | 1.60 | 3.75 | 7.80 | 25.15 | 40.2 |
| 80.00 | 13.00 | 1.60 | 3.75 | 9.60 | 27.95 | 34.9 |
| 100.00 | 14.00 | 1.60 | 3.75 | 12.00 | 31.35 | 31.3 |
| 125.00 | 16.00 | 1.60 | 3.75 | 15.00 | 36.35 | 29.0 |
| 150.00 | 18.00 | 1.60 | 3.75 | 18.00 | 41.35 | 27.5 |
| 175.00 | 21.00 | 1.60 | 3.75 | 21.00 | 47.35 | 27.0 |
| 200.00 | 24.50 | 1.60 | 3.75 | 24.00 | 53.85 | 26.9 |
| 300.00 | 29.10 | 1.60 | 3.75 | 36.00 | 70.45 | 23.4 |
| 400.00 | 31.40 | 1.60 | 3.75 | 48.00 | 84.75 | 21.1 |
| 500.00 | 33.70 | 1.60 | 3.75 | 60.00 | 99.05 | 19.8 |

This statement is approximately if not exactly correct—near enough to demonstrate the excessive burdens and charges which the Copper Trust imposes upon those miners in Alaska who still struggle futilely to own, hold, and develop copper mines in the "Kennecott territory," or on Prince William Sound. The rates are prohibitory and confiscatory, and, of course, unjust and

There are yet two or three optimistic copper mine owners on Prince William Sound, who are making a brave effort to mine and ship copper ore to the Tacoma smelter. They have an advantage over the "Kennecott territory" independents, for they can secure lower rates through competitive rates by independent steamers. The Pacific Alaska Steamship Co., the "Admiral Line," tariff fixes a rate of $3 per ton on shipments of more than 100 tons from the Cordova zone, and since substantially all shipments exceed that tonnage that may be adopted as the prevailing water rate on copper ore from Cordova. These boats do a pioneering work, and load from ramshackle wharves with inadequate facilities, running into bays and waters off their line of route; it is a more expensive service than that given by the Alaska Steamship Co., whose boats load "Kennecott territory" and "Beatson" ores from cars alongside at well equipped and lighted docks.

Copper ore is not affected by heat or cold, by rain or snow; it is solid, compact, and easily handled in bulk or in sacks. Once loaded on flat or coal cars—for it is not handled in box cars—it is carried over the Copper River & Northwestern Railway to the Cordova Wharf with no more care or attention than coal or brick. It differs from coal or brick in that its units or parts are not useful if stolen, and even a ton or more would have no value if thus taken. In case of wreck it can be easily reloaded without loss. It requires no attention, and will not deteriorate if sidetracked in the yards for an indefinite time. It is a valuable cargo as ballast at sea, and occupies space not otherwise used on return trips to the Tacoma smelter. The "actual value" of the ore adds nothing to the cost of shipment, either over the rail or steamship line, for the least valuable receives exactly the same care as the most valuable.

The official tariff sheet gives every point on the Copper River & Northwestern Railway from Chitina to Kennecott a common rate. Chitina is 130 miles from Cordova Wharf, and Kennecott 196 miles. The region from Chitina to Kennecott is therefore called "Kennecott territory," since the common rate enables a shipper to have the same rate from any point in it. The rates range from the lowest, $10 per ton, to the highest, $33.70, from "Kennecott territory" to Tacoma on copper ore, according to "actual value."

Three dollars of these rates are absorbed by the steamship, while the balance is rail rate. The following table shows the rail rate, the distance, and the ton-mile rate, in mills, from "Kennecott territory" to the Cordova Wharf:

| Rail rate. | Distance. | Mills. | Rail rate. | Distance. | Mills. |
|---|---|---|---|---|---|
| | *Miles.* | | | *Miles.* | |
| $7.00 | 196 | 35.7 | $15.00 | 196 | 76.5 |
| 7.50 | 196 | 38.4 | 18.00 | 196 | 91.8 |
| 8.00 | 196 | 40.8 | 21.50 | 196 | 109.6 |
| 9.00 | 196 | 45.9 | 26.10 | 196 | 131.3 |
| 10.00 | 196 | 51.0 | 28.40 | 196 | 144.8 |
| 11.00 | 196 | 56.1 | 30.70 | 196 | 156.6 |
| 13.00 | 196 | 66.3 | | | |

Now compare those rates, not one of which is less than 35.7 mills per mile, with the following for the carrying of similar ore not to exceed $100 in value:

| Terminal point. | Distance. | Rate. | Mills. |
|---|---|---|---|
| | *Miles.* | | |
| Anaconda to St. Paul | 1,155 | $6.00 | 5.19 |
| Wallace, Idaho, to Pittsburgh | 2,261 | 15.20 | 6.72 |
| Wallace, Idaho, to New York | 2,705 | 16.00 | 5.91 |
| Sand Point to East Helena | 311 | 3.25 | 10.45 |

While comparison of rates by the cost per ton-mile scale may not be the best standard, it is one so often used as to be considered reasonable. There seems to be no other common standard so convenient in this case. Other factors are also considered in the decisions of the commission, and still others will not be forgotten in the final determination.

In the decision by the Interstate Commerce Commission in Rock Spring Distilling Co. *v.* I. C. R. Co. (29 I. C. C. Dec., p. 24) this statement is made:

"The average revenue per ton per mile for all railways in the United States on live stock, for which these figures are available, is 12 mills, while the average for all freight is 7.5 mills, the revenue on cattle being about 60 per cent greater than the average."

In Ontario Iron Ore Co. *v.* N. Y. Co., etc. (30 I. C. C., p. 570), the commission said:

"Considering all the facts of record, we are of opinion and find that the rate of $1.60 per gross ton on iron ore in carloads from Fruitland and Ontario to Curtin, 256 miles; Milesburg, 259 miles; and Bellefonte, 262 miles, is unreasonable to the extent that it exceeds $1.40 per gross ton, and that any rate in excess of $1.40 for the future will be unreasonable."

The ton-mile rate shown in the table in that case, upon which the rates were based, are, respectively, 6.2 mills, 6.1 mills, and 6.1 mills.

In Lum *v.* G. N. Ry Co. (30 I. C. C. Dec., pp. 556–557), where rates from the iron fields of Minnesota to Lake Superior were involved, the commission said:

"Carriers sought to show that the 60-cent rate is not unreasonable by comparison with many other rates on a ton-mile basis. With the distances given on a previous page, the 60-cent rate yields earnings per ton-mile, as follows:

| | Average haul. | Earnings per gross ton-mile. | Earnings per net ton-mile. |
|---|---|---|---|
| Duluth & Iron Range: | *Miles.* | *Mills.* | *Mills.* |
| Mesabi Range | 67.07 | 8.946 | 7.987 |
| Vermilion Range | 89.32 | 6.717 | 5.997 |
| Duluth, Missabi & Northern | 77.43 | 7.749 | 6.919 |
| Great Northern | 108.23 | 5.544 | 4.950 |
| Average | 84.53 | 7.098 | 6.338 |

"Under all of the conditions that have been shown, we find that the rate on iron ore from points on the Mesabi Range should not exceed 55 cents for the future, and an order to this effect will be entered."

In the case of Pennsylvania Smelting Co. *v.* Northern Pacific Railway Co. (19 I. C. C., 60) a rate of $12 per net ton on lead ore and concentrates from Coeur d'Alene district in the State of Idaho to Carnegie, Pa., was held to be unreasonable and reduced to $11.40. Sixty cents additional was allowed to Atlantic coast points, an additional distance of 660 miles. The distance from Wardner, Idaho, the point of shipment to Carnegie, Pa., via the Northern Pacific Railway is 2,494 miles. The rate per ton-mile to Carnegie is 4.56 mills; the additional 660 miles is at the rate of 0.909 mill.

The argument of the commission in support of its judgment in Metropolitan Paving Brick Co. *v.* Ann Arbor Railway Co. (17 I. C. C., 197) seems to be decisive of the like feature in this case. The syllabus in the reported case reads as follows:

"There is no transportation reason for making different rates on different grades of fire, building, and paving brick. In so far as it was held in the Stowe-Fuller case (12 I. C. C. Rep., 215) that one rate should be applied to fire, building, and paving brick on shipments between the points involved, the conclusion then reached is sustained by further and more exhaustive inquiry."

And in the body of the opinion:

"It is conceded by defendants that it costs no more to transport fire brick than any of the other kinds. Claims for loss and damage are nominal only, and there appears to be no material difference in this respect between the various kinds of brick transported. It is well settled that in making a classification of articles bulk, value, liability to loss and damage, and similar elements affecting the desirability of the traffic should be considered and articles which are analogous in character should ordinarily be placed in the same class."

There is no transportation reason for making different rates on the different ores from "Kennecott territory" to the Tacoma smelter. Nor is it done for a "transportation reason." It is done to suppress development of independent copper mines by independent miners and to enable the syndicate to control the "Kennecott territory" and to secure a monopoly of the copper mines therein which may be found to be highly valuable as producers. It is done as a part of their purpose to own and control the copper fields of Alaska and the output thereof. It is a rate in restraint of trade and commerce and in suppression of the development of the United States public domain.

The average of the several ton-mile ore rates on the longest haul over the Copper River & Northwestern Railway, from the "Kennecott territory" to the Cordova Wharf is 8.03 cents, or 80.3 mills per ton-mile. That is more than ten times the amount of the average rate of all freight hauled in the United States; it is eight to ten times higher than any other ore rate in American territory under similar conditions; it is unreasonable and unjust and ought to be reduced nine-tenths. Its maintenance at that excessive mark is more than an unjust and an unreasonable railroad rate; it is an unreasonably high rate levied by the Alaska Syndicate to prevent any independent copper development in the "Kennecott territory" and to enable the Kennecott Copper Corporation to acquire all valuable copper properties therein. If there is any power in or inclination on the part of the United States officials to reach these rate makers and secure some freedom to American citizens on the public domain in the copper region of Alaska, it ought now to be exercised in this case. And, to begin where it will do the greatest good to the greatest number, these copper-ore rates ought to be reduced nine-tenths. Any rate above one-tenth what they now are will be unjust and unreasonably high. The "actual value" clause in the official-rate sheet ought to be stricken out, or so far modified that it can no longer be used by the syndicate or the American Smelting & Refining Co. as a means of monopoly, oppression, and extortion.

THE SYNDICATE'S GENERAL COMMODITY RATE.

The following is an official arrangement and statement of the rates on specified commodities from Seattle to Cordova over the Alaska Steamship Co.'s boats and from Cordova to McCarthy on the Copper River & Northwestern Railway:

Carload rates in dollars and cents per ton of 2,000 pounds, from Seattle, Wash., to Cordova and Valdez, Alaska, via Alaska Steamship Co., and from Cordova, Alaska, to McCarthy, Alaska, via Copper River & Northwestern Railway are as follows:

| Commodities. | Seattle to Cordova and Valdez, Alaska. | Cordova to McCarthy, Alaska. |
|---|---|---|
| Hardware | $9.00 | $48.20 |
| Hay, double compressed | 12.00 | 28.60 |
| Hay, single compressed | 16.00 | 28.60 |
| Grain | 9.00 | 36.20 |
| Flour | 8.00 | 41.60 |
| Automobiles | 11.00 | 41.60 |
| Automobile parts | 11.00 | 41.60 |
| Machinery, mining | 11.00 | 30.00 |
| Machinery, no single piece weighing over 4,000 pounds | 11.00 | 41.60 |
| Machinery, single pieces or packages from 4,000 to 40,000 pounds | 14.00–24.00 | (1) |
| Coal, blacksmith | 8.00 | 12.60 |
| Coal, fuel | 6.00 | 11.60 |
| Furniture | 9.00 | 41.60–59.40 |
| Household goods, released | 16.00 | 59.40 |
| Household goods, unreleased | 15.00 | 89.10 |
| Sugar | 8.00 | 41.60 |
| Clothing | 11.00 | 59.40 |
| Dry goods | 11.00 | 59.40 |
| Electric appliances | 11.00 | 89.10 |
| Wire rope | 11.00 | 41.60 |
| Nails | 8.00 | 30.00 |
| Picks | 9.00 | 41.60 |
| Shovels | 9.00 | 41.60 |
| Burial cases | 11.00 | 83.20 |
| Billiard tables | 11.00 | 59.40 |
| Groceries | 9.00 | 41.60–59.40 |
| Fresh fruit | 11.00 | 72.80 |
| Stoves, Klondike | 11.00 | 72.30 |
| Cooking stoves and ranges | 11.00 | 59.40 |
| Bicycles | 11.00 | 118.80 |
| Tobacco, cut | 12.00 | 59.40 |
| Tobacco, plug | 12.00 | 48.20 |
| Cigars and cigarettes | 12.00 | 118.80 |
| Books | 11.00 | 59.40 |
| Window glass | 11.00 | 41.60 |

[1] Single pieces or packages 4,000 to 20,000 pounds, $45.76 to $60.32.

Rates from Seattle to Cordova and Valdez are carried in Alaska Steamship Co. tariff I. C. C. No. 10. Rates from Cordova to McCarthy are carried in Copper River & Northwestern Ry. I. C. C. 3, in connection with Alaska Freight Classification I. C. C. No. 2.

McCarthy is 190 miles distant from the Cordova Wharf and is the last public station on the road before reaching its final terminal at the syndicate's Kennecott mines. McCarthy is the inland terminal used by the public and those engaged in prospecting and mining in the region beyond the end of the railroad. There is always some competition from Seattle to Cordova by independent or "tramp" steamers, but none whatever from Cordova inland.

For the purpose of comparison of the local rail rate from Cordova to McCarthy, over the Copper River & Northwestern Railway, the following table has been arranged to show the combination rate from Chicago, Ill., to Seattle, Wash., and from Seattle to the Cordova Wharf, alongside the local rate on the railroad from Cordova to McCarthy, upon the same specified commodities.

The distance from Chicago to Seattle is 2,276 miles, from Seattle to Cordova Wharf 1,581 miles, and from Cordova Wharf to McCarthy 190 miles.

| Specified commodities. | Cordova to McCarthy. | Combination rate, Chicago to Cordova. | | |
|---|---|---|---|---|
| | | Chicago to Seattle. | Seattle to Cordova. | Chicago to Cordova. |
| Hardware | $48.20 | $40.00 | $9.00 | $49.00 |
| Hay, double compressed | 28.60 | 15.00 | 12.00 | 27.00 |
| Hay, single compressed | 28.60 | 15.00 | 16.00 | 31.00 |
| Grain | 36.20 | 12.00 | 9.00 | 21.00 |
| Flour | 41.60 | 15.00 | 8.00 | 23.00 |
| Automobiles | 41.60 | 60.00 | 11.00 | 71.00 |
| Automobile parts | 41.60 | 41.40 | 11.00 | 52.40 |

| Specified commodities. | Cordova to McCarthy. | Combination rate, Chicago to Cordova. | | |
|---|---|---|---|---|
| | | Chicago to Seattle. | Seattle to Cordova. | Chicago to Cordova. |
| Machinery, mining | $30.00 | $30.00 | $11.00 | $41.00 |
| Machinery, under 4,000 pounds | 41.60 | 30.00 | 11.00 | 41.00 |
| Machinery, to 40,000 pounds | 60.32 | 30.00 | 24.00 | 64.00 |
| Coal, blacksmith | 12.60 | 8.80 | 8.00 | 16.80 |
| Coal, fuel | 11.60 | 8.80 | 6.00 | 14.80 |
| Furniture | 59.40 | 49.00 | 9.00 | 58.00 |
| Household goods, released | 59.40 | 24.00 | 10.00 | 34.00 |
| Household goods, unreleased | 89.10 | 35.40 | 15.00 | 50.40 |
| Sugar | 41.60 | 35.00 | 8.00 | 43.00 |
| Clothing | 59.40 | 60.00 | 11.00 | 71.00 |
| Dry goods | 59.40 | 60.00 | 11.00 | 71.00 |
| Electric appliances | 89.10 | 32.00 | 11.00 | 43.00 |
| Wire rope | 41.60 | 22.00 | 11.00 | 33.00 |
| Nails | 30.00 | 15.00 | 8.00 | 23.00 |
| Shovels | 41.60 | 27.00 | 9.00 | 36.00 |
| Picks | 41.60 | 25.00 | 9.00 | 34.00 |
| Burial cases | 83.20 | 49.00 | 11.00 | 60.00 |
| Billiard tables | 59.40 | 29.00 | 11.00 | 40.00 |
| Groceries | 59.40 | 35.00 | 9.00 | 44.00 |
| Fresh fruit | 72.80 | 49.00 | 11.00 | 60.00 |
| Stoves, Klondike | 72.30 | 35.00 | 11.00 | 46.00 |
| Stoves and ranges | 59.40 | 26.00 | 11.00 | 37.00 |
| Bicycles | 118.80 | 50.00 | 11.00 | 61.00 |
| Tobacco, cut | 59.40 | 40.00 | 12.00 | 52.00 |
| Tobacco, plug | 48.20 | 40.00 | 12.00 | 52.00 |
| Cigars | 118.80 | 60.00 | 12.00 | 72.00 |
| Cigarettes | 118.80 | 40.00 | 12.00 | 52.00 |
| Books | 59.40 | 28.00 | 11.00 | 39.00 |
| Window glass | 41.80 | 18.00 | 11.00 | 39.00 |

Notice that the following commodities—hardware, hay, grain (oats, etc.), flour, auto parts, machinery, furniture, household goods, electric appliances, wire rope, nails, shovels, picks, burial cases, billiard tables, groceries, fresh fruit, stoves and ranges, bicycles, tobacco, cigars, cigarettes, books, and window glass—can be shipped from Chicago to Seattle, a distance of 2,276 miles, and from Seattle to Cordova, a distance of 1,581 miles, a total distance of 3,857 miles, for a less charge than the same articles pay from Cordova to McCarthy, only 190 miles, over the line of the Copper River & Northwestern Railway.

Why? Because the Kennecott Copper Corporation does not want the traffic. It does not want hardware, grain, flour, furniture, household goods, nails, shovels, picks, and so forth, nor prospectors, miners, nor copper operators in its "Kennecott territory." It does not want that region of public lands, larger than the State of Ohio, prospected or settled—at least not now—not until it gets title to the mineral wealth here. It now has one $55,000,000 mine there, but it wants more; high rates are an aid to its increasing monopoly—hence high rates.

But there are independent prospectors and mine owners seeking to develop property there, who have been crushed for 10 years with the weight of this burden, who want just and reasonable rates established. Many of these people have appealed to the Delegate from Alaska for assistance. These rates ought to be reduced nine-tenths, for they will then be excessive.

The Kennecott Copper Corporation and its subsidiaries, the Copper River & Northwestern Railway and the Alaska Steamship Co., ought not to have sympathy extended to them, or very much consideration. They have long violated every rule of justice and fairness with the single purpose of monopolizing the public wealth in this region and excluding American citizens from that participation therein which the statutes of the United States guarantee them, and they ought now to be treated with that rigor which lawbreakers deserve.

SYNDICATE PROFITS JUSTIFY REDUCED RATES.

The owners of the Copper River & Northwestern Railway and the Alaska Steamship boats are entitled to a fair profit on their investment beyond maintenance. A rate will not be made so low as to be confiscatory nor so high as to force the public to pay unreasonably for the service rendered. Luckily in this instance the admissions of the owners of the railway and steamship line in their New York Stock Exchange statement leave little to consider on that phase of the case.

The New York Stock Exchange statement was filed February 14, 1916, in order to persuade the exchange to admit the Kennecott Copper Corporation's stock to sale to the public, and the statements therein must be taken as binding on the corporation, though not on anyone else. On the seventh page of the statement is their representation that the net income of the Copper River & Northwestern Railway for the year ended March 31, 1915, was $1,135,083.78, while the account on page 6, for the Alaska Steamship Co. for the same period, shows a net income of $564,889.15, a total on both for the year 1915 of $1,699,972.93. On the fourth page this statement is made:

The income and profit and loss accounts of the Alaska Steamship Co. for the eight years ended December 31, 1915, were as follows:

| Year. | Earning less P. & L. adjustment. | Depreciation. | Dividends. | Surplus. |
|---|---|---|---|---|
| 1908 | $470,489.33 | $258,480.46 | $150,000.00 | $61,909.87 |
| 1909 | 661,837.21 | 245,278.50 | 250,000.00 | 166,558.71 |
| 1910 | 419,008.77 | 219,210.86 | | 199,797.91 |
| 1911 | 374,326.89 | 221,475.80 | | 152,851.09 |
| 1912 | 266,433.55 | 177,754.73 | 30,000.00 | 58,678.82 |
| 1913 | 241,198.62 | 171,108.21 | 120,000.00 | 49,911.59 |
| 1914 | 362,687.42 | 154,346.08 | 240,000.00 | 31,653.66 |
| 1915 | 564,886.15 | 134,311.55 | 330,000.00 | 100,577.60 |
| Total | 3,360,868.94 | 1,581,975.19 | 1,120,000.00 | 658,893.75 |

And on page 4 of the statement they represent that the earnings of the railway "since its acquisition by the Kennecott Copper Corporation has been in excess of $150,000 per month," or $1,800,000 per annum. It will, then, not be necessary to go behind these public representations on the question of profits. What its former owners may have made or lost is immaterial, for we may start with the profits of the present owners, and their representations in the New York Stock Exchange statement, in establishing present and future rates.

The owner of this railroad and steamship line made these statements of net income in its statement to the New York Stock Exchange to induce the public to buy its stock. It will not now be heard to deny the fact; otherwise it might be guilty of fraud in the sale of its stocks or even guilty of using the United States mails to defraud. Neither the public nor the United States is bound by those statements.

Another statement was made by this corporation, or in its presence and assented to by it, which amounts to the same thing. As a part of its campaign for putting its stock on the market and selling it to innocent purchasers, the New York Commercial, on Wednesday, March 1, 1916, on the front page, and other pages following, published a long account of the facts concerning the Kennecott mines, the Copper River & Northwestern Railway, and the Alaska Steamship Co. and their value and earnings. This statement was prepared by, or from statements made by, the Kennecott Copper Corporation, was assented to by it, and upon that statement the corporation is selling its stock on the market, and is as much bound thereby as by its statement to the stock exchange.

Near the end of this New York Commercial statement is a summary of the earnings of these two lines, and it says:

"The Kennecott Copper Corporation's copper production is now as follows:

* * * * * * *

"(5) The Copper River & Northwestern Railway and the Alaska Steamship Co. are earning $2,400,000 net per annum, combined, chiefly on transportation of Kennecott's ores, supplies, and materials. Such is the wonderful transformation in 16 years of an unknown desolate mountain peak in Alaska into the heart of a $165,000,000 copper organization, which is playing a leading rôle, and will play a bigger rôle, in the world's copper market."

Immediately preceding the summary just quoted from is this statement:

"At the present market value of Kennecott a value of about $55,000,000 is placed on the original Kennecott mine in Alaska, $43,175,000 on Braden, $11,265,000 on the Copper River Railroad and Alaska Steamship Co. (which cost $31,000,000 to construct and equip), $6,000,000 on the Beatson mine in Alaska, $33,385,000 for Kennecott's quarter interest in Utah Copper."

Now, on the first page of the New York Stock Exchange statement it is shown that all the properties comprising the wealth of the corporation were purchased in exchange for 3,000,000 shares of Kennecott stock, of which 205,760 shares were exchanged for the Copper River & Northwestern and 53 per cent of the Alaska Steamship Co. The Kennecott Copper Corporation properties are then advertised to the public in the Commercial as of the value of $165,000,000, which will fix the price of the stock at $55 and the purchase price of the Copper River & Northwestern Railroad and the Alaska Steamship Line at $11,316,800, substantially the sum stated by the Commercial in its "round up."

Assuming these statements to be correct, the net income of $1,699,972.93 shown in its New York Stock Exchange statement will pay interest on the $11,316,800 which the railway and

steamships represent at the rate of something over 15 per cent per annum.

The Kennecott Copper Corporation owns the railroad, the steamship line, the Kennecott mines, and the Beatson mines, and these are not different investments; they are one. Its profits are to be based upon its whole investment, and a glance at its New York Stock Exchange statement shows that its whole profit on its whole investment is a much larger pro rata amount.

On the fifth page of the Stock Exchange statement, at the bottom of the page, is the statement that its net income on the Kennecott and Beatson mines alone from May 27 to December 31, 1915, amounted to $7,709,503.90. Add to that sum its net income on the railway and steamship lines and it gives a grand total on the four Alaska elements of its enterprise of $9,409,476.83 profits for the year 1915.

Now turn to page 1277, Poor's Manual of Industrials, 1915, for the statement prepared by the Kennecott Copper Corporation of its net earnings for prior years. The statement there found connects with the New York Stock Exchange statement, and is as follows:

*Production and net earnings of Kennecott Mines Co. and 60 per cent of Beatson Copper Co.*

| Year. | Production. | Average selling price. | Net earnings. |
|---|---|---|---|
| | *Pounds.* | *Cents.* | |
| 1911 (8 months) | 22,854,000 | 12.03 | $1,754,500 |
| 1912 | 24,319,000 | 16.19 | 2,766,238 |
| 1913 | 17,729,000 | 15.15 | 1,636,579 |
| 1914 | 17,200,000 | 13.54 | 1,250,000 |
| 1915 (3 months) | 7,836,359 | 13.21 | 715,851 |

If these public statements issued by the Kennecott Copper Corporation are correct, and it will not be hard to deny them, the rates of Alaskan transportation to the public over its lines can be cut to the minimum without any real reduction in its millions of net earnings. A reduction of the public rate will not, of course, affect the rate at which the corporation hauls its own ore. A reduction of the public rate should be based upon its entire net earnings of both lines of transportation, but it is apparent that such reduction will not affect its own ore rate, so that there really will be no reduction except upon the small amount charged the public—probably less than 10 per cent of the whole net earnings. Therefore the reduction will only affect that much of the charge for transportation; the rest will remain just as valuable to the corporation as it now is. It will lose only the small reduction on the freight carried for the public—nothing on the much larger amount carried for itself.

Both the ore rates to Seattle and Tacoma and the general commodity rates both ways on both lines ought to be reduced 90 per cent; any rate above 10 per cent of the present rates on the Copper River & Northwestern Railroad and on the Alaska Steamship Co.'s boats on the charges now made for carrying property for the public will be unjust, unreasonable, and highly discriminatory against the Government and those settlers and independent copper miners whom the Government invites to locate copper claims in "Kennecott territory."

TANANA-YUKON RIVERS, ALASKA, RATES.

Since it acquired a monopoly of Alaskan traffic on the Tanana and Yukon Rivers, the White Pass & Yukon Route has increased the rates to the highest magnitude. It is not restrained by the railway commissioners for Canada (7th Rept., 1912, p. 223) and defies all restraint of the Interstate Commerce Commission of the United States, notwithstanding the decision of our Supreme Court in United States *v.* Pacific & Arctic Railway, and so forth (228 U. S., 87). The Pacific & Arctic Railway is on Alaskan soil and entirely within the jurisdiction of the Interstate Commerce Commission and American courts. A proper order for through, just, and reasonable rates over the connecting steamship lines from Seattle over the Pacific & Arctic Railway and connecting lines down the Yukon River to Alaskan points on the Yukon and Tanana Rivers would be within the jurisdiction of the Interstate Commerce Commission and could be enforced. Such through rates ought to be established and the defiance of the American steamship lines from Seattle to Skagway and the Pacific & Arctic Railway met with vigorous action by the American commission and courts. If this British corporation can control both gateways to the interior of Alaska, the Skagway and St. Michael terminii and the Yukon and Tanana Rivers routes, by its unlawful "control" of the Northern Commercial Co.'s steamers on the Yukon and its combination with the Alaska Steamship and Pacific Coast Steamship Cos. at St. Michael and Skagway, if it can break a through rate in defiance of our laws and continue to monopolize our interior Alaskan business in spite of the decisions of our Supreme Court, it is only because our officials are derelict in the performance of their duties.

The following table of specified rates from Seattle to Skagway and from Skagway to Fairbanks is prepared from the official tariff sheets:

*Table showing specified commodity rates from Seattle to Skagway, and from Skagway to Fairbanks, and the total charge per ton from Seattle to Fairbanks, over the White Pass & Yukon Route.*

| Specified commodities. | Seattle to Skagway. | Skagway to Fairbanks. | Seattle to Fairbanks. |
|---|---|---|---|
| Hardware | $5.00 | $66.00 | $71.00 |
| Hay D. Comp | 8.00 | 57.00 | 65.00 |
| Hay, S. Comp | 10.00 | 71.25 | 81.25 |
| Grain | 5.00 | 57.00 | 62.00 |
| Flour | 5.00 | 57.00 | 62.00 |
| Automobiles | 5.00 | 99.00 | 104.00 |
| Automobile parts | 5.00 | 99.00 | 104.00 |
| Machinery less than 4,000 pounds | 5.00 | 82.00 | 87.00 |
| Machinery, 4,000 to 40,000 pounds | 28.00 | | |
| Coal | 3.50 | 57.00 | 60.50 |
| Furniture | 5.00 | 164.00 | 169.00 |
| Household goods, released | 5.00 | 82.00 | 87.00 |
| Household goods, unreleased | 7.50 | 123.00 | 130.50 |
| Sugar | 5.00 | 57.00 | 63.00 |
| Clothing | 5.00 | 82.00 | 87.00 |
| Electric appliances | 5.00 | 82.00 | 87.00 |
| Wire rope | 5.00 | 57.00 | 62.00 |
| Nails | 5.00 | 57.00 | 62.00 |
| Shovels | 5.00 | 57.00 | 62.00 |
| Picks | 5.00 | 57.00 | 62.00 |
| Burial cases | 5.00 | 114.00 | 119.00 |
| Billiard tables | 5.00 | 82.00 | 87.00 |
| Groceries | 5.00 | 82.00 | 87.00 |
| Fresh fruit | 5.00 | 99.75 | 104.75 |
| Stoves, Klondike | 5.00 | 66.00 | 71.00 |
| Stoves and ranges | 5.00 | 82.00 | 87.00 |
| Bicycles | 5.00 | 164.00 | 169.00 |
| Tobacco, cut | 5.00 | 82.00 | 87.00 |
| Tobacco, plug | 5.00 | 66.00 | 71.00 |
| Cigars | 5.00 | 82.00 | 87.00 |
| Books | 5.00 | 82.00 | 87.00 |
| Window glass | 5.00 | 57.00 | 62.00 |

The above rates do not include wharfage rates at Seattle or Skagway, nor Canadian customs brokers' fees at Skagway.

There are, of course, exceptional conditions over the White Pass & Yukon Route to interior Alaskan points, which do not occur on the Copper River & Northwestern Railway. The Yukon River is closed by ice by November 1 each year, and is not open for navigation to the White Pass & Yukon Route before the 1st of June, and no Alaskan freight moves over this route during that period. But the expense stops when the boats do. The boats are put on the White Horse ways during that period and the crews discharged. During the summer period the navigation by water is cheap. The railroad is a narrow gauge and not expensive to maintain. The winter expenses are not chargeable to through freight, but to local freight to Canadian points between Skagway and Dawson.

There ought to be through freight rates established from Seattle to Alaskan points over the White Pass & Yukon Route and the present rates reduced 80 per cent. If the White Pass & Yukon Route had not conspired with the Alaska Commercial Co. and unlawfully bought "control" of the Northern Navigation Co. steamers and forced them out of the competitive trade, there would be no legal impediment to reducing these rates that amount, and it ought not to be permitted to violate the antitrust and commerce laws of the United States, and then profit so greatly by its own wrong. Certainly the United States is not powerless to protect its citizens in Alaska from this British corporation, and it ought to do it in this case with a view to preventing any further looting of American territory and Alaskan shippers in the future.

THE MONOPOLY OF ALASKAN WHARVES.

The Alaska Steamship and Pacific Coast Steamship Cos. either jointly or severally own or control the wharves at Ketchikan, Juneau, Skagway, Cordova, Valdez, Nome, and St. Michael, over which more than nine-tenths of Alaskan freight and passengers go to the interior of Alaska. They have entered into combination at Skagway with the owners of all independent wharves for their closing, and only the wharf under their control is now used. There is no other wharf at Cordova than the one owned and controlled by the owners of the Alaska Steamship Co., and the St. Michael Wharf, over which all freight and traffic is carried to that port and to the Yukon interior, is also controlled, if not owned, by them.

There are two wharves at Valdez only, and the facts relating to their corporate control are typical of the conditions at other Alaskan wharves. The town of Valdez owns one of these wharves. It is in every way equal to the wharf controlled by

the Alaska Steamship Co. It extends equally to the deep waters of the bay, is large, safe, and has equally good facilities for the loading and unloading of freight and passengers. The town council has by law fixed low rates of wharfage over it and also over the dock and wharf controlled by the Alaska Steamship Co. But the steamship company refuses to land its boats at the town dock, and will not land either freight or passengers there, and refuses to submit to the rates fixed over the wharf controlled by it, and in defiance of the wishes of shippers and the town authorities continues to land all its boats, freight, and passengers at the dock and wharf controlled by it, and all shippers are there charged excessive wharfage rates, greater than those fixed by the town authorities. The wharfage rates so charged at the wharf and dock controlled by the said steamship company are unjust and unreasonable. The town authorities of the town of Valdez have endeavored to control the rates over the other wharf and to compel its owners to reduce their rates to correspond to those fixed by the town and charged at the town wharf, but have not been able to do so, because the outer end of both wharves is beyond the town line and upon the tide lands held in trust by the United States for the future State.

The Alaska Steamship and the Pacific Coast Steamship Cos., by their ownership and control of the landings, wharves, and docks at the principal ports in Alaska, all of which are situated upon the tide lands belonging to the public, are enabled to and do monopolize and control the trade over them, and do charge and force the shippers to pay excessive, unjust, and unreasonable rates of wharfage thereon. Both at Juneau and Valdez the Alaska Steamship and Pacific Coast Steamship Cos. unloaded and stored large quantities of coal brought from ports in British Columbia on their boats. This coal was stored for sale to the people at excessive rates of about $14 per ton. The town authorities were able to and did buy coal at the same British Columbia mines and procured it to be shipped on independent boats, and stored on the town wharf and sold it at $. per ton to the people of the town and still made a good profit. A suit was instigated by the steamship companies and brought against the town authorities to restrain them from using town funds for that purpose, and the court held it was not within their power, and the steamship companies immediately advanced the price of the coal to the old rate, where it has since been maintained. The control of these wharves is thus used to compel the people of the town to pay these excessive and unfair prices for coal and other necessities, and both of said companies refuse to give the towns or the people there, or shippers, equal or fair facilities in the handling of coal and other necessities thereon, and refuse to land the coal at the town docks and thus create and maintain an unjust and burdensome monopoly in such necessities to their own great profit and to the great injury of independent shippers and the people of the towns. They refuse to pay taxes on the value of the docks or the property or business thereon to the towns, or at all.

ET TU, BRUTE!

Section 22 of the commerce act provides "that nothing in this act shall prevent the carriage, storage, or handling of property free or at reduced rates for the United States, State or municipal government," and the following data is not intended as a complaint against the Alaskan transportation lines because they give reduced rates to the Alaskan Engineering Commission and to other Government bureaus. The facts are presented to show that they can carry freight for the shipping public at the same rates; also to show that Government officials have knowledge that excessive rates are charged to private shippers, and to show a standard by which to judge excessive rates, and for other purposes.

The White Pass & Yukon Route officials, in connection with the Alaska Steamship and Pacific Steamship Cos. have proposed to the Alaskan Engineering Commission to carry its railroad freight for the coming season from Seattle to Nenana, within 50 miles of Fairbanks, on the Tanana River, for $30 per ton. The same transportation companies in 1915 charged the miners and shippers of Fairbanks a flat and minimum rate of $62 for hardware and machinery, while exceptions raised both rates—hardware to $71 and machinery as high as $115 per ton. If these companies can carry general railroad supplies and materials for $30 per ton flat, they can carry hardware and mining machinery for the same price. The Alaska Transportation Co., of Fairbanks, does carry it as a private carrier for $26 per ton. Just what rebate the Northern Commercial Company gets under its secret contract of "control" with the White Pass & Yukon Route is not officially stated, but it is publicly declared they have a $35-per-ton rate—a rebate of $20 per ton less than the lowest rate to the public.

The Alaskan Engineering Commission, appointed by and representing the President of the United States in locating and constructing the Government railroad from Seward to Fairbanks, Alaska, advertised for bids for carrying its freight for the season of 1915 from Seattle to Seward and Anchorage. On April 13, 1915, the Alaska Steamship Co. made an offer in writing to carry the freight for the Government. The offer was accepted, and it carried the Government freight to those points for the prices named. The following table shows in separate columns the Alaska Steamship Co.'s freight rates specially quoted for 1915 to the Government railway and the regular tariff to the public at Seward and Anchorage upon the same commodities:

| Specified commodities. | Government rate. | | Public rate. | |
|---|---|---|---|---|
| | Seward. | Anchorage. | Seward. | Anchorage. |
| Cement | $5.00 | $6.00 | $6.00 | $6.00 |
| Coal, bulk, 2,240 pounds | 4.00 | 5.00 | 6.00 | 7.00 |
| Coal, sacks, 2,000 pounds | 4.00 | 5.00 | 6.00 | 7.00 |
| Fuel oil, in iron tanks | 6.00 | 7.00 | 11.00 | 13.00 |
| Grain, all kinds, 2,000 pounds | 6.00 | 7.00 | 9.00 | 11.00 |
| Gasoline, benzine, naphtha, etc | 10.00 | 11.00 | 15.00 | 15.00 |
| Hay, double compressed in bales, 2,000 pounds | 8.00 | 9.00 | 12.00 | 14.00 |
| Hay single compressed, 2,000 pounds | 15.00 | 16.00 | 16.00 | 18.00 |
| Lumber, not over 32 feet long, per thousand | 9.00 | 10.00 | 12.00 | 14.00 |
| Lumber, over 32 feet long, per thousand | 10.00 | 11.00 | 15.00 | 16.00 |
| Shingles, per thousand (4 bundles) | 1.00 | 1.00 | 1.50 | 1.75 |
| Merchandise, not otherwise specified | 6.00 | 7.00 | 11.00 | 13.00 |
| Meat, fresh, poultry, etc | 20.00 | 21.00 | 25.00 | 28.00 |
| Horses and cattle, less than 10, each | 29.00 | 30.00 | 30.00 | 30.00 |
| Horses and cattle, 10 and over, each | 24.00 | 25.00 | 25.00 | 25.00 |
| Machinery, boilers, cars, etc.: | | | | |
| 4,000 pounds or under | 6.00 | 7.00 | 11.00 | 11.00 |
| 4,000 to 6,000 pounds | 7.00 | 8.00 | 14.00 | 14.00 |
| 6,000 to 8,000 pounds | 8.00 | 9.00 | 15.00 | 15.00 |
| 8,000 to 10,000 pounds | 9.00 | 10.00 | 16.00 | 16.00 |
| 10,000 to 12,000 pounds | 10.00 | 11.00 | 17.00 | 17.00 |
| 12,000 to 14,000 pounds | 11.00 | 12.00 | 18.00 | 18.00 |
| 14,000 to 16,000 pounds | 12.00 | 13.00 | 19.00 | 19.00 |
| 16,000 to 18,000 pounds | 13.00 | 14.00 | 20.00 | 20.00 |
| 18,000 to 20,000 pounds | 14.00 | 15.00 | 21.00 | 21.00 |
| 20,000 to 22,000 pounds | 16.00 | 17.00 | 22.00 | 22.00 |
| 22,000 to 24,000 pounds | 18.00 | 19.00 | 23.00 | 23.00 |
| 24,000 to 26,000 pounds | 20.00 | 21.00 | 24.00 | 24.00 |
| 26,000 to 28,000 pounds | 22.00 | 23.00 | 25.00 | 25.00 |
| 28,000 to 30,000 pounds | 24.00 | 25.00 | 26.50 | 26.50 |
| 30,000 to 32,000 pounds | 26.00 | 27.00 | 28.00 | 28.00 |
| 32,000 to 34,000 pounds | 28.00 | 29.00 | 29.50 | 29.50 |
| 34,000 to 36,000 pounds | 30.00 | 31.00 | 31.00 | 31.00 |
| 36,000 to 38,000 pounds | 32.00 | 33.00 | 32.50 | 32.50 |
| 38,000 to 40,000 pounds | 34.00 | 35.00 | 34.00 | 34.00 |
| Powder, gun and blasting | 15.00 | 16.00 | 20.00 | 22.50 |
| Refrigerator service | 20.00 | 31.00 | 40.00 | 44.00 |
| Rails | 6.00 | 6.50 | 11.00 | 13.00 |
| Railroad materials | 6.00 | 6.50 | 11.00 | 13.00 |

Special attention is called to the discrimination in the rates for coal, hay, grain, gasoline, lumber, merchandise, powder, and refrigerator service. These are commodities needed by every settler in a new country, and it costs the Alaska Steamship Co. no more to land the ordinary shippers' freight on the dock at Seward or at ships' tackle at anchorage than it does that for the United States.

UNITED STATES STATUTES NOT ENFORCED IN ALASKA.

The interstate-commerce laws and antitrust acts of Congress provide fully for criminal prosecutions and equity suits in United States and Territorial district courts against violation of the laws. All these acts provide that it shall be the special duty of United States district attorneys, under the direction of the Attorney General, to enforce the provisions of the law—but in Alaska it is not done, except in a single instance, which proves the rule. A shipper or anyone having a specific cause of complaint under the commerce act may also apply to the Interstate Commerce Commission in Washington for relief. But "Heaven is high and Washington is far away"; prayers from Alaska have to travel a pioneer and high-rate route to reach the latter place, and no shipper has ever attempted it. The merchants have long "paid the freight," and charged it against the miner, but no one has sought the trail to relief.

When I came here as Delegate in 1909 the miners and shippers of Alaska began to appeal to me for relief from the distressing burdens of transportation monopoly and extortionate freight rates. Upon examination it seemed there was ample enactment by Congress, but no enforcement by officials charged with duty.

Prior to the beginning of the case of the Humboldt Steamship Co. against White Pass & Yukon Route, filed before the Interstate

Commerce Commission in May, 1909, no effort had been made to establish the jurisdiction of the commission over Alaskan transportation rates, or to control them in any way. On May 24, 1909, Mr. Stephen Birch, the representative of the Alaska Syndicate, wrote to the Delegate from Alaska in Congress, attempting to prevail upon him not to appear before the Intertsate Commerce Commission in support of his platform pledge made to Alaskans under date of July 16, 1908, that:

"I shall stand for * * *

"13. The encouragement of all legitimate railroad construction in Alaska; the building of a trunk line railroad from the coast to the interior under Government supervision; the strict Government control of transportation rates by rail or boat, and fair and not excessive rates for freight and passenger traffic.

"14. I shall oppose in every way possible the control of transportation or mining business within Alaska by the Guggenheims or any other dangerous combination."

Mr. Birch's communication was accompanied by a copy of letters from prominent officials and lawyers, and by a brief prepared by the then attorney (now the president) of the White Pass & Yukon Route in support of the argument that the Interstate Commerce Commission had no jurisdiction over Alaskan railroad or other rates because Alaska was a "District" and not a "Territory." It is needless to say neither the letter from Mr. Birch, nor the argument against jurisdiction had any effect on my action.

On May 26, 1909, the suit of the Humboldt Co. was filed before the Interstate Commerce Commission in Washington. The White Pass & Yukon Route attorneys filed their objection to the jurisdiction of the commission over transportation in Alaska. The Copper River & Northwestern Railway Co. was not made a party, but it intervened, and the attorneys for the Alaska Syndicate filed their appearance and a brief against jurisdiction. While I was not an attorney of record for the Humboldt Co., I prepared and filed a brief in support of the jurisdiction of the commission. After a long contest the commission, by a divided decision, on June 6, 1910, held it had no jurisdiction or control over Alaska rates, Commissioners Clements, Cockrell, and Lane dissenting. (19 I. C. C. Report, 81 and 105).

Thereafter, on July 21, 1910, the Humboldt Co. brought suit in the Supreme Court of the District of Columbia praying for a mandamus against the Interstate Commerce Commission to compel it to assume jurisdiction and to execute the law in Alaska. The railroad attorneys filed their brief in the case against the jurisdiction claim, and the court decided against the Humboldt Co. An appeal was then taken to the court of appeals, and finally to the Supreme Court of the United States. I appeared as one of the attorneys for the Humboldt Co. in the Supreme Court of the United States and prepared that part of the brief for the Humboldt Co. supporting the claim that Alaska was a Territory, and therefore the interstate-commerce laws were in force there. On April 29, 1912, the Supreme Court decided the case on all points in favor of the jurisdiction of the commission in Alaska and issued its mandate requiring the commission to enforce the law in that Territory (224 U. S., 474).

Thereupon, on May 24, 1912, three years after the original suit was begun before it, the Interstate Commerce Commission issued an order requiring all companies engaged in Alaskan transportation to file their tariff of rates with it under the law, and it assumed jurisdiction over Alaskan transportation and freight rates. This decision of the Supreme Court of the United States not only settled the jurisdiction and duty of the Interstate Commerce Commission in Alaskan transportation matters, but as well fixed the duty of United States district attorneys in Alaska to enforce the law there. The decision also afforded individual shippers in Alaska authority to institute proceedings before the commission in Washington to protect themselves against unreasonable or discriminatory rates or other damage to them by violation of the interstate-commerce law.

Many complaints from shippers and the people of Alaska kept coming to me, and many demands to secure relief from violations of the law. These were referred to the commission and other officials, but no action was taken. After waiting for a reasonable time, I determined if no official whose duty it was to act did so I would again press the matter to determination. In the summer of 1914, in pursuance to the secret contract made between the White Pass & Yukon Route and the Northern Commercial Co. for the control by the British company of the Commercial Co.'s boats, there was a tremendous increase in rates on the Yukon and Tanana Rivers. The people of that locality appealed to me for assistance and protection, and in pursuance of my promise to give it I turned to the official whose duty it is under the law to enforce its provisions when violated. Among the many complaints received was the following:

THE SAMSON HARDWARE CO. (INC.),
*Fairbanks, Alaska, November 13, 1914.*

Hon. JAMES WICKERSHAM,
*Delegate from Alaska, Fairbanks, Alaska.*

DEAR SIR: Inclosed herewith please find a few expense bills from the Northern Navigation Co., the Merchants' Yukon Line, and the Alaska-Yukon Line, or, as better known, the "White Pass," showing the rates we have had to pay on goods shipped to Fairbanks from outside points.

The bills from the Northern Navigation Co. from 1913 will show where a flat rate of $40 per ton was named, while those of the Alaska-Yukon Navigation Co. for the same year show a rate of $25 per ton from Skagway, plus $5 per ton from Seattle to Skagway, or a net of $30 per ton. During the season of 1912 we had a contract with the Merchants' Yukon Line at a flat rate of $45 per ton, without exceptions.

The bills of the White Pass this year show a base rate of $55, with exceptions on practically every class of merchandise shipped into the country. If this rate is continued, it will cause a number of the operators to close down, as there is but little placer ground left in the country that will pay to work under existing transportation rates.

We wish you would kindly bring this matter to the attention of the proper authorities and endeavor to obtain relief from the present intolerable conditions existing.

Thanking you for your efforts in advance, we are,
Yours, sincerely,

THE SAMSON HARDWARE CO. (INC),
J. E. BARRACK, *Manager.*

The following communication was thereupon addressed to the United States District Attorney at Fairbanks, Alaska:

FAIRBANKS, ALASKA, *November 16, 1914.*

R. F. ROTH,
*United States District Attorney, Fairbanks, Alaska.*

SIR: I am informed that in the recent sale to the White Pass Co. the Northern Commercial Co. received $500,000, to be paid in freight at a fixed and greatly reduced rate, thereby securing to itself as a shipper an advantage over all other shippers of freight into the interior of Alaska. While it is not possible at this moment to furnish proof, yet the United States district attorney has power under the Sherman antitrust and other laws for the punishment of conspiracy to prevent the restraint of trade to compel the production of the contract between the White Pass and the Northern Commercial Co., and thereby disclose the true situation and to punish those found to be violating the United States Statutes.

The White Pass Co. has increased the rate of transportation for 1914 over that of 1913 by so large an amount as to justify the most stringent efforts to control and curb the power of this British corporation to tax our people unjustly, and it is your duty as district attorney to act in the matter. Since the decision of the United States Supreme Court in the case of Interstate Commerce Commission v. United States ex rel. Humboldt Steamship Co. (224 U. S., 474; 56 L. Ed., 849), the interstate-commerce laws of the United States have been in force in Alaska, and will also give you much assistance.

Your attention is also specially called to the contract between the White Pass Co., the Northern Commercial Co., and the old N. A. T. & T. Co., which created and maintained the monopoly of transportation and high rates from 1906 to 1912, a copy of which is in the office of the United States district attorney at Juneau, and which was also a contract in restraint of trade, and did the people of the interior and of Fairbanks great injury. The Government ought to proceed against the parties to these contracts in restraint of trade by indictment, and, since the injury occurred in this district, it is here that the indictments ought to be found.

If there is any assistance I can give in aid of the destruction of this rate monopoly I shall be glad to do it, and will if requested.

I will send a copy of this letter to the Attorney General, Washington, D. C., and will call in person there to urge action as soon as I reach Washington in December.

Respectfully,

JAMES WICKERSHAM,
*Delegate from Alaska.*

On December 31, 1915, having had no acknowledgment of my letter addressed to the district attorney, a letter was written to the Attorney General, with which was inclosed a copy of the letter to the district attorney, fully acquainting him with the facts and praying for action by the Department of Justice. Soon the following letter was received from the Attorney General:

DEPARTMENT OF JUSTICE,
*Washington, D. C., January 13, 1915.*

Hon. JAMES WICKERSHAM,
*Delegate from Alaska, Washington, D. C.*

SIR: The department is in receipt of your letter of the 31st ultimo, with inclosures, stating that in 1914 the steamboats of the Northern Navigation Co. plying the Yukon and Tanana Rivers were sold to the White Pass & Yukon Navigation Co., and that you are informed and believe that as a condition of the sale the White Pass Co. agreed to transport the freight of the Northern Commercial Co., which is affiliated with the Northern Navigation Co., at much lower rates than those charged other shippers.

You state that the result has been to put other shippers out of business, and you ask that an investigation be made to ascertain whether your information in this regard is correct; and if so, that appropriate action be taken.

United States District Attorney Roth, of Fairbanks, Alaska, whom you have also written on the subject, has been directed by telegraph to make a prompt investigation of your charge, with a view to developing all the material facts.

The receipts for freight payments inclosed in your letter are herewith returned as requested.

Respectfully,
For the Attorney General.

G. CARROLL TODD,
*Assistant to the Attorney General.*

Nothing more was heard from the Department of Justice officials and more than a year later the following letter was written to the Attorney General:

WASHINGTON, D. C., *February 22, 1916.*

Hon. T. W. GREGORY,
*Attorney General, Washington, D. C.*

MY DEAR SIR: On December 31, 1914, I wrote a letter to the Attorney General of the United States in relation to the excessive transportation charges made by the White Pass & Yukon Co. in connection with the Northern Navigation Co. and the Northern Commercial Co. upon the Yukon and Tanana Rivers in the interior of Alaska. With that letter I sent you a copy of a letter which I had previously written, on November 16, 1914, to R. F. Roth, United States district attorney, at Fairbanks, Alaska, upon the same subject. With my letter of December 31, 1914, I also inclosed a copy of a contract which had been in force between the transportation companies on the Yukon River for many years, together with other data in relation to the matter. In answer to my communication of December 31 I received your letter of January 13, 1915, in which you acknowledged the receipt of my letter and informed me that you had directed District Attorney Roth, by telegraph, to make a prompt investigation of the charges contained in my letter with a view to developing all the material facts.

I respectfully request you to inform me what, if any thing, was done by Mr. Roth in answer to your telegram or subsequently in the matter and what, if anything, the Department of Justice did in relation to it, and if any further proceedings are to be taken in relation thereto. I will thank you to send me a copy of any correspondence with District Attorney Roth about the matter, if compatible with the public interest to do so.

This inquiry is directed to you because the Delegate from Alaska has taken the matter of transportation rates and general conditions up with the chairman of the Committee on the Territories of the House with a view to securing some legislation for the appointment of a public utilities commission in Alaska, with probable control over transportation rates, and it seems desirable to present to him what the department has done heretofore in connection with it.

Very respectfully,

JAMES WICKERSHAM,
*Delegate from Alaska.*

In answer to that request the Department of Justice wrote me the two letters following:

DEPARTMENT OF JUSTICE,
*Washington, D. C., February 29, 1916.*

Hon. JAMES WICKERSHAM,
*House of Representatives, Washington, D. C.*

DEAR SIR: The department has received your letter of the 22d instant relative to the alleged sale of certain steamboats by the Northern Navigation Co. to the White Pass & Yukon Navigation Co. on condition that the White Pass Co. would transport the freight of the Northern Commercial Co. (which is affiliated with the Northern Navigation Co.) at much lower rates than those charged other shippers.

As you know, this matter was referred to United States Attorney Roth at Fairbanks, Alaska, for investigation. Mr. Roth conducted an investigation on the spot, and reported that he could obtain no evidence there of such an arrangement.

Subsequently, in accordance with his suggestion, an examination of the records of the Northern Commercial Co. at Chicago and San Francisco was made by agents of the department, and their reports were duly forwarded to him as a basis for further consideration of the matter. He has made no further report. He has been requested to advise the department by wire of the present status.

Respectfully,

G. CARROLL TODD,
*Assistant to the Attorney General*
(For the Attorney General).

—

DEPARTMENT OF JUSTICE,
*Washington, D. C., March 30, 1916.*

Hon. JAMES WICKERSHAM,
*House of Representatives, Washington, D. C.*

DEAR SIR: Replying further to your letter of February 22, the department has been advised by District Attorney Roth, of Fairbanks, Alaska, that he was unable to find any ground for action under the Sherman law in the terms and conditions of the sale of certain steamboats by the Northern Navigation Co. to the White Pass & Yukon Navigation Co.

There were certain features of this transaction, however, which it is thought should be brought to the attention of the Interstate Commerce Commission, and this has been done.

Very respectfully,

G. CARROLL TODD,
*Assistant to the Attorney General*
(For the Attorney General).

The Department of Justice having thus refused to act, and the announcement being made that the Transportation Trust intended to immediately increase the Alaskan rates, I was appealed to by the shippers and miners in every part of Alaska to take action in their name for such relief as might be had in private suit under the law.

Thereupon a complaint was prepared setting out in considerable detail the acts complained of and entitled: *Before the Interstate Commerce Commission, Washington, D. C.: The Samson Hardware Co. (Inc.) and James Wickersham, residents of Fairbanks, Alaska, for themselves and all other persons similarly situated, complainants, against The Pacific & Arctic Railway & Navigation Co., the American Yukon Navigation Co., the British Yukon Railway Co., the British Yukon Navigation Co. (Ltd.), the Northern Commercial Co., the Northern Navigation Co. (Ltd.), the Kennecott Copper Corporation, the Alaska Steamship Co., the Copper River & Northwestern Railway Co., the Pacific Coast Co., the Pacific Coast Steamship Co., and the Valdez Dock Co., defendants.*

On April 10, 1916, the complaint was delivered to the Interstate Commerce Commission with the following communication:

WASHINGTON, D. C., *April 10, 1916.*

GEORGE B. MCGINTY,
*Secretary Interstate Commerce Commission, Washington, D. C.*

SIR: Herewith I hand you a copy of the complaint and petition for the investigation of the transportation conditions in Alaska, being entitled The Samson Hardware Co. et al. *v.* The Pacific & Arctic Railway & Navigation Co. et al; also a copy of a post route map of Alaska with the lines of transportation superimposed thereon; also a copy of a letter dated November 13, 1914, from the Samson Hardware Co. authorizing me to use their name in this connection; also a large number of receipts given by the White Pass & Yukon Route, by the Northern Navigation Co., and by the American Yukon Navigation Co. to the Samson Hardware Co. for the carriage of freight in the years 1913 and 1914; also a copy of the New York Exchange statement dated February 14, 1916, made by the Kennecott Copper Corporation; and also a copy of a letter from Mr. Stephen Birch to James Wickersham, dated May 24, 1908, together with copies of attached letters; also a copy of a bid by the Alaska Steamship Co., dated April 13, 1915, addressed to the Alaskan Engineering Commission offering to carry freight from Seattle to Seward and Knik Anchorage; also a copy of a contract, dated March 26, 1906, between the British Yukon Navigation Co., party of the first part, and the North American Transportation & Trading Co. and the Northern Navigation Co., the parties of the second part. If you will advise me of the number of copies of the complaint in this action which will be required for service I will furnish them to you for that use.

Very truly, yours,

JAMES WICKERSHAM,
*Delegate from Alaska.*

Some criticism was made of the detailed statements in this complaint, and an amended copy was prepared, with the same parties, and filed with the commission on June 3, accompanied by the following communication:

WASHINGTON, D. C., *June 3, 1916.*

Hon. B. H. MYERS,
*Chairman Interstate Commerce Commission, Washington, D. C.*

SIR: Herewith I send to the Interstate Commerce Commission for filing nine copies of the complaint in the case of the Samson Hardware Co. et al. *v.* The Pacific & Arctic Railway & Navigation Co. et al. I respectfully request to have the case filed and set for hearing at such convenient time as will best suit the commission. I shall be here during the whole session of Congress, and have, I think, sufficient evidence to make at least a prima facie case, and I respectively request that I be heard as a witness in the matter.

Respectfully,

JAMES WICKERSHAM,
*Delegate from Alaska.*

Thereupon on June 5 the commission issued the following order, No. 8975, for a general investigation of Alaskan transportation:

ORDER.

At a general session of the Interstate Commerce Commission, held at its office in Washington, D. C., on the 5th day of June, A. D. 1916. No. 8975.

THE ALASKA INVESTIGATION.

*It appearing,* That the rates, practices, rules, and regulations governing the interstate transportation of persons and property, subject to the jurisdiction of this commission, wholly by railroad within Alaska and partly by railroad and partly by water between points in the United States and points in Alaska, and from points in Alaska, through Canada, to points in Alaska, and the ownership, control, and operation of wharves in Alaska used as facilities in connection with said transportation, has been the subject of formal and informal complaints to the commission:

*It is ordered,* That a proceeding of inquiry and investigation be, and the same is hereby, instituted by the commission on its own motion into the rates, practices, rules, and regulations of common carriers governing the transportation of persons and property, subject to the jurisdiction of this commission, wholly by railroad within Alaska, and partly by railroad and partly by water between points in the United States and points in Alaska, and from points in Alaska through Canada to points in Alaska, and also the rates, practices, rules, and regulations of said common carriers in connection with the operation of wharves used in the course of such transportation.

*It is further ordered,* That said inquiry shall ascertain, among other things, whether mineral products are mined or produced by or under the authority of common carriers by railroad subject to the jurisdiction of this commission engaged in the transportation thereof, or whether such common carriers own, in whole or in part, any mine or mines from which are produced minerals which they transport or whether such common carriers are directly or indirectly interested in any mine or mines from which are produced minerals which they transport.

*It is further ordered,* That this proceeding and inquiry be conducted with a view to the issuance of an order or orders requiring such respondents to cease and desist from charging, demanding, collecting, or receiving rates and charges for and from enforcing their practices, rules, and regulations governing the transportation of persons and property between the points herein named in so far as the same may be found to be unlawful, and requiring such respondents to substitute and thereafter to put in force and effect such rates, rules, practices, and regulations relative to the transportation of persons and property as aforesaid as may be found just and reasonable and not unjustly discriminatory, unduly prejudicial or unduly preferential, including such rail proportional rates and such joint rail and water rates over such through routes as, in the opinion of the commission, should be established between the points of origin and the various destinations referred to herein.

*And it is further ordered,* That the Alaska Steamship Co., Pacific Coast Steamship Co., Copper River & Northwestern Railway Co., Northern Navigation Co. (Ltd.), Pacific & Arctic Railway & Navigation Co., British-Yukon Railway Co., British-Yukon Navigation Co. (Ltd.),

British Columbia-Yukon Railway Co., American-Yukon Navigation Co., Valdez Dock Co., Kennecott Copper Corporation, Northern Commercial Co., and Pacific Coast Co. be, and they are hereby, made respondents to this proceeding.

By the commission.

[L. S.] GEORGE B. MCGINTY, *Secretary.*

On June 7 the following acknowledgement was received from the chairman of the commission:

INTERSTATE COMMERCE COMMISSION,
*Washington, D. C., June 7, 1916.*

Hon. JAMES WICKERSHAM,
*House of Representatives, Washington, D. C.*

DEAR SIR: This will acknowledge the receipt of your letter of the 3d instant, together with nine copies of the complaint of the Samson Hardware Co. et al. *v.* Pacific & Arctic Railway & Navigation Co. et al.

The commission will file the complaint and serve it in accordance, with the usual method, as outlined in our rules of practice. Before service can be made, however, it will be necessary for you to forward to the commission 16 additional copies of the complaint.

The commission in conference Monday decided to enter into an investigation of the transportation of passengers and property in Alaska on its own motion.

Very respectfully, yours,

B. H. MEYER, *Chairman.*

Later the following communications were received from the secretary of the Interstate Commerce Commission:

No. 8976. INTERSTATE COMMERCE COMMISSION,
OFFICE OF THE SECRETARY,
*Washington, June 30, 1916.*

Hon. JAMES WICKERSHAM,
*House of Representatives, Washington, D. C.*

DEAR SIR: The petition of the Samson Hardware Co. et al. against the Pacific & Arctic Railway & Navigation Co. et al. under the act to regulate commerce and acts amendatory thereof or supplementary thereto has been filed.

A copy of the petition has been forwarded to each carrier with notice to satisfy the complaint or answer the same in writing within 20 days from this date.

By the commission:

GEORGE B. MCGINTY, *Secretary.*

—

INTERSTATE COMMERCE COMMISSION,
OFFICE OF THE SECRETARY,
*Washington, July 24, 1916.*

Hon. JAMES WICKERSHAM,
*Delegate from Alaska, House of Representatives,*
*Washington, D. C.*

DEAR SIR: In connection with the Alaska Investigation Docket No. 8975, the commission desires to notify all boards of trade, chambers of commerce, and similar commercial and shipping organizations interested in Alaska traffic of the nature and scope of the investigation, the dates and places of hearing, etc., and to invite their cooperation. I shall be obliged if you will furnish me the names and addresses of such interested organizations and also of persons who, if called as witnesses, could give material information concerning the matters under investigation.

Yours, very truly, G. B. MCGINTY, *Secretary.*

The names and addresses of interested Alaskan organizations and witnesses were furnished to the commission as requested, and on July 31 and August 1 copies of the order of June 5 were forwarded to the Fairbanks Commercial Club and other similar bodies in Alaska and to witnesses, and specific demands made on the White Pass corporations, the Alaska Steamship Co., the Pacific Coast Steamship Co., the Copper River & Northwestern Railway Co., the Northern Navigation Co., the Pacific Coast Co., the Kennecott Copper Co., and the Valdez Dock Co. for information required by the Interstate Commerce Commission in the general investigation.

The two proceedings are now pending before the commission, and it will be necessary for shippers and those having information touching the allegations in the general order and in the Samson Hardware Co. complaint to present the same at the times and places fixed for hearings when announced by the commission. It is now up to the people of Alaska to make their complaints with specific proofs to the commission, with the view of curbing the hitherto unrestrained control of these Alaskan transportation companies and securing a judgment from the commission reducing their extortionate rates, requiring them to desist from giving rebates and discriminatory rates, and to establish just and reasonable through tariffs, to the end that the development of Alaska may be had under fair control and without unlawful combinations and unfair mercantile burdens upon the merchants and people of the Territory.

About the time the original complaint was filed in the Samson Hardware case the Alaska Steamship Co., the Pacific Coast Steamship Co., and other allied companies issued local freight and passenger tariff sheets increasing the coastwise rates to Alaskan ports 50 per cent, and since the complaint in the Samson Hardware case was filed the Alaska Steamship Co. and the Pacific Coast Co. have filed tariff increases on coast rates about 100 per cent, the White Pass & Yukon Route Railway and its inland steamboat connection also filed its tariff sheet with the commission increasing the rates to Alaskan points on the Yukon and Tanana Rivers by from $5 to $8 per ton. When advised of these increases, and on August 4, I filed the following protest against their allowance:

WASHINGTON, D. C., *August 4, 1916.*

B. H. MEYER,
*Chairman Interstate Commerce Commission,*
*Washington, D. C.*

SIR: I am informed that the Pacific Coast Co. the Pacific & Arctic Railway & Navigation Co., and the Alaska Steamship Co. have filed with the commission freight tariffs increasing the rate on freight from Puget Sound to Alaskan points. Pacific Coast Co., I. C. C. No. 17, effective August 25, increasing by $1 per ton; the Pacific & Arctic Railway & Navigation Co., I. C. C. No. 54, effective August 25, increasing the rates from Skagway to points on the Yukon River from $5 to $8 per ton; the Alaska Steamship Co., I. C. C. No. 15, effective August 16, increasing rates from Puget Sound to Alaskan points 100 per cent.

I respectfully protest against the allowance of these increases until the whole matter of the investigation now on foot by the commission shall be concluded, and I also protest against their allowance until the hearing of the cases of the Samson Hardware Co. et al. *v.* The Pacific & Arctic Railway & Navigation Co. et al., now pending before the commission, in which case I am one of the complainants and attorneys. I respectfully request that these rates be not confirmed until final judgment in these matters can be had, and that the whole question of these increases be considered with these cases.

Respectfully,

JAMES WICKERSHAM,
*Delegate from Alaska.*

In conclusion I appeal to those public officials in Alaska whose duty it is to enforce the interstate commerce and anti-trust laws of the United States to perform their duty and to assist in curbing the extortionate and discriminatory rates of these violators of the United States statutes. If such assistance is given, the people of Alaska, who are being taxed one-half of the total output of the country for transportation, can be protected and extortion and unlawful combination and monopoly prevented. I appeal to the people of Alaska, and especially to the mercantile and business organizations, to come forward now, while there is opportunity, and assist in bringing these unjust charges upon our commerce and trade within due and legal restraint. Let the people of Alaska realize that these unreasonable extortions come out of their earnings, for every pick and shovel, every pair of shoes and pound of groceries, every dollar of gold from placer or quartz mine, the household goods going into the country and the products of your labor transported to or in or from Alaska are thus heavily and unjustly burdened. *How can you help? By gathering your receipted bills for freight shipments over any and every route of transportation to, from, or in Alaska to show what you have actually paid for freight; your receipted bills for groceries, household goods, machinery, coal, lumber, and all other mercantile purchases to show the prices you are obliged to pay to assist in developing the Territory; and by preparing a written statement by letter showing how these excessive rates and prices actually affect you in your business or home, and then send me the receipted bills and your statement, so I may have a general view of the burden, and also a special view of how it affects both the greater shipper and the most humble home in Alaska.* These receipts and statements properly tabulated will tell the story and do more to secure just, fair, and reasonable rates than a month's talk from your lawyer. Will you help? It is your duty to assist in securing a just and fair control of transportation rates now or you must be prepared to suffer in silence for years to come.

I appeal also, and finally, to the Secretary of the Interior, for if these combined criminal interests are not brought within the law the Alaska Government Railway, with which you are so intimately and officially connected, will become merely a connecting link between their steamships on the coast and their steamboats on the Tanana and Yukon Rivers. It will not avail the people of Alaska to give them reasonable rates over the Government road only to permit the combined Transportation Trust to add the excessive increases at both ends.

## The Good-Roads Bill.

### EXTENSION OF REMARKS
OF
### HON. E. W. SAUNDERS,
OF VIRGINIA,
IN THE HOUSE OF REPRESENTATIVES,
*Friday, August 4, 1916.*

Mr. SAUNDERS. Mr. Speaker, the favorable action of the two bodies of Congress on the conference report on the good roads bill, marks the culmination of a movement to enlist the activities of the Federal Government in the direction of a new phase of domestic development, and one that will engage the

interest of a greater proportion of the general public than would be attracted by any other form of Federal activity. This movement has been actively prosecuted within the last decade, but over one hundred years ago Gen. Washington, and later Thomas Jefferson, advocated Federal aid for roads. Indeed it was due to the efforts of Jefferson, and other far-seeing, clear-visioned men of that day, that the Cumberland Road was begun. It is worthy of note that the prosecution of that enterprise, even in that day of small revenues, did not in anywise embarrass the Treasury, while the results secured, were of inestimable public benefit. This fact should allay the apprehensions of those statesmen, chiefly from the great cities, who view the passage of this measure with dismal forebodings, and sniff the odor of pork in every item which it carries. They may compose their souls with patience, for while an era of extensive road building is at hand, the expenditures will be far short of the sums that ought to be appropriated in this direction. It is a lamentable fact that while nations are often extravagant, they rarely err, in this respect, in the direction of domestic development. No one of the great nations of the world carries any heavy burden of indebtedness due to expenditures for internal enterprises of a civil character.

The public debts of these nations are composed of items that in the main are in nowise related to the homely and prosaic projects of domestic enterprise. These enterprises, unlike appeals for military expansion, do not touch the imagination, and can not be used as material for exciting public apprehension, and disturbing the public equilibrium. Hence the appropriations in this direction will always be carefully considered, and the likelihood is that the appropriating body will err on the side of parsimony, rather than of extravagance. But having in mind the benefits that will ensue from the appropriations for road development, and particularly the universality of these benefits, there is every reason to believe that these appropriations will be made from year to year on an increasing and expanding scale.

It is a singular fact that while this country has aided many forms of internal improvement, has built railroads, dredged rivers and harbors, and irrigated deserts, it has neglected the greatest and most manifestly needed of these improvements—namely, road building. When this measure went to the President for his approving action, and he affixed his signature to the bill, a great piece of constructive legislation was completed, one rich with the promise of better things for the farmers who, with ungrudging toil, have laid the stable foundations of national prosperity, while the rich streams of Federal appropriations have been applied to enterprises unrelated, save in a remote degree, to the development of rural United States on a scale commensurate with its deserts. The men who are responsible for this road bill have builded better than they knew. It is not sectional either in theory or application. Therefore it is essentially just. It knows no South, no North, no East, no West, but dispenses its benefits so equally, and so impartially, that no community earnestly desiring aid, and fairly entitled to receive it, will knock at the door in vain.

Under its beneficient operations the ordinary wagon road, the road that leads to all other roads, the universal road that serves every use—the local use, the county use, the State use, and the national use—will be developed not only for the benefit of the local community, but in the result, for the benefit of the whole country. The vast network of roads that in the aggregate the operations of this measure will raise to a higher level of excellence, will furnish improved facilities for that vast volume of commodities that are hauled from the farms to find their way into interstate commerce, and ultimately into world traffic. Whatever expands this traffic, and diminishes the cost of its transportation, confers a national benefit. Plainly this is what a better system of roads secured through national aid will inevitably accomplish.

The basic foundation upon which the prosperity of this Republic rests, is the gigantic annual production of the farms of the United States, a production that last year totaled over $10,000,000,000. In the first leg of their journey to the markets, whence they will be distributed to the four corners of the earth in the ceaseless ebb and flow of international traffic, the products of the farm must be hauled over the local roads to the highways of commerce, whether those highways are railroads, or hard roads of an extensive and permanent character. In time the return traffic must pour back over the same roads. How idle, then, to talk of a system of road aid which would be limited to the construction, or maintenance of a few great trunk lines of hard roads of the most expensive character! It is one of the merits of this bill that while a State, in its discretion, may use its allotted funds to build the latest types of hard roads on an extensive scale, it may also use the same fund to construct roads relatively insignificant, but of profound significance and intense value to the local community. Like the former and the latter rains which fall upon the just and the unjust alike, the benefits of this measure will affect road building on the largest, as well as the humblest scale.

There is no community with a road project of a meritorious character, that will not find itself within the purview of this bill. It has been well said that the question of good roads is a problem that concerns everybody. At one end of every road is the farmer with his crops for sale. At the other end of the road, is the city with its people waiting to be fed, its merchants with goods to sell, and the railroad with its trains ready to haul the farm products one way, and the industrial products on the return trip. To whose advantage is it, then, to have good roads to the villages, to the towns, to the great cities? Clearly it is to the advantage alike of the merchant, the farmer, the city, and the railroad.

Who will be benefited by this bill? Practically every individual in the 100,000,000 souls who compose this great Republic. Compare its benefits with the benefits conferred by the other measures which Congress annually passes, the public building bill, the rivers and harbors bill, the bills for draining swamps, and watering deserts, and the most ardent advocates of these confessedly meritorious measures, will be constrained to admit that in its effect upon the commerce and life of the whole Nation, the act for road construction through Federal aid, is of greater interest, and holds within itself possibilities of greater value for all the people of the entire Republic, than the other measures in their collective aggregate.

I have been somewhat surprised at the opposition to this bill, not at the size of this opposition, for its numbers have been small, something like 60 of our total membership, but at the quarter from which it has come. This opposition has been largely confined to the members from the great cities, who seem to think that the benefits of the measure will be limited to the farmers. Even if this were true, it would not be a valid objection, for in comparison with the beneficiaries of the huge appropriations that have been made in other directions, the farmers will not receive a tithe of their deserts under this bill. As a rule the benefits of appropriations for domestic development are largely confined to the localities in which they are immediately expended. But we should not withhold our support on that account. In this view the farmers should have opposed every appropriation that has been made for harbor development since the beginning of this Government. But they have not maintained so shortsighted, selfish, and ignoble an attitude. They have cheerfully approved these appropriations, though they were well aware that the immediate and palpable benefit of their expenditure would be in the localities where the expenditure would be made. The representatives from the cities which have grown rich and flourishing under a policy which has established and maintained their commercial facilities by Government expenditures, should not adopt the selfish and narrow attitude that aid of this character should be confined to city communities.

The measure of our prosperity, is the prosperity of that agriculture which sustains all the urban communities. It is an old illustration that should our cities be destroyed, they would be built again, but destroy our agriculture, and grass would grow in the streets of our proudest cities. No greater burden can be taken from the back of agriculture, than the burden of bad roads. It afflicts the farmer every day of his life. It is an indirect tax, but it is the greatest tax that he carries. It touches him in the repairs of his vehicles, the strain upon his draft animals, in the inadequate loads that he hauls, and in the time which is unnecessarily consumed upon the road. But there is another phase to this matter. Social life in the country is dependent upon the roads of the community. The progress of civilization, the uplift of our people, the interchange and adjustment of our civic views, depend upon the extent, and facility of our social intercourse, when mind meets mind, and neighbors come to know each other in the amenities of social life. The extent of this intercourse is limited by the facility of travel. So that in the result, not only on the material and economic side, but on the social side as well, the uplift of a community is intimately related to the condition of the roads in that community.

I find the same thought elaborated in the speech of a colleague.

It has been shown that as a result of good public roads, school attendance has been materially increased, social intercourse between the units of farming communities has become more frequent, and the interchange of opinions on political, economic, and educational problems has been stimulated. In counties favored with good roads all the social activities of the community have received an impetus in a forward direction.

Some interesting figures have been furnished by the Department of Agriculture showing the cost of transporting farm products over the bad roads of the United States, in compari-

son with the cost of like transportation over the good roads of Europe. In the first place it costs the American farmer an average of about 23 cents per ton per mile to haul his products to the river landing, or the railroad depot. The aggregate of this annual charge upon American agriculture has been estimated at $600,000,000, a colossal burden, and one susceptible of easy remedy through the betterment of our highways. By far the greater portion of this cost is due to bad roads. It may be remarked in passing that these are the roads which the Federal bill is designed to improve. The cost of transportation over the roads of Europe run as follows: In France the average cost of hauling farm produce to market is about 11½ cents per ton per mile, in England 12 cents, in Italy 9 cents, in portions of Germany from 11 to 13 cents, in other portions of that country as little as 5 cents a mile. Compare with these figures the cost of like transportation in the United States which runs from 19, to 27 cents per mile. What is the explanation of this difference in cost, one so much to our discredit, and so great a handicap on our farmers?

The explanation is easy, good roads on the one hand, bad roads on the other. The situation, however, is not wholly bad, the cloud has a silver lining. In the last decade many States, and many counties, have come to realize the secret of their backwardness, and have made wonderful strides in the direction of better roads. The thrill of this impulse has not been confined to any one section. The big States, and the little States, the poor States, and the rich States, Massachusetts, and Florida, New York, and California, the North, the South, the East, and the West have united in this great forward movement, and the results attained have been little short of wonderful. But while much has been done, much more remains to be accomplished. The long pull, the strong pull, and the pull altogether remains to me made. At this point the Federal bill comes in. It does not seek to interfere with, or overthrow any work that is in progress in the States. It holds out a helping hand. It proffers cooperation. The terms on which its aid will be afforded are simple. Any community in any State seeking to construct a highway, or a section of a highway, whether on an extensive, or a limited scale, will submit its project to the highway commission of that State. The engineers of the highway commission will examine and pass on the merits of the project submitted. If approved by them, they in turn will submit the project to the engineers of the United States Department of Agriculture. If these engineers find the project good, then a price is fixed for the work, and the specifications drawn. When the project is completed according to these specifications, and the road is accepted by the Federal department, then a warrant is drawn on the Federal Treasury for one half of the agreed cost of construction. The other half is paid by the State and the community, upon the terms arranged between them. If the work is done in a State like Virginia, the State, in many instances, will aid the community to the extent of one-half of the amount charged against the community. This aid would leave the community chargeable with only one-fourth of the entire cost. In brief this is the scheme of the Federal bill, popularly known as the good-roads bill. Its possibilities of benefit to the entire country are enormous. For the first year, operations under this measure will not be extensive.

The department must organize its forces and get ready for this work. It will be necessary to provide an adequate supply of inspecting agents, engineers, and experts, and create the elaborate machinery required for a new departure in governmental activity. But after the first year, the operations of this road bureau will expand at a marvelous rate. The growth of the green bay tree is usually cited to illustrate rapid development, but I predict that wonderful as the growth of that tree may be, it will take second place to the record-breaking pace that will be set by the expanding activities of this bureau. This is but a beginning, a small plant that will be watered and fostered. The proverb truly says, no beginning of things, however small, is to be neglected, for continuance makes them great. From little things, we go on to greater things. Look at rural delivery, that giant doing public service every day, save Sundays, rain, or shine, summer, or winter, over good roads, and bad, and recall that the span of its life is only about a decade and a half.

Mr. Speaker, the way to this legislation has been long and much encumbered by the obstructions of selfish opponents, heedless of any interest but that of their immediate localities. But everything is well that ends well, and we realize that we have come to the turning of a long lane, the friends of this measure, feel that they have fought a good fight, and having kept the faith with their constituents, they tender this bill to the country in the full assurance that our faith in its merits will be justified by the results of the severest tests to which it may be subjected. I wish that I could body forth in appropriate terms my vision of what this legislation will effect in the next decade. It will establish the prosperity and happiness of all the people of the entire Republic upon a basis as imperishable and enduring as the foundations of the everlasting hills.

**Congressman James T. McDermott Makes His Annual Report to the Voters of His District.**

---

## EXTENSION OF REMARKS

OF

# HON. JAMES T. McDERMOTT,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. McDERMOTT. As the Representative in Congress from the fourth congressional district, I submit for the consideration of the people of that district a brief report of the legislation passed and acted upon by Congress at the last session. It is but right that I should acquaint the people of the district of my activity regarding the many bills that were considered and which directly and indirectly concern the welfare of the constituency which I have the honor to represent. Ever since I have been in Congress it has been my policy to make an annual report of this kind to my constituents.

I was first elected to Congress on my promise to work and vote for all measures in the interest of the working masses. I gave my word that I would always be found on the side of the workingman when it came time to vote on any of the labor measures before Congress, and the CONGRESSIONAL RECORD, the book that contains the true proceedings of the daily work of Congress, bespeaks the faith I have kept by showing that my vote has always been registered with labor. I have supported and voted for every bill indorsed by organized labor.

### REPRESENTS THE VIEWS OF HIS CONSTITUENTS.

In this connection I desire to say a few words regarding my vote on the immigration bill. Representing the constituency that I do, which is composed largely of Bohemian, German, Irish, Lithuanian, Polish, and other foreign-born citizens, I could not consistently, after receiving the views of these people, vote in favor of the literacy test. I am convinced that foreigners of sound body, mind, and morals, of good and patriotic intentions toward our country and institutions, and of sufficient means to justify the assumption that they will not become public charges, should be welcomed into our midst and made to feel that they are at home. They should be extended all the privileges of our laws and liberty that our Constitution provides.

The father of Abraham Lincoln could not read or write, and if he had been born abroad and had come seeking admission to our country he would have been excluded under the literacy test as provided in the immigration bill.

When Kosciusko and Pulaski appeared at our shores and offered their services for the cause of liberty and independence of our country no one asked them, "Can you read?" One of these Polish patriots gave up his life for the cause of independence, and the United States Congress, in grateful appreciation of the services rendered by these foreign-born heroes, authorized an appropriation for the erection of a monument in their honor in the city of Washington. And in my opinion the Polish people are to be congratulated on the active support that the Democratic administration has given their people both here and in Poland, and as a Representative in Congress of a district that has many Polish-American citizens I heartily agree with the State Department in their efforts to help these deserving people.

### VOTED AGAINST THE USE OF THE STOP WATCH ON HUMAN BEINGS.

One of the most important legislative battles that came before the Sixty-fourth Congress was the fight over the Tavenner amendment prohibiting the use of the stop watch in Government arsenals and navy yards. I supported the Tavenner amendment and did all within my power to bring about its passage. The stop watch is the principal feature of the so-called Taylor system of "scientific shop management." I do not believe the man lives who can successfully defend before an audience of average American citizens the Taylor system as Mr. Taylor himself described it.

Imagine any man confronted on the public platform with Mr. Taylor's own words, used in describing how he installed the Taylor system at the plant of the Bethlehem Steel Co.:

The tasks were all purposely made so severe that not more than one out of five laborers (perhaps even a smaller percentage than this) could keep up.

The motive behind the stop watch and other speeding-up features of Taylorism is not efficiency, as the average man understands the meaning of the word, but an inordinate desire for a greater profit from the toil of man, and back of that desire is greed.

In its last analysis the Taylor system is simply the "scientific" grinding down of the spirit, the hopes, the ambitions, as well as the physical bodies, of those who toil; and for what? In order that dividends may be increased. The thing is too inhuman and too murderous to be imposed on beasts of burden, to say nothing of imposing it upon fellow human beings. It may be said to the credit of the average American employer that he has refused to go to anything like the extremes that Mr. Taylor recommended.

As so well stated by the gentleman from Colorado [Mr. KEATING], the issue in the fight against the Taylor system is between those who want to hold a stop watch on some one else and those who have had the stop watch held on them.

ATTEMPT TO INSTALL SYSTEM IN GOVERNMENT ARSENALS.

Strange to relate, the Chief of Ordnance wants to install the Taylor system in the Government arsenals. The Sixty-fourth Congress deserves the unstinted thanks of the workers of the Nation for inserting in the Army, Navy, fortification, and sundry civil bills a provision prohibiting the use in Government arsenals and navy yards of the stop watch and other objectionable speeding-up features of the Taylor system.

This provision reads as follows:

Amendment offered by Mr. TAVENNER:

"*Provided*, That no part of the appropriations made in this act shall be available for the salary or pay of any officer, manager, superintendent, foreman, or other person having charge of the work of any employee of the United States while making or causing to be made with a stop watch, or other time-measuring device, a time study of any job of any such employee between the starting and completion thereof, or of the movements of any such employee while engaged upon such work; nor shall any part of the appropriations made in this act be available to pay any premium or bonus or cash reward to any employee in addition to his regular wages, except for suggestions resulting in improvements or economy in the operation of any Government plant."

The enactment of this legislation was accomplished in the face of the bitter opposition of the great manufacturers' associations of the United States.

Considering the powerful influences that opposed it, considering the treacherous parliamentary whirlpools through which it had to pass, and the dangers which beset it at every stage of its legislative journey, the workingmen of the Nation are to be congratulated upon its final passage by Congress.

ANTI STOP-WATCH LEGISLATION IMPORTANT TO ALL WORKERS.

This legislation is of importance to all workingmen, whether they are employed in Government establishments or not, because if the Taylor system could have been installed in Government plants, the fact could have been made use of to the disadvantage of employees in private plants where the installation of the system is contemplated. Private employers would be in the strategic position of being able to assert to their protesting employees that the Taylor system had been indorsed by the United States Government, and that if it was an inhuman and bad system Uncle Sam would not be putting his official stamp of approval upon it by introducing it in the Government arsenals and navy yards.

The Commission on Industrial Relations spent thousands of dollars in an investigation of "scientific management." The conclusions reached by disinterested investigators and students should be read by any man who doubts that these so-called systems are to-day the gravest danger facing the workers in their struggle for freedom and well-being. Briefly, the commission found:

(1) That the cardinal principle of "scientific management" is the pitting of each workman against the fellow workman at his side in a race for greater and greater output per minute and hour and day.

(2) That constant dread of discharge is deliberately implanted in every worker's mind in order to drive him forward at top speed.

(3) That this killing competition of worker against worker is the most efficient scheme ever devised to break down organization among employees by creating interests that are not common, but absolutely the reverse of common.

(4) That it is a fact, proved over and over again, that employers operating under scientific management reduce the basic rate of pay to about that prevailing before the system was introduced, as soon as they have speeded up their employees to the point where the latter are earning more than the prevailing rate of wages, as a result of their increased speed and productiveness. In other words, the workers' share of their increased production is taken away from them as soon as the standard has been set and the employers have demonstrated that the increased rate is possible.

(5) After the basic rate has been reduced, the employee must keep up the same nerve-racking race or he will not receive even the lower rate.

In the words of Andrew Furuseth, "they will scrap the whole human race unless some power stops them."

If organized labor had established its right to exist and were strong enough to take an equal voice in administering so-called scientific management systems, it might be a different story. But with labor already fighting against odds for the right to organize, the net result of the Taylor system if generally adopted would be simply to destroy unionism and leave the workers helpless.

WILL PLACE REPORTS AND TESTIMONY OF FAMOUS INDUSTRIAL RELATIONS COMMISSION REPORT WHERE ALL CONSTITUENTS MAY CONSULT THEM.

I desire to announce that I have 14 sets of the final report and complete testimony of the hearings of the famous Industrial Relations Commission, which I will place at labor centers and public libraries in my district where they will be available to the largest possible number of the men and women of my district. This is considered the most remarkable document that has ever been turned out of the Government Printing Office, and will have its effect on legislation for the next half century to come.

TAKES PRIDE IN ASSISTANCE GIVEN PROGRESSIVE LEGISLATION.

When the present session of Congress comes to an end, legislation of great importance to the country will have been enacted into law. Since the opening of the Sixty-second Congress in 1911, the first Democratic Congress since 1895, more reform and progressive legislation, more legislation for the benefit of the great masses, has been placed on the statute books than in any period of our history. I believe I am justified in taking some pride in the long list of achievements in the interest of the American people, for I have worked faithfully to bring these great reforms about.

Because of a Democratic administration at Washington we now elect United States Senators by popular vote, and we have a publicity law which insures the honest election of Senators and Representatives.

We have the income tax, which places the burden of taxation on those best able to pay, and nets to the Treasury nearly $140,000,000 a year.

We have the Underwood tariff law, the first honest downward revision of the tariff in a quarter of a century, and we will have a nonpartisan tariff commission which will prevent the tariff from being used as a football of politics in the future.

We have a new banking and currency system which has emancipated the American people from the money changers of Wall Street.

We have the Federal Trade Commission and the Clayton antitrust law for the protection of honest business men and the encouragement of honest business.

We have passed a law for the physical valuation of railroad properties in order to enable the Interstate Commerce Commission to fix just passenger and freight rates.

We have enacted liberal pension laws to take care of the old soldier and his widow in their old age.

And what about the 25,000,000 men in this country who labor by the sweat of their brows? For years they have been petitioning Congress for legislation, but not until after the election of a Democratic majority in the Sixty-second Congress were these petitions heard.

We have a Secretary of Labor, and labor now occupies a prominent position at the President's Cabinet table.

We have an eight-hour law on works done for the Government as well as work done by the Government.

We have the Children's Bureau for the protection and welfare of the youth of the country (Miss Julia Lathrop, of Chicago, appointed the head of this bureau), and we have a child-labor law.

We now have laws for the safety and protection of workmen in hazardous occupations, such as the phosphorus match act, the Bureau of Mines act, and Bureau of Safety Appliances.

We now have a seaman's law which has liberated the seamen, and we have exempted labor unions from the operation of the antitrust law, thereby liberating the laboring man and elevating him above property and the almighty dollar.

ADEQUATE DEFENSE PROVIDED FOR.

But this is not all. When this session ends we will have provided for the protection, security, and lasting peace of a hundred million people. We will have provided an Army and a Navy sufficient and able to protect the interests and honor of our Republic and of its citizens everywhere. We do not want war. These preparations are not for war. These are preparations against war. We love peace. God grant that there will never be another war. But why are we unprepared? Who is responsible for this condition? Who has been in power for 16 years before the Wilson administration? At no time in the history of our country has any administration equaled the present in the matter of providing adequate national defense.

While making adequate preparations against war, the greatest achievement of the administration is that our leader has kept us at peace with the world. While civilized Europe has been involved in the greatest slaughter of humanity during the past two years, President Wilson has kept us at peace.

FRATERNAL INSURANCE MEASURE.

Referring to the interpleader insurance bill which recently passed the House of Representatives, I wish to say that should this bill become a law it will afford a much-sought relief to the fraternal insurance companies in the United States. The outstanding feature of the bill is the giving to insurance companies the right to file bills of interpleader whenever a case occurs where two or more persons make claim to the benefits of a policy of a deceased member. The State courts had jurisdiction of cases brought within the State, although other suits may have been pending for the recovery of the sum due. The Moore bill, if passed, will compel the rival claimants to appear in a Federal court and assert their claims, treating the litigants fairly and deciding which is entitled to the benefits of the policy. Heretofore it has been possible for rival claimants under a policy of insurance to make recovery where but one sum was due, this happening where suit was brought in different States. One can readily conceive that the passage of the measure will give the fraternal insurance societies the opportunity to file a bill of interpleader in the Federal court and thus prevent a number of suits arising in various States. Under the present practice, where there are several claimants, it is necessary for the officer or officers of a fraternal insurance society to appear, with counsel, wherever a suit is brought. The expense of affording transportation of the officer and attorney and for counsel fees is necessarily borne by the members of the insurance society, which usually proves expensive and a hardship to be borne by the members of the organization.

This bill has passed the House of Representatives and is now in the hands of the Senate, and strong efforts will be made to have it considered and passed at this session. It is a meritorious measure and will result in the speedy adjudication of cases that heretofore have lingered in the courts for years.

CONGRATULATED BY SPEAKER CHAMP CLARK.

I wish to report to the voters in our district that I have been constantly in attendance at the sessions of Congress. I believe my record for faithfulness in this connection will compare favorably with that of any other Member.

In this connection it affords me much pleasure to state that the great Speaker of the House of Representatives, the Hon. CHAMP CLARK, has written me the following letter, calling attention to this phase of my service in Congress:

THE SPEAKER'S ROOMS,
HOUSE OF REPRESENTATIVES,
*Washington, D. C., August 14, 1916.*

Hon. JAMES T. MCDERMOTT,
*House of Representatives.*

MY DEAR MACK: This has been a very eventful session of Congress and one in which the Democratic Party has done more good for the United States and the American people than has been done in 20 years.

I congratulate you on your faithfulness in attendance and in the steady and constant discharge of your duties. You have been regularly at your post and have voted right.

I wish you luck in the impending campaign. The longer a man stays in the House the better Representative he ought to make.

Your friend,

CHAMP CLARK.

THIS IS CONGRESSMAN M'DERMOTT'S FINAL WORD TO THE VOTERS.

Upon this excellent record I shall go before the people of our district for renomination at the Democratic primaries, Wednesday, September 13.

This will be the only communication that will be sent to the voters of our district from me. Any other purporting to come from me will be sent out by my opponents, whose methods will be repudiated by all fair-minded voters of the district. As in the past, my campaign will be conducted in a dignified and manly manner befitting the position I aspire to, and I trust I will have the support of the voters of our district at the primaries on September 13.

**Read, Ponder, Act.**

## EXTENSION OF REMARKS

OF

# HON. HALVOR STEENERSON,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 18, 1916.*

Mr. STEENERSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address by Andrew Jay Frame, president Waukesha National Bank, before the State Bankers' Association of Colorado, at Denver, July 21, 1916.

The address is as follows:

MONOPOLIZATION V. INDEPENDENT BANKING.

[Address by Andrew Jay Frame, president Waukesha National Bank, Waukesha, Wis., before the State Bankers' Association of Colorado, at Denver, July 21, 1916.]

Eternal vigilance is not only the price of liberty, but also of our vested rights.

Fifteen years ago the leaders of the American Bankers' Association, under the guise of providing an elastic currency for us, attempted to deliver our independent banking system into the hands of the monopolists under a branch banking system, which utterly failed.

This octopus has again revived, and it would seem the advocates have corralled the powers that be and the Democratic doctrine of an avowed enmity toward monopolization is dead, unless House bill 15734 is buried beyond resurrection. If this bill passes, then, in common parlance, Wall Street has swallowed the Democratic Party.

Let us briefly diagnose the case.

House bill No. 15734 reads practically as follows, as cited by Mr. Paul M. Warburg before the New York State Bankers' Association:

"Authorizing any national bank with $1,000,000 capital and surplus or over, located in a city of more than 100,000 inhabitants, to establish branches within the corporate limits of the city, and authorizing any national bank located in any other place, with the approval of the Federal Reserve Board, to establish branches within the limits of its county, or within a radius of 25 miles of its banking house, irrespective of county lines, etc."

To my mind the passage of such a bill would be signally destructive, and also would be the stepping-stone to a general monopolistic branch banking system, which would practically destroy the 25,000 to 30,000 independent banks of the United States. In 1901 and 1902, when some—not all—big bankers in a few big cities attempted to commit the American Bankers' Association to such a scheme, and in the discussion of which I had the honor of taking a material part, these branch-bank advocates were signally defeated. I feel confident this similar scheme will not prevail, as soon as its destructive results are fully comprehended by the Democratic Party. I am informed, on what I believe to be good authority, that a few big city bankers are now fostering this plan, because they desire to skim the cream from the whole country. No honeyed reasons advocating branch banking can begin to compare with the wonderful upbuilding power of the independent banking system of the United States.

As a new generation is born every 20 years and told to keep away from the fire, permit quotations from my address before the State Bankers' Association of Michigan, in 1902, and also from another in Oklahoma, in 1913, both of which show clearly the destructive results of branch banking.

To my mind this bill should read:

A BILL.

First. To revolutionize and monopolize the banking business of the United States.

Second. To pull down what we have been unbuilding for years.

Third. To substitute 100 or 200 great central banks, with 25,000 to 30,000 tails to their big kites, thus destroying our independent banking system.

Fourth. To skim the cream from the country to enrich the exchequers of the great central banks and to increase the people's tax burdens.

Fifth. To overthrow the party in power if this effort to monopolize is enacted into our laws.

In 1901 and 1902 we heard the soothing statement that branch banking in the United States would be evolutionary and not revolutionary. Does any one believe that, even if the opening wedge is now but driven in? We read it took 100,000 men 30 years to build the big Pyramid of Egypt. Would it take a Yankee over three months to duplicate the contract if the cash were forthcoming to pay the bill?

Great Britain has approximately 74 great central banks and over 7,000 branches. Over 86 per cent of her banking power is monopolistic. France has a few great central banks, and Germany likewise. In both of these countries these banks practically dominate the commercial banking business. In London, Paris, and other large cities wherein branch banks are authorized the great central banks throw out their arms all over those cities, thus overthrowing many independent banks therein. Mr. A. B. Stickney, in 1901, said there were five branch banks competing for the cherry in one small city of Canada and none paid local taxes.

With these facts before us, may we not well ask: If Congress should authorize branch banking in the United States, will not the great central banks in competing for the business of city and country openly or tacitly say to the well-to-do State, as well as national independent bankers, "Sell out to us or we will establish a branch bank near yours," and the result will be a fight to the finish if the local bankers will not sell? What would become of the investments of more than a million of stockholders who now own the local banks of the country? If any banker thinks he is strong enough to cope with that system, then let him sit idly by and fail to register his protest against con-

gressional legislation in favor of internal branch banking. I fear the result will be like Ben Franklin's description of quack doctoring: "I was well. I wanted to be better. I took physic and died."

Again: Mr. Stickney, in an address before the Marquette Club of Chicago, in 1901, said that "Eleven of the banks of Great Britain paid last year 20 per cent or more, and the average dividend paid by all the other banks was 13.8 per cent." This, of course, was by the central banks, as branches make no dividends. In 1900 the national banks of the United States paid 8 per cent.

Query No. 1. Is the meat in this coconut philanthropic on the part of the advocates of branch banking, or is it that the general central banks may skim the cream from the whole country to enlarge the profits of the central banks?

No. 2. Have we no vested rights that the monopolist is bound to respect?

No. 3. As branch banking means monopoly and revolution in banking, are you ready to surrender?

No. 4. Are these not serious questions for the country banker to ponder over and even a majority of the city bankers, as branches would be established in the cities as well?

After more than a half century of arduous labor in building up a good bank and encouraging local industries, I am led to urge that we do unto the monopolist as he would do unto us, but under David Harum's philosophy, "Do it to the monopolist fust by preventing legislation permitting it."

STRIKING COMPARISONS.

In my 1902 Michigan address, heretofore referred to, I compared results of panic conditions from 1836 to 1902 in Great Britain under its branch banking system with our independent system. Time forbids more than a sum up of records showing Great Britain had six recorded panics, with £106,000,000 of liabilities, as against four panics in the United States, with £81,000,000 liabilities.

Further: The American Encyclopedia for 1893 says as to the Australian branch banking system: "That out of 28 banks, with 1,700 branches, 13 of them, with 800 or 900 branches, failed in six months ending May, 1893, for the stupendous sum of £90,000,000." This sum in that single swoop exceeds the total liabilities of all the failed banks in the United States from 1863 to 1902, although the banking power of the United States was many times that of Australia. When we compare historical facts with unsupported assertion unjustly vilifying our banks it seems the banking business of the United States looms up so grandly that every American citizen should feel proud.

CANADIAN SYSTEM.

Permit just one more comparison with the much-vaunted Canadian system, with quotations from my Oklahoma address in 1913, substituting Denver in place of Muskogee.

First. The Canadian system requires not less than $500,000 of capital to start a bank there. There are now in the chief cities but 17 great central banks, with over 3,000 branches. In 1880 there were 41. It is a scandalous fact, widely admitted, that the powers controlling made it about as difficult to get into the select coterie as to get into a safe with a jimmie. The system evidently borders on a pure monopoly, whereunto we are trending.

Second. The stock of these central banks—no stock being issued by branches—is held largely in London, Liverpool, Quebec, Toronto, etc., and only a small percentage throughout the Dominion. Of course, dividends follow the stockholders' residence.

Third. I understand the stock is assessed where the holders reside. Branches pay a small license fee, but practically no taxes, except on buildings owned by the bank, which must be paid in any event.

Fourth. The branches in the country towns and smaller cities have no president or cashier and no board of directors, but are managed practically by figureheads. One man has general supervision over 10 to 20 branches in separate localities, and the so-called local managers take orders from him.

Fifth. They take the deposits from one locality and send to others where interest rates are higher to the detriment of home demands.

Let us compare conditions in Denver and the country generally with like cities in Canada.

Denver has 35 banks and trust companies with capital and surplus of about $15,000,000. The presidents, cashiers, and boards of directors are strong, influential, public-spirited citizens. The local stockholders are all on the alert to upbuild Denver and bring profits on their stockholdings.

Under the Canadian branch banking system the Denver presidents and cashiers would be set aside and the directorates abolished. There would be comparatively no stockholders, even of the central banks, and cashiers would be the managers of the branches. As self-interest is the first law of nature, this wrecking of the powerful influence for good of all these elements would breed indifference.

Again, as taxes are paid in Denver on capital and surplus, Denver would get filched out of $250,000 per year in bank taxes, which would simply add to the people's burdens. If stockholders get but 6 per cent per annum on their investment of $15,000,000, that would mean $900,000 less per annum for distribution in Denver, plus any undivided profits covering over a million dollars annually, all of which, if the Canadian system were adopted in the United States, would go to 100 or 200 great central banks of New York, Boston, Philadelphia, Chicago, etc. A beautiful and enticing picture for Denver, other like cities, and the country generally. I appeal to you, gentlemen, is it not a fact that those allied to the ownership and management of the independent banks of the country have been wonderfully instrumental in the onward and upward progress of your farm sections, your hamlets, and your cities? If we upbuild these, do we not upbuild the great cities and the Nation as a whole?

Contrast these facts with the further ones that Canada, with splendid resources, has a territory about equal to the United States, with a population of but seven and one-half millions; that her whole banking power is not equal to that of Massachusetts alone; that losses to depositors and stockholders of Canadian banks, as compared to our national banking system, is as three to one in our favor; that interest rates are neither uniform, nor are they lower than in the United States; and then ask yourselves if I am not justified in declaring "the Canadian branch banking system skims the cream from the country to enrich the exchequers of the monopolists in the great cities, while the independent banking system of the United States helps wonderfully to upbuild the Nation as a whole."

As further proof permit a short quotation from a 1912 weekly edition of the Toronto Star, which has a daily circulation largely in excess of any of the other six dailies there.

Preceding a well-written, logical four-column article, the following strong headlines appear in the Star:

MONSTER BANKING MONOPOLY A LEECH AT CANADA'S THROAT, KILLING LOCAL INDUSTRY, DEPOPULATING RURAL DISTRICTS—CENTRALIZATION OF ALMOST ENTIRE FINANCIAL POWER OF DOMINION IN THE HANDS OF A FEW CAPITALISTS HAS RESULTED FROM OUR MUCH-VAUNTED BANKING SYSTEM—ALMOST TOTAL EXTERMINATION OF LOCAL BANKS.

I quote but two extracts therefrom, to wit:

"While large capital insures slow, steady transmission of deposits to 'branches' for control and use of head offices in smart, alien centers, local credit based on local savings is transferred to parasites on whom rests neither responsibility, object, nor desire to exercise banking functions in support of local enterprises. With such credit basis lost not only does the collapse or absorption of local bank institutions become inevitable, but local aspirations and confidence which had sustained local industry are wiped out or made dependent on the will and not of competitive enterprise. So secretly, so gradually, does this sequestration of savings proceed, so insiduously are local enterprises undermined, that planting of a 'branch' to suck out local earnings, to extirpation of even the last local industry or institution, is embraced by 'slow-going' people with the same artless innocence as a 3-year child fondles a viper."

"To this accursed system of concentration of credit and destruction of local industry the Dominion of Canada stands indebted for a contracted population of 7,000,000 in place of 25,000,000 rightfully due it under decentralized systems of banks designed to sustain, to breathe the breath of economic life through the remotest as well as the most insulated of its parts."

This indictment from a Canadian rather outstrips mine.

Brother bankers, if you value your liberty, then protest to your Representatives in Washington to vote against any internal branch banking bill, and thus preserve your vested rights.

New Jersey, under its State banking act, permitted branch banks. The big fish were eating up the little ones. A repeal bill was presented to the legislature by the country banks in 1915 and passed. The governor vetoed it. The country bankers' vigorous, educational campaign convinced the legislators of the menace to democratic banking, and they almost unanimously overrode the veto. This object lesson should awaken the Nation.

As further proof of my contention permit me to quote from a letter received from the president of a prominent trust company in New Jersey, to wit: "I notice that the branch banking danger is again looming up. The last issue of the Bankers' Magazine contains several references to it. It appears that a great many of the larger bankers are quietly lining up in its favor, and it may be necessary for the country bankers to organize in opposition.

"You will recall that last year we won out in our fight in New Jersey and succeeded in passing the repeal of the branch banking bill over the veto of the governor. It was a very hard fight, and I understand that the large institutions who opposed us are planning to make another attempt to force the branch banking law through in our State."

In another letter he says: "Branch banking promulgated by a national banking system would prove more dangerous than the State law which we were successful in having repealed. Our present banking arrangements would be seriously disarranged by the passage of this act. * * * The big banking interests are determined to introduce branch banking into this country. This can only be avoided by uniting in strong opposition along the same line carried out in the recent fight in our own State."

I have similar information from New York and other States.

Permit me to suggest that in every State wherein the law is not explicit against branch banking it should be made so without delay if the independent banking system is to be preserved. The enemy is active.

I now and always have approved of winning world trade by throwing out arms to the ends of the earth like unto the splendid work now being pioneered by the great National City Bank of New York and as authorized in the Federal reserve act as to foreign branches. I only take issue with internal monopolization. Permit me to digress for a few moments upon two live subjects.

FREE REMITTANCE FOR CHECKS.

The arbitrary and unjustifiable methods to bring about the free remittance for checks by country banks, to my mind, can not be defended on any equitable or economic grounds.

The noise about the excessive "float" of checks to and fro will be doubled and trebled under a rule of free remittance therefor. If bills made at the great centers were paid by draft, as they should be, there would be no "float" to be sent back home with time lost in transmission, doubling and trebling postage and entries, clerk hire, envelopes, etc.

To encourage the "floating" of checks from the Pacific to the Atlantic coast and vice versa is simply to greatly enlarge unnecessary expenses and encourages "kiting" of checks. It is a positive evil. The thought that it relieves the big merchants of material loss is a fallacy, because, if checks are sent instead of bank drafts to pay bills, the cost of collection to the city merchant is invisibly charged to the customer, where it belongs. I assert, it is indefensible to compel the banks to remit for these checks without charge, as they are not interested in the transaction. The banks are open at material expense and keep reserve city balances in order to sell exchange as one of the ordinary, legitimate functions of banking. Because a few banks charge excessively is no excuse for robbing the many doing a legitimate business. To my mind, if it is constitutional to compel banks to remit for checks at a loss, then it is constitutional to compel farmers to sell butter below cost. The very foundation of our Constitution is threatened.

Some argue that if any account is not large enough to cover the cost of free remittance, then the bank should decline the account. This seems queer logic. A banker in Milwaukee lately told me that his bank had 1,000 small accounts that were unprofitable, but it kept them to encourage the small dealer to grow.

The Waukesha National Bank has over 1,500 of such accounts. Banks generally have them; and I ask you in all seriousness, Shall we encourage or throttle them? Should they not pay the banks something for exchange to partially cover safety of their funds and for convenience in paying their bills? Banks generally, where accounts justify it, now sell drafts without charge to customers. No arbitrary rule can govern. Where facts are stated it would seem bankers are not all devoid of patriotism. "Consistency, thou art a jewel," seems

to apply in this case. Permit me to ask, Is it consistent for the Government to compel banks to remit for checks without charge when its own exorbitant charges for postal orders are as follows:

| For orders: | Cents. |
|---|---|
| From $0.01 to $2.50 | 3 |
| From $2.51 to $5 | 5 |
| From $5.01 to $10 | 8 |
| From $10.01 to $20 | 10 |
| From $20.01 to $30 | 12 |
| From $30.01 to $40 | 15 |
| From $40.01 to $50 | 18 |
| From $50.01 to $60 | 20 |
| From $60.01 to $75 | 25 |
| From $75.01 to $100 | 30 |

No post-office orders are issued in excess of $100 each.

Express companies charge exactly the same rates as post offices. Compare these with rates charged by the Waukesha National Bank to any customer or stranger:

Drafts up to $10 cost 5 cents each.
Drafts $10 to $100 cost 10 cents each.
Drafts $100 to $1,000 cost 10 to 25 cents each.
Drafts over $1,000 cost 25 cents per $1,000.

These rates are about one-tenth those charged 40 to 50 years ago. In well-settled sections charges for exchange are rarely equal to post-office rates. Lower rates generally prevail. The great increase of business and competition has justified the decrease of charges. The law of supply and demand must govern, and arbitrary action by Government is simply tyrannical and fully as indefensible as the exploded attempt to artificially regulate the rate of interest. Just a moment as to the—

UNJUST DEMANDS OF THE FEDERAL RESERVE BANKS.

For the use of the New York Times Annual Financial Review of January 1, 1916, the editors asked me: "Why do not the State banks join the Federal reserve system?" My answer thereto was approximately as follows:

The national banks have paid into the Federal reserve banks for capital, say, $55,000,000.

| | |
|---|---|
| On this they get 6 per cent per annum if earned, or | $3,300,000 |
| Add to this the expenses of Federal reserve banks for 1915, say | 1,600,000 |
| Total | 4,900,000 |

which the Federal reserve banks will probably make soon, but at the expense of competition for liquid loans with the general reserve city banks. I say, competition, because, out of 20,000 millions of dollars of so-called "loans and discounts" of all the banks of this country, not over one-quarter of them are in "live paper." This is so because trade and commerce do not produce it, and we are all crying for it but can not get it. The fallacious arguments sent broadcast that we can manufacture "live paper" in abundance is too absurd for serious thought, and yet good men are constantly deceived. Further, why should banks be accessory to their own hanging by furnishing excessive funds to Federal reserve banks to be loaned in competition with the depositors?

The great expense of the Federal reserve banks at $1,600,000 per annum seems excessive as against but $125,000 cost in six years to the banks in the issue of some $380,000,000 Aldrich-Vreeland currency in 1914. This Aldrich-Vreeland currency practically pulled us through the great strain of 1914 without suspension of cash payments by banks, which aided trade and commerce so that no repetition of 1893 or 1907 took place.

As the strain had ceased and conditions were mending before the Federal reserve banks opened in November, 1914, and rediscounts thereafter were almost nil the claim that these banks did the work seems utterly fallacious.

It would seem that the last writing from the pen of the empire builder, James J. Hill, advocating 1 central bank instead of 12, would save probably 90 per cent of the expense and fully accomplish the true mission of a servant to and not master of our banking system. The banks of the country are paying the freight, which indirectly adds to the people's burdens.

In addition to the foregoing, the following sums are demanded of the national banks for deposit in the Federal reserve banks without interest or right to withdraw, as follows (approximately):

| | |
|---|---|
| By the three central reserve city banks of New York, Chicago, and St. Louis, 7 per cent of deposits, say | $190,000,000 |
| 52 general reserve city banks, 5 per cent of deposits, say | 120,000,000 |
| 7,578 country banks, 4 per cent of deposits, say | 150,000,000 |
| July, 1916, paid in on deposit | 460,000,000 |
| Nov. 16, 1916 and 1917, general reserve, city and country banks must pay in or hold in cash an additional | 100,000,000 |
| Thus tying up, without profit, a grand total of | 560,000,000 |

or more than one-half of the total capitals of all the national banks of $1,060,000,000 without any compensation for it whatever except the right to borrow back—from our own deposits, we might say—by parting with our limited stock of choicest interest-bearing securities, or, as the term goes, rediscounting. Rediscounting has always been open to good banks through their city correspondents, except in panic periods, and this defect is now remedied.

Permit me to appeal to the intelligence and fairness of the American people by asking what individual or corporation is willing to deposit one-half of his or its capital in the bank not subject to withdrawal in order that he or it may be sure to get an accommodation at that bank when panic threatens once in 10 to 20 years?

The amounts already paid in to the Federal reserve banks are more than ample to cover any threatened panic contingencies that may arise. The Federal reserve banks have now in cash on hand $400,000,000 and have the power to issue $1,000,000,000 of extra currency, and yet they insist on the last pound of flesh for 1916 and 1917 from member banks, and still want to double the unnecessary burdens by adding the State banks and trust companies, which now hold, outside of central reserve cities, but slightly in excess of 4 per cent of deposits in cash on hand, which must be retained to comply with the law and common prudence. Where will the payments come from? Wisconsin national banks by November, 1917, will have deposited outside of the State in Federal reserve banks or tied up about $8,000,000 in cash above reserves on hand. If State banks joined, they would be called upon for $10,000,000 more, which would come from present interest-bearing sources, as cash can not be spared.

How much will Colorado tie up outside of the State for a like purpose, thus lowering the banks' loaning powers to the people, unless they rediscount from their own deposits in Federal reserve banks, by worse than brokerage, as brokers do not indorse paper? But let us diagnose the

UNJUST BURDENS.

The three central reserve city banks part with 7 per cent out of 25 per cent cash heretofore held against their deposits. This is absolutely no burden to them, and they will never suspend cash payments and tie up country-bank balances as they did in 1893 and 1907, because the Federal reserve banks stand ready for relief.

I assert, if the reserve centers are cared for, no suspension of cash payments will ever again occur unless overexpansion of currency and credit runs rampant.

The 52 general reserve city banks have paid in more cash now than can be spared, and further calls add unnecessary burdens upon them.

The country banks have paid in, above capital-stock requirements, 4 per cent of deposits. Under the old law they were required to keep on hand 6 per cent of deposits. After November, 1917, it will be 4 per cent. This releases 2 per cent. But 4 per cent has already been paid in. The other 2 per cent has come from interest-bearing sources.

The act requires tying up absolutely 12 per cent of the country-bank demand deposits, and the burden is so great that practically the whole of them are chafing under the load, and many of them are threatening to leave the system unless relieved. The 3 per cent supposed reduction of reserves is largely mythical, because banks must keep city-bank balances against which to draw drafts.

While at Massachusets lately, where I addressed the joint session of all the New England State bankers' associations, I unfolded these facts to the governor of the Federal Reserve Bank of Boston.

He frankly admitted the great burdens put upon the country banks. Mr. Warburg, in addressing the late New York State Bankers' Association, when referring to our "heavy sacrifice," said: "Sincerely appreciating the hardships it entails for the country banker, and sympathizing with the difficulties of his position, we must say to him, 'Forget these exchange charges.'" This confession seems like adding insult to injury, when neither of them are necessary to cover the object sought, and both are clearly un-American, undemocratic, and subversive of American freedom. Let us not forget that if incomes of the Federal reserve banks exceed the $4,900,000, heretofore referred to, the Government confiscates the surplus, which belongs, under any code of honorable ethics, to the depositing banks.

The great bulk of arguments of those who are everywhere working tooth and nail to unnecessarily enlarge the work and powers of the Federal reserve banks, and to justify their salaries, to my mind are seriously fallacious and only add to the burdens of those who pay the freight.

LOWER INTEREST RATES.

There is loud acclaim, that interest rates are lower, because of the Federal reserve bank act. Let us see. Political economists declare that the rates for money, like unto the cost of potatoes or any commodity, rise and fall under the law of supply and demand. Fictitious manipulation of prices does not make for permanent values. On the other hand, since 1914, the United States imports over exports of gold has approximated $500,000,000, which of itself is a basis for billions of credit expansion. In addition, our unnatural general exports in 23 months exceeded our imports by some $3,000,000,000, thus giving another big bank account for credit inflation. These have made money a drug on the markets. Further, I know from experience that after the panic of 1873, money was a drug on the markets for six years. From 1893 to 1896 like conditions prevailed. Political economists also record the fact that following undue stress, conservatism generally prevails and money becomes a drug. In view of these facts, as the Federal reserve act does not increase surplus capital by a single farthing, and rediscounting has generally been an insignificant factor since the banks opened in November, 1914, it would seem the claim has practically no foundation to rest upon.

It grieves me greatly to speak so plainly, but the life of the country banker is at stake, and these excessive, coercive measures can not be defended on any moral or sound economic grounds.

Finally, permit me to say that I do not present these facts in a critical but in a constructive spirit, therefore reiterate what I said on page 688 of Senate hearings on the bill in 1913. After citing approximately what has now been accomplished and calls yet to be made, I said: "Can any statesman justify such calls, especially from the country and general reserve city banks? This transfers immense sums to the great cities, and impoverishes the country banks' loaning powers. Is it constitutional to take such colossal sums from the banks? Stock subscriptions and deposits in European central banks, I believe, are entirely voluntary. Why not do likewise here?

"I am with you, only I think the demands excessive. I believe in the underlying principle of the bill. We all desire a reasonable mobilization of cash to the end that cash suspension of banks may be avoided, but such calls seem far beyond reason to accomplish the object sought. Reason must reign, or a continual warfare for a repeal of the bill will bring a second Andrew Jackson to destroy these banks. What we want is to work in harmony together. We want it so reasonable that we can afford to go into it, even if it costs us something. I believe all banks are willing if the calls are fair and not oppressive." I then added that "if the full measure is demanded, I believe State banks will not join."

In the light of experience, it would seem that our statesmen should seriously consider amending the act, to the end that no further calls be made and that reason must reign in the collection of checks.

Query: If the State banks generally joined, and the funds already paid in are ample for all purposes, why impoverish the country banks by doubling the Federal reserve banks' cash assets? To encourage State banks to join, the demands upon country banks should be halved.

If our statesmen will but turn a deaf ear to the monopolizers who are urging the "cream skimming" branch-banking scheme; and the several States will stand by and foster on sound lines the independent banking system, then with a reasonable mobilization of cash to prevent cash suspension by banks on a less expensive basis, we may reasonably hope that American freedom, for which our forefathers fought, will be maintained and our wonderful program continue undimmed.

I also insert a copy of the bill (H. R. 15734) to authorize national banking associations to establish branches, as follows:

*Be it enacted, etc.*, That the act approved December 23, 1913, known as the Federal reserve act, be, and the same hereby is, amended by adding a new section as follows:

"DOMESTIC BRANCHES.

"Sec. 25a. That any national banking association located in a city or incorporated town or village of more than 100,000 inhabitants and possessing a capital and surplus of $1,000,000 or more may, under such rules and regulations as the Federal Reserve Board may prescribe, establish branches within the corporate limits of the city, town, or village in which it is located.

"Any national banking association located in any other place may, with the approval of the Federal Reserve Board, and under such rules and regulations as such board may prescribe, establish branches within the limits of the county in which it is located, provided that no such branch shall be established unless the capital of the parent bank is at least equal to the aggregate of the amounts which would be required of each branch, under the provisions of section 5138, Revised Statutes, if it were organized as an independent association, together with the amount required of the parent bank itself by that section."

## Conference Report on Army Appropriation Bill.

### EXTENSION OF REMARKS
OF
### HON. FRANK W. MONDELL,
OF WYOMING,
IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 9, 1916.*

Mr. MONDELL. Mr. Speaker, if we accept the conference report we will dispose of the Army appropriation bill for the current year. I can not, however, approve all of the provisions of the bill as agreed to, and if I could vote against certain of them without voting against the entire bill I should certainly do so. The House conferees have succeeded in reducing the bill $46,000,000 in amount and are entitled to the thanks of the country for so doing. I am therefore inclined to support their work as the best that can be done under the circumstances. Astonishing things are done or sought to be done in these days in the name of and under the cover of preparedness. Schemes and projects of local benefit, but of questionable character, from the standpoint of the general good, propositions for general or special promotion and preferment, which under ordinary conditions would have short shift, are brought forward, have their innings, and some of them get through in the general hurrah for preparedness. Furthermore, the bill contains much legislation, including new articles of war, that is questionable in form. This bill, carrying $267,596,530.10, is more than $165,000,000 in excess of Army appropriations of last year. In addition to which the deficiency appropriations already made this fiscal year for Army service exceed $27,000,000 and deficiency estimates are pending, amounting to about $6,000,000, making the total for Army expenditures this year, not including $25,000,000 for fortifications, upward of $300,000,000 or three times the appropriation of last year and in excess of $100,000,000 more than the largest recorded expenditure of any nation on earth in time of peace, which was that of Germany the year before the outbreak of the European war.

Large as this appropriation is so far as the items of pay, equipment, supplies, and munitions are concerned, they are probably not excessively large for the number of men proposed to be under arms, including the militia, but there are many items other than these which might have been eliminated or reduced without harm to the service. Legislation on appropriation bills is never justified if it can be avoided, and this bill contains much legislation adopted hurriedly and without due consideration by either House.

It is a little difficult to estimate with entire accuracy the amount of these appropriations which are properly chargeable to the Mexican situation. The total of the appropriations for the National Guard, which have been called into the Federal service, are, of course, chargeable to that situation; but it is not so clear what part of other items should be so charged. After the Army bill passed the House, the Secretary of War sent to the Senate an estimate for $88,495,525.78 additional on account of the National Guard. Not all of that sum was finally appropriated, but other appropriations were made on behalf of the National Guard not included in that estimate, including $2,000,000 for dependent families. There were also increases under the various items for the regular establishment directly chargeable to the Mexican situation. It can be conservatively stated that at least $80,000,000 of the sums carried in this bill are to meet expenditures made necessary by the situation in Mexico. This does not, of course, include the deficiency appropriations of July 1, of over $27,000,000, or the deficiency items now pending of about $6,000,000 directly chargeable to the Mexican situation, the total cost of which for Army and Navy in the last three years has been upward of $150,000,000. These are mighty impressive figures when we recall that they are made necessary almost wholly by the Administration's indefensible policy in handling the Mexican situation. Under a policy firm, fair, and fearless, the conditions of revolution in Mexico would have added very little to the expense of either our military or naval establishment.

## John Ericsson.

### EXTENSION OF REMARKS
OF
### HON. C. C. DILL,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 18, 1916.*

Mr. DILL. Mr. Speaker, I desire to take this opportunity to say a few words regarding the bill providing for the erection of a suitable memorial to John Ericsson, the inventor and constructor of the *Monitor*. He rendered services of extraordinary and incalculable value to this country in a most critical period of its history. Although born in Sweden, he is known to every schoolboy and schoolgirl in American because of the manner in which he served his adopted country. Because the naval officers of the Government during the Civil War turned down his invention of the *Monitor* his name has become inseparably linked with the name of Abraham Lincoln. When they said it was ridiculous, Mr. Lincoln gave his personal order that the proposition should be tried.

While the name of John Ericsson is known to all the world primarily because he constructed the *Monitor*, I desire to call attention to the fact that he was one of the greatest inventors of the world. He was the author of a large number of inventions and improvements of inestimable value to mankind. To him belongs the credit for the screw propeller, the use of compressed air for the transmission of power, the forced draft by centrifugal blowers, the surface condenser for marine engines, the location of propellers below the water line, and the deep-sea sounding device by which warning signals can be located accurately. In addition to all of these inventions and improvements, he invented and designed a large number of other mechanical devices of great advantage and value to the commercial world.

There is another reason, Mr. Speaker, why it is especially fitting that our Government should erect this memorial at this time. His native country is one of the few European nations which has remained neutral during the terrible war that is devastating that continent. The United States is also neutral and is on especially friendly terms with that great progressive nation. By the erection of this memorial, we shall not only do ourselves honor by thus recognizing his services, but we shall be building a shrine here in the National Capital to which will journey many millions of our own people of Swedish ancestry. The Swedish-born Americans are now, and history records they always have been, among the finest of our citizens, and this applies to all Americans of Scandanavian descent. In the State of Washington they hold high rank indeed. I know many of them personally and am proud to be a Representative in this Congress from a district which contains such a large body of citizens of Swedish and other Scandanavian ancestry. They are educated, honest, and industrious. While they read and recite the sagas and sing the songs of their forefathers and learn the history of their warrior kings, above and beyond all this, dearer than anything else to them, is their love for the United States, their adopted country. They are true to the Stars and Stripes and to all for which our flag stands.

In closing, I desire to insert as part of these remarks one of the finest speeches of its kind I have ever read. I refer to the speech of Congressman CHARLES H. SLOAN, of Nebraska. It contains some most interesting information about John Ericsson and also about the monuments already in the National Capital.

Congressman SLOAN's speech, in part, is as follows:

"Mr. SLOAN. Years ago in the schoolbooks we learned that Baltimore was the Monumental City. It is now seldom so designated. This is largely due to the fact that within an hour's ride from the 'Metropolis of the Chesapeake' there stands by the lordly Potomac, at a point where the waters from the mountains meet the tides of the sea, our National Capital.

"Its regular streets, broad avenues, palatial homes, and great buildings, public and private, together with its numerous parks, whose areas describe many geometric outlines, all challenge the notice and command the favorable comment of visiting Americans and foreigners.

"Some of the most interesting features of Washington are its monuments, erected as a protest against the oft-repeated statement that republics forget and are ungrateful. Between the Capitol and the Potomac, reaching toward the heavens, stands the greatest obelisk in the world. It was erected by a generous people's voluntary subscription and a congressional appropriation to the memory of Washington. Near the banks of the Potomac, beyond which rises in solemn grandeur Arlington Cemetery, the resting place of American heroism, is now being constructed a magnificent Greek temple in commemoration of Lincoln. [Applause.] In the various parks are imposing statues erected to brave, wise, and great Americans, 'whose deeds crown history's pages, and time's great volume make.' All these are in chaste marble, enduring granite, or imperishable bronze. These in the main are erected to commemorate America's native sons.

"However, America did not come into national existence by native effort alone, nor has that national existence been maintained independently of those who looked for the first time upon the sun in other climes or under other flags than ours. In an oblong square fronting the Executive Mansion is Lafayette Park. Here are beautiful walks under trees transplanted from many other countries. In the southeast corner upon an elevated pedestal, about which is the compatriot group, stands a bronze statue, with military trappings, of America's early, tried, and noble friend—Lafayette. [Applause.]

"At the northeast corner is a similar statue erected to Kosciusko, the Pole. May it stand there in grandeur until dismembered Poland, which gave him birth and for which he fought and fell, shall take its place among the other nations of the earth. [Applause.] In the southwest corner is another statue of heroic mold erected to Rochambeau, the great French general, who led his army, side by side with the Americans under Washington, up to triumphant Yorktown. The latest statue placed is in the northwest corner, that of Baron von Steuben, an officer under Frederick the Great. He became, after Valley Forge, the effective drill sergeant of our Continental Army. It was to a large extent his methods and discipline, added to the zeal, daring, and patriotism of the American Army, which humbled the land forces of Britain. [Applause.]

"Nor are those who distinguished themselves on land alone remembered. In Franklin Park there has recently been erected a bronze statue of Irish Jack Barry, who nobly earned the title, 'The Father of the American Navy.' [Applause.] Recently the American Government in just retrospect condemned its own neglect of John Paul Jones, who under different flags had become in that period of revolution on two continents 'the terror of the seas.' As a measure of justice the American Government transported his remains from their Parisian resting place and placed them in a mausoleum at the Annapolis Naval Academy. Afterwards a statue—enduring, imposing, and appropriate—was erected to his memory at Potomac Park in the National Capital. The achievements of this Scot in gallantry and daring reflected luster all along his career, but never more than when he patrolled the seas in vigorous warfare against all who would assail the encradled Republic of the west. [Applause.]

"John Ericsson was born with a genius for mechanics and a mind for mathematics. With the industry and persistence of his race this child of the north lived and closed his career with a record for achievement which, had he lived a few centuries ago, would have, by the iconoclasts of to-day, been called a romance.

"He first saw the light under the northern sun in Vermeland, Sweden. His nativity was but a few degrees from the Arctic Circle. It was the land of the short day and summer and the long night and winter. Eighteen hundred and three was a year of great import to America. It was the year when Napoleon, intending to deliver his greatest indirect blow at Britain, ceded Louisiana to the United States, giving us the scope of an empire. Far-off Sweden was then under the rule of the great Napoleon. There a boy was born who 59 years later was to prove a great factor in preserving intact, under the American flag, that mighty domain. Napoleon intended by so ceding Louisiana to build a western republic capable of battling successfully with Britain. That was an enterprise in which the great Corsican recognized his own inability, for already Britain's supremacy of the seas had confined Napoleon's triumphs to continental Europe.

"The march of events confirmed the foresight of Bonaparte. Britain was successfully combatted and our most marked victory was at New Orleans, the populous center of that great annexation. The supreme trial of the Republic was not destined to be with Great Britain or any other power. It arose between two parts of the Republic itself. In that John Ericsson earned the distinction which the bill for his monument now pending in this Congress would confer.

"Between the Swedish cradle and the American tomb (1803–1889) we find many interesting facts. Ericsson exhibited a precocity for drawing at the age of 4. At 8 he became an adept at understanding and handling machinery. He was the builder of a perfect miniature mill at 9. At 10 he astonished Admiral Platten, the great Swedish canal builder, who prophesied for the boy an extraordinary future. At 13 he directed 600 Government military laborers in the construction of public highways. So the good roads builders of to-day may find a pioneer in John Ericsson. At 17 he became a soldier in the army of Bernadotte, under whom he was rapidly advanced. At 18 he was a surveyor in the King's service. His measurements and maps made at that time still remain marvels of accuracy and utility. At 23 he left his homeland of the north, where he deemed his abilities and activities circumscribed, for Britain was then as now the empire of the sea. There he believed would be a demand for the creations of his brain and their perfection by his hand. [Applause.]

"Britain was not an hospitable host for the Scandinavian genius. The man who rivaled Stephenson in producing the steam locomotive, the foreigner who produced at a London fire the first steam fire engine, the alien who bound the cannon barrels against their bursting, and the originator of the screw propeller, came up against British official inertia and English red tape. While Ericsson could take dead metal and shape it to his will, chain the elements, make a gun safe, at least to its handlers, subdue the fire fiend, and seizing upon the theory of bird flight, apply it to shipping, revolutionize in cheapness and speed navigation, yet he could not jar loose the official mind of Britain. The official mind of Britain was much like the official minds of other countries which have so often dismissed the suggestions of genius with these insuperable objections: 'We never saw it before. It was never done before.' It almost leads one to inquire why the ancients wasted rocks with which to build pyramids Were there not sufficient official skulls for the purpose?

"So in 1839, wearied with Britain's official inaction, though he had acquired 30 British patents, he started for New York, the then ambitious port of the Western Continent, now the one through which passes more commerce than any other port of the world.

"He came to America at the invitation of Robert F. Stockton, an American capitalist. In 1842 he designed, and the Government adopted, its first real steam war vessel, known as the *Princeton*. He invented an instrument for measuring distances and in firing guns. The range finders on our great dreadnaughts are but the perfection of this instrument invented by Ericsson. Its importance may well be realized since size of guns, weight of projectile, resistance of armor plate, and distance between gun and target constitute the four great facts in naval gunnery.

"The New World became attractive to him. He conceived a patriotic devotion to the great Republic whose enterprising men and liberal government gave him scope for his genius and industry. From this country he was granted 100 patents. So, in 1848, he adjured his allegiance to the Crown of Sweden and became a naturalized American citizen. Before our Civil War he conceived the *Monitor* and offered it to Napoleon III, there seeming to be no American demand, but Napoleon rejected it. By a strange coincidence, the character of the great battle in Hampton Roads was to either side suggested by Ericsson. Mallory, the naval secretary of the Confederacy, had been a friend of Ericsson's before the Civil War. In his then talks with the inventor, the ironclad was discussed, and Mallory later upon obtaining his position in the Confederate Cabinet, used Ericsson's thought, years before the war informally communicated, for the construction of the *Merrimac*.

"The Civil War was on. Its first year had shown in the activities of the field the mettle of both sides, albeit lack of discipline and preparation were manifested on either side, but more particularly by the North. It is an ancient story now about the construction of the *Merrimac*. Her entering Hampton Roads, sinking our *Cumberland*, burning the *Congress*—both wooden vessels—and driving the *Minnesota* into a position of helplessness.

"But the building of the *Merrimac* was not unknown to the northern authorties, and the time of her arrival where the battle must take place was of course reasonably forecasted. It

seemed providential that preparation for meeting it should have been made by the one man then in the world capable of successful preparation. [Applause.]

"On September 14, 1861, the Government entered into a contract with Ericsson to construct the *Monitor*. One of his claims was that it should be impregnable to shot. Think of it! In that critical period the Government, dealing with the only individual capable of meeting the great national crisis, inserted in its contract of purchase a condition that payment should be withheld unless that condition could be clearly met.

"The *Monitor's* keel was laid October 25, 1861; her engines were steamed December 30. It was launched January 30, completed February 15, went into United States commission February 25, and on March 8 made her famous trip to Hampton Roads. Word painting of the first great sea fight, where gravity seems to have been conquered and where iron not only floated but fought iron, is left to the many writers and historians who with picturesque detail have given to the world an account of the first great naval battle as modern warfare then begun and since continued. Interesting as such an account might be, more interesting would be a statement of the fear and trembling on the decks of every northern wooden man-of-war. The consternation of Philadelphia, Boston, and New York, who saw in the immediate future the menace of their invaded ports, their destroyed shipping, and their wealth placed under tribute to the ironclad monsters already under construction and fashioned after the *Merrimac*. More interesting yet was the suspense and almost terror in Washington, where those in authority in anticipation saw the *Merrimac* steaming up the Chesapeake on into the Potomac, past Mount Vernon, and up to the National Capital, with guns trained on the Treasury and the Capitol, which meant more than a mere battle and the destruction of property. It meant a release of the southern blockade. It meant recognition of the Confederacy by all the powers on earth. It meant their commerce aiding the seceding group. It forecasted an unconquerable South and a permanently divided Nation.

"Men sometimes refer to the battle in Hampton Roads as being undecisive, because neither ship was captured or sunk. But the best evidence of victory was the subsidence of fear throughout our Navy; the restoration of complete confidence in Boston, New York, and Philadelphia; the tightening of the southern blockade; the nonrecognition by foreign powers; the supreme relief and the glorious confidence of Lincoln and his Cabinet; and as time went on the complete victory by the North and the perpetuation of the Union left unquestioned proof of who was victor and who was vanquished in the first great battle of floating iron. [Applause.]

"That in building the *Monitor*, Ericsson's chief consideration was for battle rather than navigation is suggested in the final end of the historic craft. Late in the year of 1862, as the northern naval forces were prosecuting their conquest against the shore defenses of the South, the *Monitor* was sent down the Atlantic coast. There, in a stormy sea, it passed Cape Hatteras; but in the increasing gale which followed it yielded to the battering of Neptune's artillery, and on the 31st day of December, 1862, it sank in that section of the sea which has claimed so many craft of both wood and iron and levied, year by year, heavy tribute of human life.

"My attention has recently been called to the fact that Dr. Greenville Weeks, who was a surgeon on board the *Monitor* in its first battle cruise, and still with it on its final trip, still lives, at the age of fourscore years. He recently visited the great Capital whose preservation was the *Monitor's* prize in 1862. It may be a matter of general indifference, but to me one of the most interesting seafaring accounts I ever read was 'the last cruise of the *Monitor*,' written many years ago by Dr. Weeks, in which he graphically described the last trip and final passing of the *Monitor* upon which he had been an officer and witness in its battle triumph, and which he left on its final cruise only when it sank to rise no more.

"There is a story of the ancient Swedish kings, and, by the way, one of them was named Ericsson, that a prince entitled to the throne must look upon it, then go and perform some great and heroic deed; then drink a libation from a skull before he takes his seat of power. Ericsson had looked upon a throne of metal, proffered by Neptune. He drank a libation from rebellion's skull, and became entitled to his throne. That right was confirmed by Neptune and Mars. [Applause.]

"Some may think Ericsson's *Monitor* was the chance thought of the dreaming inventor. It was not. It was the legitimate product of a highly organized, tempered, tried, and cultured brain, which always controlled and commanded a hand of cunning.

"A tribute to Ericsson is, in a broad sense, a tribute to the race from which he sprung. No evidence of this would seem better or more appropriate just now than a quotation from Admiral Luce in a paper read before the Naval Institute April 20, 1876:

"The *Monitor* was the crystallization of 40 centuries of thought on attack and defense, and exhibited in a singular manner the old Norse element of the American Navy; Ericsson (Swedish son of Eric) built her; Dahlgren (Swedish branch of valley) armed her; and Worden (Swedish, wording, worthy) fought her. How the ancient Skalls would have struck their wild harps in hearing such names in heroic verse! How they would have written them in "immortal runes"!

## A Correction.

## EXTENSION OF REMARKS
OF
# HON. THETUS W. SIMS,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 18, 1916.*

Mr. SIMS. Mr. Speaker, during the month of July, 1914, when the House was considering the conference report on what was called the Lever cotton-futures bill, I addressed the House for 5 or 10 minutes in opposition to the bill. I did not contend that the bill was not a good bill for the purpose of regulating dealing in cotton futures; in fact, I think it was quite a good bill for that purpose. But inasmuch as the Democratic national platform adopted in 1912 favored the enactment by Congress of legislation to suppress all pernicious practices of gambling in agricultural products by organized exchanges and others, as I now recall the language of the platform, I was opposed to regulation and favored legislation in accordance with the platform demands to suppress future dealing or, as the platform called it, gambling in farm products.

A few days ago my attention was called to what appears to be an editorial utterance in the issue dated August 8, 1916, of the Anderson Farmers' Tribune, published in the town of Anderson, S. C. One Mr. V. B. Cheshire appears to be editor of the paper. This editorial, if such it be, is written in opposition to the nomination of my honored colleague from South Carolina, Mr. WYATT AIKEN, and says in part:

We charged him with being absent when fake legislation curbing gambling in cotton, known as the Lever bill, was up for action July 27, 1914, and to prove what he says is untruthful and what we say is the gospel truth, let our readers who receive copies of a speech by a good Democrat from Tennessee, by the name of T. W. SIMS, containing the record yea-and-nay vote on the conference report, verify our statement. It consists of four pages of the CONGRESSIONAL RECORD, and in those four pages you will find interesting evidence of the way AIKEN is absent and the way LEVER puts things over the wool-hat boys and buncoes the farmers in the interest of the cotton exchanges and cotton gamblers. Read carefully.

It will be seen by reading my remarks on that occasion that I had no controversy or words of any kind with Mr. AIKEN. Mr. LEVER had charge of the bill, and the only colloquy I took part in concerning the bill was with him.

In the editorial I have read from it is also stated, referring to my speech, that "it will reach you on or before this issue of this religious semiweekly does." From this statement it appears that this speech of mine is being sent to persons in the congressional district of Mr. AIKEN for the purpose of using it in opposition to his nomination. I want to state, Mr. Speaker, most positively that I have not sent out that speech to anybody in South Carolina or anywhere else. I did not even so much as have it printed and sent to my own district.

I have heard through private sources that this speech of mine is being sent into the district of Mr. AIKEN at this time—1916—under my frank. I want to say, Mr. Speaker, that the editor of the paper referred to, nor anyone else, has any authority to use my frank for this purpose. I can not imagine how this speech can be sent out at this time under my frank, as I never had any of them published, even for use in my own district. A few days after I delivered the speech referred to, in July, 1914, one Mr. J. H. Patten came to my office and stated to me in substance, as well as I can now recall, that he wanted to use my speech with the Farmers' Union people in my district to aid in my election in November, 1914. He commended the speech and said that it would do me good. As a part of my speech I read and incorporated in my remarks a letter from Mr. Charles S. Barrett, national president of the Farmers' Union, bearing on the subject under discussion, and Mr. Patten wanted to use that letter also, and this was one of the reasons given for asking me to permit him to use my speech.

I had known Mr. Patten casually for two or three years prior to that time, and had been informed from sources that I regarded as perfectly reliable that he was an attorney or legis-

lative agent for the Farmers' Union. I had seen him in company with several of the officials of that organization and had at times talked with him concerning legislation in which the members of the Farmers' Union were interested. I knew that Mr. Patten had married the daughter of a former United States Senator from South Carolina. I had known Mrs. Patten and her father's family more or less intimately and had the very highest regard for them. If I had known nothing else but that Mr. Patten was the son-in-law of this former United States Senator from South Carolina, I would have taken it for granted that he was a perfect gentleman. In addition to this, knowing that he was associated in an official way with the Farmers' Union, I naturally had no thought that he wanted to use my speech for any other purpose than for the purpose I had in making the speech. He seemed to be very friendly disposed to me and wanted to help me secure my reelection to Congress, and stated to me, as best I can now recall, that if I would permit him he would send out my speech under my frank to the members of the Farmers' Union in my district. I can not say positively that he said that he would not send it to any other district than my own, but I had not the remotest thought that it was his intention to use my speech for any other purpose than to aid in the election of Members of Congress in the general election in 1914 who were favorable to the position taken by President Barrett on this question of the suppression of gambling in farm products on the exchanges of the country. So believing and so understanding him, I gave consent that he might have this speech published and sent out under my frank.

Now, I can not understand how this speech of mine can be circulated at this time under my frank in South Carolina or elsewhere unless some of the speeches which were secured by Mr. Patten were not sent out at that time and are now being sent out.

As it appears from this newspaper article that the speech is being used to prevent the nomination of Mr. AIKEN, I want to say, Mr. Speaker, that I have known Mr. AIKEN ever since he became a Member of this House and served with him on the District of Columbia Committee for a number of years, and in that way I have had an opportunity to know him much more intimately than a Member knows another with whom he has had no committee service, and I take great pleasure in saying that I have never received any impression of Mr. AIKEN other than that he is a most honorable gentleman, a man of ability, and an industrious and faithful public servant, and under no circumstances would I permit my frank to be used even for the sending out of my own speech when the object of doing so was simply to prevent, if possible, the nomination of Mr. AIKEN. In fact, I would not do so to prevent the nomination of any Member of the House, either Republican or Democrat.

I do not charge that this editor is using my frank, because there is nothing in the article in the paper that I have just read that would indicate that he was doing so, but if he or anyone else is doing so it is wholly without my knowledge or consent. The conference report upon which the speech was delivered was adopted more than two years ago, and is not now an issue before the House, nor will it be, so far as I can see, in the next Congress. Of course, I do not know that Mr. Patten is sending out this speech in South Carolina or elsewhere at this time. If he is, it can not possibly be done by him in furtherance of what I understood to be his object and purpose in requesting me to permit the use of my frank in the first instance. If any of these speeches were ever sent to my congressional district I have never heard of it, and if I had had the remotest idea that the speeches were to be used as it appears in this newspaper article that they have been, I would never, under any circumstances, have consented to the use of my frank. Whether it is known or was intended by the parties who are now using my frank for this purpose, such use is in effect, and in fact, an abuse and a misuse of my frank.

Mr. Speaker, in the 20 years' service that I have seen in this House I never have, except in this one instance, permitted my frank to be used by other than a Member of the House for any purpose, and this instance serves to show how cautious Members of the House should be in permitting the use of their frank for any purpose whatever by others than Members of the House.

The only conceivable purpose for the use of my speech at the time I gave this permission was to aid, through the instrumentality of the farmers' union, in securing the legislation regarding gambling in farm products that was demanded in the Baltimore Democratic platform; and now to find that that speech is being used, more than two years after it was delivered, for the purpose of preventing, if possible, the nomination of my friend and colleague from South Carolina, demonstrates how unwise it is for a Member of this House to ever permit the use of his frank by others than his colleagues for any purpose at all.

I want to notify any and all persons, whoever they may be, that may be sending out that speech of mine, or any other portion of the CONGRESSIONAL RECORD, under my frank that they are doing so without my knowledge or consent and that after this notice, if not before, any such use of my frank is an unlawful use and will subject the parties so using it to the penalties prescribed by law applicable to such cases.

**Democratic Party Is of Necessity Sectional—Reason Pointed Out by Raymond Robins.—Why Chairman of Progressive Convention Supports Charles E. Hughes.**

---

## EXTENSION OF REMARKS

OF

## HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 11, 1916.*

Mr. JOHNSON of Washington. Mr. Speaker, the greatest political importance is attached to the decision of Raymond Robins, of Illinois, chairman of the national Progressive convention of 1916, to support Mr. Hughes, not only because he had been the Progressive nominee for United States Senator in 1914, and the recognized Progressive leader in the Central West, but for the added reason that President Wilson's managers had expected confidently to land Mr. Robins as the one big Progressive who would stand out against Col. Roosevelt and the bulk of the Progressives and line up with Wilson.

Futile, foolish hope to expect a man of positive and practical progressive ideals like Robins, who has long been identified with the trade-union movement, and is trusted and beloved by its leaders, to seek sanctuary in a party whose dominant faction is almost feudal in its treatment of the laboring man.

As Mr. Robins says, in a recent statement giving his reasons for believing the Republican Party to be one of national progressiveness—

> The fixed southern control of the Democratic Party is individualistic in its thinking, sectional in its sympathies, and inherits a tradition against common labor as servile. The social organization is still semipatriarchal in the rural communities, and the southern environment presents the maximum of natural and cultural resistance to necessary social and industrial standardization.
>
> This doctrine of individualism, sectionalism, and disunion menaced and almost prevented the freeing of the colonies from foreign dominion. This doctrine well nigh defeated the adoption of a unifying constitution wherein the American Nation became a fact. This doctrine after 60 years almost overthrew the national structure in dissension over the issue of slavery. This doctrine since the civil war has delayed national legislation so urgently needed to solve the problems of pure food, transportation, child labor, and conservation.

Mr. Speaker, one dislikes to dwell on the inescapable consequences if the country has four more years of misrule by southern Democrats, for the success of the Democratic Party involves, indeed necessitates, the imposition of southern thought upon northern action. It has not been escaped and it can not be escaped.

There is a three years' record to prove that, and the American Nation, bound to nearly a year of it, is asked to accept four more beyond its period of bondage.

In an editorial on "Southern bondage" the Chicago Tribune of August 7 said:

> The social organization of the United States can not safely be directed by a section of the Nation which still remains semipatriarchal in its character. The foreign and domestic policies of the United States can not safely be formed by men with parochial instincts, by men who still believe in decentralized government, who still believe that the obligation is on the Nation for the benefit of the State and not on the State for the benefit of the Nation.

On this point Mr. Robins, in emphasizing our imperative need of a comprehensive foreign policy and an adequate preparedness to maintain our right part in the world movement of advancing human interests, as against the domination of privilege, autocracy, and militarism, asks:

> Can these imperative national needs be worked out by a State rights Democratic Party that plans a State-dominated militia, with its menace of shiftless incompetence, spoils politics, and organized snobbery in a national defense force at a time of world peril? More and more it becomes plain that most of our pressing problems of large import are national in scope and will yield only to national action. Yet we find in the Democratic Party the modern, and let us hope the last, stronghold of the advocates of local sovereignty.

Wherever the fight for more efficient and more humane government has been waged this baneful doctrine of State rights has been invoked to rally and shelter the antisocial forces to arouse sectional bias, local jealousy, and all the mean, narrow passions that hold men's eyes upon the ground, when great human needs call upon them to look beyond the rough and dusty roads to the far country that is worth the toil and sacrifice of the long, hard journey.

There is an infinite pathos in these last words, voicing as they do the yearning appeal of a noble idealist for justice against the arrogance and cruelty of class prejudice and bigotry.

In all their gaunt nakedness these hideous traits of minds infirm with selfishness stood revealed in Congress recently in the fight made by southern Members against a bill that was designed to free little children from the slavery of factory life and all its attendant evils. Such evils are rife in the Southland where child labor presents its most revolting aspects and the appalling results of it are exhibited in a wide-spread illiteracy and its inevitable companions, degradation and crime.

Of the southern representation in Congress 47 in the House and 10 in the Senate, after a bitter and acrimonious battle, voted against the bill, acting, possibly, under the instructions of aristocratic constituencies on the old, old ground that it was an invasion of State rights. So was the abolition of slavery an invasion of this sacred ground.

Mr. Robins considered all this when he chose the Republican Party as the party of performances. He says:

Comprehending our national necessities, how can a Progressive hesitate long to choose between the party of nationalism and the party of sectionalism?

He then adduces the following reasons:

The Progressive movement and revolt of 1912 having failed as a permanent political party, and the verdict of the voters having been rendered in favor of the Democratic and Republican Parties as the instruments of their organized political action, what is the present duty of the men and women who were loyal to the Progressive Party and who believe in Progressive principles? In which of these dominant parties in the long run will Progressive principles find most effective support, and where will the rank and file and leadership of the Progressive Party find largest cooperation in the service of our common country? The answer to this question is twofold—first, the character and environment of the primary voter mass control; and second, the permanent achievements of its leadership.

The primary voter mass control of the Republican Party is in the rural communities of the Central, Western, and New England States. This group represents the highest literacy in America, is freest from severe social and economic pressure, is in the zone of the greatest natural tendency to industrial standardization and equality of opportunity, and inherits the tradition of Lincoln and the men who saved the Union.

The Republican Party has a rank and file of men and women who have proved their capacity to reject false or dishonest leadership. Conceived in moral revolt against human slavery, it was born, baptized, and nurtured in the supreme national struggle to maintain the national heritage and fulfill the promise of equal opportunity to every citizen. Is not its rank and file best calculated to support a leadership that will create a national mind and conscience, and, having preserved the integrity of the Nation against the heresy of secession, will it not develop and maintain a progressive national program of social and economic organization?

The present leader of the Republican Party won his reputation as the Progressive Republican governor of New York. He there proved himself completely independent of all boss control and demonstrated that he will take advice from many but dictation from none. His words have been made good by deeds. His leadership is the fruit of the Progressive movement in American politics. Mr. Hughes's recognition of the Progressives in the appointment of his campaign committee is a guarantee of the good faith in which he appeals for Progressive support.

This estimate of the Progressive character of the Republican nominee does not rest upon the testimony alone of his record and his associates. From a statement over the signature of one of the ablest of the Progressive leaders in this Nation I quote as follows:

"The nomination of Mr. Justice Hughes will be acceptable to the great body of Progressive Republicans in this country. * * * He was not the choice of the reactionary element which formed the platform and otherwise controlled the convention. * * * He is able, independent, fearless, and possessed of high public spirit. There is no question of his personal and political integrity; he will go as far as his convictions carry him, and no ulterior influence can stop him.

"ROBERT M. LA FOLLETTE."

We Progressives stand at the cross roads. American social, industrial, and political life has broken down under the old individualistic control. A new national mind and conscience developing social unity, industrial standardization, efficient political honesty; from a self-controlled democracy—this is the goal of our generation in American life.

I believe in the character and courage of the nominee of the Republican Party. He is the most conspicuous example in our history of the possibilities that American politics may hold for success in able and unselfish public service. For myself, I gladly enlist with the great majority of the Progressives of the Nation under the leadership of Charles Evans Hughes.

Mr. Speaker, when we read of these Democratic senatorial caucuses, and find one Democratic Senator from the Middle West deliberately and pointedly charging another Democratic Senator from the far South with framing a revenue measure designed to save the South and rob the West and the North we must be further convinced that the statements made by Raymond Robbins are true.
